ALWAYS MISTAKES

An eye-witness's vivid story of the brief drive of the Allies on the Western front, which by some chance escaped the censor's pencil, and which reached this country in the form of a personal letter from M. Bert Noble, formerly of Hamilton, Bermuda, a sharpshooter in the Bermudian contingent, fighting with the British army in France, is interesting reading in view of the growing charges of incompetency brought against the British. We quote fragmentarily from the *New York Evening Sun*.

SOMEWHERE IN FRANCE—OCT. 2, 1915

Dear Al:

You've read, of course, of the big strike all along the line! We did most of the "getting ready" for that, and a deuce of a job it was too. . . . However, we got it done at the cost of two lives and several wounded men, for we were under fire all the time, and a week before the show was to come off we moved up to the firing line to finish up there.

Then the fun began. The fact that we were working was soon spotted by the Huns. Hence one Sunday afternoon we were way out working peacefully when without any warning Fritz's artillery opened full on us. Laddie, you should have seen the scatter-action. . . .

We dropt the shovels, made grabs at our rifles, and beat it to the trench. Having arrived there, all hands lay down until it subsided. But it wasn't doing any subsiding—it grew worse. . . . It is estimated that they put a thousand shells into that acre of ground in two hours, so you can imagine it was pretty lively! And they treated us to this exhibition every day for six days. Every time we came out they let us get started, and then—bang, crash, over they came again. But by dint of working nights we got it done in spite of them.

Then we shifted over to a reserve trench. We were to go up to hold them and stave off the counter-attacks. Well they got the trenches O. K., but they didn't hold them. There were mistakes made—there always are mistakes with this man's army—and the attacking regiments got cut to blazes. So we didn't get our show after all. But oh, Lord, spare me that experience again. The trench we were in was little more than a ditch—no parapet nor bottom boards, few dug-outs. It rained solid for two days, you couldn't hear yourself speak for shells, didn't dare show your head for machine guns, not only the German's but our own were sweeping across us. No cooking, very little food, and waiting, waiting, waiting, for the orders that never came.

From 3 a. m. to 10 p. m. the bombardment went on. Just picture us, will you, one of the biggest battles of the war raging all around us, front, back and sides, and we in the middle of the maelstrom waiting.

Then came the news that the attack had failed and we crawled out wet, dispirited, into the soaking, muddy wood to try to clear up some of the mess. Here we found a gorgeous confusion. Communication trenches jammed with wounded, reliefs, working parties and all manner of people. Fellows who'd got lost, wounded, who'd been dumped down anywhere; fragments and remnants of companies, all struggling to get along, and raining all thru it and underfoot mud, mud, and slimy, slippery, slushy mud so that you could hardly keep your feet!

However, we got thru and finally got back to our ditch and in due course started for camp.

REMARKABLE REMARKS

JESS WILLARD—Wear loose clothing.

THE POPE—Our sorrow increases day by day.

HILLAIRE BELLOC—All that cats think is evil.

GEN. JOFFRE—Oh, our women! They are sublime.

ENRICO CARUSO—St. Patrick was an Italian.

LILLIAN RUSSELL—I am not afraid of getting fat.

SENATOR TOWNSEND—Mr. Wilson is not a Democrat.

LAURA JEAN LIBBEY—He will return if he loves you.

ARTHUR BRISBANE—Don't try to write "effectively."

WOODROW WILSON—Talk is a very dangerous thing.

JOHN R. MOTT—Conscience is the alarm clock of the soul.

JAY E. HOUSE—Life is on the streets, not on the stage.

LINCOLN STEFFENS—Her face looked like an old hatchet.

FIELD MARSHAL VON HINDENBURG—I do not like to be fêted.

BART HOWARD—Roosevelt is our champion hammer thrower.

PROF. M. JOHNSON—The best children are the fourth and fifth.

SIR HERBERT BEERBOHM TREE—Humor is the onion of the human salad.

ED HOWE—The greatest bonehead I ever knew accused me of being one.

BILLY SUNDAY—England will not concede a shilling or a mutton chop.

EUGENE V. DEBS—I'd rather be a molly coddle than be Theodore Roosevelt.

REV. HUGH BLACK—All the problems of America are religious problems.

GEORGE ADE—Let us go back to Chicago. I hope I am not asking too much.

GIFFORD PINCHOT—I know positively that a food trust is being organized.

NICHOLAS VACHEL LINDSAY, POET—I want permanent readers or else enemies.

PRINCIPAL EDWIN FARLEY—The study of formal grammar is almost valueless.

VICE-PRESIDENT MARSHALL—I never was a candidate for any office in my life.

THE INFANTA EULALIA—The rule of money is no better than the rule of rank.

KING CONSTANTINE—What is happening in Greece today may happen in America tomorrow.

YUAN SHIH KAI—Firm refusal regarding I have been forced to submit to the people's will.

JUDGE C. A. WILLIAMS—We were not to be ashamed of themselves in wearing short skirts.

CONGRESSMAN MANN—The President cannot call me to the White House and give me orders.

There is a real risk in waiting too long to order your Cadillac

EACH year we have urged the public to guard against possible disappointment.

And each year, in spite of this warning, many have had to content themselves with some other car because they could not get a Cadillac.

In spite of steady increases in production, the annual Cadillac shortage is almost a mathematical certainty.

There is every indication that the current season will see that condition materially emphasized.

There is the steady, stable, year-in-and-year-out Cadillac demand to begin with—a very large number who automatically repeat.

And then, there is the large—and steadily growing larger—element of increase in new Cadillac ownership.

This has been strikingly marked ever since the advent of the Cadillac "Eight."

Thus far its sales have reached the impressive total of more than twenty-one thousand cars, amounting in value to more than forty-seven millions of dollars.

The vogue of the Cadillac Eight has never been perceptibly checked or challenged by any other car.

True, there may have been, from time to time, cars which—in advance—gave promise of comparable charm.

But their appearance served rather to stimulate admiration for the Cadillac and to emphasize its inimitable qualities.

Cadillac prestige is based on the universal esteem for the soundness of Cadillac policies and the soundness of Cadillac principles of construction—and the feeling that the new Cadillac exemplifies the most luxurious form of motoring yet evolved.

Cadillac prestige is steadily growing greater—the Cadillac demand will go right on expanding in volume and in enthusiasm.

Therefore, when we urge you to assure yourself of Cadillac delivery, it is that you may guard against disappointment.

If you can secure a Cadillac now, protect yourself, and take it.

If you cannot do better than to arrange for delivery in a month or two, we urge you to take that precaution.

THE COAT OF ARMS OF ANTOINE DE LA MOTHE CADILLAC WHO FOUNDED IN 1701, UNDER COMMISSION FROM LOUIS XIV, THE COLONY ON THE SITE WHERE NOW STANDS THE CITY OF DETROIT.

THE TYPE 53 CADILLAC CAR IS DISTINGUISHED BY THIS COAT OF ARMS MOUNTED UPON ITS RADIATOR.

Styles and Prices

Standard Seven passenger car, Five passenger Salon and Roadster, \$2080. Three passenger Victoria, \$2400. Four passenger Coupe, \$2800. Five passenger Brougham, \$2950. Seven passenger Limousine, \$3450. Berlin, \$3600. Prices include standard equipment, F. O. B. Detroit.

NUMBER 3500

A RIDICULOUS CHRISTMAS DREAM

IT was the morning of Christmas Day, and the Editor had read in the morning paper the day's report how fire and brimstone had dropt down from Hell upon the field of carnage, for Hell has invaded Heaven, God, it would seem, has retired far beyond the starry spheres, and we ask if God is dead. Then the Editor went to church and heard the Gospel song and vision of peace on earth, goodwill to men. In the evening he read aloud, as he reads every Christmas night, the Hymn to the Nativity:

No war or battle sound
Was heard the world around;
The idle spear and shield were high up hung.

And the promise:

Yea, Truth and Justice then
Shall down return to men
Orbed in a rainbow, and like glories weaving
Mercy shall sit between
Clothed in celestial sheen.
With radiant feet the tissued clouds down steering,
And Heaven as at some festival
Shall open wide the gates of her high palace hall.

But where was Heaven now?

Then the Editor slept and dreamed. He dreamed the war had ended. He dreamed that the Allies had conquered and had driven the Teutons back within their own borders. Their armies were crushed and could no longer resist the overwhelming force against them. They were forced to submit, and their foes were prepared to require in Berlin hard conditions of peace; loss of provinces and huge indemnity to Belgium, and for the cost of the war. Then he dreamed that in France the Socialists and the allied workmen met and protested. The German workmen, the German people, said they, are our brothers; they did not wish this war, it was forced upon them. They have already suffered all they can bear. Five million of their strong young men have been disabled or have died in this horrible war. We, too, have suffered and we must bear our misfortunes, but we will add nothing more than we can help to the burdens of those across the Rhine. The provinces in question shall be French or German as the people choose. The indemnity to be paid to Belgium shall be as moderate as possible, and the world must help.

Very strange, quite absurd and ridiculous, was this decision. But dreams are absurd, and in dream the French Government accepted the folly, and England and Italy and Russia agreed to spare Germany the humiliation of a treaty of peace signed in Berlin and the peace was concluded at The Hague.

Meanwhile, Father Clark, of the Christian Endeavor, called a great congress of his Young People in Chicago. With them came the delegates of the Young Men's Christian Association and the young women also, and

the Epworth League, and the Federation of Catholic Societies, and the Hebrew Charities, all of one mind, and they voted that the neutral nations, of which the United States is the chief, must save the impoverished peoples from any added burdens of war. They sent a monster delegation to Washington to see the President and Congress. The President shared their enthusiasm and he sent a message to Congress urging generous appropriations from the public treasury. The House took the matter immediately in hand and voted, the Senate concurring, to expend two hundred million dollars to Germany to pay her indemnity to Belgium, then another hundred million direct to Belgium, and two hundred million more for Serbia and Poland and the new buffer Armenian state. Oh! it was absurd, incredible, impossible, but the President, in a grand address to the people, declared that it had saved the country more than half a billion dollars which would otherwise have had to be expended on formidable additions to the army and navy, for defense.

Then, strange to relate, but it was only in dream, Henry Ford and J. P. Morgan and Jacob H. Schiff called a meeting in the Morgan library of the great masters of finance in the country. They were told that, while Europe had been deluged in blood and had piled up billions of debts, this country, and this country only, had been vastly enriched by the war, and that it was only decent that they personally should give their hundred, or hundreds, of millions to relieve the losses that have enriched us. Strange to say, they did it. They were glad to follow where the boys and girls had led; for a little child shall lead them.

IT was all a foolish dream. Once our nation gave a few hundred thousand dollars to China to help her educate her young men, but that was an altruism, not to be repeated. Our business is, have we not been told? to take care of ourselves, and let other nations take care of themselves; not to meddle; not to help—not to get entangled; to leave charity to individuals, to preach and practice thrift and wisdom, and wealth. America is for Americans, and America must be the greatest, strongest, richest country in the world. That should be our national ambition and glory; the biggest guns, the heaviest ships of war; New York the money center of the world; gold, gold pouring in upon us thru every port, and every bank of every village bursting with credit. That is the true political economy, and let it shower down upon us from the same sky from which fire and brimstone dropt down upon the sodden fields of war.

It was a foolish dream. We will dream no more till Christmas comes round again.

W. H. W.

A TRIAL BALANCE OF THE WAR

ON December 31 it is customary to take an inventory of stock and balance accounts. Let us then look over the battlefields and see where the belligerents stand at the end of seventeen months of war. Altho a dozen nations are engaged in the fighting and the greater part of the world is involved, the military situation in its main outlines is remarkably simple.

It is essentially the siege of a big fortress. A region about the area of our Mississippi Valley states, stretching from France to Mesopotamia and from the Adriatic Sea to the Gulf of Riga, is besieged on every side, by sea or land. The garrison has tried many sorties by land, but has never broken thru the investing lines at any point, altho it has pushed forward its entrenchments in many directions. It has not yet tried a sortie by sea. The besiegers have so far failed to make a breach in the walls and they have never been able to capture and hold any important outworks of the defenses.

Now there are four ways of reducing a besieged fortress: by assault, by failure of its ammunition, by the killing of its defenders, or by starvation of the whole population. All these methods are being tried together, and no man living is wise enough to say for certain when or whether they will succeed. But without attempting to forecast the future we may profitably consider the possibilities involved. All attempts to break thru the defenses of the Central Powers have, as we have said, practically failed. But the total population of the Allied countries is nearly six times that of the Central Powers, their area about twenty times as great. In wealth and natural resources and especially the ability to draw upon the whole outside world for munitions and supplies, the Allies have an overwhelming advantage. If the war were to be determined by matching pennies or matching men, we could count them victors from the start. The line of circumvallation of the four besieged countries, extending as it does over thousands of miles of sea and desert, mountains and rivers, cannot all be fortified or strongly defended, so if the Allied forces keep pounding away at it long enough, the chances are of course that they will break thru somewhere sometime.

So far, however, there are no signs of weakening at any point in the Teutonic line. The defenses are stronger than a year ago and apparently as well manned. It is commonly assumed that the Germans by advancing two hundred and fifty miles into Russia have dangerously extended their line. A glance at the map will dispel that illusion. The Austro-German line on this side is at least thirty-five per cent shorter than it was when the war began, because now it is nearly straight north and south from Dvinsk to Tarnopol, while before the war it bent about the menacing salient of Poland. But on the other hand their present line, tho shorter, is not so easy to defend as their national boundaries, because they have here no permanent fortifications and no railroad lines paralleling the front. As the situation stands now the Austro-German forces in the east seem to be able to hold their lines indefinitely against Russians outnumbering them four to one, the Austrians against the Italians three to one, and the Germans against French and British two to one.

Leaving now unsettled the question of the defeating of the Central Powers by breaking thru or shoving back their lines, let us consider the possibility of wearing them down by attrition, starvation or exhaustion of material. Here the difference between a besieged city and a besieged country appears. The four countries of Germany, Austria-Hungary, Bulgaria and Turkey altogether cover such a range of climate and such varied resources that if a Chinese wall of unsurmountable height were erected around them, there is no reason why they should not live and prosper till Doomsday. Any shortage of South Sea products or Yankee notions might be remedied by German science, and thus thrown upon their own resources, it might happen that when the last trump brought the walls down the imprisoned peoples would make as good a showing as the outside world, which would be mostly yellow, brown and black.

The only question then is whether the natural resources of the four Central Powers are sufficiently available for the immediate purposes of the war, and this of course cannot be ascertained. It may be that some indispensable metal or organic substance for munitions will soon run short and cripple the defense, but there is no evidence of this. Cotton is undeniably needed. Wood pulp is a possible but probably not a satisfactory substitute. The sunny fields of Asia Minor may eventually supply all the cotton desired for the mills and munition works of Germany, but not for several years yet. Rubber is also lacking, but here synthetic chemistry may come to the rescue. Several years ago a German chemist exhibited in New York a couple of automobile tires which had been made in the laboratory and had done their thousand miles. The only reason why the caoutchouc tree has not been put out of business like the indigo plant is that the process of manufacture has been too expensive. The conquest of Serbia has helped out the copper shortage, and by the utilization of the low grade ores of Mansfeld in the Harz mountains, Germany is or can be made permanently independent of copper importation. The lack of gasoline, which threatened for a time to be fatal, has been relieved by the recovery of the Galician fields. In the matter of coal and iron, Germany is better off than ever thru the possession of the mineral region of Belgium, Luxemburg and northern France.

The breaking of a pathway thru the Balkans brings to Germany and Austria-Hungary the harvests of Bulgaria and Asia Minor. No doubt there will be much suffering among the people this winter. There have been bread riots or rather "fat riots" in German cities, but taken as a whole the beleaguered empires can eventually raise enough food for their needs and with their efficiently organized system of distribution, they are probably in no immediate danger of starvation.

But most important of all is the supply of men. How long will this hold out? We need not consider the Allied side in this matter. Russia alone, with her birthrate of seven million a year, would alone suffice to keep the armies full. The Central Powers, on the other hand, have no such exhaustless human reservoirs to draw upon. But there are 840,000 young men coming of military age every year in Germany and this is more than the number of Germans killed during the first year of the war. Since we do not know how many of the wounded

are able to return to the ranks, it is impossible to tell how much, if at all, the Central Powers have actually lost in military manhood so far. The acquisition of the Bulgarian and Turkish forces will probably come near balancing the accession of Italy on the other side.

If we should attempt to decide the game on points as it stands, that is, on territory gained since the war began, we must declare England the winning nation, with Germany second. The British have obtained possession of more than two million square miles in Africa, Asia and the Pacific. These acquisitions comprize an area about forty times the size of England. The German and Austrian armies have conquered about 150,000 square miles of new territory in Belgium, Luxemburg, France, Serbia and Russia, an area larger than Prussia itself. Russia has a slight compensation in the bit of eastern Galicia which she still holds and in the rapidly increasing area of northern Persia and eastern Turkey which is coming under her control. France clings to a strip of Alsace some ten miles wide and thirty miles long.

The war has come to be primarily a contest between Great Britain and Germany. But this means a fight between a whale and an elephant, or, as the Germans put it, between Mahanism and Moltkeism. Each has won on its own element and failed on the other. "Britannia rules the wave" in the most literal sense of the words. That is to say, over eighty per cent of the earth's surface the British flag is supreme, for seventy-two per cent of the surface is oceanic and a quarter of the land belongs to the British Empire. The unchallenged supremacy of England on the seas has enabled her to sweep away absolutely the shipping of her enemies and to exert a control over the shipping of neutral nations admittedly unauthorized by existing international law. She is frankly determined to prohibit all commerce with her enemies even in goods non-contraband, such as food conveyed by neutral vessels to neutral ports, and she will not allow the German ships to be purchased by other nations. In carrying out this policy she has not scrupled to seize American vessels engaged in the coastwise trade between American ports and to stop in transit the American registered mail.

The attempts of the German submarines to destroy British commerce have had little effect except to arouse against Germany the abhorrence of the outside world. Both the British and German fleets have been kept mostly in home harbors, and there has been no decisive battle between them. We may suppose that the Kaiser will never give up without making some use of the navy which he has taken such pride in building up. If it should happen that the German fleet was victorious, then the whole situation would be reversed, for the British Isles might be starved out in a few months with Germany in command of the sea. Such an event, tho conceivable, is most improbable, for the British navy is twice the strength of the German, and there are the French and Italian navies to count upon besides.

Supreme on the sea, the British have not distinguished themselves on land. The French, the Belgians, the Serbs and the Russians have exprest their dissatisfaction in plain language, and recently similar sentiments have found utterance in England itself. It is sufficient on this point to quote the opinion of the military expert of the *London Times*.

Never did any government possess such great means of action as ours; never was public support more complete;

never were greater mistakes made in the organization and conduct of war.

The expeditions to Antwerp, to Gallipoli, to Salonica and to Bagdad were ill advised and ill managed, and altogether failed of their purpose. The raising of an army of three or four million men without resorting to a draft is an unprecedented triumph of patriotism in which the British may well take pride, but this after all is a promise rather than an achievement.

Such are some of the visible and in part calculable factors of the problem. But it would not be safe to base a solution on them, because there are too many unknown quantities, and at any moment some unforeseen chance may determine the issue. A supreme military genius may appear; or a great inventor with a new weapon of unprecedented power. So far the surprize weapons, such as the forty-two centimeter guns, the asphyxiating bombs, the jets of blazing oil, the novel airships and big submarines, have not materially altered the balance of power. But other inventions may appear or these be multiplied. What, for instance, if the Zeppelins rained bombs every night on London or if the fleet of five thousand aeroplanes, which England is said to have secretly prepared, flies in a continuous swarm over Essen?

Most incalculable and most important of all is the human will. The making of peace, as the making of war, is in the hands of a few men. Who can read their minds? What, for instance, if the Kaiser should die? His successor is supposed to be more belligerent and less able than he. What would be the effect of the change? This is essentially a contest of endurance. Which people can or will stand the strain longest? What is the breaking point of human nature? That, after all, is the determining factor.

CAN WAR BE PREVENTED?

WE are not asking whether the present war can be stopped by any intervention, personal, moral or economic. War once begun may or may not have to run its course, like a fever; we do not undertake to say. But the world has learned that some fevers, at least, can be prevented.

The inquiry is imperative, and is imperative now. Of all the kinds of preparedness in relation to war that should interest mankind, none is so basic and none so obligatory as preparation to prevent war if war is, in fact, preventable.

In fact: there is the crux; and how are we to know? How did typhoid and yellow fever become preventable? Not by *a priori* theorizing; not by exhortation, nor even by diligence in general well doing. They became preventable when their respective causes were discovered. War, in like manner, will not be prevented by good intentions nor by preaching; by prudence nor by hocus pocus. It will be prevented, if ever, when its causes become known. There is no more serious business confronting the human race at this hour than to discover, if possible, the causes of war.

It is nonsense, it is incredible folly, to pretend that the causes of war are known now. Are they moral? Perhaps Mr. Ford believes so, but if they are, we might as well make our plans in practical certainty of plenty of war ahead for generations, for the overwhelming

majority of mankind is not yet too good or too proud to fight. Are they economic? The great bankers of America and Europe were as sure of it as Karl Marx was; and until a year and a half ago they confidently believed that an international syndicate of bankers could hold kings in leash. Are they racial and national? So believed the socialists, who expected by international proletarian organization, cross-cutting nationalistic lines, to make military mobilization impossible. Are they diplomatic? The question provokes no answer but the cynic's smile. Are they structural in society, as faults in rock strata are the cause of earthquakes? When war begins has something merely slipped, without will of man?

Dr. Frederick Adams Woods in his painstaking attempt to answer the question "Is War Diminishing?" gives us a statistical table showing that since 1450 the European nations have spent approximately half their time in waging war. Have they sacrificed half of their populations, and destroyed half or more of their wealth? Who knows? We do not even know whether by systematic research it would be possible now to learn even roughly what the sacrifice has been.

But it is time to begin research, determined, costly, scientific, exhaustive, to ascertain, in the scientific man's sense of the word, what is the cause, or what are the causes of war. Until this research has brought forth a positive, unimpeachable result, our efforts to prevent war are likely to be but sentimental and visionary.

A KILOWATT MEAL

THE people of Kansas City, Kansas, are raising their own electric currents from their own plant. The new municipal power station costing a million dollars is already paying operating expenses and interest on the investment and the sinking fund. A thousand housewives have abandoned gas and are now using electricity, which puts the heat just where it is wanted and nowhere else. If the housewife is rich enough to own an electric range costing \$40, she gets her electricity at the rate of three cents per kilowatt hour; if she is content with a grill costing \$5.95 (marked down from \$6), she pays six cents. But even the higher rate is not ruinous. A six-cent kilowatt hour will cook five lamb chops, five cups of coffee, twenty biscuits, a pound of potatoes and two pumpkin pies, which is as much as even a Kansas man can consume at a meal.

Three cent electricity is the equivalent of fifty cent gas. We wish that the Kansas City plant would extend its lines to New York, where people have to pay eight cents for electricity and eighty cents for gas.

ARMS—OR NOTHING

ANY hint of a peace movement from neutral nations meets with furious resentment in England. *The Spectator* in its leading editorial of November 20 declares that if the United States shuts off the shipment of munitions the Allies will certainly retaliate by cutting off all commercial intercourse with the United States. This would undeniably be a serious blow to American commerce, for it would destroy our export trade with the whole British empire, with Russia,

France, Italy and Japan, with all of Africa except Liberia, with all the Pacific Islands except our own possessions, with all of Asia except perhaps the southern part of China. The only openings left to our products would be the republics south of us and such neutral countries of Europe as could not be persuaded or coerced into joining in the boycott. It certainly looks as tho the Allies had the whip hand of us.

But *The Spectator* need not brandish the whip. We have no intention of prohibiting the export of munitions, not because they want us to continue, but because our duty as a neutral nation requires us not to discriminate against either side in the conflict.

WHO SHALL HAVE THE HORN?

IT is proposed in some quarters to abolish automobile horns on the ground that they cause more accidents than they prevent, as the chauffeur relies upon the harsh blast to scatter the people in front of him and so does not slow down. The argument is good, but the conclusion is wrong. The horns should not be prohibited, but given to the pedestrian. He has the right of way, for he was on the ground first, and even tho he be a Populist and insist upon walking in the middle of the road, it is the business of the chauffeur to look out for him. The automobilist takes pride in his swiftness and quickness. Has he not shown us how he cracks a watch crystal without injuring the watch? Now if those unfortunate people who on account of the uneven distribution of wealth are still obliged to go on foot would wear acetylene lights in their hats like miners and would carry a bellows under their arms like bagpipe players by which they could squawk, toot or whistle whenever they crost the danger zone, it would throw the responsibility upon the machine. If under such circumstances they still got run over and killed it would be a consolation to them in the next world to know that the chauffeur was quite in the wrong.

OUT OF OIL IN 1937

OWNERS of automobiles are warned by the Secretary of the Interior that it is not enough to get their machines insured; it is more important to insure their gasoline supply. For he figures that if we go on using up petroleum at the present rate of 250,000,000 barrels a year, our subterranean storage tanks will run dry in about twenty-two years. Then the American automobilist will be as badly off as when he gets stuck between two towns for lack of fuel. He may find that there is no more oil to be had nearer than Persia or China. In his desperation he will be apt to take to alcohol—as a fuel for his motor, we mean of course.

This is the most serious of our conservation problems. Timber used up will grow again in the course of time. The conservation of water-power means "Use it now, otherwise it is lost forever." But the petroleum supply is strictly limited and irreplaceable and yet we are using it with increasing lavishness. It is well that our government, like others, has awakened to the necessity of keeping a bit in reserve for the time of need which is surely and quickly coming. Since preparedness is being preached from Ezekiel let oil conservation be preached from Matthew 25:1-13.

THE STORY OF THE WEEK

Gallipoli Campaign Abandoned

The British have abandoned their attempt to take the Dardanelles and have withdrawn their troops from all parts of Gallipoli except the tip of the peninsula. According to the statement of Premier Asquith in the House of Commons the withdrawal was effected so secretly and with such skill that not a man was killed and only three wounded. A relatively small proportion of the stores and a few guns were left behind but were destroyed by the troops on leaving. The Constantinople statement on the contrary asserts that the British suffered heavy losses from the Turkish artillery fire during the retirement, that they left sick and wounded behind and that the booty abandoned included eight heavy guns, two field guns and a great quantity of ammunition, tents and provisions.

The British and French troops have been mostly shipped away from the Aegean Islands of Tenedos, Imbros and Lemnos, which have served as a base of operations during the Dardanelles campaign. It is not so stated, but presumably they have gone to Salonica to defend that port against the attack of the Germans and Bulgars or to Alexandria to defend Egypt against the attack of the Germans and Turks.

Thus ends ignominiously an expedition which has long been recognized and is now acknowledged to have been unwise and mismanaged. Ten months ago the combined fleets undertook the forcing of the Dardanelles, but the British lost here five battleships and the French one without being able to get thru the strait or reduce the forts guarding it on either side. Contrary to the reports at first sent out the bombardment of the Turkish fortifications suffered comparatively little from the bombardment by big guns of the dreadnoughts. But the Turks did run short of ammunition, and it appears that the Allies were nearer success at one time than they dreamed. The officers in charge of the Chanak fort, on the right of the narrows, are reported to have said that they had only seventeen big shells left on the night of March 18 and these would have been used up in a few minutes if the naval attack had been renewed in the morning. The court and German Embassy were already packing up to leave Constantinople.

But the Allies considered it hopeless and too risky to attempt to gain Constantinople by the fleet alone so they waited for the coöperation of land forces. This delay gave the Turks under German engineers opportunity for the construction of entrenchments so when on April 25 troops were landed at Sedd-el-Bahr on the southern extremity of Gallipoli, they were not able to force their way up the peninsula. In June another attempt was

made about ten miles further up the coast. The Australian and New Zealand Army Corps established themselves on a shore named from the initials of the force "Anzac Cove." But they also were unable to make their way inland so in August another landing was made

OUR REITERATED DEMANDS TO AUSTRIA

The Government of the United States has received the note of Your Excellency relative to the sinking of the "Ancona," which was delivered at Vienna on December 15, 1915, and transmitted to Washington, and has given the note immediate and careful consideration.

On November 15, 1915, Baron Zwiadenek, the Chargé d'Affaires of the Imperial and Royal Government at Washington, transmitted to the Department of State a report of the Austro-Hungarian Admiralty with regard to the sinking of the steamship "Ancona," in which it was admitted that the vessel was torpedoed after her engines had been stopped and when passengers were still on board.

This admission alone is, in the view of the Government of the United States, sufficient to fix upon the commander of the submarine which fired the torpedo the responsibility for having wilfully violated the recognized law of nations and entirely disregarded those humane principles which every belligerent should observe in the conduct of war at sea.

In view of these admitted circumstances the Government of the United States feels justified in holding that the details of the sinking of the "Ancona," the weight and character of the additional testimony corroborating the Admiralty's report, and the number of Americans killed or injured are in no way essential matters of discussion. The culpability of the commander is in any case established, and the undisputed fact is that citizens of the United States were killed, injured, or put in jeopardy by his lawless act.

The rules of international law and the principles of humanity which were thus wilfully violated by the commander of the submarine have been so long and so universally recognized and are so manifest from the standpoint of right and justice that the Government of the United States does not feel called upon to debate them and does not understand that the Imperial and Royal Government questions or disputes them.

The Government of the United States therefore finds no other course open to it but to hold the Imperial and Royal Government responsible for the act of its naval commander and to renew the definite but respectful demands made in its communication of the 6th of December, 1915.

It sincerely hopes that the foregoing statement of its position will enable the Imperial and Royal Government to perceive the justice of those demands and to comply with them in the same spirit of frankness and with the same concern for the good relations now existing between the United States and Austria-Hungary which prompted the Government of the United States to make them.

LANSING

at Suvla Bay, five miles beyond. The reports coming to us thru London of their success in gaining the crest of the ridge overlooking the Dardanelles proved fallacious. At no point have the Allies been able to get more than two or three miles from the shore, altho they have had the heavy artillery of the fleet to back them and have made the most persistent and daring assaults on the Ottoman entrenchments. Altogether the British, up to December 9, had lost 114,555 at Gallipoli, of whom 26,172 are dead. The French loss is not stated, but is much smaller, as fewer troops were engaged. There has been a good deal of illness in this army, apparently because sanitary matters were not as well managed as in other fields. On account of blunders in carrying out the operations or other evidences of incompetency several officers have been removed, among them, it is said, Sir Ian Hamilton, the commander in chief. Lieutenant General Sir Archibald Murray will have charge of the troops left at Sedd-el-Bahr to guard the entrance to the Dardanelles.

The Defense The city of Salonica, the ancient Thessalonica to which the Pauline epistles were directed, is now the chief objective in the Great War. It has long been a bone of contention among the Balkan states and the cause of more than one war. Greece, Serbia, Bulgaria and Austria intrigued and struggled for its possession when Turkey should relinquish it because it is the most important port on the Aegean and the natural outlet of the rich agricultural region in the vicinity and of the countries to the north. When the Balkan coalition of Greece, Serbia, Bulgaria and Montenegro attacked Turkey, the Bulgars and the Greeks raced for Salonica, but the Greeks got there first and obtained possession. Then the disappointed Bulgars attacked the Greeks in the hope of gaining either Salonica or the port of Kavala to the east of it, but in this second Balkan war Bulgaria was defeated by her late allies, the Greeks and Serbs. But the Serbs were by no means satisfied with the result, for they had failed to obtain by their two wars their great desire, a port on either the Aegean or the Adriatic.

The policy of the Austro-Hungarian empire has for more than fifty years been directed toward securing a trade route thru Serbia to the sea at Salonica. It was this ambition which brought about the conflict between Austria-Hungary and Serbia and so precipitated the Great War a year ago last July. Twice the Austro-Hungarian troops tried to force their way down thru Serbia and failed. The third time they succeeded with the help of the Germans and Bulgars and the armies

of these four nations now stand on the Greek frontier, only thirty-five miles north of Salonica. But between them and the desired haven are the lines now being fortified by the French and British. The first line of defense is established on the hills close about the port; the second front a larger semi-circle of about twenty-five miles radius. The Greek troops have been withdrawn from the prospective battlefield between Salonica and the Serbian frontier. They are said to have been transported to Kavala. The inhabitants of the towns of this region were forced by the Allies to leave their homes on forty-eight hours notice in order to clear the ground for the military operations.

The delay of the Central Powers in crossing the Greek frontier, whether due to the necessity of gathering a larger force or to the fear of offending the Greeks, is at any rate giving the Allies the time they needed to prepare for the defense of Salonica. The French and British troops already there are said to number 200,000, which is about twice the population of the city, and more are arriving every day. The British hold the right wing and the French the left.

The positions of the attacking party are reported to be as follows: The Bulgarian troops, said to number 120,000, but soon to be raised to 180,000, occupy the center in the Vardar Valley, about Strumnitza and Lake Doiran. On their left to the east is a strong force of Turkish troops, now coöperating with their late foes, the Bulgars, in a land which only three years ago the Bulgars took from the Turks. At Monastir,

sixty miles to the west, an army of 60,000 Germans is stationed, ready to march down this railroad and attack Salonica from the west, while the Bulgars come down the railroad along the Vardar from the north.

The Dilemma of Greece Germany is said to have notified the Greek Government of her intention of following the British, French and Serbian troops who have retreated into Greek territory unless they are, in accordance and with international law, disarmed and interned. Since the Allies are determined to stay in Salonica any attempt on the part of the Greeks to enforce such a measure would bring them into the war on the German side which they would dislike even more than going in on the side of the Allies. Premier Skouloudis has stated the dilemma in an affecting appeal he has made thru the press to the English people:

Greece's friendship has been repaid in a singular way. An embargo has been laid on our commerce and our ships held up. A people friendly to the Entente has been within an ace of being starved for want of bread. Our cable communication, too, has been suppressed.

Our aid was spurned, nevertheless we have given freely. We have done our utmost for you and your cause; that is to say, the utmost you in your own blundering, high-handed, haughty way would permit us to do. Now we are faced by a still more terrible problem. How are we to stop our land from being deluged with blood? One set of the belligerents already is there and a second set is soon to come. Strictly, they have a perfect right to do so since the Allies have been allowed to enter. The Austro-Germans may bring their allies, the Bulgars—what can we do? How can we prevent the ingress of an enemy who, already

THE GREAT WAR

December 20—British evacuate Anzac and Suvla positions on Gallipoli. Russian warships bombard Bulgarian port of Varna.

December 21—French take trenches on Hartmannsweilerkopf, in Vosges mountains. Japanese liner, "Yasaka Maru," sunk in Mediterranean by Austrian submarine. No lives lost. One American on board.

December 22—Rebellion against Monarchy in Yunnan province, China. Russians take Kum, Persia.

December 23—British repulse Turkish attacks at Kut-el-Amara on Tigris. Germans regain trenches on Hartmannsweilerkopf.

December 24—Montenegrins repulse Austrian attacks. British losses to December 9 reported to be 528,227.

December 25—French and British at Salonica prepare for attack of Germans and Bulgars. Austrians taking offensive on the Isonzo river.

December 26—Heavy artillery fire in Artois and Champagne. British Cabinet consider conscription.

successful in Macedonia, has an eye on Kavala and Seres?

How can we make war on Germany and Austria and two Balkan powers all to oppose the passage of the Bulgars? We stand every chance of being overwhelmed. Our enemies will be on top of us, because, while our determination to resist invasion by the Bulgars remains unaltered, our power of offensive has been weakened thru our army at the request of the Allies having modified its hold on certain strategic positions essential to the successful conduct of a campaign.

So, as I see it, Greece is to be ravaged by a cruel, relentless war because the Allies badly blundered in a diplomatic as well as a military sense.

There appears to be no way by which Greece can avoid being made a battlefield during the next few weeks. To add to her anxieties an Italian army is advancing toward Salonica thru that part of Albania which the Greeks desire to possess. Italian troops have been landed at the two Albanian ports of Durazzo and Avlona. Roads are rare in this region, but from Durazzo an ancient Roman military road led to Elbasan and Lake Ochrida, and these, though now in a ruinous state, may serve the modern Romans as it did their ancestors as a route to Salonica. The remnants of the Serbian army which defended Monastir retired into Albania and are said to have met the Italian expedition at Elbasan, which is half way across Albania. The Bulgars are reported to be in close pursuit and will try to intercept the Italian expedition in Albania and so prevent it from making a junction with the French and British. William of Wied, the Prussian officer who was selected by the Powers at the close of the Balkan war to become Mpret or Prince of Albania, but who fled from the country at the outbreak of the present war, is now back again and said to be spending money freely to win over the tribesmen to the German cause.

Russian warships have again bombarded the Bulgarian port of Varna, on the Black Sea, but the report that Russian troops have been landed here seems to have been unfounded.

THE BALKAN STORM CENTER

The armies of nine nations are now hastening toward Macedonia. British and French troops are being landed at Salonica to defend this port against the Austro-Hungarian, German and Turkish troops assembling on the Serbian frontier. That part of the Serbian army which escaped into Albania is being reorganized to renew the conflict and Italian troops have been landed at Avlona and Durazzo. The Russians have shelled the Bulgarian port of Varna and are expected to land troops here or to send them across Rumania. Greece and Rumania are still technically neutral, but likely at any moment to be drawn into the maelstrom. Austrian troops are slowly spreading over Montenegro. The Serbian government has made Scutari its headquarters. The shaded area is that dominated by the arms of the Central Powers.

The Russian Invasion of Persia

The ill-fated expedition of the British into Mesopotamia is not yet out of its troubles. A month ago they were within ten miles of Bagdad, the goal toward which they had been working for a year. Now they are having a hard time to defend themselves at Kut-el-Amara, a hundred miles down the Tigris. They lost 4567 at Ctesiphon and during the retreat down stream and 1127 since reaching Kut-el-Amara. This is very heavy, considering the size of the force, which was at first said to consist of only one division, that is about 20,000 men, altho the Marquis of Crewe states that it is "considerably larger."

It is at any rate considerably outnumbered by the Turks and Arabs under the command of Field Marshal von der Goltz, the famous German strategist. So far the British seem to have been able to keep open their line of communications down the river to the Persian Gulf, but the agitation among the Mohammedans in Turkey and Persia makes it harder to maintain freedom of operations in this region. Bagdad is regarded as a holy city by both the Shiite and Sunnite sects and the Mohammedan world regarded with dislike the advance of the British toward it. Doubtless their sudden retreat when it was almost within their grasp is being heralded as a miracle by the priests who are now preaching the Jihad or Holy War in Africa and Asia. This propaganda is evidently having more effect than has been hitherto supposed by the British. It is rumored that the Mohammedan troops from India, who at first formed part of the expedition into Mesopotamia, manifested so much aversion to fighting under a Christian flag against their coreligionists for the capture of one of the sacred places of Islam that they had to be sent back.

The propaganda among the Persian Mohammedans resulted in an uprising of tribesmen reinforced by part of the troops trained under Swedish officers in the Persian gendarmerie. These left Teheran with the German Minister at the court of the Shah, Prince Henry of Reuss, and established themselves at Hamadan and Kum. But the Russians came down from the north and have captured both places after some hard fighting. It is expected that Teheran, the capital, will soon be occupied by the Russian forces who are now fighting the Turks and Persians only twelve miles away. The capture of Hamadan brings them within about 220 miles of Kut-el-Amara, where the British are besieged. If the Russians can reach the Tigris and join with the British they will have a chain stretching from the Caucasus to the Persian Gulf, and "the German road to India," of which there has been so much talk recently, will be barred. Prince Firman Firma, who has been foremost among the Persians favoring the Russian side, has now been made premier and virtual ruler of the country, since the Shah is only seventeen years old. This shows that Russian influence is now dominant in Te-

heran and that the effort of Prince Henry to win over the Shah has failed.

The German Plotters

Paul Koenig, the Hamburg-American Steamship Company's chief of police, and believed to be the head of Germany's secret service in this coun-

try, who was arrested a few days ago, has now been indicted in New York for plotting the destruction of the Welland Canal in Canada. If found guilty on all the counts he may be imprisoned for thirty years. Richard E. Leyendecker, a New York merchant, and Edmund Justice, both of whom were

WE, THE UNDERSIGNED, HAVE FAITH IN THE EFFORTS OF BISHOP BRENT AND HIS FELLOW-WORKERS TO HELP THE SUG PEOPLE.

WE WANT HIM TO CARRY OUT THE PLANS HE HAS LAID BEFORE US. WE NEED THE SCHOOLS AND MEDICAL WORK HE DESCRIBES, AND WE APPRECIATE WHAT HAS ALREADY BEEN DONE BY HIS GROUP OF VOLUNTEER WORKERS AND THEIR ASSOCIATES NOW WITH US.

WE HOPE THE AMERICAN PEOPLE WILL GIVE BISHOP BRENT THE SUPPORT NEEDED.

WE WILL GIVE HIM ALL THE HELP WE CAN.

THE RUSH TO AVOID CONSCRIPTION IN ENGLAND—A BATCH OF LORD DERBY'S VOLUNTEERS

associated with Koenig, were also indicted. A full confession has been made by Frederick Metzler, who was Koenig's private secretary for five years, and because of his disclosures several trunks full of incriminating papers have been seized. It is said that these affect men prominent in the diplomatic service at Washington. Otto F. Mottola, an officer of the New York police force, received \$3 a day from Koenig. The arrest of Frederick Schleindl, an audit clerk in the foreign department of the National City Bank, of New York, for stealing messages about the shipment of arms and selling these to Koenig, has been followed by the dismissal of several other German employees of the bank. A man, name not published, who had intended to blow up the power houses on the Canadian side at Niagara Falls, and to destroy railroad bridges there, discovered that he was pursued and for that reason threw his explosives into the lake at Erie, Pennsylvania.

The grand jury's inquiry at New York concerning Labor's National Peace Council, an organization which received money from Franz von Rintelen to be used in causing strikes, will soon be followed by indictments. One of the witnesses was President Gompers, of the Federation of Labor, who testified, he says, about the failures of the plotters to corrupt labor union officers. A notable example was the futile attempt to cause a strike of longshoremen on both coasts. For this plot \$1,250,000 was available. This money was to be paid to the men during the strike. It appears that Von Rintelen, now in the Tower of London, is a captain in the German navy and an intimate friend of Admiral Von Tirpitz. He was interested, it is said, in an attempt to buy control of the Union Metallic Cartridge Company, at Bridgeport, Conn. He and those whom he represented offered \$17,000,000, or more than twice the value of the company and its property. Their purpose was to cause strikes there and elsewhere, and thus to prevent shipment of ammunition to the Allies. They failed, owing to the action of a banker who thus sacrificed a very large commission.

Plans for the shipment of considerable quantities of rubber from New

York to Germany, where it is needed for auto truck tires, came to nothing last week when the personal baggage of Miss Anna Dekker was seized. In four trunks and eight packing cases were 3500 pounds of rubber. She had taken passage for Rotterdam, and other women, with similar baggage, were to follow her. The project was in the hands of Max Jaeger, a naturalized German who has lived in this country thirteen years. Additional arrests in San Francisco are expected, as the result of an inquiry as to the expenditure of \$400,000 or \$500,000 for supplies forwarded some time ago to German warships by means of false clearance papers. It is asserted that the Department of Justice has evidence, with photographs of checks, that about \$1,000,000 was expended by German agents in Washington to promote legislation designed to prevent exportation of war supplies. The project included a series of lectures, and the supervising agent was paid \$1000 a week. The de-

struction of the Du Pont powder works in Wisconsin was prevented a few days ago by the work of detectives. Captain Franz von Papen, the German military attaché recalled at the request of our Government, sailed for Holland last week, Great Britain having undertaken not to interfere with his passage.

Defense and the Navy Reports Current discussion concerning the Administration's plans for enlarging the army and the navy, and the questions of national policy involved, had for a prominent subject last week the exports of the General Board of the Navy, of which Admiral Dewey is chairman. Secretary Daniels published a report, prepared in October, in which the Board, at his request, gave its views as to the best plan for expending an average of \$100,000,000 a year for five years for new ships. Afterward he published the Board's annual report, dated November 9, relating to the condition and needs of the

SERBS, REFUGEES FROM THEIR CONQUERED COUNTRY, SEEKING FOOD AT A RUMANIAN SOUP KITCHEN

navy, the lessons of the Great War, etc. But there was an earlier report, prepared and submitted in July, in response to a request from President Wilson. Representative Gardner and others asserted that the Secretary was suppressing this report. In the November annual report, however, the Board referred to this earlier statement, saying that in it the following opinion had been expressed:

The Navy of the United States should ultimately be equal to the most powerful maintained by any other nation of the world. It should be gradually increased to this point by such a rate of development year by year as may be permitted by the facilities of the country, but the limit above defined should be attained not later than 1925.

On the 22nd, Henry A. Wise Wood, a member of the new Naval Advisory Board, of which Mr. Edison is chairman, resigned, saying in his letter of resignation, address to Secretary Daniels, that he desired to be "free to attack the thoroly inadequate, and therefore dangerously weak, naval and military policy of the President," as expressed in the recommendations of Secretary Daniels and Secretary Garrison. The Secretary of the Navy, he added, had withheld the Board's July report. In his long letter there was much emphatic criticism of the plans of the Administration. Mr. Wood is president of the American Society of Aeronautic Engineers.

Secretary Daniels on the 24th gave to the public the General Board's July report. It recommends an expenditure of \$265,521,000, instead of \$100,000,000, for new construction in 1917, saying this would be an adequate program of the expenditure and should be "continued in subsequent years on a similar scale." The present session of Congress, in the opinion of the Board, should provide for eight dreadnoughts, and this rate should be increased hereafter, in order that at least 48 dreadnoughts may be begun in the next six years and completed by 1925. This program would require an expenditure of \$1,593,126,000 for new construction alone in the next six years, or about \$1,000,000,000 more than the sum needed in five years for the Administration's plans. The list for one year, besides the eight battleships, includes 37 submarines, 28

destroyers, 6 gunboats, 6 scout cruisers and a dozen ships of other kinds. The President of the National Security League, Mr. Menken, after making inquiries and attending conferences in Washington, says the prospect is uncertain because of a lack of agreement in Congress about the legislation relating to the defense plans. There is said to be little support for the proposed Continental Army of 400,000 volunteers.

Prices and War Orders

Owing to the demand for war supplies, and also to embargoes on the exportation of certain products to this country, remarkable advances in prices are reported. Bromides, used in the treatment of nervous diseases, are \$5.50 a pound, altho the price before the war was only 25 cents. Permanganate of potash has risen from 7 or 8 cents to \$1.75. The effect of the advances in drugs and acids has been, it is said, to multiply the cost of a considerable number of druggists' prescriptions by twenty. The price of platinum, \$41 an ounce a few months ago, is now \$100. Copper was 13 cents a pound one year ago. Recently the price has been rising, and last week it was 21½ cents, the highest figures reached in nine years. The price was affected by a contract, signed by the British Government, for 135,000,000 pounds, to be supplied by three or four mining companies. This is the largest single order ever known, and the price was about 21 cents. Large quantities of this metal are used here in the manufacture of ammunition. An advance in the price of crude petroleum has been accompanied by higher prices for gasoline. Oklahoma crude has risen in a year and a half from 40 cents to \$1.20, and Pennsylvania crude from \$1.35 to \$2.15. For gasoline, selling at 13 cents a gallon when the present year began, 21 cents must now be paid. Great quantities are used here in automobiles, farm engines and motor boats. There is also a demand from abroad, for use in the many millions of dollars worth of auto trucks we have exported to the Allies.

Among the new war orders is one given to Pennsylvania foundries by the French Government for 100,000,000

hand grenades, and the British Government is in the market for such munitions. Orders for suits of woolen underwear and sweaters are taxing the capacity of many mills. A recent lawsuit for a commission relates to a Russian order for \$6,000,000 worth of motor trucks, and another similar suit asks for a commission of \$282,000 on a sale of 3,000,000 pairs of boots to Russia. There were reports that from France the Midvale Steel Company had received a \$28,000,000 order for shells and one of \$45,000,000 for guns of large caliber. In Canada, where the industry has been developed by the British Government, 320 companies or firms are now at work on war orders.

Labor Movements

There are indications that the first part of the new year will see a widespread movement by organized labor for a reduction of hours and an increase of wages. Prominent in this movement will be the demand of the four railroad unions, the brotherhoods of engineers, firemen, conductors and trainmen, for an eight-hour day, with time and a half for overtime. The demand has been formulated by the four executive councils, and members of the union, about 400,000 in number, will have sixty days to vote on it. Almost unanimous approval is expected. Present contracts or agreements will expire in May. One of them, the result of an arbitrators' award, will end on May 16. This award was quite unsatisfactory to the employees, and prominent union officers say that there will be no arbitration this time. Every railroad in the country will be involved. It is said that eight hours will be demanded by 700,000 coal miners. A strike of 70,000 makers of shirtwaists is predicted. In New York last week 6000 umbrella makers decided to ask for a week of forty-eight hours and a wage increase of ten per cent, and 15,000 girls in the millinery trade voted to demand a week of fifty hours. Four-fifths of the 4000 waiters on strike at East Side restaurants in that city have been successful, and 10,000 on the West Side are now to be called out. The demand is for a week of sixty-four hours, an increase of ten per cent, and recognition of the union.

The Texas and Pacific Railroad Com-

CANADA'S THIRD TRANSCONTINENTAL SYSTEM, THE CANADIAN NORTHERN

To the east is a short line from Capreol to Ottawa and Montreal, on which the track is laid but operation has not commenced, another from Toronto to Ottawa and from Montreal to Quebec, beside the Halifax and South Western Railway in Nova Scotia. The dotted lines are routes proposed or under construction. The short-haul low-grade line from Alberta to Vancouver will take much of the traffic now moving eastward to the lakes. Transcontinental service from Toronto to Vancouver commenced in November, 1915. See the article on page 18

pany has added \$14,000 a year to the wages of its telegraphers, and increases ordered by the Brooklyn Rapid Transit Company affect the pay of 7000 men. A company in Providence that makes machinery used in the manufacture of shells has added an increase of five per cent to one of the same value granted in August

Announcement is made by the American Federation of Labor that its program of legislation to be sought in Congress includes the following: restriction of immigration; old age pensions and retirements; an industrial education act; eight hours for interstate railroad telegraphers; a compensation act for interstate railroad employees and workers in the District of Columbia; additional safety laws; prohibition of goods made in whole or in part by convicts in foreign countries; prohibition of the interstate transportation of goods in the manufacture of which the labor of children is employed. The Federation's executive council has instructed subsidiary organizations to begin a campaign for legislation against the use of armed guards, supplied by detective bureaus, by corporations when a strike is in progress. These "private armies," it says, "must be legislated out of existence." In New Jersey the Federation is exerting its influence against the proposed bill for a state constabulary.

The Change in Mexico Altho Villa's generals signed the peace agreement with representatives of Carranza, Villa himself denounced them and remained in the field with a few hundred men. The agreement provided for amnesty to all of his soldiers, 4000 of whom surrendered, the reception of Villa in the United States as a political refugee; a transfer of the local governments in Villa's territory, and the addition of his men to Carranza's army. The governments at Juarez and in the State of Chihuahua were transferred, but Villa, after his small force had been whipped by General Trevino, disappeared, and at the end of last week had not been found. Altho assurance had been given that his extradition from this country for any political offense would not be permitted, he feared arrest for his crimes. His brother, Hippolito, had crossed the line and been placed in jail at El Paso

for stealing cattle and getting money on worthless checks. It was reported that Villa would go to Cuba, and then to Argentina, where he has bought a large tract of land. Before the peace agreement was signed he confiscated the great Babicora ranch of 1,000,000 acres, owned by William R. Hearst and his mother and situated in the State of Chihuahua, and took the cattle from it. Nearly all of the employees were made prisoners, but one escaped to tell the story in El Paso, after a journey of nine days. Some weeks earlier, Villa had looted silver and copper mines in which Congressman Sherwood, of Ohio, has an interest, and had killed several of the miners. It is estimated that the losses suffered by foreign interests in Villa territory exceed \$50,000,000. After the peace agreement a party of Villa's soldiers, returning hungry and destitute to Juarez, looted the shops there, and in the course of the ensuing riot an American railroad brakeman on Texas soil was shot and killed.

In the Mexican capital there are not less than 30,000 cases of typhus fever, and there are also thousands of cases in Puebla and Pachuca. On the 23d

three cases were found in Laredo, Texas, the infection having come up on the railroad. Some months ago the American Red Cross withdrew from Mexico at the request of Carranza, who said that its services were no longer needed. The Red Cross is now willing to return and with the aid of the Rockefeller Foundation, to stamp out this typhus epidemic, as the similar epidemic of more than 40,000 cases was stamped out by the same agencies in Serbia. Our Government some weeks ago sought the consent of Carranza for such an attack upon the disease. At the end of last week his response had not been received.

The Catholic Archbishop of Oaxaca sends word to Cardinal Gibbons that confessions and the taking of collections in churches there are prohibited. Carranza, asking his Governors for reports concerning church property, asserts that all of it is owned by the national Government. Zapata has put to death publicly in Cuautla General Rafael Liz, the leading artillery expert in Mexico, and his staff. General Liz had been assisting Zapata, but the latter learned that he was about to accept Carranza's offer of amnesty.

The Danish West Indies Reports from Denmark say that Councillor of State Hageman recently made the following remark about a suggestion that the Danish islands in the West Indies should be sold to the United States: "If the question of selling the Danish West Indies should arise again I am sure that it would receive favorable consideration, as it is useless to continue spending large sums without gaining any benefit." It is not known whether any proposition from Denmark has been received at Washington.

A treaty for the cession of the islands to the United States was approved by our Senate thirteen years ago, and by the lower branch of the Danish Congress, but the upper house rejected it. Such a transfer of the islands has since been a subject of consideration. An article on the question appeared in The Independent last week, December 27.

BOOKER T. WASHINGTON'S SUCCESSOR

Major Robert R. Moton, twenty-five years commandant at Hampton Institute, and a close friend of Mr. Washington's, has been elected principal of Tuskegee

FROM STATE TO STATE

ARKANSAS: Federal Judge Trieber has decided that the Arkansas Railroad Commission's distance freight tariff No. 5 is confiscatory as it applies to the St. Louis & San Francisco and the Kansas City Southern railroads. He declined to grant an immediate injunction against the commission because a similar case is soon to be decided by the United States Supreme Court on appeal taken by the state, but in the meantime the roads will continue to operate under the tariff they are now using—a tariff approved by the Federal Court. The decision applies only to the two roads named.

IDAHO: Senator Borah will ask the present Congress to set apart 145,000 acres in the heart of Idaho to be known as Sawtooth National Park. These acres include one of the wildest and most rugged mountain regions in this country. Last March the Idaho Legislature adopted a memorial asking Congress to take this action. The territory in the proposed park adjoins a state game preserve of 220,000 acres, which, it is contended, would add greatly to the interest of tourists to this park.

IOWA: Muscatine is to be headquarters of an important barge line to operate between St. Paul and New Orleans. Its present purpose is to handle only such freight as is too bulky for transportation by rail, but it is expected ultimately to develop a general freight service for all Mississippi River points. Mr. B. Layton, the contractor in charge of the Muscatine levee improvement work, is the moving spirit in the enterprise.

MAINE: It is believed that this is to be a record winter for Maine trappers, professional and amateur. Last winter the European war had so upset the fur market that very little trapping was done, with the result that fur-bearing animals are now greatly increased in number. Also the styles this winter, calling for extraordinary use of fur trimming, and the largely increased number of automobilists desiring fur coats and gloves have extended the demand and raised the price of pelts. The Oneida Community, which makes 95 per cent of all the game traps used in the world, reports that its sales there indicate that nearly everybody in the game sections of Maine is going into trapping.

MISSOURI: A steam railway in this state recently made application to the Missouri Public Service Commission for an increase of its passenger and freight rates. The commission, deeming the increase just, but doubting its right to grant a rate higher than the statutory one, went to the Supreme Court of the state and got a favorable decision. Thereupon it granted the application, with the result that this railway is now charging higher rates than those prescribed by the Legislature which created the commission. Since most of the railroads cen-

tering in St. Louis have gone into the hands of receivers, the people and press of the state are generally applauding the commission's act.

MONTANA: What is described as the tallest and largest chimney in the world was recently completed at Great Falls for a smelting company. It was built for the very practical purpose of carrying gases off to a great height, but it serves also the purpose of a show place, attracting many persons long distances to see it. The chimney proper rises 506 feet above its foundation, and altho it tapers 8 per cent in the first forty-six feet, seven per cent in the next 180 feet, four per cent in the next 100 and two per cent in the remaining 180 feet, its internal diameter at the top is just fifty feet. These variations in taper, adopted to obtain the desired bearing pressures, due to both weight and wind loads, give the chimney a very graceful appearance despite its enormous size.

NEBRASKA: The people of Kearney and Buffalo counties have adopted a new way to get good roads. They recently held a six-day fair at Kearney to which nearly everybody in the two counties contributed either money or some article which was sold by auction. Merchants donated goods from their stores and farmers contributed grain, live pigs, chickens and all sorts of farm products, and much fun, to say nothing of money, was realized at the sales. Also each of the farmers living along the twenty miles of road to be improved gave two days' work upon it. It is said that not one farmer refused to do his share either in the matter of work or in making contributions.

NEW HAMPSHIRE: As a result of a movement started at the recent Merrimack County Family Gathering in Concord that city expects soon to have a public cold storage plant, the first in the state. A committee then appointed is said to favor the project, as giving to merchants and farmers as well as to citizens in general a means of storing products at times when the prices are low and drawing on them when the prices are high. Another argument advanced is that such a plant would give the people a place for storing their furs during the summer.

NEW JERSEY: The ship canal across New Jersey is believed to be a part of the plan for national defense in the minds of many members of Congress. Its strategic value as an inland protected water course between the bases of Philadelphia and New York has been recognized by military and naval experts, it is said. As the case now stands the enterprise will not become a Government project until New Jersey purchases the right of way and pledges itself to liquidate any damages due to the taking over of water power. But it is believed the Legislature will take the necessary steps early in its next session to accomplish this.

NEW MEXICO: One of the most noticeable features of the recent state fair in New Mexico was the surprise expressed by people of different sections of the state at the variety, excellence and cheapness of products of other sections. Never before, it seemed, had the several parts of the state come so close together. Each section had subsisted on its own products and those imported from other states. As a result of this new knowledge a state commercial body is forming, having for its chief purpose the bringing about of closer trade relations and interchange of products among the different parts of the commonwealth.

NORTH DAKOTA: Beavers, which are protected by law in this state, have become so numerous as to be a menace to timber lands and a nuisance to farmers in many parts. Old settlers who remember when the trapping of these animals was the principal industry of a large portion of the state say there are as many beavers now as there were then. Along the shores of creeks, where timber is most abundant, beaver dams are only a few feet apart, ranging from three to thirty feet in length and from two to four feet in height. These require large contributions of trees, the result being that most of the groves are thickly dotted with stumps.

OHIO: Credit is given to state and local boards of health by the Ohio Registrar of Statistics for the decreasing mortality in the cities of this state. His figures show a steady decrease in those cities which during recent years have given the most active support to these boards. While Cleveland during these years has shown the lowest death rate among the larger cities of the state, the decrease from year to year has been about the same in Cincinnati, Columbus and Toledo. Cleveland's rate for the last year was 12.7, while for the year before it was 14.1. In the same period Cincinnati's rate dropped from 17.2 to 16.1; Columbus's from 15.3 to 14.7, and Toledo's from 16.4 to 15.9.

OKLAHOMA: A sale of segregated coal lands and unallotted lands in Eastern Oklahoma is to be made by the Government this month. One person may purchase 160 acres of the agricultural land and 640 acres of the coal land, suitable only for grazing. Minimum prices range from \$1 to \$25 an acre, 25 per cent to be paid in cash. Bids may be placed in person or by authorized agents. The lands lie in the reserves of the Choctaw and Chickasaw nations, and information concerning them may be obtained from the superintendent of the Five Civilized Tribes at Muskogee.

OREGON: A committee of the Portland Chamber of Commerce appointed to consider methods of relieving conditions of unemployment recommends that an effort be made to prevent the suspension of construction work on state, county,

municipal and individual enterprises at the beginning of winter. The committee says this suspension is a result of habit rather than of necessity, since in the mild climate of the Pacific coast more than 75 per cent of the work which is now discontinued at the approach of winter could be carried on the year round, thus stabilizing the employment situation. The report refers specifically to many public and private operations which are unnecessarily and uneconomically suspended at the beginning of winter merely because the habit of doing so, formed in more rigorous climates, has been brought here without reason.

PENNSYLVANIA: Work has begun on the survey, provided for by the last Legislature, to extend the park system of Philadelphia and make it, so Pennsylvanians say, the finest in the United States. In Fairmount the city already possesses the largest park of the kind in the world, and now a chain of surrounding parks is to be connected by broad boulevards with this great pleasure ground. The work now in hand is an extension along the banks of the Wissahickon to Fort Washington. Under the new law the commission may acquire the necessary land by gift, purchase or condemnation, but since the route lies thru many wealthy estates which will be benefited by the extension, it is believed a large part will be donated. The extension includes those two historic spots, Fort Hill and Militia Hill, which constituted old Fort Washington.

VERMONT: Interest in apple growing in Vermont is steadily increasing. The state has now four of the largest apple orchards in New England and many other extensive ones are in prospect. This awakened interest is largely due to the efforts of the Vermont State Horticultural Society and the State Publicity Bureau. A great deal of favorable attention was attracted to this industry by the campaign made at the time of the recent fruit show in Boston, when large advertisements of the Vermont apple exhibit appeared in the Boston newspapers and more than 5000 of the apples were given away in a single day to as many visitors at the show.

WISCONSIN: The hydro-electric operation which the Wisconsin-Minnesota Light and Power Company is undertaking on the Chippewa River at Paint Creek is one of the largest pieces of construction for the development of electric energy ever attempted in the Middle West. The dam is to be sixty feet high, with a spillway 100 feet long and will impound water over 9000 acres. Six turbines of 7500 horse power each and six electric generators with rated capacity of 6000 kilowatts each will be installed, and seventy-four miles of transmission line will carry the current to St. Paul and Minneapolis.

O. F. Browning

A WALKING DELEGATE OF AMERICAN DIPLOMACY

COLONEL E. M. HOUSE, INTIMATE FRIEND AND ADVISER OF PRESIDENT WILSON, WHO IS LEAVING FOR EUROPE TO ADVISE WITH OUR DIPLOMATIC REPRESENTATIVES IN THE BELLIGERENT NATIONS, BOTH AS TO WASHINGTON'S ATTITUDE AND AS TO CONDITIONS ABROAD

TRAINING OUR YOUTH FOR DEFENSE

BY GEORGE E. CHAMBERLAIN

UNITED STATES SENATOR FROM OREGON AND CHAIRMAN OF THE COMMITTEE ON MILITARY AFFAIRS

MILITARY efficiency — by means of compulsory training for American young men between the ages of twelve and twenty-three years—is the object of the bill which I have introduced and which has been referred to the Senate Committee on Military Affairs. This bill is a modification of the Swiss military training plan, and would provide an army and navy reserve of young men who complete active training for a prescribed period.

Briefly, the bill provides for a citizens' cadet corps of boys from twelve to seventeen years of age. From eighteen to twenty-three years of age the cadets would become members of the citizens' army or the citizens' navy, as they might elect. The citizen force thus organized would be subject to call by the President of the United States in time of war, threatened war, insurrection, rebellion or when the public safety requires. When thus mobilized and called into the service of the United States, the individuals shall receive the same pay and allowances as may be authorized by law for corresponding grades in the regular army or navy, and those who might incur disabilities in line of duty while in active service or while actually undergoing training, and while proceeding to or returning from training centers and camps of instruction, shall be entitled to pen-

sions as provided under existing laws.

For the first two years ninety hours of drilling without arms would be required, and this instruction could be given in public or private schools. The third year requires ninety hours and at least ten continuous days in camp. The training during this period shall include field exercises and target practice, in addition to other training that may be prescribed. The training for members of the citizens' army shall be not less than 120 hours, or twenty whole days each year, and shall continue for six years.

All able-bodied male inhabitants of the United States who have resided within the continental limits for twelve months who are citizens of the United States or who have declared their intention to become citizens, shall be liable to be trained between the ages of twelve and twenty-three years.

I am convinced that this military instruction serves the double purpose of being useful in a national way and of being useful to each individual in a physical and moral way. To make it attractive to boys and, at the same time, to keep this military instruction from interfering with their school attendance, the bill provides that the necessary training for the Citizen Cadet Corps and for the Citizen Army and Citizen Navy may

be given in public and private schools, academies, colleges and universities, in the organized militia or naval militia of the several states, in organizations of Boy Scouts or similar organizations, provided that it conforms to the prescribed training for the corresponding years, is of equal annual duration, and is so certified by the district commandant of the district in which such instruction is imparted.

Penalties are prescribed for persons who, without lawful excuse, fail to register or who evade or fail to render the personal service required by the act, and they become ineligible for employment in any position of trust and profit created and authorized by the Congress of the United States. Employers who prevent, or attempt to prevent any employee who is serving or is liable to serve from registering or rendering the personal service required of him, or who penalize such employees in the way of reduction of wages or dismissal, are subject to fines of from \$50 to \$500.

This bill is strictly one in favor of efficiency in any and every respect. Every young man is to join the branch of the service which he prefers. The military training given each individual under its provisions will, at the very outset, be of great physical and moral advantage.

Washington, D. C.

BUYING THE ULTIMATE CAR

BY BRONSON BATCHELOR

BUYING a motor car ten years ago was something of an adventure. Sometimes one got a car; more generally it was likely to be a fine assortment of trouble under a highly finished, beautifully upholstered body. A man bought an automobile to satisfy a child-like longing for the toy; or because his wife had social ambitions. He delivered himself eagerly at the nearest salesroom, and a blind, deaf and dumb agent could have done the rest.

Selling an automobile today is a much more difficult thing. The evolution of buyers has been as great as that of motor cars. A decade's experience has shown that there are gold-bricks in cars as in real estate and mining stock; and now, when

the public invests \$500 or \$3000 in four wheels, it does so not with infantile trustfulness, but with a Missourian "show me" attitude.

The reason is that the automobile has lost much of its novelty, much of its glamor of romance. Instead, like electric lights, sanitary plumbing, or a furnace in the basement, it has become a necessity in more than two million American homes. People plan today to have motor cars just as they plan to send their children to college; in fact, cases have been known where the cars were preferred to the children. Last year more than 600,000 persons found that they could not do without them any longer.

Yet in this state of things is another fact, equally significant. For

those 600,000 cars the public paid only the same half billion dollars it had spent on 500,000 machines the previous year. It gained in quality, in quantity, and got a fifth more for its money. People are learning to discriminate in automobile values as in other necessities, and merit brings its own reward.

But the task of pointing out the merits among so many contenders for the honors, makes the manufacturer a sharer in the problem of salesmanship. For it is not enough that the public must think merely in terms of automobiles; the maker must see to it, by constant advertising and unremitting efforts, that they think in terms of his own particular product.

It is difficult to recall, from the

modern sophisticated point of view, what a simple, trusting soul the automobile buyer was a dozen years ago. With the perfected motor of today, it is so easy to forget man's helplessness before its prototype, the terror that attended its operation, the constant dread that the mysterious mechanism would refuse to perform its functions. Yet to appreciate the modern sales-problem one needs to contrast that era with this.

The garageman of that day, as he is remembered now for the repairs he was called on to make, seemed a first cousin to the burglar. Always extracting something for gasoline, oil, prestolite, tires, and a thousand what-nots, he presented bills each month that were as long as Tammany ballots.

Those were the days, too, of the "tours," by which one was expected to prove his membership in the motorists' fraternity. The departure was something of a ceremony: the family, begoggled and bedustered, squeezing itself thru a narrow back entrance into the sardine-tin the French had christened for us the "tonneau"; the luggage strapped on the running boards, or bestowed in baskets above the back-fenders; and then the asthmatic gasps from the straining engine as the bumpity-bump journey began.

It is as a veteran of those early, amateurish, pioneering days that the automobile buyer has come into his own. And if today he is a worry to the manufacturer it is because he has had his fling of motor madness: bought cars for speed, for horsepower, for style, and for comfort. Nearly thirty per cent of sales are to previous owners. In the models they buy today, they are interested largely in one thing—efficiency.

Thus the automobile sells best which is simplest and "service proven," which has fewest parts to get out of order, which can stand knocks and wear, and still do the essential thing—go. Company after company, and car after car, have gone into the discard, because those behind them failed to perceive that the public, tired of makeshifts, wanted a car that would last—the ultimate car.

For those manufacturers who have seen the public mandate it has set a new problem and a new opportunity. They have had first to simplify their product, lop off every non-essential and at the same time give it the durability and reliability of a finely attuned watch. This the public insisted on to insure freedom from chauffeurs it could not afford, and repair-shops that never repaired.

And the resultant dependability and efficiency of the medium, and even the low-priced, car is as much an American engineering triumph as the building of the Panama Canal. No manufacturers in the world can compete with ours in quality, quantity, or price. As a result, even before the war, the American car was fast becoming the standard the earth over.

The standardization that came with simplification has given the manufacturer his chance. It has enabled him to embark on large-scale production, and by lowering costs and his margin of profit, make new economic groups of the community potential purchasers. Thus in five years the average price of automobiles has fallen from \$1500 to less than \$600.

Never has there been a trade romance like the Aladdin-like growth of the automobile industry in the past decade. From a mere 25,000 cars in 1905 to 703,000 in 1915, is but the first chapter of the story; there remain whole cities like Detroit, Toledo, and Flint to be put on the map; huge factories, rivaling the steel mills, to be developed; and the habits and customs of a people to be changed.

To learn how all this has been brought about, one needs only to enter a salesroom, or pick up a popular magazine. The gospel of both as preached by young and enthusiastic salesmen and ad-writers is that of the ultimate car. They no longer tell you of all the fancy stunts their cars have performed, their horsepower, or the express speed they are capable of. Instead the watchword of motor salesmanship today is economy.

Manufacturers talk now of miles per gallon rather than miles per hour; of cheapness of operation rather than initial cost. They are not only willing but anxious to prove the bona fide value of their product. Witness this sentence from a recent advertisement of one of the largest makers:

"Despite the lower price, we *guarantee* the ——— car to contain more drop forging, better upholstery, better paint and finish, greater quality than previous models." And that guarantee is more than empty talk, for the periodical in which it appeared rigorously censors and insists on the truth in its advertisements.

Instead of climbing hills and running two, three or four miles an hour on high gear, low cost records of operation are among the most popular selling arguments today. Like watches that run frozen in ice,

motor engines are kept going for days in closed rooms without cooling, to prove the quality of their metal; while others, under sealed hoods, negotiate the perils of desert and mountain roads to demonstrate the worthiness of their pedigree.

Still more convincing are the statistics of customers, showing the cost of up-keep, repairs, and supplies, compiled in the belief that Mr. Average Man's testimony is "best in the long run."

How reasonably a car can be operated today can be seen from a glance at this table, issued by the maker of one of the most popular of the low-priced cars:

	Per Mile.
Gasoline, 25 miles per gal. at .20	.008
Oil, 800 miles per gal. at .60	.0075
Tires, one set at \$12 each.....	.0032
Repairs, at \$50 a year.....	.0033
Insurance, theft, fire, etc.....	.00066
Depreciation, 25% yearly.....	.00066
Interest, 6%0016

Total cost per mile..... .02417

Similar schedules, reams on reams of them, can be produced from the files of every agency, and their cumulative effect is to prove that the cost of operation, like the cost of cars, has declined from nearly ten cents a mile ten years ago to less than three cents today. Machines representing a greater capital investment than that above can show similar economies.

This brings us to another feature peculiar to the automobile industry—the motor service department. There is scarcely a business today where the maker assumes such care of his product after it has passed from his control. Not merely does he make good defective parts—which has long been the practice of most reputable manufacturers in all lines—but he pledges himself as part of his duty to his customer to a general looking after of the car.

Every conceivable kind of a device, from a year's free supervision to coupon books good for so many hours' work, has been adopted to prove that the manufacturer is interested not merely in making a sale, but in seeing that the customer gets service from his car.

One reason for this service of the manufacturer is that the average buyer, even tho he has operated a car, is generally ignorant of the mechanical principles underlying the automobile. To acquaint its customers with these fundamental things one company has adopted the plan of giving seven thoro inspections within six months after a sale.

A complete record is made of the mechanical condition of the car, and

the owner is asked to review this record with the Service Manager, who points out to him how he should handle the car to avoid the repetition of whatever faults have been found. Within the six months, any man, whether mechanically inclined or not, is thus enabled to know how to handle his car intelligently and wisely.

Or, again, in the matter of accessories, how a decade has revolutionized the customs of a trade! It used to be that when a man paid \$1500 or \$4000 for a car, he promptly had to spend another \$100 or \$400 in fitting it out with lights, a top, extra seats, a horn, and on some models, even its first set of tires! Today all these essentials, and scores of other little refinements, are furnished with practically all cars. Turn to the specifications of any one of two dozen or more popular makes, and you will see items like these:

"Double lubrication; full semi-elliptic or cantilever springs; special floating axles, running on special ball bearings; double ignition system; self-starter; electric horn and head-lights, wind shield built in body; speedometer; demountable rims, and tire-carriers in rear; adjustable footrests; robe-rail"; even down to the license bracket.

Each one of these features represents the product of some highly specialized side-line of the industry, perfected thru years of study, yet now made a part of the car, and the cost assumed by the motor company.

For all this—the perfection of the car and its accessories—despite what trust economists may say to the contrary, competition has been largely responsible. Under the stimulus of a free market, open on equal terms to all, the automobile busi-

ness has developed, and over-developed, until each year the selling of the output becomes more of a problem.

Only by adding to the comfort and convenience of the public could makers win an outlet for their wares. And the public, jealous of its new-found independence, condemned for all past sins and commended for new joys. It picked its favorites here and there, and as it did so, unconsciously it performed one of nature's old functions—that of selection—and brought nearer the ultimate car.

And today the ultimate car is practically here. Different makers have their different selling points, of course; but stripped to essentials, they aim at the same result, which is—to give the buyer the least possible worry for his money.

© Paul Thompson

TO SPOIL THE EGYPTIANS

The Arabs and Turks of Palestine are being called to the colors at Jerusalem to form an army under German officers for the invasion of Egypt. It remains to be seen whether this new and reversed exodus will get thru the wilderness of Sinai in less than forty years.

THE TEN-MILLION BUSHEL WHEAT ELEVATOR OF THE CANADIAN NORTHERN

A NEW GATEWAY

BY GEDIE

WESTWARD the course of empire takes its way. But, in Canada, at least, the freight moves eastward. As the great West has been built out of the wilderness into the world's granary, the east-bound water-route to the Atlantic thru the Great Lakes, and the land routes to the north and south of the Lakes that are called into play when navigation closes, have been developed to carry the grain to Liverpool. Over 225,000,000 bushels of wheat are available for export from this year's great crop. The elevator pictured here, with the tremendous capacity of 10,000,000 bushels, suggests the scale of the traffic.

Now that picture is not as inappropriate in an article on a gateway to the Pacific as it looks, and for two reasons. First, there probably never would have been this particular gateway—the Canadian Northern Railway, 0.7 (we're coming to that later)—if the grain traffic from the prairie provinces passing thru this and similar elevators had not laid the foundation for the further extension of the road east and west. The Canadian Northern was a tangle of tracks in central Canada years ago; its transcontinental service is brand new. The system may be likened—see the map on page 12 showing most of the lines—to a substantial and active dog with a

new-grown tail in each direction. Just now the dog does all the wagging.

The other reason is that the big elevator stands for a condition of things which the new lines are going to change—and in that change lies the chief significance of the road to Canadian trade. But we're coming to that later.

William Mackenzie and Donald Mann, one a school teacher to begin with, the other a railroad navvy, are the great railroad adventurers of present day Canada. Sir William, as he is now, president of the Canadian Northern, is the wizard whose prowess in getting capital is the talk of the country. Sir Donald is the construction expert. There wasn't much capital when the road began, in 1896, with a line of tracks north from Gladstone, in central Manitoba. The road was built cheaply, piece by piece, "build a mile and mortgage it to build the next." Light rails were laid; improvements would have to come

RAILROAD AT PORT ARTHUR, ONTARIO. IT IS THE LARGEST IN THE WORLD

TO THE PACIFIC

S SMITH

out of earnings. They have come, too, tho there are pieces of track still eloquent of pioneer days. Like all Canadian railroads, the Canadian Northern leaned heavily on Government aid. Tho the later comers have had nothing like the sweeping land grants given to the Canadian Pacific, they have been generously treated. The road was built, so a genial Liberal bureau chief in one of the provincial governments remarked, by a policy of taking by way of subsidy "everything that wasn't hot or tied down." But as I said, he was a Liberal, and it was the Conservatives who decided in 1914, after the road had already enjoyed Government credit to the extent of \$280,09,705, to guarantee bonds for \$45,000,000 more to complete transcontinental construction. The Government holds \$40,000,000 of the road's hundred millions of stock.

But to get back to the elevator. It was put up in 1901, the year before service was started across Manitoba to Port Arthur, with a capacity of 1,500,000 bush-

els. Three years later it was increased to five times that size. In 1912 it was again enlarged to its present capacity. Meanwhile the system was growing, too. Lines were bought and built in Quebec and Nova Scotia, and the rails crept north from Toronto along Georgian Bay. Westward, the main line reached Edmonton in 1905, the first railroad to enter that surprising city that grew 848 per cent from 1901 to 1911, and then jumped in two years from 25,000 to sixty or seventy thousand.

One link was forged quickly. The Canadian Pacific had leased the Qu'appelle, Long Lake and Saskatchewan Valley Railroad and Steamboat Company's line from Prince Albert thru Saskatoon to Regina. The lease expired; the big system felt secure in its control and offered to renew on terms the owners did not like. It was thought to be pretty poor country, anyway. At five o'clock one day in 1906 the road was offered to the Canadian Northern. By midnight the deal was closed. The next year that road carried ten million bushels of grain. In the East the last spike was driven in the Montreal-Port Arthur line on January 1, 1914, where the link thru the New Ontario forests was the last to be completed. A year later the line to the coast was spiked thru, making it possible to operate approximately 10,000 miles by the end of 1915.

Consequently there was a new one on the train which I boarded in Toronto on November 19, 1915. It is, for the first time—

Winnipeg—Edmonton—Vancouver The train was as new as the sign. The Pullman showed here and there a convenience one had never noticed before. The inside of the baggage car shone like a bride's kitchen.

A night's run takes us to Capreol, and from there we cut thru the New Ontario wilderness, where there is yet little but trees, Ojibways, big game, and mining prospects. At Winnipeg the service breaks, and a new train pulls out for Vancouver at night. Between Winnipeg and Edmonton we are on a long traveled route, thru country rougher and more wooded than the bona fide prairie to the south, tho with some great stretches of flat country.

But beyond Edmonton lie the Rockies. Here is the newest part of the road; here it begins to be unique. Three or four hours beyond the city the mountains can be seen—a blue jagged line far over the purple distances of the roughened prairie. We climb easily over an excellent road-bed. At Entrance, where we pass into Jasper Park, a Dominion game and forest preserve, we are fairly in the superb country that makes the Canadian Rockies dear to the "See America First" traveler.

Yellowhead Pass, like Tête Jaune Cache and all the Jaspers, is named for a Scotch fur trader, Jasper Hawes, who was here in 1811 or 1812 for the old Northwest Company. It is the key to the new railroad's usefulness. Not only does it allow the road to cross the mountains at a maximum height of 3706 feet (the Canadian Pacific goes 5321, the Santa Fé 7421, and the Union Pacific 8200), but it made possible the astonishing feat of building a road over the Rockies with maximum grades of 0.5 per cent westward (six inches in a hundred feet) and 0.7 per cent eastward (eight and a half inches per hundred feet). Like the Grand Trunk Pacific, which has practically the same advantages, the road follows in general the route first located by the Dominion Government in the seventies. It was intended for the Canadian Pacific, but it was then pretty far north to seem feasible, and the more southerly route was chosen, tho it led at first to grades of 4.4 per cent and even now, after new engineering exploits, is burdened with a maximum of 2.2 per cent, and the better pass was left to this century for utilization.

Once over the Continental divide, we begin to follow down the Fraser River. Mt. Robson, whose 13,067-foot

peak, the highest in Canada, is pictured on the cover of this number, is in view for nine miles of the journey, and if well-intentioned meddlers in Eastern Canada do not succeed in getting its name changed to Edith Cavell Mountain, Mt. Robson will remain the glory of the railroad.

The most difficult construction work came not in the Rockies, but down thru the Thompson and Fraser River Canyons, which carry the line southwest into Vancouver. The milky green streams rush along between precipitous and weirdly configured rock walls for many miles. There are numerous tunnels, and the cliffs that are not tunneled are sufficiently threatening. One tunnel stood serenely for eight months and then simply slid off—roof and side—into the river below! The construction gangs tackled what was left, leveled it off, and now there is open track. Twelve miles from Vancouver the track joins that of the Great Northern, and for the present trains enter Vancouver by the borrowed route.

But Canada has already two transcontinental lines, the old Canadian Pacific and the new Grand Trunk Pacific-National Transcontinental Railway system. Does it need another? To the bald question the answer is probably, "No—not yet." But it is worth noting just what the new line offers Canada. In two sections new country is being opened.

One is in the great waste of New Ontario. For 150 miles west of Sudbury the road runs thru mineral country with nickel, copper and iron. (chiefly magnetite ore). The nickel deposits in the Sudbury district are the greatest known in the world. There is enough iron along the line between Sudbury and Winnipeg, it is estimated, to make 53,000,000 tons of steel. In the form of 80-pound rails that would build over one hundred four-track railroads between New York and Chicago. For 250 miles beyond the mineral belt the road runs thru the "clay belt," where the deep clay soil produces phenomenal berries, fruits and vegetables and will support a large farming population when it is cleared. Meanwhile there is a tremendous store of timber. There are said to be 10,000,000 cords of pulpwood tributary to the line—enough to make 7,500,000 tons of news print—which would keep the *New York Times* going, at its present circulation, for 205 years.

On the other part of the system, in British Columbia, the promise of development is similar—but the figures are larger. For instance, the stand of commercial timber in the province is estimated at 400,000,000,000 feet! There are great min-

eral values, and along the river valleys one finds good farm and fruit lands.

But the important thing about this British Columbia line is that it provides a new outlet for the prairie. While the new line swings far to the north of the Canadian Pacific, its mileage between Winnipeg and Vancouver is only 116 miles greater than the old, and as we have said, the grades are incomparably better. The Parliamentary Special, which ran from Quebec to Vancouver in October to celebrate the completion of the route, was a fifteen-car train, weighing, including the engine, 1200 tons. One locomotive—and that not of the most powerful classification—took the train over the mountains at thirty or forty miles per hour.

Canadian Northern men are very proud of that, and travelers who remember the two engines puffing away with a shorter train over the Canadian Pacific will appreciate their satisfaction. The Canadian Northern can haul thru the mountains freight trains that are long enough to pay, and can therefore offer shippers of the Western prairie provinces rates that will make it desirable to send their produce to Vancouver instead of Port Arthur or Duluth. Of course the route for grain from Vancouver is via the Panama Canal to Liverpool. Vancouver is never closed to navigation; the lake elevators are stuffed full of storage wheat all winter. Edmonton is 773 miles from Vancouver, 1261 miles from Fort William—the rail haul is cut by a third. Vancouver, which has rather too hopeful visions of being a 200,000,000-bushel wheat port and already has a 1,350,000-bushel government elevator, expects to receive shipments from points as far east as Moose Jaw in southern Saskatchewan. That is probably too much to expect, but the crops of Alberta alone were worth nearly \$70,000,000 this year, and all of Alberta, once the mountain barrier is discounted, is naturally tributary to Puget Sound.

The Canadian Northern, in a word, is the natural route for the exchange of lumber, grain and manufactured imports between the Western and particularly the Northwestern prairie country and Europe and the East. Its grades give it a tremendous advantage over the Canadian Pacific; its choice of an established port, Vancouver, gives it an advantage over the Grand Trunk Pacific route to Prince Rupert. Something is bound to happen to the monopoly enjoyed by the eastern route. The newest transcontinental is going to serve Canada both ways.

THE WORLD OVER

An African Elephant Hunt

The honor of obtaining the record pair of elephant tusks in the Mount Kenya region of British East Africa, a "land of promise to the elephant hunter," belongs to a woman. It was Mrs. Carl E. Akeley who braved the dangerous country of the Wakikuyu and followed the hunt thru the jungles, "up and down the slippery trails worn in places by the passing of generations of elephants into giant stairways" and in the dismal bamboo forests, until thru the mist the hunters finally spotted "the indistinct outline of the great, rounded back of a 'big un.'"

"We crept carefully forward," says Mr. Carl Akeley in his description of the hunt in the *American Museum Journal*, "to within forty feet of where the giant stood. Breathlessly we waited until, as he moved slowly forward, there came into view a splendid pair of tusks, followed by the massive head and great, flapping ears of the best elephant we had seen. Bibi, as the na-

tives called Mrs. Akeley, raised her rifle and with steady aim placed a bullet in just the right place.

"The news of a kill spreads rapidly among the native Wandorobo hunters, and in a short time they had gathered from all quarters. Little camps of men, women, and children were scattered all about the place, while over each fire festoons of elephant 'biltong' were being cured for the future. The killing of an elephant is a blessing to these poor wretches.

"Finally six days had past, six days of exhausting, disagreeable work; but the skin, reduced by shaving to half its original weight, and thoroly salted, had been made into three oblong packages and firmly lashed to long poles, ready for the porters, four or more for each load, to begin their heart-breaking journey out of the forest."

But meantime the gun-bearers had been scouting for more elephants and brought the news that they had found a herd only two miles from camp. Luck was with the hunters again here, for they succeeded in tracking the game and Mrs. Akeley surpassed her previous shot by bringing down the biggest prize of all—with tusks nineteen and a half inches in circumference, and eight feet ten inches long, right and left weighing, respectively, one hundred and fifteen, and one hundred and twelve pounds—the record elephant for a woman.

A Railroad on End

The rack road up Mt. Pilatus, one of the loftiest peaks of the Bernese Alps, in Switzerland, is said to have the steepest grade of any road in the world not operated by cables. Rising from the western shore of Lake Lucerne, it ascends 6998 feet up the mountainside to the summit.

The railroad starts from an elevation of 1450 feet above sea level and climbs 5400 feet in a distance of 15,150 feet to the top. The grade at the station of Alpnachstad is 36°. At no place is it less than 19°, and in some

Feature News Service

THE STEEPEST GRADE IN THE WORLD

it is as much as 48°, or more than half a right angle.

The roadbed is built thruout of solid masonry, capped with granite flagstones. The ties are steel channel bars, anchored to the masonry with U shaped bolts every three feet. The rails merely support the weight of the train. The rack bars are set on edge, so that the cogs are vertical—an arrangement made necessary by the fact that on the steepest grades cog-wheels would have a tendency to climb out of any horizontal rack.

Engine and car are built on a single frame. The boiler, six feet long, is placed crosswise of the track, so that the water level in it will not be disturbed on the grades. The speed is a little more than three feet a second, or about two miles an hour. Thirty-two passengers is the maximum capacity.

Easy Electroplating

An almost absurdly simple and easy method of electroplating, in which not only the plating-bath but all external sources of electricity are dispensed with, was devised by an English investigator, A. Rosenberg.

The plating is carried out simply by rubbing on the article to be plated a powder moistened with water. The Rosenberg process is a refinement of the old contact method in which the metal to be coated was immersed in an electrolyte, containing, for example, a silver solution. In contact with this metal a more electropositive one was placed, also dipping into the electrolyte. This metal, usually zinc, past into solution, and an electric current was generated which deposited the silver on the less electropositive metal.

In the English process the electropositive metal is employed in the form of a fine powder, and generally mag-

Courtesy American Museum of Natural History

THE PRIZE WINNER

THE FIRST BIG TUSKER—NOW IN THE FIELD MUSEUM IN CHICAGO

SCHOOLWORK THAT PAYS

nesium is used. This is mixed with a metallic salt or with the powdered metal it is desired to plate-out, and ammonium sulphate or some other ammonium salt. In order to plate a piece of metal the powder is moistened with water and rubbed over its surface by means of a piece of cloth or a brush. By this means adherent and bright deposits are obtained in about one minute, the thickness of the deposit depending upon the time employed and the quantity of powder used.

The magnesium, being strongly electropositive, reacts with the moist electrolyte, and goes into solution, causing the metal to be plated-out upon the metallic surface which is being rubbed. In other words, each particle of the powdered magnesium may be said to function as a minute anode. One of the difficulties in electroplating is to plate a substance upon itself. It is claimed that in the English process this difficulty does not occur.

The process is certainly ingenious, and will no doubt be found useful for small work, but it is hardly likely to enter into competition with ordinary electroplating for large work or for irregular articles. Nor is it likely to be employed in cases where heavy coatings of metal are required, because it would not be an easy matter to rub the powder on evenly enough to obtain uniform and thick deposits.

Building a Schoolhouse

The boys of the Manual Training Department of the Central Grade School at Klamath Falls, Oregon, are busy erecting their own building. This novel innovation in the curriculum has been recently instigated, but it is working out very successfully and incidentally proving a substantial economy in the department's expense budget.

The new building, made necessary by this year's increased enrollment, is being erected adjacent to the main building. It is a frame structure, 25 by 45 feet ground measure, and 16 feet high.

Most of the work was marked and laid out by the instructor; but the as-

sembling has all been done by the youngsters, about twenty in number. Scorning the use of scaffold or platform, they wriggle up the studding and over the rafters like so many monkeys, presenting a most unique and amusing spectacle.

The interest of these juvenile carpenters in their work is decidedly marked. Instead of going off to play at the hour of dismissal, they stay "on the job" with a strong disregard of union hours, until sent home by the instructor at supper time.

Other Cities Please Copy

St. Louis is going to try a new experiment. Music rolls are to be circulated free to the public at the public library. It is estimated that there are several thousand of player-pianos in St. Louis, and anyone who knows anything about musical human nature knows that every one of their owners is tired of playing some of his pieces and these he would gladly exchange for new ones. As the library has no appropriation to establish such a department, the music rolls must be supplied at first by the player-piano owners themselves. But it is morally certain that when the experiment proves a success the city will feel justified in financing the whole plan, keeping its own stock of rolls on hand for circulation.

Librarian Bostwick has also signified his willingness to accept phonograph records to be cataloged and distributed

in the same way, provided these are given as gifts.

Rolled and canned music is such a comparative novelty that the people have not as yet realized that it is in all essentials as worthy of public support and distribution as a book. For anything that diffuses popular education or elevates public taste is primarily within the jurisdiction of the community.

And when the time comes—as it surely will—when no home will be complete without its own moving picture outfit, then the art that is destined to rank with printing in its educational and inspirational value, must likewise be furnished free to the individual by the community.

Won't those be the great days, tho, when you can go around the corner after supper to the public library and bring home to the expectant family the latest volumes by Bergson, Wells and Harold Bell Wright (perhaps), together with a couple of Caruso records, a Paderewski Minuet roll, and a six-reel complete life of Theodore Roosevelt acted by himself?

Uncle Sam's Signature

Imagine one man devoting all his time to signing checks! That is what Frank J. F. Thiel, the Assistant Treasurer of the United States, was called upon to do in his official capacity. For with the stint of 500,000 checks a year before him he found time for practically nothing else.

Recently, however, a check-signing machine has been installed in the Treasury and Mr. Thiel's efficiency at that particular task increased more than 3000 per cent. One hundred checks in fifty-four seconds is his present rate. That means 6666 signatures in an hour, and 64,662 in a seven-hour working day. Signed by hand a good day's work would be about 2000.

Harris & Ewing

THE MAN WHO SIGNS 500,000 CHECKS A YEAR

WAS THE DOCTOR RIGHT?

SOME INDEPENDENT OPINIONS

IN our issue of November 29, we asked our readers to give their opinions on the propriety of the conduct of the Chicago physician, who, with the consent of the parents, decided not to operate upon a baby who was born in the hospital badly malformed in body and presumably defective in mind. An operation might have prolonged its life, but the baby, being unable to assimilate food, died six days after birth.

The grand jury of Independent readers to whom we submitted the case return a verdict of "not guilty" by an overwhelming majority. The letters commending the doctor's course in letting the crippled baby die are four times as many as those that condemn him and hold that every effort should have been made to prolong the life of the unfortunate child as long as possible. The doctors, who are regarded by some as hard-hearted scientists, are divided in opinion, but the clergymen, who are accused of being rigid moralists or soft-hearted sentimentalists, are almost unanimous. Every letter except one bearing a minister's name answers our question, "Was the doctor right?" by a "Yes." It is interesting to note that the Ethical Relations Committee of the Chicago Medical Society recommends the expulsion of the doctor, not, as might have been imagined, for his action in this doubtful case, but for "advertising himself" by permitting his name to be used in a newspaper account and being photographed for a motion picture weekly, which at the worst is not a question of ethics at all, but merely a violation of trade union rules.

We can only quote from a small proportion of the letters received and of these only a few sentences to bring out the many different arguments and points of view. The quotations do not, therefore, give an adequate idea of the character of the whole letters, which are often long and thoro discussions of the questions. Most of those who think the doctor did right in this case are careful to point out the danger of abuses and recommend some sort of a commission of experts to pass on doubtful cases. Almost all who mention it, repudiate with abhorrence the suggestion that the aged and incurable adults should be relieved of life by euthanasia.

We quote first from the head of the Department of Political Economy at Yale, the author of *National Vitality* and chairman of the Committee of One Hundred on Public Health:

So far as I have been able to get at the facts, I may say that I emphatically approve of the attitude of the mother and the physician. Of the many questions involved, the important one is the eugenic question. In fact the chief significance of this event lies in the recognition that the vitality of the human race must be duly considered. The fact that the incident has attracted so much attention thruout the country shows that this eugenic idea is a new one. Only new ideas are startling. I hope the time may come when it will be a

commonplace that the interests of the race are paramount. When that time comes, not only will defective babies be allowed to die a natural death, but they will, for the most part, cease being born. IRVING FISHER
New Haven, Connecticut

From the Biologist in Charge of Maine Agricultural Experiment Station and one of our foremost authorities on heredity we have:

In my judgment, it was not only biologically wise, but normally right from the highest ethical standards, to make no effort to preserve the life of the Chicago baby referred to in your editorial "Was the Doctor Right?" According to the detailed reports in the newspapers the congenital malformations in this case were of so extreme a character as to make it certain to any person of competent biological training that this infant could never develop into anything even approaching a normal human being, even granting that its life could have been saved by operation, which appears to have been very doubtful. This and like cases, however, should be regarded each on its own individual merits and not be made the basis of far-reaching generalizations. RAYMOND PEARL

Orono, Maine

The head of the Department of Sociology at Columbia and professor of the History of Civilization draws this distinction between mental and physical incapacity:

MENTAL CAPACITY THE TEST

Since Richard III, as Shakespeare portrays him, became a malcontent and enemy of the human race because he had "Been sent into this breathing world scarce half made up," the question of letting the defective baby live or die has been debated but not acted on in the modern world. In the ancient world it was acted on without debate. Each plan has been incomplete and ineffective. There should be a legal and careful determination of the kind and degree of incapacity. The idiotic child should mercifully be allowed to die. The child with a good brain, however crippled otherwise, should be saved.

FRANKLIN H. GIDDINGS
New York City

The Director of the Carnegie Station for Experimental Evolution and of the Eugenics Records Office speaks with the authority of one who has for years devoted himself to the investigation of the laws of heredity and the influence of defectives on society:

Man is a social species; in successful social species the functions of the individual must be subordinated to the best interests of the race. If, with the best knowledge available, a wise and conscientious surgeon is forced to conclude that surgical interference in a case will be to the detriment of society, such interference on his part would be anti-social. If the progress of surgery is to be used to the detriment of the race (and incidentally, as in this case, to the artificial preservation of those whom the operation of natural agencies tends to eliminate) it may conceivably destroy the race. Shortsighted they who would unduly restrict the operation of what is one of Nature's greatest racial blessings—death.

C. B. DAVENPORT
Cold Spring Harbor, N. Y.

The letter from which we quote below the closing sentence brings out a point which many others refer to:

Is it not strange that the whole country should be so shaken, almost hysterical, over

the death of a babe never consciously alive, and so callous to the degradation and shortening of life in conditions that might be remedied; to the thousands of needless deaths and tens of thousands of preventable accidents; to the millions of victims of war to which we give only a languid interest. H. E. WARNER

Washington, D. C.

As to the one-eyed, one-eared babies born, that Nature would not permit to live but for medical intervention, how can anyone possess of a drop of the milk of human kindness desire that such should survive? Handicapped from birth to death, what but pain, shame, humiliation and distress awaits them.

To cant about the sacredness of human life in the present cataclysmic waste of the most fit in Europe, and talk of "preparedness" for the same result here, is too hypocritical and ridiculous.

EDWARD BERWICK

Pacific Grove, California

Will Providence be inexorably offended if we do not make frantic efforts to save the life of a hopeless idiot? Is it true that the wrath of God will overtake us if we attempt, for instance, to limit the multiplication of the Juke family? When men finally got up their courage sufficiently to make a decided effort to control the workings of natural law, they found that the earth did not open and swallow them. The creation of modern civilization was the result.

We are breaking away from the mediaeval conception of God as a stern and arbitrary despot. We are growing into the larger conception of God as the Father, whose love is infinite toward his children, which is simply Jesus' view. We believe that our intelligent, honest, sincere attempts at improvement, instead of being contrary to, are fundamentally in harmony with God's purposes.

WALTER B. BROCK
Auburn, New York

Why shall not humanity, of which the child is a minute part, be permitted to say thru its medical representatives, "This little creature is a step backward in the progress of the race. Not only will it be unable to bear its own burden, but it will ever be a load on its parents, and after them, should it live, on a community which already is burdened with the unfortunate who are always with us. A natural death is its natural right."

EDWARD G. CLAPHAM
Fulton, New York

THE EFFECT ON CIVILIZATION

The Professor of History in Texas Christian University sends us a long and well considered analysis of the case from which, however, we can only quote the final sentences:

In the long run, the issue is: Which civilization would be the most efficient, the one with or the one without the distorted lives which are in the balance? Sentiments are not to be despised—they are to be evaluated and cultivated, so that they may help in conquering the world and subduing it. As to the general effect on men of society's preservation of idiots in order to avoid the act of killing them, or the contributory negligence of allowing them to die, this is an appeal to our experience. I always think of a great, sixteen-year-old product of this deluded moral scruple, in a family across the street from my boarding place in a Colorado town. Until I die, I shall not forget the effect it always had upon my spirits to see this great, overgrown idiot go thru his horrible contortions, mouth open, palate gone, as he leaned over the yard fence and stared into the sun.

Mr. Klein, who as assistant Secretary of the Prison Association of New York, has had large experience with the defective classes, writes us as follows:

I ask further: is it right or wrong to execute people for crime, to incarcerate for life "the habitual criminal," to sterilize the feeble-minded and insane, or permanently segregate them, etc. And I presume that by right is meant that which makes for the bettering of the life of man. I do not think it is a choice between two principles, one right, the other wrong. It is rather a question of the *order of importance* among a number of principles, all of them valid. Such principles are, for example: 1. The recognition of the supreme value of human life as an absolute essential for the progress of society. 2. The recognition of the value of sympathy and love as the great factors in the life of the community. 3. The recognition of the competence of science to appraise facts and make just inferences; and the duty of society to profit by the advice of science as it profits by sympathy and self-love.

What shall be the order in which these principles shall be applied? This must be determined by the particular facts in the case, as interpreted by competent opinion, and above all it must be determined by the general sentiment of the age.

PHILIP KLEIN

New York City

The human body, we are told, is the temple of the living God. Such a body as that of the babe in question would be a poor receptacle for the indwelling Holy Spirit. Holy Writ teaches that we should eat our bread by the sweat of our brow. As a Christian and a Socialist I believe most sincerely in that doctrine, and hope the day of the parasite, who eats his bread without earning it, will soon pass, whether he be mentally or physically incompetent or not.

DR. J. C. HOWELL

Orlando, Florida

WHY PROLONG SUFFERING?

The pastor of a Congregational church in Wisconsin holds that the course adopted was dictated by mercy:

One can but marvel at that civilization that is merciful to a suffering animal, but prolongs as far as possible the agony of those who are hopelessly ill or injured. If we love our friends or relatives, why should we wish them to suffer needlessly? Such a principle could have originated only in the mind of him who had no life but the present, and to whom physical death was the end of all things.

These questions are largely a matter of the age in which they present themselves. What is wrong today by the weight of universal opinion, will be right in the conception of our descendants. If this case had come up a hundred years ago, as it undoubtedly did come up many, many times, death would have followed birth because there was no known way of preventing such an outcome.

Science has divinely-given rights, but these rights are only for good and merciful ends, and cannot rightly be exercised to prolong human misery needlessly, or to cause unnecessary suffering.

BENJAMIN WALKER SAUNDERS

Prairie du Chien, Wisconsin

Several of the letters can hardly be read without tears, for they come from some who wish for themselves or their dependents that their doctor had acted as the Chicago doctor did. A minister, whose name it would not be proper to reveal, writes of a "backward" child of his who at the age of ten was taken with a dangerous contagious disease from which only surgery could save it. The father and mother decided against an operation, but the physicians over-

Get the Saving Habit

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

HOME LIFE INSURANCE COMPANY
Geo. E. Ide, President.

We read for our subscribers all the important papers published in the United States and abroad. If you have never used press clippings, drop us a postal and we will show how they can be of advantage to you. Write for booklet and terms.

ROMEIKE, INC. 106-110 Seventh Ave., New York City

ruled them and they consented to their lifelong regret.

The child lived. The "backwardness" has not mended. We accepted the care. We are now facing that care multiplied. Shall we give up that calling to which I once thought I was called that we may care for the child while we live? Or shall we put the child in an institution, where good doctors tell us, the last ray of hope will vanish for the child, and where, knowing the child as we do, we believe it would die in a month or less of utter loneliness and fear?

I love children. There is nothing in this world that appeals to me anywhere as a child does. "Suffer the children to come unto Me, and forbid them not!" Do I need to tell you whose the quotation is? Did it never occur to you that that might have a meaning rarely if ever given to it?

I make this solemn statement, knowing its meaning as I write it. I believe that the Father was calling for my child thru the open door of pain. I believe that Heaven is *Heaven*, where there is no more sickness, nor sighing, nor pain, nor death, nor "backwardness" any more. And I believe that a lot of surgical operations not on children only, but on those older, are no more nor less than forbidding the children to go to Him when He calls.

A CRIPPLED CHILD'S OPINION

Here is another letter of the same sort which was sent directly to the physician:

Dear Doctor Haiselden—Just a line of praise from a little crippled girl for your not letting that baby live. I know God will be good to you, for I know how it is. My experience and that of other crippled children is that our hearts always ache. We can't dance nor play like other children. We are in every one's way but mother's, and her poor heart aches with ours. We are just a curiosity for people to look at.

Why don't those ladies who are attacking you adopt a crippled child? I am tired of life at fifteen. What will become of me when mother dies?

Those of our readers who have read that inspiring book, *The House on Henry Street*, will need no introduction to Miss Wald. In establishing the nurses settlement in the congested district of New York she has been a pioneer in a most useful field of philanthropy:

The controversy concerning the Chicago doctor is not new. Informally this has been discussed for many years, and in the early days of my own experience in the hospital, when vivid impressions were being made. I was perplexed and unable to understand whether the physician's oath or pride in the case moved the doctors to extraordinary measures for prolonging the suffering of "hopeless cases."

However, the inevitable conclusion that, I think, almost everybody has come to is that the right to decide upon life or death cannot be left to fallible human judgment; every doctor must, at some time in his practice, ponder upon the responsibility in this. The most conscientious may at times decide from high ethical reasoning that extraordinary measures are not justified in prolonging life in a being who is destined to misery and suffering and who may be a positive menace to society.

It does not seem impossible to some time define the boundaries within which decision may be made according to high moral convictions. To be sure that they are upholding the sanctity and traditions of this priestly profession, the doctors ought to take it up frankly, if necessary boldly, and confer with serious social thinkers.

LILLIAN D. WALD

*The music that
brings back the dreams*

HOW the memory thrills at the music of the Steinway! It stirs thoughts of the long-ago years when, even as now, the songs of the heart were enriched by its exquisite tones.

Three-score years ago, even as now, the Steinway was the ideal piano. In many a family, the Steinway which grandmother played is today a cherished possession—its durability a tribute to superior craftsmanship.

Consider the Steinway as a gift to wife or daughter or sister—an enduring evidence of the noblest sentiment. Nothing could be more appropriate. Consider, too, that this marvelous piano can be conveniently purchased at a moderate price.

Illustrated literature, describing the various styles of Steinway pianos, will be sent free, with prices and name of the Steinway dealer nearest you.

The GLEN SPRINGS

WATKINS, N. Y., ON
SENECA LAKE.
Wm. E. Leffingwell, Pres.
OPEN ALL THE YEAR

A Mineral Springs "Cure" and Hotel, known as THE AMERICAN NAUHEIM. The diagnostic and treatment methods, and the equipment embrace the best that advanced medical science has approved. Two of the Drinking Springs are highly Radioactive.

THE BATHS

THE BATHING SPRINGS are similar to the waters of Bad Nauheim, but about five times as strong. THE RADIUM EMANATION FROM BRINE SPRING NO. 2 AVERAGES 64.8 MACHE UNITS PER LITER OF WATER, or nearly three times as much as any other American Spring known. For the treatment of diseases of the Heart, Circulatory System and Kidneys; disorders of the Nervous System; affections of the Digestive System and liver; "Rheumatism", Arthritis, Gout, Obesity and Diabetes; such symptoms as Anaemia, Constipation, "Auto-intoxication", Insomnia and Neuritis, and derangements of the Organs of Internal Secretion, we offer advantages unsurpassed in this Country or Europe.

Situated in a private park with miles of well-built and graded walks for Oertel Hill Climbing exercise. Well-kept Golf Course. Tennis Courts, Clock Golf and Miniature Golf. Music, Dancing. Tobogganing, Skating.

Our Illustrated Booklets and Latest Reports on our Mineral Springs will be Mailed on Request

It's a Long Time to 'Camp Time,' but—

You may think it a long time to 'camp time.' So it is. On the other hand, it is really a very short time. It depends how you look at it. If all you desire for your son, next summer, is a camp that will keep the boy amused, out of mischief, and well-fed, then it is true. It is a long time to camp-time, and, when the season is at hand, you will have no difficulty in finding many good camps which meet with your requirements.

If, however, you are looking for a camp which will do more than that—if you are looking for a camp which is really a camp and not a school, a camp where every facility of the Great Outdoors is used directly to develop initiative, self-reliance, self-help, and self-control, to develop a real love for the best that Nature can give, as well as to develop physical strength and well-being—if you desire a camp that will do these things and at the same time give your lad a bully good time, in carefully selected companionship and under trained supervision—then you will need all the time you can get, for such camps are not common.

If you desire the first type of camp, this notice will not interest you. If the second type is the object of your search, perhaps our new booklet will be of value.

spondents, cites the example of the ancients:

The old Greek and Roman "pater-familias" inspected the new born babe and decided whether it was fit to live. If not, the babe was destroyed. The result was a strong and vigorous race as long as the old custom was observed. While we in the twentieth century would hardly advise a return to the old custom "in toto," we believe the general principle is right.

S. P. FOGDALL

Des Moines, Iowa

The publicity for which the President of New Mexico Normal University blames the physician was due primarily to a reporter with an abnormally keen "scent for news" who got wind of the case. After it has been made a public sensation in this way the discussion of it was unavoidable.

I think all monstrosities should be permitted to die, but I do condemn the physician for making such a public ado about the matter. He has done nothing more than many physicians have done, but done more wisely; and this publicity will prompt others less wise to go farther in this matter than they should.

FRANK H. H. ROBERTS

Las Vegas, New Mexico

It is interesting to see by what different routes our readers arrive at the same conclusion. Some view the question from the sociological standpoint, others from the personal; some argue from theological grounds; others from scientific.

"HE MADE THEM WHOLE"

Morally, was the doctor wrong? Would you, my reader, wish to assume the responsibility of a fellow being's embarkation upon such a life? Christ went about "Doing good," and in this case Christ could and might have caused the little one to live by the exercise of his miraculous power, but it is inconceivable that He would have merely worked a miracle in order simply to preserve life. He would at the same time have removed the entire physical disability, which is impossible for man to do. To confer life with the maximum chance to enjoy it is God-like. To confer life with preponderating chances of its being devoid of enjoyment is—shall we not justly call that fiendish?

E. E. LUSK, M.D.

Baraboo, Wisconsin

Mr. Alexander Johnson, Field Secretary on Provision for the Feeble Minded, returns a non-committal answer:

A cardinal principle of our civilization, as opposed to that of ancient Sparta, is that of the preservation as long as possible of every human life, no matter how defective nor in what agony. There is a present tendency towards some reversion from this principle, as shown by the popular leaning toward the sterilization of the unfit. Between extinction and sterilization the difference seems rather of degree than of kind. Those who advocate sterilization must surely approve of the course taken in this extreme case.

I believe, however, that a matter of such vital importance should not be left to the decision of one man, but that some form of collective or legalized action should be required.

ALEXANDER JOHNSON

Philadelphia, Pennsylvania

The answers in the negative are, as we have said, fewer, and they are also less varied, being for the most part absolute condemnation of the action on dogmatic grounds as contrary to the commandment, "Thou shalt not kill," or arguments as to the possible bene-

fit of such a life to the world. The following quotations will indicate their general character:

NO! NO!! NO!!! God gives life. God alone can say when he will take it. That was first degree murder. The doctor *should have done everything in his power to save the child.* Even tho the mother did give her consent, it must have been obtained under duress, for she was weakened, nervous, sick. She could not think properly for herself. She was in dire need of some one to think for her; to think right and properly. She had chosen this doctor and HE FAILED HER! Had she been allowed to keep her child, to nurse it, care for it, and lavish the love of her heart upon it, her life would have been broadened, bettered, purified, for with such suffering comes the purification of character.

WILLIE MAY REDDIN

Janesville, Wisconsin

"THOU SHALT NOT KILL"

I believe that the fifth commandment needs no amending. I believe that the Constitution of the United States was right in guaranteeing that no person shall be deprived of life, liberty, or property without due process of law. And I believe that the criminal code of Illinois should be enforced against persons who have no regard for moral and statute law.

PAUL KAYSER

Milwaukee, Wisconsin

If, according to Emerson's law of compensation, for everything we have missed we have gained something else, who knows but what this babe—deformed and malformed as it is said to have been—might have possessed some gift that would have added a little mite to the world's spiritual or intellectual heritage? We cannot help congratulating ourselves and the world at large that in the past so utilitarian a standpoint as regards defective lives was not taken. For we would then never have had the songs of Fanny Crosby, or read of the wonderful transformation in the life of Helen Keller.

P. SMITH

Detroit, Michigan

Professor McElroy, of Ohio Wesleyan, urges that to endorse the deed would be "to Australianize our ethics":

The ethics of the doctor's position represent the ethics of Australia and the savage world. His act can only be regarded as a survival. The Australians stand at the bottom of the human ladder. On their lean island starvation ever looks them in the face. Hence their peculiar restrictions on marriage and their shrewd adjustment of population to food supply. When a child is born among them, the question of its life is settled by a council. If permitted to live the child is treated kindly. By the growth of knowledge, the advance of civilization, and the influence of religion, the world has for ages been moving away from the ethics of savagery. B. L. McELROY.

Delaware, Ohio

Dr. Walsh, a Catholic physician well known to the public as the author of *The Thirteenth Greatest of Centuries* and other works on the history of science, condemns the act of the Chicago physician on the following grounds:

The physician has assumed the exercise of a power that is not his. Doctors have the care of life, not death. Physicians are educated to care for the health of their patients, but so far at least as I know we have no courses in our medical colleges as yet which teach how to judge when a patient's life may be of no service to the community so as to let him or her die properly. Some of us physicians may thank God that we are not yet the licensed executioners of the unfit for the community, and some of us know how fallacious our judgments are even with regard to the few things we know.

JAS. J. WALSH

New York City

"Don't be discouraged! Resinol Soap will improve your skin"

Many and many a girl has a clear, healthy complexion today because some friend came to her with this sound advice, based on her own experience.

Resinol Soap not only is delightfully cleansing and refreshing, but its daily use reduces the tendency to pimples, offsets many ill-effects of cosmetics, and gives nature the

chance she needs to make red, rough skins white and soft.

Hands protected by Resinol Soap rarely chap or roughen in winter. Used for the shampoo, Resinol Soap helps to keep the hair rich, glossy and free from dandruff.

If the skin or scalp is in bad shape, through neglect or improper treatment, a little Resinol Ointment should at first be used with the Resinol Soap, to hasten the return to normal conditions.

Resinol Soap and Resinol Ointment are sold by druggists and dealers in toilet goods everywhere. For a sample of each, free, write to Dept. 12-B, Resinol, Baltimore, Md.

Resinol Shaving Stick also contains the Resinol medications. The discriminating man appreciates the way it soothes his face and prevents most shaving discomforts. Trial on request.

THE NEW BOOKS

PRECIOUS STONES

The Magic of Jewels and Charms is by George F. Kunz, whose long connection with the Tiffany establishment has made him the leading American authority on precious and semi-precious stones, as well as on cut gems. It is he who has prepared for a number of years the United States Government's annual report on gems and minerals found in this country. This magnificent volume contains chapters on magic stones, meteorites, stones popularly used medically, the virtues of fabulous stones, concretions and fossils, snake-stones, the religious use of various stones, amulets, ancient, medieval, oriental or primitive, with various facts and fancies about precious stones. This makes a remarkable collection in a very curious and interesting line, having much to do with the history of human superstition and imagination gathered from many recondite sources. Not least in value to the reader are the many striking and unfamiliar illustrations.

The Magic of Jewels and Charms, by George F. Kunz. Philadelphia: Lippincott. \$5.

YOUTH AND OLD AGE

It is characteristic of living things that they change with time in such manner that they finally reach a state in which the life processes can no longer continue. The metaphysical and poetical speculations on this theme may have brought resignation and consolation, but they have not brought understanding. Now it is the scientist's turn. In a dignified and attractive volume entitled *Senescence and Rejuvenescence*, Professor Charles Manning Child of the University of Chicago has brought together the results of years of experimental study, of which his own researches form a considerable part.

Professor Child defines the aging phenomena in general terms, as a decrease in the rate of the dynamic processes of the organism, conditioned by the accumulation of substances, differentiation, and other changes in the material substratum. He has little patience with the biological theories that assume the perpetual youth of some portion of the organism—as “the germ plasm,” for example. All living involves differentiation, and differentiation involves senescence. To account for the cyclic reappearance of youth, Dr. Child points to the phenomena of dedifferentiation, which may not be a reversal of the aging process in the chemical sense, but which is a regression that results in the reestablishment of the undifferentiated condition of protoplasm. Thus is rejuvenescence brought about—an increase in the rate of dynamic processes. The young organism arises from the old, and the young becomes old again.

Various theories of senescence are discussed, as the accumulation of poi-

sonous excretions, made familiar chiefly thru the work of Metchnikoff; the exhaustion of some essential ferments; the mathematical theory of the changing ratio of surface and volume; the differentiation of the protoplasmic structure, and others; and the inadequacy of each theory is pointed out. A consideration of the facts gathered in developing these various theories, however, leads the author to question whether the live substance returns with each regression or rejuvenation to exactly the same condition as that in which it existed in the previous cycle. In other words, he suggests that there is a gradual, progressive senescence of protoplasm in the course of evolution. Such a senescence would account for the extinction of whole races of organism, without reference to the usual Darwinian factors of “struggle” and “survival of the fittest.” On the other hand, it may be the basis for progressive mutations, in the sense of DeVries, or for the kind of orthogenesis described by Osborn. While only some three or four of the chapters in this book are of direct interest to the general reader, the work is a valuable contribution to the analysis of fundamental biological problems.

Senescence and Rejuvenescence, by Charles Manning Child. University of Chicago Press. \$4.

IRISH RECITATIONS

Captious indeed would be that entertainer who, seeking to regale his audiences with selections of the choicest Hibernian flavor, could not find something to his taste in the five hundred odd pages of *The Reciter's Treasury of Irish Verse and Prose*, which has recently made its appearance here. Rarely in books of this sort is the level of literary excellence so high, or selections made with a shrewder eye for the reciter's demand for material of a kind that will make a hit with the average audience. The popular note, comic, tragic, pathetic, is sounded again and again, nor are the editors above including a good bit of stirring melodrama, wit with a forceful “punch,” or boisterous, rollicking fun. There are ready-reference indices and an admirable critical introduction, which tells the reciter many things he should be happy to know about the selections and their authors.

The Reciter's Treasury of Irish Verse and Prose, comp. and ed. by Alfred Percival Graves and Ernest Pertwee. Dutton. \$1.50.

OUR FRIENDS IN NEED

An unusual and illuminating picture of life in America during and just after the Revolution is that drawn by Charles H. Sherrill in *French Memories of Eighteenth Century America*. The officers and other gentlemen of France who fought in our battles or came later on official business left many and full records of their visits and in these sur-

prizingly understanding as well as friendly records and criticisms we see ourselves as we appeared to our benefactors. The description of the American army is of especial interest and of some moment in connection with our present discussion of preparedness. It illustrates Washington's statement of the piteous and needless waste entailed by untrained troops. The French government in sending aid to the rebel colonies was probably as disinterested as governments are apt to be, but the soldiers and officers who risked and lost their lives in our behalf deserve everlasting gratitude. Tho the book is a history, not in the least an appeal, one closes it with the feeling that since money and goods are all the return we may make today to suffering France, it is to our shame if this return be not without stint.

French Memories of Eighteenth Century America, by C. H. Sherrill. Scribner. \$2.

RECORDS OF CIVILIZATION

The publication of the first volume in a series of researches and studies planned to illustrate the total process of the evolution of the civilization of Western Europe from the early Greeks down to modern times, calls for more than a passing notice. The series, *Records of Civilization*, is edited by Prof. James T. Shotwell, of Columbia University, in collaboration with eight colleagues from Columbia and the Union Theological Seminary, including Prof. Franklin H. Giddings of the department of sociology and Prof. Munroe Smith of the department of law, and the seventeen or more volumes are on such varied topics as The History of History, The Records of the Jews, Persian and Hindu Documents, Early Medieval Law, The Papacy, The Expansion of Europe, The Social History of Modern England, and Reprisals in the History of International Law.

These volumes are designed to be more than simple translations of interesting documents, such as we have in various “source-books.” In addition to the translation of extended sources, they will contain scientific introductions and commentaries, with full bibliographical guides. If the introductory essay of Professor Botsford, covering the first sixty-two pages of *Hellenic Civilization*, is a fair sample of the quality of the expegetical material that is to appear in this series, we may at once say that the series will take rank with the *recueils* and *corpora* of European scholars. It seems hardly like overpraise to hail this project of American scholars as the beginning of our *Monumenta Historica*.

Aside from their great value as works of reference to which both teachers and students will go for material on politics, philosophy, literature, religion, science, social customs, and a hundred and one other subjects of in-

terest in ancient and medieval times, the series will help to supply a want which is being more and more keenly felt as the study of the Greek and Latin languages ceases to be the inevitable basis of our education. The Loeb Classics, with their parallel pages of classical text and English translation have already made a score or more of the important works of Greek and Roman antiquity and the early middle ages accessible to English readers. Prof. Shotwell's series will greatly extend this material, incorporating many hitherto untranslated texts and preserving for the general educated public rich treasures of the ancient and the medieval mind which are in danger of becoming the exclusive possession of the comparatively small number of classical experts in these days of pragmatic and scientific education. It is this happy combination of respectable popularization and critical scholarship which seems to us to constitute the chief value of the series.

In the volume before us, *Hellenic Civilization*, we are confronted by an embarrassment of riches. From the Minoan Age to the late Roman Republic, every stage of Hellenic and Hellenistic culture is presented. Such common things as business contracts, popular festivals, domestic relations, medical superstitions, farming, trading, the duties of wives and housekeepers take their place with the more formal, but far less "typical," extracts on politics, philosophy, and stately literature that usually fill the pages of a source-book on ancient history, and the range of authors cited is no less remarkable than the variety of topics.

Chapter VIII is devoted to the private and criminal law of the fifth century, B. C.—the private law represented by the Gortysian code of Crete, and the criminal law represented by the Draconian decrees. The editors, assisted by Prof. Munroe Smith and other scholars, have given us a masterly presentation of these laws, with critical notes, introduction and bibliography, making a chapter not only intensely interesting for its information on the laws of slavery, divorce, widows and children, inheritance, adoption, but also most gratifying to American scholars as an essay worthy to stand with the work of Bücheler, Dareste, Reinach and other continental scholars.

Another remarkable chapter is that on Administration, Industry, and Education in the Hellenistic Kingdoms, 337-330 B. C., contributed by Prof. W. L. Westermann of the University of Wisconsin. This gives a new light on a period singularly neglected in our histories. Most of the material is from papyri lately discovered. The last two chapters of the book (Science and Invention, and Social Conditions) deserve "honorable mention" for the new and interesting material in them—especially the delightful anthology of epigrams at the end, translated by Prof. William C. Lawton of Hobart.

AMERICANISM

Americanism has set the world many important examples in material, intellectual and diplomatic progress.

The New International Encyclopædia is not the least product of Americanism. Conceived and published by an American firm, edited by foremost American scholars, it has been declared by eminent authorities "the best and fullest Encyclopædia in existence" for American readers and American interests.

THE SECOND EDITION OF THE New International Encyclopædia

24

Volumes

is now in course of publication by

DODD, MEAD & Co., New York City

80,000

Subjects

This revision—a matter of enormous expense and work—could not have been undertaken at a more opportune time. Recent advances in science, arts, engineering, manufactures, research, invention, discovery, etc., have left existing reference works wholly inadequate. Important history is in the making, great political and social changes are progressing. These matters receive full, authoritative, impartial treatment in the Second Edition. It will contain about

80,000 articles—30,000 more than any other Standard Encyclopædia—due largely to the great amount of matter incorporated

It thus becomes the only encyclopædia of the present. It covers with equal thoroughness, all knowledge from earliest times. This knowledge has been made easily and quickly accessible by means of the alphabetical arrangement of subjects.

Its practical illustrations and maps are models of accuracy and fine workmanship.

Printed on thin paper, the volumes are as easy to handle as a monthly magazine. The paper was made especially for the Second Edition and is opaque, tough and durable.

The Special Library Edition is printed on regular book paper and bound in Library Buckram.

This Second Edition is rapidly approaching completion. More volumes will be ready for delivery in February when the price will be materially increased.

Since this great work is indispensable if you would gain that efficiency which full knowledge imparts, order NOW at the low special price.

An Illustrated 30-page Book Free Write for this book today. Use the coupon if you prefer. The book is interesting of itself and contains an outline of the scope of The New International Encyclopædia, sample illustrations, maps, pages of text, illustrations of bindings, etc. Send for it now—it may be the turning point in your career, as it has for hundreds of others.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

MUTUALITY IN LIFE INSURANCE

Looking over a list of more than two hundred life insurance companies which have been organized in the United States during the past ten years, one acquainted with the nature and practicabilities of the business is astonished at the paucity of mutuals among them. I don't think that there are as many as ten. The condition should be reversed. As I have observed on several occasions in this place, the system of insuring lives is one that should not be subordinated to the purpose of making dividends for invested capital. Its objects are too closely bound up with human misery, sorrow and affection, to permit of its exploitation for profit by the owners of money which, to a successful, going company, is a superfluous encumbrance.

The greater number of these new stock companies are the creations of professional promoters outside the insurance business, who took advantage of the excitement caused by the New York investigation of 1905 to provide comparatively small communities with "home" institutions, thus to save them from the evils attendant upon sending their money away. Their schemes were fostered by the existence, in almost every state, of laws which render it very difficult, if not impossible, to organize mutual companies. Millions of dollars were made by promoters organizing new stock life companies which, when ready for business, were turned over to local men to operate and manage, the promoters, like a circus, moving on to another locality—a new field of conquest—selected in advance.

The people were exploited. The country was supplied with innumerable superfluous companies, most of them of the wrong kind. A fourth of the number have already failed or retired. Many more will do so within the next decade. By that time there will again be room for twenty or thirty properly organized new companies and, if in the meantime the laws are altered so that encouragement and help will be extended by the state to new mutual companies, they should all be of that class. Among insurers and insured, the tendency is strongly toward pure mutuality in life insurance, unburdened by stockholders' dividends and—what is more objectionable—stockholders' control.

J. B. S., Franklin, Ind.—You have had an unfortunate experience with one of the new and unnecessary companies which I occasionally caution the public against. You have lost your money and several years. Your endowment policy in the Presbyterian Ministers Fund is a solid security. Yes, I think you should have more life insurance; in fact, as much more as the whole sum invested at five per cent will yield at least at your present annual earnings. The ac-

celerative endowment policy of the New York Life about which you inquire is a splendid contract. You might also look into that and other companies' thirty-five-year endowments.

A. G. C., Ottawa, Kans.—Money put into the stock of new life insurance companies is a speculation, not an investment. There are now 250 life insurance companies in the United States. Sixty-five life companies have failed or retired in the past ten years, involving their stockholders in losses aggregating about \$15,000,000. Life insurance is a beneficence, and there is a growing prejudice against its being used as a dividend earner for capital. In time the pure mutual will have the field—and it should.

R. F., Mount Vernon, N. Y.—Observation of the matter inclines me to the conclusion that the insurance laws of Pennsylvania provide as effective protection to policyholders as do those of Massachusetts or Wisconsin; but that they are not as efficiently administered in Pennsylvania as they are in the other two states. The Massachusetts Insurance Department is particularly efficient. If the representatives of the John Hancock Mutual and the Northwestern Mutual have recommended a convertible-term policy, it is because, having knowledge of all the conditions, they have concluded you could prudently carry it. Generally, the use of term insurance is injudicious. The saving in premium is not invested faithfully and too often conversion to a higher form of contract is not made. Why don't you secure a 40- or 45-years endowment? I don't clearly understand the figures you send and, under the circumstances, am unable to explain the differences you mention. In conclusion, you may rely on getting exact facts from the two companies mentioned above, both of which render the best of service. The other is not their equal in character.

O. C. L., Columbus, O.—I can answer your question respecting the conversion of the term policy only in a general way in the absence of the contract itself, the terms of which I do not know. I presume you have a ten-year term policy and will suppose that the conversion will be to a whole life. I will also assume that the difference in premiums at the initial age is \$8.88 per \$1000 a year. Now assuming that the company will charge you interest at three and one-half per cent on this difference, you will have to pay \$107.82 for your new whole life policy, plus \$20.60, the new premium rate. The immediate cash value of the new policy is \$101; the paid-up value, \$242. At your present age, the premium on a whole life policy is \$27.20, which is \$6.60 a year for life greater than the policy you can get by converting the term policy. If you lapse the term policy and take a whole life at your present age, you will retain the \$107.82, difference in back premiums, pay \$27.20 for the new policy and at five per cent the remainder (\$80.62) will be worth in twenty years \$213.88. But at the same interest rate, in the same time, the \$6.60 difference per year between the premiums at your initial and your present age will be worth \$229.14. In ten years from now the cash value of the converted policy (then twenty years old) will be \$239; while the cash value of the other (then but ten years old), will be \$147. I would convert the term policy. As between the Mutual Benefit, Equitable of Iowa and Union Central, all the advantages, from a policyholder's viewpoint, are with the Mutual Benefit. The special \$5000 policy of the Metropolitan cuts as close to net cost as can be, and now that the company is a mutual, if there are any savings to lower it, policyholders will get the benefit.

PEBBLES

Something tells us that the King of Greece doesn't even carry a latch key.—*Chicago Tribune*.

THE "ANCONA" NOTE

Well, there's nothing left but an antepenultimatum!—*New York Tribune*.

"Blessed are the peacemakers," but they are overhearing a lot of unflattering remarks just now.—*Sunshine*.

"So my daughter has consented to become your wife. Have you fixt the day of the wedding?"

"I will leave that to her."

"Will you have a church or a private wedding?"

"Her mother can decide that."

"What have you to live on?"

"I will leave that entirely to you, sir."—*Yale Record*.

A lot of people hate the war because it has upset their routine and the running of their apparatus.

Some of them think the best way is to ignore it, and go right on as if there were no war.

These are the kind of people who, when they hear the last trump, will say: "Oh, bother this day of judgment. It will be bad for business, and besides, it will make me late to dinner."—*Life*.

The Human Clock Grows Rusty

EVERY man starts life as a clock wound up. Then, gradually, the exuberant vitality of the child expends itself through youth and middle age until at last he ends life as a clock run down.

As the clock ticks on through three score and ten years of work and worry often the wheels gather rust, a cog slips—the human clock runs down too soon.

Constipation is the rust which clogs the human clock. It is constipation which is responsible for that too-early slowing-down of mental and physical energy known as premature old age. It is constipation which, by weakening the body's power of resistance, opens the way to many more serious diseases.

Constipation frequently becomes chronic because of the unwise use of laxatives and cathartics, which give only temporary relief and are followed by dangerous reactions.

Constipation may be permanently gotten rid of by the use of Nujol, a pure white mineral oil. Nujol acts as a mechanical lubricant, softening the contents of the intestines and oiling the walls as a delicate machine is oiled. Thus it facilitates and strengthens the normal processes of evacuation, so correcting the cause of constipation.

Nujol is colorless, odorless and tasteless, and is not absorbed by the system. Consequently it may be taken in any quantity without harm.

Write for booklet "The Rational Treatment of Constipation." If your druggist cannot supply you with Nujol, we will send you a pint bottle prepaid to any point in the United States on receipt of 75c—money order or stamps. Address Dept. 12.

MOBILIZING AMERICAN SECURITIES

BY HAROLD J. HOWLAND

THE proposal of the British Government for "a mobilization of American securities" is a gratifying one to American pride. But it is a puzzling one to any but the trained financier. Its announced purpose is to "stabilize exchange." But what is exchange and how will this procedure give it stability? Let us see if it can be made clear.

There are owned in Great Britain about three billion dollars' worth of stocks and bonds in American corporations. But capital has been invested to that extent in American enterprises. As we recently pointed out, when the war began there was great anxiety lest there should be a rush to sell those securities over here with disastrous results to our security market. The Stock Exchange was closed to avoid this threatening danger and kept closed until the sterling exchange market had righted itself and it was seen that the necessities of Europe would create such a demand for American merchandise that we could pay for our securities in bills of exchange offered against our sales of commodities instead of in gold, which would otherwise have been demanded. Apparently the British investor realized the sound value of American stocks and bonds as investments in these topsy turvy days and was loth to let them go. The American market absorbed without a ripple all that were offered and proceeded to ask for more.

Now the British Chancellor of the Exchequer proposes a plan for bringing these American securities out of their British hiding places and using them for the benefit of the Empire. In the pursuit of his great task of financing England's share—the lion's share among the Allies—in the war he has come to realize that here England has a great asset which is not being put to use. He has been authorized by Parliament to invite the holders of the American stocks and bonds either to sell or to lend their holdings to the Government. They will be paid for if sold outright in Government bonds bearing five per cent interest. If the securities are merely lent, the Government will turn over to the owner all dividends or interest as they accrue and pay in addition one-half of one per cent on the face value of the securities.

The process is simple and will presumably not put too great a burden on the patriotism of the British owner of the stocks or bonds. But what will the Government do with them once it has them?

The securities, as has been said, are to be used primarily for the purpose of stabilizing exchange. Some will be sold in the American market; others, including those which are only lent to the Government, will be used as collateral for loans. How will this affect the question of exchange? To know this we must clearly understand what this question is.

PROGRESS OF THE UNITED STATES TOWARD FINANCIAL SUPREMACY

From a table published in the New York Times, based on figures compiled by L. F. Loree, president of the Delaware and Hudson Company.

AMERICAN SECURITIES OWNED IN EUROPE JULY 31, 1915			
	Par Value.	Approximate Average Price.	Market Value.
Railroads..	\$2,223,510,228	78	\$1,751,437,908
Industrials, etc.	518,300,000	90	466,400,000
Total	\$2,741,810,228	81	\$2,217,837,908
Held here for foreign account ..	123,000,000	81	99,630,000
Gr'd total.	\$2,864,810,228	81	\$2,317,467,908
BOUGHT BACK IN SIX MONTHS			
Owned in Europe Jan. 31, 1915 ...	\$3,486,100,000	71	\$2,475,060,000
Owned in Europe July 31, 1915 ...	2,864,810,228	81	2,317,467,908
Decrease..	*\$621,289,772		\$157,592,092

*During the six months from January 31 to July 31 the average price of the foreign-held securities increased from about 71 to about 81, which accounts for the fact that the decrease in market value, \$157,592,092, is so much less than the decrease in par value. It is the latter which shows the volume of securities which we bought back from Europe.

When an exporter in the United States sells goods to an English importer, it is desirable that he should receive payment for them without the actual shipment of gold across the Atlantic. For the shipping of gold is an expensive and to a degree a hazardous process. He receives therefor, instead of the actual money called for by his bill, a bill of exchange or a draft on London. The seller's problem is then to get his money in place of this instrument, which is a certificate of his right to the payment of so much money. The way in which he can get this money without its actual transportation across the ocean may be shown by a simple example.

Let us suppose that Smith of New York has sold goods worth \$100 to Brown of London, Brown then owes him \$100. Let us suppose that at the same time Jones of London has sold to Robinson of New York goods worth \$100. Robinson then owes him \$100. Smith receives from Brown in place of his goods a bill of exchange worth \$100. Now if Robinson will buy from Smith his bill of exchange he can send it to Jones in payment of his debt to him. Jones can then take this instrument to Brown, who will give him its value in place of it. Smith and Jones then have their money, while Brown and Robinson have their goods, and everybody is satisfied. The two original transactions taking place across the ocean have been completed by two transfers of money, each taking place not across the broad Atlantic, but within the narrow limits of a single city. Smith has

shipped goods across the ocean and received his payment in money handed to him in New York; while Jones has also shipped goods across the ocean and received his payment in money handed to him in London. All the expense of shipping gold both ways across the Atlantic has been eliminated, to the profit of all concerned.

Multiply this group of transactions by thousands and we have the elaborate structure of foreign exchange. Obviously, however, the great mass of transactions that result cannot be carried on by each buyer in New York dealing directly with a seller in the same city; and each seller in London dealing similarly with a single buyer in London.

It would take too much trouble for each to find the other; and when he had found him, there would be little probability that the needs of one would exactly correspond with what the other had to offer. Smith might have a bill of exchange for \$90 which he wished to sell, while Robinson might need a bill for \$110 with which to satisfy his foreign creditor.

Middlemen are therefore essential, and they are provided by the banks and bill brokers. These agencies buy bills of exchange from thousands of Smiths and sell them in turn to thousands of Robinsons. They deal in exchange bills as a jobber deals in dry goods or groceries or hardware. Exchange bills become an article of commerce, a commodity.

Like any other commodity, the price of exchange bills is immediately subject to the law of supply and demand. If many Smiths are offering bills to the New York banks, and few Robinsons are ready to buy them, the price goes down. Smith becomes willing to sell his bill of exchange for £100—normally worth \$485.66—for \$480; while Robinson is unwilling to pay more than \$480 for a bill for £100 because if Smith No. 1 will not let him have it for that, Smith No. 2 or 3 or 4 will. So the price of exchange goes down and the exchange value of the sovereign falls.

During the war it has fallen as low as \$4.50—from the normal of \$4.87—and is now hovering about \$4.73. There comes, however, a point below which the exchange will not go; for as soon as it becomes cheaper to ship gold than to buy exchange, gold will be shipped in payment of debts. Then the demand for exchange bills will decrease, and the price will naturally go up.

Now, the supply of exchange bills and the demand for them depends upon one thing—the quantity of goods that are being shipped in each direction between the two countries. If the United States were selling large quantities of goods to England, and absolutely none were being sold in the opposite direction, there would be no possibility of exchange at all. All England's debts to us would have to be paid in gold. If

the opposite were true, we should have to pay in gold everything we owed to England for the commodities we were buying. If we were selling England exactly the same value of commodities that she was selling us, exchange would do the whole thing, and not an ounce of gold would need to be shipped either way.

But none of these conditions ever exists. So the supply of exchange on London in the New York market depends on the quantity of goods New York is shipping to London, and the demand for it depends on the quantity of goods New York is buying from London. The rate of exchange, therefore, goes up and down in harmony with the fluctuating balance of trade.

Exchange on London has been and continues to be phenomenally low in New York precisely because we have been and are selling such gigantic quantities of goods—food, munitions, clothing, equipment, to say nothing of all the usual exports—to England, and because England is not selling more than, if as much as, usual to us. The balance of trade between the two countries has swung widely to the other end of the arc.

The problem before British financiers, therefore, and before the British Government, is to restore the rate of exchange on London to something like its normal position. They must find a way of paying their debts in America without the reckless shipping of gold, which is a serious menace to a nation's credit, and without creating a tremendous supply of exchange bills in New York for which there is no demand.

There are several ways in which these debts can be paid.

By shipping gold; that soon becomes dangerous.

By shipping goods; but England has not enough goods to ship that we want, and her need for our goods shows no probability of decrease.

By sending over her own Government securities, as she does when she borrows money here; but England, in partnership with France, has just borrowed \$500,000,000 here and the effect upon the exchange rate, while it has been encouraging, has been by no means sufficient to solve the problem.

Meanwhile the balance of trade stays firmly at the American end of its swing. England owes us more and more every day, and the debts which we are incurring with her are by no means commensurate with those she is piling up here.

The plan which the British Government is now entering upon to solve this troublesome problem of exchange is a combination of two of the methods mentioned above. The people of England have certain assets which have a readily realizable value in this country. They hold \$2,864,810,228 worth of American stocks and bonds. If they can get these securities together, or any considerable part of them they can either sell them in our markets or use them as collateral in borrowing money from us.

CROWELL HADDEN, President
LAURUS E. SUTTON, Comptroller
ARTHUR C. HARE, Cashier
CHAS. C. PUTNAM, Asst. Comptroller

In either case the effect upon the exchange value of the sovereign will be salutary. If they sell them here, they will immediately cause the creation of exchange bills to pay for them; and the resulting increase in the supply of exchange in London will send the value of the sovereign up. If they borrow money here on them as security, by sending their own government bonds or notes over as evidences of the loans, they will equally create a supply of exchange, with the same favorable effect upon the value of the sovereign as in the first case.

It will be of just as much efficacy in its effect upon exchange to send American securities from London to New York, or to send British Treasury notes, as to send Sheffield steel, or Manchester cottons.

But what will be the effect upon our own security markets? Will not this mean the unloosing of that flood of foreign selling, the fear of which closed the New York Stock Exchange for over four months? Can our market absorb the possible offerings without disaster?

The answer must be a matter of probability, not of certainty. But there is good reason to believe the United States to be in such a strong financial and commercial position that nothing that is likely to happen can bring serious harm to us.

In the first place, the flood cannot overwhelm us unless it comes. In the early months of the war its coming seemed probable and the Stock Exchange was closed to avoid the danger. But the flood did not come. The market absorbed all the American securities that were offered from abroad, and seemed to thrive on the diet. In spite of the foreign selling stocks have gone up and not down. The British investor evidently realized the value of his investments in the one great Western country that is not at war, and preferred to hold on to them. It is a question, then, whether even the urge of the British Government's appeal will be sufficient to draw these securities from the strong boxes in sufficient numbers to disturb the American market's equilibrium. In addition the British Government has declared that the securities collected will not be used in any way that will disturb the American financial world.

In the second place, there is a considerable reserve of absorptive power in this country which is not being called upon at the present time. In normal years the American public invests in from one and a half to two billion dollars' worth of new securities a year. Since the war began the issues of new securities have been nothing like these figures. A vast amount of buying power, which in ordinary times is taken up in new enterprises, under the strained and abnormal conditions of war time is to a large extent available for other purposes. It is probable that we should hardly have to make a wry face at swallowing a big dose of our own securities, provided they were not thrust down our throats too brutally.

F. E. ANDRUSS, Cashier.

LIGHTING THE HOUSE

The actual selection of lighting fixtures is a matter which may well be left to the architect who has planned the lighting system of the house, since the fixtures largely affect the method of distributing the light as well as the decoration of the rooms.

The character of the wall coverings has much to do with the selection. Dark colors and such fabrics as velvet require vastly more illumination than wood painted white, cream or gray, or hangings which reflect rather than absorb the light. The height of the ceilings must be considered, too.

Chandeliers, when they may be appropriately used in large or somewhat formal rooms, are extremely decorative. For the ordinary home, however, wall lights or reading lamps are usually in better taste. Should it be necessary to light a room from the top and yet avoid the use of a chandelier there are various forms of lighting which keep the bulbs close to the ceiling.

The most satisfying fixtures are those which are based upon antique motifs, but developed by the skill of present day designers. Our American homes are being built, to a great extent, in what is popularly known as the Colonial style, which is, of course, our American adaptation of the Georgian style in England. The designers of this picturesque period were particularly fortunate in the fashioning of their lighting fixtures and their beautiful designs are available for use today.

Especially successful are their wall lights, often designed as sconces and holding electric candles, or sometimes having the light bulb concealed by a cut glass shade hung about with glass prisms or pendants. To lighten the decorative effect of these candle lights the tips of the candles may be cleverly concealed beneath tiny shades made in a great variety of forms and fabrics.

The "Craftsman" and "Mission" styles, while frequently misused, are both appropriate and beautiful in their proper place. For use in such surroundings there are attractive and highly distinctive fixtures of wrought copper, bronze, brass or iron.

For dining rooms there is hardly anything more serviceable than a broad domed shade of metal, glass, or porcelain hung directly over the dining table. It casts the light upon the table, where it belongs, instead of in the eyes of those there assembled.

Just at present the system of illumination known as "indirect lighting" is having increasing popularity. The fixtures consist of inverted metal, glass or alabaster bowls hung from the ceiling by several chains. Within the bowls are placed groups of lighting bulbs casting their light upward, where it is reflected by the ceiling, usually white, and diffused about the room.

FREE TO YOU

FOR

10 DAYS!

The World Famous

Frantz Premier

Electric Cleaner

Yes, Madam, that is exactly what we mean.

We will send you one of our superb, BRAND

NEW, easy gliding and

deep cleaning Frantz

Premier Electric Clean-

ers on 10 days FREE

Cleaning trial. We

are going to loan

you free, this splendid cleaner for 10 whole days. Remember, this free loan **won't cost you a penny.** We even pay all delivery charges. We bear every expense. All you have to do is to use it to your heart's content for **all cleaning purposes** about the house!

Without Cost To You

Simply sign and mail the coupon below or write us and we will send you the full details of this wonderful free loan offer, and also our beautifully illustrated booklet. No strings are attached to this free loan offer. We want you to use the Frantz Premier for 10 full days **just as though it were your own.** Clean your carpets and your rugs with it. Try it on your furniture, mattresses and walls. Use it in all the nooks and corners. We want you to see for **yourself** how it picks up threads, lint and ravelings and every speck of dust and dirt.

And then, at the end of the 10 days free trial if you are not more than delighted with the cleaner, **you may return it, or we will send for it, without a cent of cost or obligation on your part.** But if you decide that you simply cannot get along without it, then you may keep the cleaner and pay for it on

Easy Monthly Payments

The cleaner goes to you right from our factory, or direct from our dealer if we have one in your town. **First you get the free trial and then the easy monthly payments.** And, remember, you get the rock bottom factory price—you do not pay a penny more because of this special Easy Monthly Payment Plan.

We expect to be so swamped with Free Trial requests that we reserve the right to withdraw this offer after a reasonable length of time. So send at once for your Free Trial. Remember—**absolutely no obligation to buy.**

MAIL THIS COUPON Sign this coupon and mail it to us at once. The minute we hear from you we will mail you the full details of this great free trial offer and easy payment plan. We will also send you free, the beautifully illustrated literature. **Send coupon or write today—at once.**

CHICAGO

WHEN IT'S COLD AT CHAUTAUQUA

BY E. H. BLICHFELDT

WHAT Chautauqua, New York, can do in January or February can be done by any one of a hundred little communities in the zero belt. It is only during July and August that Chautauqua has unique advantages for a scheme of outdoor enjoyment and indoor entertainment and instruction. During the winter it may boast only such favoring conditions as are found elsewhere. Population shrinks to a minimum of about 500 before Christmas. Diversities of interest akin to those of "town and gown" naturally exist among institution employees, cottages and more or less permanent residents. There is a union church, a consolidated township high school, and the usual quota of local societies, Chautauqua Circle, W. C. T. U., fire department, Young People's Society and the like. But the birth of a new community spirit, which many a small town craves, yet somehow fails to obtain, began here with a winter week of indoor lectures and entertainments, plus provision for outdoor coasting and skating. It was a voluntary home application of the Chautauqua idea to winter small-town conditions. It began timidly with a question on somebody's part as to whether an indoor winter program of lectures and entertainments on a very modest scale, accompanied by some livelier activities for those whose blood runs warm within, would be given support. It "caught on" so imperceptibly but grippingly that about \$400 was subscribed for tickets at \$1.50 to assure another carnival the next winter.

Again in 1915 the program and the sports were inaugurated. Money was spent out of the fund to scrape and flood a skating rink on the green in the center of the town. This rink was

THE TOWN ON THE COAST

lighted by a big electric bulb over the middle and at the corners by two quite marvelous towers of ice with electric bulbs encased within. Volunteer labor supplemented the little expenditure for this innovation. Lecture fees were, of course, paid; but the ticket sellers and ushers gave their time. The Institution, whose offices are at Chautauqua thruout the year, regarded it not as a philanthropy but as a good piece of business to give every employee three hours during the week and encourage its officers to give their services as fully as possible, on the platform or on the snow scraper. The people, not by companies or cliques, but as individuals, gathered to help the various efforts, here in force, there a little weakly, but on the whole with increasing unanimity, and before many days everybody knew that something had happened to the town. The thing that had happened was good, and there was no longer any vagueness about the idea of its merit of continuance. The Chautauqua annual carnival would seem to be established if everybody is discreet enough to remember that it isn't his affair or the affair of his group, or the affair of any other group of whom his might be mildly jealous. It is *everybody's* affair and is possible only as everybody claims part in it, and lends it his good

will. This has been so apparent that probably nobody will overlook or forget it. It is the carnival spirit that deserves emphasis as creative of all that rescued Chautauqua from monotony for ten days in February, and seems to have unified its elements in a new way.

An inventory of the products of the enterprise would be made up first of intangible things, tho they are sure to bring tangible consequences after them. Men and women fifty years

of age, who had not skated in years, brought out their wooden-bodied, hand-forged skates of the model of 1879 and zigzagged over the ice, exchanging partners. Reserved or shy grownups who had been suspected of being a little crusty became pals with the neighbors' children. Glove fingered gentlemen heaved on a five-man snowshovel. Half-grown barbarians of both sexes found legitimate vent for their energies. Overnice young ladies fell down and lost their precious airs without any damage to proper reserve. Boys of eighteen discovered that lectures need not be a deadly affliction if the lecturer is a normal member of the human race and if the fellow on the bench is sportsman enough to reciprocate the good fellowship that older folk have shown him out on the ice. In short, the greatest accomplishment of the affair was in making better friends of those who thought they had nothing in common, who will still differ very much in their daily interests, but who have discovered unsuspected fine qualities in each other and learned that they can unite in enthusiasm for what benefits all.

It has been demonstrated that some counterpart of the Chautauqua week may become a local institution in a thousand villages of America.

mind my asking you, but are you a relative
of Captain Jones of Mudford?
The Officer—Madam, I am Captain
Jones of Mudford.
Kind Old Lady—Ah, then that accounts
for the extraordinary resemblance!—*Lon-*
don Opinion.

"I hope your constituents appreciate the
value of your patriotic services," said the
prominent citizen.

"I don't know that I care to make it a
question of actual value," replied Senator
Sorghum. "The market for patriotic serv-
ice is terribly fluctuating."—*Washington*
Star.

REMARKABLE REMARKS

GEN. JOFFRE—The French Army will
never crack.

JOHN HAYS HAMMOND—The Republican
Party is reunited.

BLISS CARMAN—Heaven is no larger
than Connecticut.

EMPEROR YUAN SHIH-KAI—My heart is
full of love for the people.

WOODROW WILSON—After all the most
vitalizing thing in life is Christianity.

CONGRESSMAN "CYCLONE" DAVIS—I
haven't worn a collar in twenty years.

ELLA WHEELER WILCOX—On a few oc-
casions I have received messages from the
beyond.

PROF. CHARLES MCCARTHY—The day of
the "hoo-hoo" and "eat'em-alive" freak is
passing.

REV. CHARLES B. MITCHELL—About the
meanest skunk on the footstool is the
snobbish minister.

WILLIAM ALLEN WHITE—Kansas is the
sole legatee and custodian of the New Eng-
land conscience.

SENATOR TOWNSEND—True democracy
demands that wheelbarrows be taxed, if
automobiles are to be.

INEZ MILHOLLAND BOISSEVAIN—Cer-
tainly women should have the right to
propose. I did it myself.

SECRETARY LANE—The Bureau of Edu-
cation should either be abolished or put
to serious high purpose.

SENATOR J. HAMILTON LEWIS—The Re-
publican masters are bent on picking an-
other Mark Hanna for 1916.

DR. HEINZ BOTHOFF—If necessary we
must kill hundreds of thousands of prison-
ers who are consuming our food.

ELIHU ROOT—If the nomination were
offered to me, I should feel it my duty to
accept it, even if it should kill me.

MRS. HENRY FORD—I'd rather give up
my own life than send my son into battle
to seek the life of another mother's boy.

ROBERT E. PEARY—The 40th parallel of
North Latitude is the most fateful and
suggestive line upon the earth's surface.

SIR FREDERICK TREVES, M.D.—As soon
as King George's health is entirely re-
stored he will resume total abstinence.

ALEXANDER GRAHAM BELL—I can imag-
ine men with coils of wire about their
heads and communicating thought by in-
duction.

MARY PICKFORD—Today I had fifteen
letters asking me if my hair is naturally
curly. Just to be saucy, I won't answer
one of them.

BOURKE COCKRAN—Roman Catholic
schools are the real non-sectarian schools,
while the so-called public school system
based on agnosticism is sectarian.

SIR WILLIAM OSLER—In time our civ-
ilization is but a thin fringe like the layer
of living polyps on the coral reef, capping
the dead generations on which it rests.

PETER FINLEY DUNNE—"Is th' Prisi-
dent a good goluf player, d'ye know, at
all?" asked Mr. Hennessy. "As a goluf
player he cud give Lincoln a sthroke a
hole," said Mr. Dooley.

HELEN KELLER—Let us start a world-
encircling revolt which shall make a junk
heap out of civilization, of Kaisers and
Kings and all the things that make of man
a brute and of God a monster.

PUBLISHER ERMAN J. RIDGWAY—We
covenant with you, and solemnly, to edit
without malice, without self-interest, not
even for your self-interest, but for the good
of all, as God, the Father, gives us to see
what is good for all.

H. J. CALLAHAN—I always carried a
supply of dead cockroaches with me. When
I had finished eating I would throw one
on the plate. Then I would call the res-
taurant proprietor, point disgustedly at it,
and walk indignantly from the place with-
out settling the bill. It never failed.

NUMBER 3501

TWENTY-ONE AMERICAN REPUBLICS

THAT the twenty-one American republics should all be represented in the Scientific Congress in Washington by a thousand of their most distinguished citizens is a notable event, but far more notable is the fact that the twenty-one independent American nations are all republics. Besides these, Canada is to all intents and purposes a republic, tho nominally governed by an appointed representative of an European nation. Apart from British America, only a few insignificant fringes along the Atlantic coast have an exotic color; the continent is self-governed and republican.

That this is the great fact is to the credit of our own nation. Ours was the first of these republics, and is stronger and richer than all the rest put together. It was our example that made them republics. And when independent, it became our privilege to protect them. Hence, nearly a century ago, came the Monroe Doctrine. Under the shadow of that Doctrine they have grown, some of them to a fine maturity. It is not strange that our Secretary of State in welcoming the delegates to this Pan-American Congress and the delegates in their responses should have recognized what the Monroe Doctrine has done, and should have anticipated a more intimate sentiment of Pan-American good-will.

The Monroe Doctrine had no purpose to control or patronize the infant republics. It simply said, and wholly for the protection of our own nation, that no European Power should obtain a new foothold on our Continent. The camel should not put its nose into our tent. The Doctrine has been efficient. During the century no European Power has gained one inch of American territory. When one threatened it has been resisted. Meanwhile

Africa has been portioned out among the nations of Europe, but not America. When some European creditor nation has threatened to enforce payment of some little republic's extravagant debts we have peacefully intervened at the request of the endangered state. We have taken no advantage to ourselves beyond the advantage of keeping the Eastern Continents out of the Western.

Nor have we interfered in the differences between the twenty republics, unless our own Mexican War is an exception, when we recognized the independence of Texas and were thereby involved in war. Chile and Peru had their war and we did not interfere. Chile and Argentina divided Patagonia between them with no objection from us. We have also added one to the number of independent American republics, Cuba, by our war with Spain, and relieved Porto Rico from European domination.

It is not strange that the other republics should at times have feared that our purpose was selfish. Such it is not, and the twenty republics are coming to recognize our friendly purpose. This is what is implied in Pan-Americanism, each for all. It means peace, it means prosperity and wealth. While the three continents of the Eastern hemisphere are drenched in blood, slaughtering and impoverishing each other and themselves, the American policy brings peace and wealth and added population. To the Monroe Doctrine it adds the Pan-American Doctrine of good-will, mutual and trustful helpfulness. We are twenty-one sister nations, and when this fearful war is ended the nations of the old world will be quick to learn our lesson and we are confident will follow our example. Then the league of peace shall encircle the earth.

MORAL PREPAREDNESS

WE have already discussed at length the President's preparedness program from the military and financial standpoint. Is there not an aspect of the problem, however, more fundamental than either?

Here we are in the midst of the direst calamity known to history. Europe is bleeding to death. Asia is straining every nerve to hold our friendship. We would seem to be safer from invasion than at any time during our history. We are not only safe, but we are prosperous. Our prosperity, however, is not the result of our own planning. It is coined out of Europe's agony. And yet at the very time when our hearts should open as never before to the piteous cries from across the water, when all our thoughts and all our substance should be freely given to binding up the broken wounds, when the hour calls for a supreme and glorious unselfishness, we are proposing

to retire within our little world and proclaim as our national policy, "safety first."

Instead of considering how to embark on a course that would bring us the gratitude and love of every nation—such for instance as taxing ourselves to lend them a billion dollars to repair their losses after the war—we propose a plan that will inevitably make each one of them hate us a little more.

Some years ago we returned to China \$10,000,000, which was an overpayment on the Boxer indemnity. That was not a present to China, but only a refusal to keep what did not rightfully belong to us. Yet the return of that sum—half the cost of a modern dreadnaught—has made the United States the most beloved nation on earth in the hearts of that great Asiatic people now so sincerely groping for light and liberty. Is

there not a lesson here for a nation that would plan preparedness for peace?

Let us then make haste slowly in increasing our armaments. By the time the war is over we shall most likely find the nations ready to organize the world for peace and some sort of disarmament. If that is the case, any great burden of taxation now imposed on the American people for armament purposes will be wasted.

If the nations, however, instead of making a durable peace, only declare a truce in order to continue the mad scramble for greater and ever greater armaments, then the United States, having lost neither in treasure nor in men, will be in a better position than any other nation to enter the inevitable and crushing race whose end is death to all but the most powerful.

PANAMA AND SUEZ

THE inclusion of the Suez Canal within the zone of war seems likely to effect a decided change in the status of the Panama Canal. The Hay-Pauncefote treaty upon which the neutralization of the Panama Canal depends states in Article III that

The canal shall be free and open to the vessels of commerce and of war of all nations observing these Rules, on terms of entire equality.

The canal shall never be blockaded nor shall any right of war be exercised nor any act of hostility be committed within it.

The words "observing these rules" refer, as stated in the preceding paragraph of the treaty, to "the Convention of Constantinople, signed the 28th of October, 1888, for the free navigation of the Suez Canal" and which "the United States adopts as the basis of the neutralization of such ship canal."

Let us see then what this "basis of neutralization" stipulates. The chief clauses of the Convention of Constantinople bearing on this point are:

Article I. The Suez Maritime Canal shall always be free and open in time of war as in time of peace, to every vessel of commerce or of war, without distinction of flag. Consequently, the high contracting parties agree not in any way to interfere with the free use of the canal, in time of war as in time of peace. The canal shall never be subjected to the exercise of the right of blockade.

The high contracting parties agree that no right of war, no act of hostility, nor any act having for its object to obstruct the free navigation of the canal, shall be committed in the canal and its ports of access, as well as within a radius of three marine miles from those ports, even tho the Ottoman Empire should be one of the belligerent powers.

In time of war belligerent powers shall not disembark nor embark within the canal and its ports of access either troops, munitions, or materials of war.

This Convention was signed by the representatives of Great Britain, Germany, Austria-Hungary, France, Italy, Russia, Turkey, Spain, and Netherlands. Their agents in Egypt are charged to watch over the execution of the Convention. The Sultan of Turkey and the Khedive of Egypt are permitted to take such measures for the defense of Egypt "by their own forces" as may be necessary, but Article I, the first paragraph of the above quotation, is not so waived.

The Great War has left little or nothing remaining of the Convention of Constantinople. All of the signatories are involved except Spain and the Netherlands. The Suez Canal has been the scene of one conflict and is likely to become the center of another and fiercer struggle. The British Government has deposed the

Khedive, set up a Sultan independent of Turkey and declared a protectorate over Egypt. Since even neutral lines like the Dutch are now going around by the Cape of Good Hope instead of thru the canal we may imagine what would happen if a vessel flying the German or Austrian flag should try to go thru.

On August 5, 1914, the day after Great Britain declared war on Germany, the Government seized all German ships of over 5000 tons displacement and fourteen knots speed in Egyptian ports. German and Austrian men anywhere in Egypt were arrested and deported. All these acts took place, it should be understood, while Great Britain was still legally at peace with Turkey and while the Sultan was still nominally sovereign of Egypt and the canal zone.

During the autumn and winter of 1914 the Suez Canal was fortified on both sides and 12,000 men brought from Australia, New Zealand and India to defend it. In February and March Suez was attacked by the Turks, but they were repelled by the artillery of the forts and the warships which patrolled the canal.

We are not here questioning the propriety of any of these acts, but merely considering their bearing upon our rights at Panama. Referring back to the quotation from the Hay-Pauncefote treaty at the beginning of this article we see that it specifies that only nations "observing these rules" are entitled to equality of treatment in regard to tolls and the passage of vessels of commerce and war. These words "observing these rules" were not in the first draft of the treaty, which was amended by the Senate and never ratified, but were inserted in the final draft which was ratified. The clause "no fortifications shall be erected commanding the canal or the waters adjacent" and the phrase "in time of peace as in time of war" following the words "the canal shall be free and open" which were originally in the treaty were struck out of its final form. This has permitted us to fortify the canal, but by a curious inconsistency the treaty debars us from "any act of hostility" in Panama.

This inconsistency has now, it seems to us, been removed. It cannot be said that Great Britain has recently been "observing these rules" in Suez and she is the only nation who possesses any treaty rights in Panama, for the United States refused to agree with her proposal that the same guarantees be extended to "all nations which shall agree to observe these rules." Whether her violation of the Convention of Constantinople invalidates *per se* the Hay-Pauncefote Convention is a question for constitutional lawyers to decide. But anyhow, the acts of Great Britain in Suez during the present war have established a precedent which would debar her from objecting if in a similar emergency we used the Panama Canal Zone as freely for belligerent purposes as we would use any part of our own territory.

WHAT GOOD WAS YOUR SCHOOLING ?

CRITICIZING schools is a very popular pastime. It amuses the public and the teachers don't seem to mind. Besides—who knows?—perhaps the criticism may some time take effect and then we shall see radical changes in our educational system. Meantime we can at least continue to talk about it.

As soon as we leave school or college and plunge into active life, we make two discoveries. We find out that

our education has in some ways given us valuable preparation for our new duties and we also feel the lack of certain other forms of training which our schooling might have given us but did not. Now the studies or discipline which have proved beneficial to one person may turn out to be quite useless for another, and we must have the experience of many if we are to draw any safe conclusion as to the sins of omission and commission in our educational system.

So we are going to hold an experience meeting on this subject. We wish every reader of The Independent would answer two questions:

1. Of all you were taught at school what has proved most useful to you in after life?
2. What have you had to learn since leaving school which you might have been taught there?

Make your answer definite, brief and sincere. Give your reason why that particular study was or might have been valuable to you, but do not write over a hundred words about it. If you use fifty words it is much more apt to be published. These questions might well be put to clubs and teachers' meetings, for they would bring out an interesting discussion and we should like to have the results of such collective questioning. Of course we do not necessarily limit the word "useful" to its narrow or vocational sense. You may think that what has helped you most was some special form of training, a new viewpoint or an inspiring ideal, but in that case to avoid vagueness you should point just why that particular study and not some other had such an effect upon your mind and character. All replies should be in by February 20. A postal card will do.

TOM OSBORNE

THE indictment of Thomas Mott Osborne, warden of Sing Sing prison, is but another example of the ingratitude of democracies.

Here is a man who has dared to substitute the law of love for the law of force in the community which he governs, a man who before our very eyes and in a few months has turned a cage of wild beasts into a self-respecting community of law and order, a man who in any other country would be decorated for his great public services, and yet now the victim of a foul conspiracy to ruin his character and drive him from public life. It seems incredible!

When he is acquitted—for it is inconceivable that he should not be acquitted—he should be reappointed to the wardenship of Sing Sing. We sincerely hope that Governor Whitman will take no uncertain attitude on this question. If he goes back on Tom Osborne, his own political death knell will have been sounded. There is not a shadow of a doubt that the whole people are with Osborne.

To Professor Kirchwey, who unselfishly stepped into the breach and assumed the wardenship of Sing Sing until the trial is over, the citizens of the state of New York and the country owe a debt of gratitude. Without his willingness to come forward to see that the Osborne policies are continued, the powers of evil might have conquered and Sing Sing would have been thrown back into the jungle.

As for State Superintendent of Prisons Riley, who has been fighting Osborne from the beginning, the sooner he goes the better. What is the Governor thinking of in keeping him in office?

THE MAN OF THE HOUR

THE latest speech of Lloyd George in the House of Commons has produced a more powerful effect than any oratorical effort of recent times. His warning that the delay in military operations and the obstructive rules of the trades unions might prove fatal to the cause of the Allies has startled and thrilled the nation:

We have been too late in this, too late in that, too late in arriving at decisions, too late in starting this enterprise or that adventure. The footsteps of the Allies have been dogged by the mocking specter of too late. Let not "Too Late" be inscribed on the portals of our workshops.

It is a curious fate that has made this poor and despised Welsh lawyer the leading man in England. A few years ago he was execrated by the ruling classes, the aristocracy, the clergy and the capitalists, who now look to him as the savior of the country. Yet he is imposing taxes ten times greater than those then thought intolerable and controlling the industries of the nation in a way that would once have been denounced as rank socialism. In appearing before the trades union congress a few months ago he introduced himself, quite correctly, as "the most extensive employer of labor in the world." He has brought the manufactories of army supplies up to an unprecedented state of efficiency and the British workman finds himself, much to his surprise, getting more money than he ever saw before.

Lloyd George is now the dominant figure in a cabinet composed of the ablest men of all parties, and in case of Asquith's fall he is likely to become Prime Minister.

"AMERICAN BARONS"

THAT is what the newspapers call them, these men who were born American citizens but have become British noblemen, William Waldorf Astor and Thomas Shaughnessy. But it is an obvious misnomer, a contradiction in terms. For those who accept a title, especially an hereditary title, are thereby repudiating the fundamental principle of this republic. Columbia disowns such degenerate sons, for what they esteem an honor is an insult to her. As old Ben Franklin puts it:

'Tis neither manliness, sense nor grace
For a man to spit in his mother's face.

We do not mind it when an American goes to live in England and becomes naturalized there because he likes the climate or the society better than ours, or finds there better business, professional or marital opportunities. Such freedom of migration is altogether desirable. We have the highest respect and admiration for the hundreds of young Americans who have taken service under the British flag in this crisis, for we realize that, altho they have had to swear allegiance to King George, they are really fighting in large part for the political principles which the two countries share.

But to join the peerage which England is trying to shake off, to accept titles which are admittedly purchasable and treated as party graft, to seek a fictitious ennoblement which is tainted with historic tyranny and which the noblest of Englishmen, such as Bright and Gladstone, have declined, proves that they are not merely aliens to America but enemies of Americanism. It seems strange that King George, now at a time when American sympathy and aid are desired, should needlessly offend American sentiment by making two 'merican barons."

WHICH DO YOU PREFER ?

BY FRANKLIN H. GIDDINGS

PROFESSOR OF SOCIOLOGY AND THE HISTORY OF CIVILIZATION, COLUMBIA UNIVERSITY

ON June 18, 1888, William II of Germany in an address "To My People" said:

Called to the throne of my fathers, I have taken over the government, looking to the King of all kings, and have vowed to God, following the example of my father, to be a righteous and gentle prince, to foster piety and the fear of God, to maintain peace, to further the welfare of the country, to be a help to the poor and oppressed, and to be to the righteous man a true protector.

On July 27, 1900, this "righteous and gentle prince," addressing German soldiers departing for Peking to avenge the death of the German Minister, Baron von Ketteler, instructed them:

You know very well that you are to fight against a cunning, brave, well-armed, and terrible enemy. If you come to grips with him, be assured quarter will not be given, no prisoners will be taken. Use your weapons in such a way that for a thousand years no Chinese shall dare to look upon a German askance. Show your manliness. The blessing of God be with you! The prayers of an entire people and my wishes accompany you, every one. Open the way for culture once for all!

On March 22, 1905, the same peace-loving potentate addressed the burgomaster and citizens of Bremen on the occasion of the dedication of a monument to Frederick III. Picturing the glorious destiny of his empire, he said:

For what has become of the so-called world-empires? Alexander the Great, Napoleon I, all the great warriors, have swum in blood and have left subjugated peoples behind them, who, at the first opportunity, have risen up again and brought the empire to ruin. The world-empire of which I have dreamed shall consist in this, that the newly-created German Empire shall first of all enjoy on all sides the most absolute confidence as a quiet, honorable, and peaceful neighbor; and that if in the future they shall read in history of a German world-empire or of a Hohenzollern world-ruler, it shall not be founded upon acquisitions won with the sword, but upon the mutual trust of the nations who are striving for the same goals.

On August 4, 1914, the German army attacked Liège. On August 20 it entered Brussels, and on August 27 it burned Louvain, all in violation of "a scrap of paper," wherein the Prussian Government had promised to respect and guarantee the neutrality of Belgium. On May 12, 1915, a commission headed by the Right Honorable Viscount Bryce, reported upon the atrocities, forever infamous, committed in the devastation of Belgium by an empire in which that helpless kingdom had placed confidence as a "quiet, honorable and peaceful neighbor."

On May 7, 1915, an Atlantic passenger steamer, the "Lusitania," was torpedoed by a submarine in the service of the "righteous and gentle prince." Of the nearly 1200 lives destroyed more than 100, including many women and children, were American citizens. On May 13 the Government of the United States sent a "firm" note to the German Government, setting forth that the destruction of the "Lusitania" was in violation of international law and of humanity. On May 31, Germany replied, justifying the act as proper under her conception of war. On June 9 our Government sent a second "firm" note, and on July 16 a third one. Whereupon, on September 1, Germany ostensibly accepted the American view of the lawful conduct of submarine warfare.

On November 1, the "Lusitania" case being still open, an Austrian submarine torpedoed, in the Mediterranean, after she had stopped, as the Austro-Hungarian Government has officially admitted, the Italian passenger steamer "Ancona," thereby sending to death defenseless non-combatants, including American citizens, among whom were women and children. On December 6 our Government dispatched a note to Vienna demanding that the "wanton slaughter of defenseless non-combatants" be denounced, that the responsible submarine officer who had destroyed the "Ancona" be punished, and that

reparation be made for the killing and injury of American citizens. On December 15 the Austro-Hungarian Government asked for "particulars" and an "exchange of views." On December 19 our Government sent to Vienna a second "firm" note. On December 29 the Austro-Hungarian Government replied to the second "Ancona" note, repudiating the sinking of the "Ancona," stating that the commander of the offending submarine had been punished, offering indemnity, and pledging the safety of neutrals and non-combatants at sea.

On December 30, simultaneously with the publication of this Austrian reply, the passenger steamer "Persia," from London for Bombay, was torpedoed and sunk in the Mediterranean. Among the hundreds of lives destroyed was that of a consul of the United States on his way to his post at Aden.

Washington, it was reported, was "shocked." Certain newspapers intimated that Washington was "amazed."

Self-respecting reader: Which would you rather be, a subject of a "righteous and gentle prince" who, fostering "piety and the fear of God," opens "the way for culture once for all" by ravaging a kingdom that has trusted him "as a quiet, honorable and peaceful neighbor," and by drowning non-combatant women and children; or a citizen of a republic whose President, having ignored or failed to perceive the greatest opportunity ever offered in human history for a firm exhibition of moral courage in defense of civilization and liberty, deals, month after month, in high-sounding periods with governments doubly and trebly forsworn, on the assumption that they may still be believed, under oath or otherwise, and who advises his masters, the American people, to suppress their indignation and hold their tongues in neutrality of thought and speech as of technically illegal acts? Think it over.

New York City

THE STORY OF THE WEEK

The Sinking of the "Persia"

The British steamer "Persia," of the Peninsular and Oriental Line, on her way to Alexandria, was sunk about three hundred miles northwest of that port at five minutes past one on the afternoon of December 30. No torpedo was seen, but the second officer reports seeing the track of one. The vessel went down five minutes after the explosion and only four boats got away. Of the 182 passengers only 59 were saved; of the 154 in the crew, 94 were saved, according to the latest reports. This gives a total loss of 247 lives, of whom 70 were women and 30 were children, a death list second only to that of the "Lusitania." That a larger proportion of the crew escaped than of the passengers is surprising but may be due to the suddenness of the sinking as it is said there was no panic. The crew mostly consisted of Lascars.

Two Americans were on board. One of them was drowned, Robert Ney McNeely, of North Carolina, who was on his way to Aden, at the entrance to the Red Sea, where he was to be Consul.

The nationality of the submarine at-

tacking the "Persia" is not known and there is a possibility that it was sunk by a mine instead of a torpedo. Altho the disaster occurred on Thursday no detailed news of it was made known to the United States until Monday morning. The "Persia" carried 4.7 inch guns but this is permissible to a merchant vessel under the rules of the United States. It is not known certainly whether troops or munitions were carried.

British Near Conscription

The House of Commons passed without opposition the Government bill extending the life of the present Parliament for eight months and increasing the army to 4,000,000 men. The next thing is to get the men. According to a recent statement of Premier Asquith there are now about a million and a quarter British troops in the various theaters of war. But since their losses average over a thousand a day it is necessary to secure a continuous supply of men in greater numbers than hitherto. The opposition to conscription is so strong that the Government tried

to avoid it by adopting the recruiting scheme of Lord Derby by which all the men of the United Kingdom, but not Ireland, were registered and classified and then personally interviewed by Government agents to ascertain what excuse, if any, they had for not volunteering. The nine weeks campaign of Lord Derby brought out an immense number, estimated to be over two million, but still not enough. The recruits under the Derby scheme are to be regarded as reserves and called out by classes according to age and condition. Classes 2, 3, 4 and 5, comprising unmarried men from nineteen to twenty-two, have already been summoned to the colors.

The Premier promised in November that "if the young men did not, under stress of national duty, come forward voluntarily other and compulsory means would be taken before married men were called upon to fulfill their engagement to serve." The Cabinet seems to have agreed to this altho there were some dissidents among the Ministers and several resignations are expected in consequence. That of Sir John

AUSTRIA'S PAPER COMPLIANCE WITH AMERICA'S DEMANDS

The reply of the Austro-Hungarian Government to the second American note on the sinking of the Italian steamer "Ancona" as handed to the American Ambassador at Vienna on December 29 is given in large part below:

The Imperial and Royal Government agrees thoroly with the American Cabinet that the sacred commandments of humanity must be observed also in war.

The Imperial and Royal Government can also substantially concur in the principle, exprest in the very esteemed note, that private ships, in so far as they do not flee or offer resistance, may not be destroyed without the persons aboard being brought into safety.

Guided by the same spirit of frankness as the Government of the Union, the Imperial and Royal Government, altho it does not find in the note, frequently referred to, the answer to all the legitimate questions submitted by it, is willing to communicate to the Federal Government the result of the investigation which, in accordance with existing departmental regulations, was begun immediately after the receipt of the fleet report on the sinking of the "Ancona," and which was just recently received. [Here follows the detailed report.]

The weather at the time of the incident was good and the sea calm, so that the lifeboats could have reached the nearest coast without danger, as indeed the lifeboats actually were damaged only by the unskilled lowering, but not after they had struck the water.

The loss of human lives is in the first instance by no means ascribable to the sinking of the ship, but (and in all probability in a much higher measure) to the rapid lowering (hinunter werfen) of the boats during

full speed, as well as to the fact that the crew, concerned only for itself, did not rescue the passengers of the capsized boats.

It is also probably ascribable to shots which hit the fleeing vessel, but the death of persons who sank with the steamer is also, above all, ascribable to the disloyal conduct of the crew.

As appears from the above-adduced state of affairs, the very esteemed note of December 9 is based in many points on incorrect premises. Information reaching the United States Government that solid shot was immediately fired toward the steamer is incorrect: it is incorrect that the submarine overhauled the steamer during the chase: it is incorrect that only a brief period was given for getting the people into the boats. On the contrary, an unusually long period was granted to the "Ancona" for getting passengers into the boats. Finally, it is incorrect that a number of shells were still fired at the steamer after it had stopped.

The facts of the case demonstrate further that the commander of the submarine granted the steamer a full forty-five minutes' time, that is, more than an adequate period to give the persons aboard an opportunity to take to the boats. Then, since the people were not all saved, he carried out the torpedoing in such a manner that the ship would remain above water the longest possible time, doing this with the purpose of making possible the abandonment of the vessel on boats still in hand.

Since the ship remained a further forty-five minutes above water, he would have accomplished his purpose if the crew of the "Ancona" had not abandoned the passengers in a manner contrary to duty.

With full consideration, however, of this conduct of the commander, aimed at accomplishing the rescue of the crew and passengers, the Imperial and Royal Marine authorities reached the

conclusion that he had omitted to take adequately into consideration the panic that had broken out among the passengers, which rendered difficult the taking to the boats, and the spirit of the regulation that Imperial and Royal Marine officers shall fail in giving help to nobody in need, not even to an enemy.

Therefore the officer was punished in accordance with the existing rules, for exceeding his instructions.

The investigation into the sinking of the "Ancona" could naturally furnish no essential point to show in how far a right to an indemnity is to be granted American citizens. The Imperial and Royal Government cannot, indeed, even according to the view of the Washington Cabinet, be held liable for damages which resulted from the undoubtedly justified bombardment of the fleeing ship.

It should just as little have to answer for the damages which came to pass before the torpedoing of the ship thru the faulty lowering of lifeboats or the capsizing of lowered boats.

If, however, because of possible lack of material proofs, the particular circumstances under which American citizens suffered damage should not have become known to the Union Government, the Royal Government, in consideration for the humanely deeply regrettable incident, and by a desire to proclaim once again its friendly feelings toward the Federal Government, would be gladly willing to disregard this gap in the evidence and to extend indemnities also to those damaged whose cause cannot be established.

While the Imperial and Royal Government may probably consider the affair of the "Ancona" as settled with the foregoing statements, it reserves to itself at this time the right to bring up for discussion at a later date the difficult questions of international law connected with submarine warfare.

WAITING FOR THE CHARGE

A French advance trench just before the attack on the German lines, over which a shell is bursting. As soon as the bombardment has done its work the crouching men will leap into action and rush the enemy's position

A. Simon, the Home Secretary, is already announced.

It is argued by those opposed to conscription of any form or degree that the national register shows that there are only 600,000 unmarried men who have not attested and of these more than half are ineligible for military service on account of physical deficiency and of the rest a large proportion are either working in essential trades or are supporting families. Would it then be good policy to introduce a measure so repugnant to national traditions and popular sentiment as conscription in order to bring the comparatively small number of real "slackers?"

Most of the radicals and labor men and many of the old fashioned Liberals are constitutionally opposed to compulsory military service, so an opposition party to the Coalition Cabinet may be formed. A national congress of labor has been called for January 5 to determine whether the trades unions will consent to conscription.

The Irish party is also opposed to any form of compulsion and no attempt will be made to extend it to Ireland at present. John Redmond, the Nationalist leader, is still supporting the Government, tho critical of the conduct of the war. John Dillon, who represents another Irish faction, attacked the Government in the following language:

Before we sanction the fourth million of men we ought to be told what is the basis of the Government's demand. In no case have the failures of the war been due to lack of men, and before the Government enforces conscription the men responsible for these failures must be removed. What is the use of sending more troops to be led by men like those responsible for the Suvla Bay and Anzac failures?

Lloyd George, who has thrown the weight of his influence on the side of conscription, is trying at the same time to bring the munition factories up to a state of efficiency. In a very impressive speech he warned the House of Commons that "unless we quicken our movements damnation will befall the great cause for which so much blood has been shed." He told how it took four months to accumulate the stock of shells which were expended in a few days in the vain attempt to break the German line in September. Now, he

said, a month and soon, he hoped, a week would produce such a supply. In May, when the Germans were manufacturing 250,000 high explosive shells a day, the British works were only turning out 2500. The manufacturers were then delivering only 16 per cent of what they had promised. But the supply of machine guns is still short and 92 per cent of the casualties are due to these. For such work there are needed 80,000 skilled and 300,000 unskilled workers. Unless the unions can be induced to suspend the rules preventing the employment of unskilled labor, Mr. George fears for the outcome of the war.

The Defense of Salonica After the conquest of Serbia the Anglo-French troops retreated southward into Greece and the Serbs westward into Albania. It was the expectation of the Allies at Salonica that the Austro-German and Bulgarian troops would follow them into Greece and accordingly they began to entrench themselves with feverish haste and to rush in all available reinforcements. Since Salonica was at first unfortified and the

French and British around Salonica did not number more than a third of what could have been brought against them, it seems likely that they could have been overcome if the Austro-German and Bulgarian troops had continued their advance. But they stopped instead at the Greek border. Whether for the purpose of preparation, or because their real interests lie elsewhere remains to be seen. At any rate, their delay has given the Allies time to encircle Salonica with fortifications, to bring up 1200 guns and to accumulate troops to the number of some 250,000.

General Castelnau, the French Chief of Staff, who has visited Salonica, pronounces it impregnable and says his only fear is lest the enemy should decide not to attack but to stay where they are, which, "in view of our preparations to receive them fittingly, would be a pity." The only sign of hostility against Salonica manifested so far is the appearance of several German aeroplanes flying high over the city. One of the Taubes, apparently mistaking a flock of sheep for the British army, dropt a bomb which killed the shepherd and four of his sheep.

On the suspicion that they were giving information about the defenses, the Austrian, German and Turkish consuls at Salonica have been arrested and transported by order of General Sarrail, the French commander. The papers of the consulates were seized and the consuls with their families and servants, sixty-two altogether, put on board a French vessel for transportation to parts unknown. The Bulgarian consul escaped. The Greek Government has protested against this new violation of Greek neutrality by the Allies.

The War in Albania On the western side of Serbia there is more activity. The Austrians, who invaded Montenegro from the Sanjak of Novibazar, have been driven back over the frontier into Serbia with a loss of over 2000 in killed and wounded. The Austrian attack upon the other side of Montenegro, tho supported by a vigorous fire from the artillery of the forts and fleet, was also ineffective. The Austrian official reports are non-

THE GREAT WAR

December 27—Bulgars defeat Serbs at Elbasan, Albania. Arabs attack western frontier of Egypt.

December 28—Montenegrins expel Austrians. Russians take Kashan, Persia.

December 29—Two Austrian destroyers sunk in raid on Durazzo, Albania. Lloyds treble insurance rates thru Suez because of threatened German attack on Egypt.

December 30—British liner "Persia" sunk in Mediterranean. British cabinet considering conscription.

December 31—Indian National Congress demands self-government for India and officers' commissions in the army. German, Austrian and Turkish consuls at Salonica arrested by French.

January 1—China adopts compulsory military service in two provinces. Canada enlarges army from 250,000 to 500,000.

January 2—Renewed activity in Galicia and Bessarabia. British steamship "Glengyle" torpedoed in Mediterranean.

committal in regard to the fighting in this field.

It seems that the Austrians are trying to gain entrance into northern Albania by way of Dalmatia to the west of Montenegro. The Austrian territory extends down along the Adriatic coast nearly to Antivari, the sole Montenegrin port, and this is only fifty miles from Scutari, the chief town of northern Albania, now the headquarters of the Serbian Government and the rallying point of its scattered troops.

It is said that the Serbian soldiers which have been collected and reorganized in Albania number about 80,000. They are being supplied with food and ammunition by the Italians, who hold the ports of Durazzo and Avlona on the Albanian coast. A squadron of five Austrian destroyers from Cattaro entered the harbor of Durazzo and sunk two vessels there but one of the destroyers struck a mine and another was sunk by shell fire. The Italian authorities have expelled from Durazzo William W. Howard, of New York, secretary of the Albanian Relief Fund, and other Americans who were engaged in the succor of the starving Albanians and Serbian refugees. The 30,000 Austrian prisoners which the Serbian troops managed to take with them into Albania when they were driven out of Serbia, have been turned over to Italy and are now interned in Sardinia.

The Bulgars who pursued the Serbs into Albania overtook and defeated them at Elbasan, in the middle of Albania and about forty miles east of Durazzo. The Bulgars are said to be still moving westward, seemingly with the intention of attacking the Italians at Durazzo, perhaps with the aid of the Austrians by land or sea. The Albanians, hereditary enemies of the Serbs, are taking advantage of the opportunity to rob and slay the helpless Serbian refugees out of revenge for the devastation of Albania by the Serbs three years ago.

Hartmanns-Weilerkopf The peak of Hartmanns-Weilerkopf which figures so prominently in the despatches from time to time stands on the southeastern verge of the Vosges mountains, overlooking the Rhine valley. From its name one would presume it to be German, but whether it is now in German hands or French cannot yet be told, for Paris and Berlin during the past fortnight have been claiming alternate or simultaneous victories. The crest of the peak, over 3000 feet above sea-level, was captured by the French last April, or at least they gained a lodgement there, for the Germans still held part of the summit. The opposing trenches were in fact only a few yards apart and sharp-shooting has been incessant between them.

On December 21 the French took the offensive and drove the Germans from their trenches on the summit and the southeastern slope. The Germans came back on the following day and regained most of their lost positions. This seesaw conflict continued all thru Christmas week, but on the whole it appears

that the French are gaining ground and are now in possession of the slope of Hartmann's Weilerkopf as well as the valley lying between this peak and the lesser elevation of Hirzenstein, a mile to the southeast. Whether this attack portends another attempt of the French at the conquest of Alsace remains to be seen.

Fighting continues at various points along the western front, especially in the Champagne, Artois and Ypres sectors where the Allies tried to break thru last summer. Artillery duels, aeroplane raids and mine explosions are reported every day, but there are as yet no definite signs of a serious offensive on either side.

More Plotters Indicted The long inquiry of a Federal grand jury in New York concerning the conduct of Labor's National Peace Council, an organization formed in June last, but not regarded with favor by the labor unions, ended last week with the indictment of eight men. These are Congressman Frank Buchanan, of the Seventh Illinois District, who was president of the Council for a time; ex-Congressman H. Robert Fowler, of the Twenty-fourth Illinois District, a lawyer, who was the organization's chief counsel; Captain Franz von Rintelen, of the German navy, an intimate friend of the Kaiser and of Admiral von Tirpitz, who came to this country in April last to instigate strikes at munition factories and to force intervention in Mexico by means of a movement under the leadership of Huerta, and who fled by means of a fraudulent passport and is now a prisoner in the Tower of London; David Lamar, the "Wolf of Wall Street," who was recently found guilty of impersonating Congressman A. Mitchell Palmer in a financial trans-

action; Frank S. Monnett, formerly Attorney General of Ohio, a member of the organization's executive council; Jacob C. Taylor, Buchanan's successor in the presidency, vice-president of the cigar-makers' union; Henry B. Martin, the Council's secretary, and Herman Schulteis, an associate of Lamar. The indictment was found under the Sherman Anti-Trust law. It accuses the men of conspiring to restrain foreign trade and commerce by instigating strikes in munition factories, inducing employees to quit work, bribing officers of labor unions to prevent manufacture and shipment, and using other means as occasion might arise. The penalty is one year in prison, or a fine of \$5000, or both. It is the first indictment of its kind in the movement against plotters here. The jury had been at work since the first week in September. Another jury will now make similar investigations. The District Attorney says this is only a beginning.

Congressman Buchanan at first said he was immune, because of his office, but after a time he consented to plead, and with others gave bonds. It is alleged that von Rintelen expended about \$400,000 upon the work of the Peace Council before he ran away. Buchanan says the prosecution is a conspiracy to check his fight against militarism. He has introduced in the House a resolution designed to cause the impeachment of District Attorney Marshall, who conducted the inquiry. Fowler says the prosecution is the Government's answer to his suit (in which Monnett is interested) for damages because of injuries suffered by a woman passenger on the "Lusitania." The Government, it is asserted in this suit, should have excluded munitions from the ship. Monnett says the shipment of munitions is illegal and criminal. Fowler declares that the prosecution is the work of the Trusts.

Anton E. Mente, the Austro-Hungarian whose room in New York was found to be full of bombs and bomb material, has been sent to prison for one year because he had explosives in a tenement house. He had threatened to blow up a factory in New Jersey. Additional explosions on ships have been reported. In the hold of the British steamship "Inchmoor," loaded with sugar and nearly ready to sail from Brooklyn, fire suddenly broke out in a dozen places, and \$100,000 worth of the cargo was destroyed. The "Barksdale," which has returned to New York from Bordeaux, reports that on her recent eastward voyage a bomb exploded in her hold and that the fire destroyed 200 bales of cotton. There have been bomb explosions or fires on 23 ships or barges in the last few months. The American Truth Society has issued a report, signed by Bernard H. Ridder and Jeremiah O'Leary, about the work of its Bank Depositors' Committee against the Anglo-French loan. This report contains a blacklist of fifty-six banks and trust companies and two life insurance companies that favored the loan. It says these "should not be forgotten or forgiven."

Underwood & Underwood

SHE DRIVES LLOYD GEORGE

The Minister of Munitions could not consistently employ a man chauffeur, and Miss Marsh is an efficient substitute.

Pan-American Union

The Pan-American Scientific Congress at Washington is one of the most notable meetings ever held in this or any other country. In it are sitting eminent representative men from twenty-one republics. From the very beginning the purely scientific purpose of the meeting has been in the background, and the keynote of nearly all the addresses has been Pan-American unity and brotherhood. (See page 68.)

It became known that our Government was proposing a convention or agreement for the arbitration of boundary disputes and to prevent shipment of arms to revolutionist factions. John Barrett, Director General of the Pan-American Union, said that the American nations should form an alliance before the end of the great war to meet the possible aggression of the victors. He would have a new Doctrine requiring South America to come to the defense of the United States, if necessary, as quickly as the United States would oppose unjust attack upon the southern republics. Several delegates spoke for arbitration. A representative of Salvador would have it compulsory and in a Pan-American court. Uruguay's delegates asked for a permanent commission.

An Institute of International Law was formed, with 105 members, five from each republic. Elihu Root is honorary president, and the president is James Brown Scott. This institute hopes to rehabilitate and improve the international code after the war. A Pan-American Union of women was organized at a meeting over which Mrs. Lansing presided, and it voted to erect a building in Washington. Ernesto Quesada, of the Argentine delegation, proposed a confederation of all the

PREPAREDNESS IN JAPAN—WHERE THE BOY SCOUTS HANDLE RIFLES

American universities, with an interchange of professors and students. A hymn, the music and words by Chileans, was sung. It had been made for the Congress and it was adopted as the official hymn of Pan-America.

The New Prohibition States

In seven states, at midnight on the last day of the old year, the sale or manufacture of intoxicating liquors was prohibited by statute or by laws enforcing constitutional amendments. These states are Iowa, Colorado, Oregon, Washington, Idaho, Arkansas and South Carolina.

In each of them several counties had been enforcing prohibition under local option laws, but they are now to have state-wide prohibition for the first time. More than 3000 saloons, breweries, wholesale liquor houses and distilleries went out of business in the seven states at the end of the year. The number of prohibition states is now eighteen.

There were only 150 saloons left in Idaho, as there had been prohibition in a considerable part of the state. The law there is a drastic one, making the possession of spirituous or malt liquors a crime, the exceptions being wine for sacramental uses and pure alcohol for use in medicine or scientific work. But for these there must be a court order. In South Carolina the dispensary system, used in fifteen of the forty-four counties, is to be known no more. Individuals are permitted to obtain by shipment one gallon of spirituous liquor every month. It is reported that between \$2,000,000 and \$3,000,000 was expended by residents of Colorado for liquors in the last week of the saloons. There were bargain sales in Iowa in the 502 saloons that were about to be closed. The Washington law permits residents to buy from dealers outside of the state two quarts of spirituous liquor or twelve quarts of beer every twenty days. In Arkansas, agents of the Anti-Saloon League will be on duty to see that the new law is enforced. In Oregon drug stores are not permitted to sell liquor with or without a doctor's prescription, but in any period of four weeks a family may import two quarts of spirituous liquor or twenty-four quarts of malt liquor for personal use.

Higher Wages

At the end of the year there were many announcements of increases of wages, and these may fairly be regarded as proofs of prosperity. While several of the addi-

SHIVERING AT SALONICA

A British outpost at an exposed point on the fifty-mile defensive line which the Allies have thrown about the Greek port where they are now awaiting the Teuton attacks. It is said that the German schedule calls for the occupation of Salonica on January 15

tions were due to profitable work on war orders, others were not associated directly with such a cause. The Amoskeag and Stark cotton goods manufacturing companies, in Manchester, New Hampshire, gave 5 per cent to 20,000 employees. Similar action was taken at Nashua, Lowell and Lawrence, and in all the number of cotton mill employees thus benefited was 65,000. It was predicted that eventually the increase would be granted to about 200,000 in this industry. The American Woolen Company gave notice of an increase of not less than 5 per cent for the 35,000 persons employed in its forty-four mills. Following the Brooklyn Rapid Transit Company's additions to the pay of 7000 men, the Interborough Railway Company and two other street railway companies in New York ordered increases for motormen and conductors which affect 14,500 men and amount to \$470,000 a year. To the longshoremen at Boston was given an increase of from 2 to 5 cents an hour.

The Calumet and Hecla Copper Company, to which the high price of copper is giving large profits, informed the 14,000 men employed in its mines and on its railroads that they were to have a bonus of 10 per cent every month until July next. An increase of 10 per cent was given by the New Jersey Zinc Company to its employees as a New Year's present. From 5 to 10 per cent was granted to the 3500 men of the Reading Iron Company, and \$50,000 in additions was paid by the Thomas B. Jeffrey Company in Wisconsin. To 9000 conductors and porters the Pullman Car Company gave about 10 per cent, or \$600,000 a year. Employees of the Allis-Chalmers Iron Company whose salaries were reduced a year ago received checks for the sums that had been taken. The United States Steel Corporation offered 35,000 shares of its common stock to employees at \$85, the market price being now about \$89. There was no offer last year, but in 1914 the employees took 47,680 shares of the common stock at \$57, and 42,826 preferred shares at \$105. This year's offer is regarded as foreshadowing resumption of dividend payments on the common stock.

Advances ordered by the Navy Department, in some instances about 10 per cent, affect a considerable number in the navy yards, but there is complaint from the sheet metal workers that both their minimum and their maximum wages have been reduced by nearly 14 per cent.

For the Los Angeles Crime

The dynamite explosion by which the building of the Los Angeles Times was wrecked in 1910, and twenty-one employees were killed, is recalled by the conviction in Los Angeles, last week, of Matthew A. Schmidt, as an accomplice of the McNamara brothers in that crime. Four years ago James B. McNamara, who confest that he placed the bomb, was found guilty and sent to prison for life. For a long time Schmidt could not be

found, but he was arrested in New York City in February last thru the efforts of William J. Burns. He now goes to prison for life, this punishment having been fixed by the jury that found him guilty of murder in the first degree.

It will be remembered that the Los Angeles Times was owned and edited by General Harrison Gray Otis, who had incurred the enmity of certain labor unions and their officers. David Caplan, another man accused of being an accomplice of the McNamaras, was arrested near Seattle in February last. He is in jail, awaiting trial.

The Situation in Mexico

Nearly all of Villa's soldiers, and all of his leading officers except General Rodriguez, have surrendered and taken amnesty. To each soldier the Carranza Government gave \$10 and a railroad pass to his home, but a considerable number joined Carranza's army. Villa himself, with about 400 men, remained in the mountains, west of Chihuahua City. His family has arrived in Havana. There are seventeen in the party. One report says that Villa is going south to join Zapata. But he holds General Obregon's brother, Francisco, as a hostage for amnesty to himself. In a proclamation brought to El Paso by cowboys he says that he intended to leave Mexico and join his family, but that after he resigned his command he was informed that the promises and agreements upon which he had relied had already been broken. "Because of that," he adds, "and because I believe that my people will never accomplish peace, liberty and justice under the present controlling elements, I will devote my time and energies to opposing those unfair elements to the end that the objects of the revolution may be realized." The thirty men of the Pearson plant whom he held for ransom have been released and are in Texas.

Carranza has ordered by decree that his successor, if he should "default," shall be the head of his Cabinet, or Minister of Foreign Affairs, and not a military leader. This excludes Obregon. He has not yet said that he will

permit the Red Cross and the Rockefeller Foundation to take up the work of stamping out the epidemic of typhus fever. It is said that our consul at Juarez, Mr. Edwards, recently called him "a bull-headed old fool." Our State Department will inquire about this. At Washington the appointment of Henry P. Fletcher, a Republican, now Ambassador to Chile, to be Ambassador to Mexico, is said to be opposed by influential Democrats. Republicans also, it is asserted, may oppose confirmation on the ground that there is no real Government in Mexico to which an ambassador can be accredited. It is also said that they may use the appointment as the text for an attack upon the President's Mexican policy. Henry Lane Wilson, who was Minister to Mexico when President Madero was assassinated, declares that Carranza's Government must fall, because Carranza is incompetent, arrogant, bombastic and conceited. He repeatedly warned Madero, he also says, and urged him to seek safety in flight. With the consent of Huerta he procured for him a special train which was ready to take him to Vera Cruz, when Huerta intercepted a telegram in which Madero's wife urged the Governor of Vera Cruz to organize a revolt to support her husband upon his arrival. This changed the attitude of Huerta. But he promised that Madero's life should not be taken. Mr. Wilson adds that he has never been able to ascertain in what manner and by whom Madero was assassinated.

PACIFISTS AT PLAY

The Reverend Doctor Charles Fredrick Alford of San Francisco and the Reverend Doctor Jenkins Lloyd Jones of Chicago are on the peace ship, Oscar II, outbound

FROM STATE TO STATE

CALIFORNIA: The California Art Club, of Los Angeles, has begun work upon a plan to popularize art thruout this state. Representative collections of the works of Western painters will be sent to cities and towns, accompanied by lecturers qualified to explain the purposes of the artists and to awaken interest in the art. The working side of the artists' craft will be described, colored slides of details being shown not only of paintings included in the collections, but also of other notable works of art. The general purpose of the movement is to show that art is not for high days and holidays, nor for the intellectual appreciation of the few, but is for the daily life of every one.

COLORADO: The children of Colorado Springs, aided and directed by a local chapter of the Daughters of the American Revolution, gave the birds of the Pike's Peak region a merry Christmas by loading down the branches of a large tree in Monument Valley Park with dainties especially pleasing to the feathered flocks. The supply was sufficient to last for several days, and the children and their elders were so much interested in seeing the birds' enjoyment that it has been determined to serve the banquet regularly thruout the winter season.

CONNECTICUT: Other cities in this state are watching with interest the movement started by the New Haven Civic Federation for a complete survey of that city's various departments with a view to ascertaining just how much overlapping of duties there is and how the municipality may be managed with more efficiency. At the instance of the federation the city manager plan is to be carefully considered. City managers from other parts of the country are to be invited to address public meetings. The federation is planning to establish a window in a central location where the work of its several committees may be displayed for the enlightenment of the public as to what is being done under the present city government.

DELAWARE: Never before have the people of this state been so busy as they are now, nor have they ever before handled so much money. Most of this prosperity is due, of course, to the Great War, but it is not confined to the business of making munitions. In Wilmington alone there are no less than 200 industrial establishments producing other things, and nearly every one of them is running to capacity. The three shipyards in the old Swede settlement, the fifteen leather factories, the huge fiber industries, the four car shops and twenty-one foundries and machine shops are all either employing full forces of workmen or trying to get them. A year ago it was estimated that there were 6000 unemployed in the city. Since that time more

than 15,000 are said to have been put to work.

FLORIDA: The Florida First Commission, the permanent organization of which was recently effected, has started upon a nation-wide campaign of advertising in which it purposes to show the advantages of Florida not only as a winter resort, but as an all-year place of residence and of business. Altho the commission was formed too late to give the founders an opportunity for canvassing the entire state and too late to expect much return this winter, it has deemed it advisable to begin the advertising campaign at once. More than thirty Florida cities, thru their chambers of commerce or boards of trade, are giving aid to the commission. All the money contributed is to go for advertising, since the members of the commission serve without pay and there are to be no headquarters expenses.

GEORGIA: The State Board of Entomology has issued charts showing the exact progress made by the boll weevil in Georgia and fixing the bounds of present infested territory. The boundary line begins at Newsville on the Alabama state line and runs eastwardly thru Tallapoosa, Bremen, Billarp and Chapel Hill to a point just north of Red Oak, where it turns to the south, passing thru or near Brooks, Molena, Thunder, Junction City and Americus. Here it veers toward the southeast and, passing thru Philema, Shingler and Dosia and slightly east of Valdosa, ends at the Florida state line. The infested territory is all in the western and southwestern part of the state. Together with the twenty mile safety zone along its border it comprizes almost a quarter of the state.

KANSAS: Altho the demand for new Kansas corn is so great that in many counties the farmers cannot husk it fast enough to keep up with the demand, the crop is so abundant that the cribs and warehouses of the state are inadequate and thousands of bushels are piled upon the ground. The yield has run all the way from fifty to 100 or more bushels to the acre, and the price ranges from 55 to 65 cents a bushel right from the field, before any shrinkage has taken place.

KENTUCKY: The Cumberland Telephone and Telegraph Company is removing its system of cables in the business section of Louisville, installing a complete new and improved equipment and making a net profit of about \$10,000 on the change. The explanation is that the company bought the new equipment before the European war began, and the total cost of the new system, including purchase price, transportation to Louisville, storage and installation, amounts to about \$10,000 less than the old copper in the worn out system is worth as junk at the present prices.

MICHIGAN: The "I Will" club, a Detroit organization which started with a membership of more than 1000 motorists, is making an energetic campaign against reckless driving. Not only are the members pledged to careful driving themselves, but they are to report all cases of careless driving that they see. Moreover they are enlisting the aid of all the public school children and of every citizen who can be reached thru public mass meetings and lavish advertising. Their purpose is to interest everybody in the city in careful driving and then to keep the interest permanently alive.

RHODE ISLAND: At the instance of Secretary Dunn of the State Board of Agriculture and Professor R. B. Cooley of the Rhode Island State College, dairy farmers thruout the state are organizing cow testing associations, each having a membership of from twenty-four to twenty-six farmers. Members pay a small fee for each cow owned, thus enabling the association to hire an expert who spends a day a month on each farm. His work is to keep an exact account of what each cow produces in milk and butter fat and what her maintenance costs. By this means members are learning which of their cows are profitable and which are merely "boarders." Also the associations, thru cooperative buying, are saving much on food and supply bills.

SOUTH CAROLINA: The Columbia Chamber of Commerce is reorganizing upon a wholly new plan. The membership is to be divided into five main bureaus and a trade group, the chairman of each to be a member of a central board of directors. Each bureau is to be a separate entity, with secretaries and special committees, and is to have charge, under the board of directors, of all matters pertaining to its particular department. There is also to be a members' council, made up of representatives of the trade and professional subdivisions, whose duty it shall be to provide for a public forum where short talks by representative men may stimulate an intelligent public interest in matters affecting the trade and welfare of Columbia. The council is to have no power of action, but is to recommend action by the directory.

SOUTH DAKOTA: The United States Supreme Court has decided against South Dakota in its long contested express tax cases. In 1909 the state assessed the Wells-Fargo and the American express companies on their gross earnings instead of on their property within the state. Judge Willard of the United States District Court decided against the state. The state took no appeal, but in the next year assessed the companies in the same way, and Judge Elliott of the United States District Court sustained it. The companies appealed, and now the Supreme Court has reversed Judge Elliott.

TEXAS: The Texas Economic League is a new organization formed by leading business men of all parts of the state. It will endeavor, thru the enlightenment of the public, to promote the interests of those engaged in productive pursuits and allied industries and seek a more equitable distribution of the fruits of labor among those employed in producing, manufacturing and distributing the products of the farm, forest and mine. The slogan of the league will be "Citizenship First," and those applying for membership will be asked to place Federal, state and community citizenship, in the order named, above class or partizan interests.

UTAH: By installing fourteen portable schoolhouses, Salt Lake City has solved the problem of housing its surplus school children without straining its finances to the breaking point. These buildings, set up on the grounds of the most congested schools, cost about \$1500 apiece and accommodate, all told, about 1100 pupils. Each building consists of two large rooms with a hallway between, which is used as a cloak room. The heating, ventilating and lighting are said to be even better than in some of the large, expensive buildings.

VIRGINIA: The Virginia press and public are showering praise upon the militia, and especially upon Major E. W. Bowles of the Richmond Light Infantry Blues, for the skilful manner in which the difficult situation at Hopewell following the fire was handled. On the night of the fire Governor Stuart ordered the Richmond Blues and the Richmond Grays there. As senior officer Major Bowles took command and at once made martial law effective by confiscating all the liquor in the town and disarming all the citizens and visitors. This immediate and thoro action prevented drunkenness, rioting and looting. It is said that 5000 gallons of whiskey and many hundred weapons were captured before the rough element had time to make use of them.

WASHINGTON: A statewide game of hide and seek has been going on ever since the Supreme Court of Washington decided, early in December, that the state prohibition law was constitutional and must go into effect on January 1. The law provides that for personal use twelve quarts of beer or two quarts of other liquor may be imported every twenty days, but many persons who feared this might not be enough for them and others who shrank from the public manner in which these importations must be made are said to have devoted the last days of open selling to laying in large stocks and hiding them away. The fact, however, that any citizen may make complaint without waiting for officers of the law to move, gives hope to the prohibitionists that the law will be fairly effective.

THE WEST AND PREPAREDNESS

BY ARTHUR CAPPER

GOVERNOR OF KANSAS

THE people of Kansas, and I believe the people of the entire West, are strongly opposed to a reversal of the country-old policy of the United States—to adopting a policy of militarism, under the specious name and the false pretense of “preparedness.”

In Kansas, we believe the clamor for the immediate beginning of a hurried program of warship-building, to extend over a series of years, is the result of popular hysteria, deliberately engendered in the minds of the hyper-impressionable and the timid by a systematic propaganda conducted by interests having ulterior motives.

It is not against preparedness in the true meaning of the word that we protest, but against the evident attempt to stampede the American people into a hasty and ill-considered adoption of that policy of militarism which has demonstrated so tragically its futility and wickedness in Europe.

As the army and navy may not be directly responsible for the appalling waste which for years has attended their maintenance—the wretched pork-barrel and log-rolling system of Congress rendering any well-planned expenditures impossible—the people of the West would look upon this clamor for more millions with equanimity if they had some assurance that the money to be poured out, should the program be adopted, would be expended wisely, honestly and efficiently, and not go to fatten favored contractors or be frittered away in favored communities. And if our present state of defense, on which we are spending so much, is so wretchedly poor and inadequate that it amounts to no defense, shall we throw away twice as much money on it instead of first investigating and checking the waste and extravagance of our present mismanagement?

It is interesting to note that Kansas, the “emotional state” where vagaries are supposed to grow wild and hair-brained cranks to abound, has been singularly sane in its determination not to join the stampede to militarism. Our people are not “seeing things” at night. Neither the popular magazines, the more popular movies, the war news, nor the wild talk of invasion, have created panic among them. And yet, should the unspeakable calamity of war ever befall our country, Kansas, the state which sent a larger percentage of its

Paul Thompson

GOVERNOR CAPPER

sons into the Civil War than any other state, could be depended on to contribute its full share of treasure and men to the nation's defense.

Here is a list of organizations that have formally gone on record against so-called “preparedness” in Kansas:

The Kansas State Teachers' Association, in a convention of 6,000; the Kansas State Grange, with 24,000 members; the Kansas State Farmers' Union, with 21,000 members; the Kansas State Federation of Labor, with 30,000 members; the Kansas State Mutual Insurance Association, with 60,000 members; the Kansas Association of Machinists, with 7200 members; more than 100 churches, 150 fraternal organizations and 40 women's clubs.

Up to this time not one organization of any description has declared for the “preparedness” program in the State of Kansas.

Our people are convinced this clamor for increased armament comes from two easily traced sources.

On the one hand, we have emotional, excitable persons who become alarmists, who see a spook in every shadow and a murderer in every stranger. They are easily played upon by the demagog. A sensational article in a magazine; a subsidized picture at a movie show; a melodramatic grouping of waxworks in a window display—for which some financially interested person pays—is sufficient to upset them. They are given to violent action and re-action. They are temperamentally hyster-

ical, unsafe, a constant menace to their community and the nation. Their alarm is genuine; their fears frightful to them; but it is the duty of sane and better balanced citizens to quiet their fears, allay their alarms and help them regain poise.

On the other hand, we have quite apparently a well-organized propaganda systematically and cruelly promoting this war hysteria in the United States. Manufacturers who see fat contracts looming ahead of them are deliberately playing upon the imaginations of the excitable and the fears of the timid, in order to stampede the nation into a campaign of extravagant expenditures, regardless of all other consequences.

Back of the manufacturers are the professional fighting men of the nation whose trade is war—men whose training and environment have made them military above everything else and warped them to the narrow point of view of the military specialist. They are schooled to glory in war. Their life-long ambition is to practise actual warfare in a great campaign conducted on a modern scale. They believe might makes right. In bloodshed they see the regeneration of the race, the development of the stern and manly virtues and a panacea for all ills.

The manufacturers, with their heads turned by the prospect of easy profits and the men of war aroused by the prospect of a real fight, or by greater professional opportunities, fully realize that they must strike now if they are to gain their ends. They must take advantage of the scare. Hence the adroitly worked-up panic and the insistent demand that war preparations begin *now*—without waiting the outcome of the European war or to see what lessons may be learned from that conflict.

We can see, therefore, only unending misfortune in this preparedness step. Let the United States arm itself to the teeth and straightaway the rapidly growing republics of South America, with their enormous natural resources and teeming populations, will take up arms in self-protection. They never have trusted us, never have understood us. If we begin arming now, history will see the old-world blunder repeated in this hemisphere. We are human. We shall soon be carrying a chip on our shoulders; the bully in us will assuredly assert itself and will be the means of turning these western nations into armed camps, just as occurred in

Europe. Then a coalition against the feared and misunderstood United States by these South American Latins will bring about the inevitable conflagration we now see as a result of this policy in Europe. But long before this we shall lose their trade. They will fear to build up a dreaded rival by buying goods of him.

But more than the commercial loss, a greater calamity even than the loss of human lives which attends warfare, is the deterioration of national character which follows the policy of militarism. We now are a peaceful people, loving the ways of peace. Given over to the rule of jingoism we shall become a swaggering, aggressive, bullying nation that puts

its trust in might rather than right. The reign of peace on earth may, as the alarmists tell us, be a long way off, but surely it cannot be hastened by transforming this great nation into a military camp.

I have great faith in the efficacy of economic pressure as a defensive measure. I do not think that the idea embodied in the proposal of a "League to Enforce Peace" is at all visionary. An international court is as possible among civilized nations as are courts for the adjustment of disputes between individuals. The combined forces of the powers, economic and military, against any one of their number who fails to take its case before an international court,

could hardly fail to keep the peace. A cycle of preparedness in Europe and of the very sort now demanded with such clamor for the United States, has resulted in the greatest cataclysm of history. Are we prepared to pay that price?

I think not. I do not believe that the sober-minded people of this country will be frightened by any bogeyman into so wicked a program. Unless we go mad in the heat of a political campaign, the wave of hysteria will recede and the United States will again put her trust in open dealing in diplomacy; in common honesty between nations; in right rather than in might.

Topeka, Kansas

I RESOLVE TO BE RESTLESS

BY ELINOR BYRNS

I AM a restless woman. Almost all my chosen companions are restless women. When physicians, essayists, and timid gentlemen whose place is the home, rail at the modern spirit of unrest and at the women who are a menace to society, they are thinking of us. Their attacks haven't troubled us, however. We have been too much absorbed in the activities induced by mental and moral unrest to analyze ourselves or to weigh the words of our critics.

From the accounts in the daily press I judge that my friends are as restless as ever. As for myself, I decided on November the third (the day after election) to enjoy a period of rest. Since that time I have done nothing but keep house, earn my living outside the home, acquire some new clothes and some made-overs, and rest between-whiles.

I was not lured to Paterson by free speech and Gurley Flynn. I have not been to Washington to lobby congressmen with the Union or to gnash my teeth over the Union with the National Suffrage Association. I have not been cruising on the Oscar II. I have not been to a single committee meeting or protest dinner. I have no notion what Margaret Sanger is doing, and I have not made a speech on any subject. Result? My temper is improved, my nerves are rested, I look five years younger, I am enjoying life, my family and friends are enjoying me? Not at all. I have been low in my mind. I have felt for two weeks as tho I were going to have grippe. I have been unduly critical of my family, my friends, and even our household treasure; and I realize they have all

been bored with me. Worst of all I have had again that horribly let-down, passive feeling to which I said farewell ten years ago, when I stopped thinking whether I was a lady or not. So, these last few days I have been searching a cause for my disquieting symptoms. My search has forced me to a few conclusions on the subject of unrest. I give them to you for what they are worth.

Consider, first, the daily routine of a restless woman. I'll be personal because it is easier, but I understand that the days of other restless women are like mine only more so. Well, when I am in the full tide of unrestful activity I never have to force myself to get up. I am forced out of bed by the ringing of the telephone. At once, my brain has to begin working at full speed; otherwise I find myself committed to a speech or a committee for which I have no desire, or refusing to participate in a stunt which I might enjoy.

After this telephone stimulus—usually repeated several times between bed and breakfast—I dress quickly because I am eager to start my day. I have no time to sit sadly in front of my mirror counting my gray hairs and wrinkles or wondering whether I shall have a double chin after I am forty. At breakfast I give treasure her directions for the day. She receives them graciously, knowing I shall be too tired at night to consider anything but results. If she wants to fly around in the morning and go to the movies in the afternoon, she may. If she wants to dawdle all day over four hours' work, she may. The dinner is always good, she is happy, and so am I. The menus

for the day I have made out on the way home to dinner the evening before. It is much easier, you know, to plan good meals before dinner, when you are hungry, than after breakfast, when food seems absolutely uninteresting. Moreover, after breakfast I haven't time.

One frequently hears of women who each morning sadly leave their homes for their dreary toil. They are undoubtedly women who are doing work they don't like, work which offers them no opportunities, work which is in no sense creative. But I always start out happily, being just as glad to leave the home in the morning as I am to get back at night—which is saying a good deal. And I actually look forward to the moment when I settle myself on the train and open my newspaper. It's a poor paper, indeed, which doesn't in each edition give a revolutionist like me new cause for anger, increased desire for activity. If by any chance the news of the day fails to furnish a burning issue—socialistic, feminist, or what not—I can always find one in the editorials. Second in interest to the finding of a burning issue is reading what my friends have done by way of making news in the last twenty-four hours. Those of us whose unrestful activity is a bit limited by the necessity for earning a living, take, you see a real and stimulating pride in the reported doings of our more conspicuous friends who are able to give all their time to unrest.

After I get to town I begin at once to work as hard as I can, because my mind is already alert. My experience is that anyone who gets

up reluctantly, dreams over her toilette, and regards commuting as a dreary means to an end, instead of an interesting preface to a day, is not thoroly awake for an hour after she begins to work.

Lunch—well, lunch may mean malted milk with an egg in it, if I want the hour free to distribute leaflets on something or other, or to help in a suffrage publicity stunt. It may mean conspiring with a few trusted friends at a woman's club or a quiet restaurant. It may mean talking while we eat with some one who wants me to do some work for money. At any rate, there is always something to look forward to in the middle of the day.

Then there is tea. As many days in the week as I can find time for it, I tea and talk things over—don't ask me what things; I am always amazed to realize how many things there are—or combine a committee meeting with tea. Before tea is well over it is of course dinner time. Sometimes I dine with a friend at her house, or apartment, or flat, or studio (following the unrestful life means friends who are far apart financially), so that we can conveniently go together to some meeting; sometimes at a club, so that we can work on something connected with a Cause; sometimes at a gay restaurant, if we want a complete change before beginning an evening of uplift. And all these evenings make me enjoy the other evenings, when I have nothing to do but go home, sew in fresh neck things, write notes and telephone—always with the vision before me of going to bed early and reading foolish magazine stories till I fall asleep.

There is a great deal of hard work as well as talk and food involved in unrest. Numerous electors of the State of New York said to me, while I was watching at the polls on Election day, "Now that I see you care

enough about the vote to stay here all day and work, I think you ought to have it." Apparently those gentlemen had no notion that November 2 was the most restful day any of us suffrage campaigners had known for months. I thought of the evening when I went to Bayonne after an exhausting day's work in Manhattan, and made seven speeches, talking almost continuously—tho probably not intelligently—from eight till eleven-thirty, and reaching home at one. I thought of last parade day—the climax of weeks of parade work—when I was out on the cold, windy streets from noon till nine in the evening, without food (or drink) and with my only peaceful moments those when I was marching up Fifth avenue. And I thought of suffrage conventions when for a week we work from seven in the morning till three the next morning, doing more business (so the newspaper men say) than any body of men in convention.

Perhaps it was thinking of these things—and many more—which made me decide next day to take a rest. But now that I have suffered the evil effects of restfulness, I have come to a realization of the blessings of unrest. In the first place, *unrest keeps us well*. We have no time to imagine ourselves ill, and we lead lives of healthful activity. If you are looking for frail, worn-out women, will you find them speaking on a street corner, or managing a mass meeting? No, you must look in houses, shops, and hotels for women who have plenty of money and no work. You must look for women who do uncongenial work in factories, shops, or offices, and never have any fun. Or you must look for women whose lives are so full of household drudgery they have no time and no strength to uplift themselves or to give inspiration to their children. We restless women have work we like plus more work plus stimulating

comradeship plus absorbing interest in something bigger and more important than ourselves.

In the second place, *unrest saves time for us*. Everybody knows we are busy, we restless women, so our neighbors don't drop in for a moment and spend hours telling us scandal; our out of town relatives aren't insulted when we give them the name of a professional shopper instead of doing their errands ourselves; and we no longer feel obliged to look for bargains for our own wardrobes; we go to a good place, buy one expensive garment, and wear it on all occasions, our friends tactfully assuming that we haven't time to change. But our greatest time-saver is the fact that we soon lose all desire for popularity, as evidenced by many social engagements—which are not really social—and week-ends which tire us rather than rest us. We say we are too busy to go, and then that hostess never invites us again, or invites us to something worth while. And then perhaps we find that, between waves of unrest, we actually have a little time for gardening, for reading, or for visiting the friends who are restless in spirit, but temporarily kept in a rut by poverty or babies.

Lastly, *unrest makes us happy*. If you can't guess why from what I have said before, any explanation of mine won't convince you. Seriously, the more I think of the many women I know, and the many women I've read about—good women, bad women, passive women, intriguing women, selfish women, charitable women—the more firmly I believe that we restless women here in New York this minute (for I am restless again from now on) are having a better time than any women in the world ever had before. And there is just a chance, you know, that we may be doing the world some good.

New York City

I SHALL GROW OLD

BY MARGUERITE O. B. WILKINSON

I shall grow old; when the wild earth is calling
I shall sit quietly, at last, nor go
To race the quickened winds where rain is falling
In woods I used to know.

Tho I still feel the lure of wings that flutter
Across the bayou on the edge of day,
And of the silver stream where quick fish scutter,
I shall not go, but stay.

Yet I shall smile, and smiling shall remember
The streams I forded and the trout I caught,
Or the leaf-kindled fires of mild November
And the strange peace they brought,

Glory of earth in her midsummer madness,
Glory of great, grave trees and sunny sea,
The swimmer's lithe dominion won in gladness,
In youth and health set free.

I shall be glad of sunburn and rough going,
Of weariness that found a perfect rest
Where our firm mother earth made ready, showing
Her rough and rugged breast.

I shall grow old—but memories strong and tender
Shall give me joy while earth's wild song is sung;
The great, glad earth I know, in all her splendor—
With her I have been young!

Macmillan

JOHN MASEFIELD, POET

THE MAN WHOM MANY READERS REGARD AS THE OUTSTANDING FIGURE OF PRESENT DAY ENGLISH POETRY CAME TO THIS COUNTRY ON JANUARY 8 FOR AN EIGHT-WEEK LECTURE TOUR THRU THE EAST AND MIDDLE WEST. HE HAS BEEN SHOWERED WITH INVITATIONS

FOUR OF JOHN MASEFIELD'S POEMS

A man whose most significant work lies in his long narrative poems is not to be lightly anthologized in a page. But here is one poem that expresses Masefield's purpose, and three others which the editors of The Independent happen to like particularly. They are reprinted from "Salt Water Ballads" by courtesy of the publishers, the Macmillan Company.

A CONSECRATION

C. L. M.

Not of the princes and prelates with periwigged charioteers
Riding triumphantly laured to lap the fat of the years—
Rather the scorned—the rejected—the men hemmed in with
the spears;

The men of the tattered battalion which fights till it dies,
Dazed with the dust of battle, the din and the cries,
The men with the broken heads and the blood running into
their eyes.

Not the be-medalled commander, beloved of the throne,
Riding cock-horse to parade when the bugles are blown,
But the lads who carried the koppie and cannot be known.

Not the ruler for me, but the ranker, the tramp of the road,
The slave with the sack on his shoulders pricked on with
the goad,
The man with too weighty a burden, too weary a load.

The sailor, the stoker of the steamers, the man with the
clout,
The chantyman bent at the halliards pulling a tune to the
shout,
The drowsy man at the wheel and the tired look-out.

Others may sing of the wine and the wealth and the mirth,
The portly presence of potentates goodly in girth;—
Mine be the dirt and the dross, the dust and scum of the
earth!

Theirs be the music, the color, the glory, the gold;
Mine be a handful of aches, a mouthful of mold.
Of the maimed, of the halt and the blind in the rain and
the cold—

Of these shall my song be fashioned, my tales be told.
AMEN.

In the dark womb where I began
My mother's life made me a man.
Thru all the months of human birth
Her beauty fed my common earth.
I cannot see, nor breathe, nor stir,
But thru the death of some of her.

Down in the darkness of the grave
She cannot see the life she gave.
For all her love, she cannot tell
Whether I use it ill or well,
Nor knock at dusty doors to find
Her beauty dusty in the mind.

If the grave's gates could be undone,
She would not know her little son,
I am so grown. If we should meet
She would pass by me in the street,
Unless my soul's face let her see
My sense of what she did for me.

What have I done to keep in mind
My debt to her and womankind?
What woman's happier life repays
Her for those months of wretched days?
For all my mouthless body leeches
Ere birth's releasing hell was reached?

What have I done, or tried, or said
In thanks to that dear woman dead?
Men triumph over women still,
Men trample women's rights at will,
And man's lust roves the world untamed.

* * * * *

O grave, keep shut lest I be shamed.

PRAYER

TEWKESBURY ROAD

When the last sea is sailed, when the last shallow's
charted,
When the last field is reaped and the last harvest
stored,
When the last fire is out and the last guest departed,
Grant the last prayer that I shall pray, be good to
me, O Lord.

And let me pass in a night at sea, a night of storm and
thunder,
In the loud crying of the wind thru sail and rope and
spar,
Send me a ninth great peaceful wave to drown and roll
me under
To the cold tunny-fish's home, where the drowned gal-
leons are.

And in the dim green quiet place, far out of sight and
hearing,
Grant I may hear at whiles the wash and thresh of
the sea foam
About the fine, keen bows of the stately clippers steering
Towards the lone northern star and the fair ports of
home.

It is good to be out on the road, and going one
knows not where,
Going thru meadow and village, one knows not
whither nor why;
Thru the gray light drift of the dust, in the keen,
cool rush of the air,
Under the flying white clouds, and the broad
blue lift of the sky.

And to halt at the chattering brook, in the tall
green fern at the brink
Where the harebell grows, and the gorse, and
the fox-gloves purple and white;
Where the shy-eyed, delicate deer troop down to
the brook to drink
When the stars are mellow and large at the
coming on of the night.

O, to feel the beat of the rain, and the homely
smell of the earth,
Is a tune for the blood to jig to, a joy past
power of words;
And the blessed green comely meadows are all
a-ripple with mirth
Of the noise of the lambs at play and the dear
wild cry of the birds.

EXPLORING THE ROSE

BY FANNY BULLOCK WORKMAN, F. R. G. S.

THE Rose Glacier, "Siachur" on the Indian survey maps, altho spoken of vaguely by early British travelers, appears until quite recently to have escaped any investigation. The reason for this is doubtless its great inaccessibility. Its tongue or snout lies at the end of the long, wild, sparsely inhabited Nubra valley, in the Eastern Karakoram mountains of Kashmir, the northernmost state of India. The small villages offer almost nothing in the way of supplies to the explorer. Indeed, the last habitation, some seven miles below the glacier tongue, is only a monastery inhabited by Buddhist Lamas.

A still more formidable obstacle is the Nubra River, which issues from the tongue, a seething flood which has to be forded five times. Because of the depth of the water and numerous quicksands in the river bottom, it is dangerous to man or beast between May and September 15th. The three summer months being the only ones in which such a great glacier can be investigated, it can readily be seen that nature has placed formidable barriers to the proper approach to the Rose Glacier by its tongue.

The Nubra valley natives, as an earlier explorer learned, call the glacier "Siachen." Sia means rose and chen, a collection of thorns. The pink wild rose bush bristling with thorns grows luxuriantly both in Baltistan and Nubra far up the high valleys, even on the banks above the glaciers as far as vegetation exists; hence the name means rose bush, or as I have called it, Rose Glacier.

In 1913, after completing some exploration in Baltistan, Dr. Workman and I went to the Saltoro valley, and in August ascended the Bilaphon Glacier, crost the Bilaphon Pass, 18,400 feet, and descended to the Rose. We remained nearly three weeks in the region, camping always at heights greater than Mont Blanc, enduring great cold and snow storms lasting two or three days at a time. Still, we managed to explore two of its most im-

Mrs. Fanny Bullock Workman, whose story of her "Recent First Ascents in the Himalaya" was published in The Independent of June 2, 1910, has made many important geographical discoveries in her twenty-five years of mountain climbing and exploration among the peaks and glaciers of the Himalaya. By making the first ascent of one of the Nun Kun peaks (23,300 feet) Mrs. Workman won in 1906 the world mountaineering record for women. She has made nearly twenty pioneer ascents. At the request of President Loubet in 1904 Mrs. Workman was made Officier de l'Instruction Publique, France. She is a member of the American Geographical Society and also a gold medalist of the Club Alpin Français.—THE EDITOR.

portant affluent glaciers and climb a peak of 21,000 feet which showed the importance of the great unexplored ice stream and afforded a glimpse of its distant snowy sources, probably overlooking the Turkestan mountains.

THE ROUGH APPROACH TO TARIM SHEHR

In the background is Junction Peak, 20,850 feet. This was first climbed by Dr. and Mrs. Workman

ON THE GREAT ROSE GLACIER

The upper part of the forty-eight-mile ice river, which Dr. and Mrs. Workman explored. Tarim Shehr peninsula juts into the foreground

But by September 16 a return over the high pass had to be made at the risk of starvation to our caravan and perishing in winter storms. Meantime I had become Rose mad, being imbued with the single desire to return the next summer and with a thoroly organized caravan, including alpine guides and topographer, to visit the sources and have the glacier mapped in detail.

While passing the winter in India I prepared for the coming snow campaign. Two caravans were to work on the glacier, our own, which would include an Italian guide, three porters and native servants, and that of our English surveyor, who traveled with one Italian porter and a native plane-table. Besides these I brought with me two Sepoy reservists from the Royal Indian Army, who were to take charge of coolies going to and from the base village to the Rose Glacier with supplies. Then last, but not least, as he proved a thoroging rascal, was the Srinagar Baba, who was to act as agent and interpreter at the glacier base camps, keep accounts, distribute grain and forward coolies and supplies to us at higher camps.

Altogether a fair sized regiment of us left Srinagar early in June. At Goma village, which was the last valley base, the better part of twenty-four hours was taken up in hearing what had and had not been accomplished in the way of advance preparation by the agent. To my relief I found the topographers, who had preceded us from Kashmir, had already crost the high pass and arrived on the Rose, so that their work was progressing. Also fifty loads of wood had been carried up to a point below the pass to await further expediting to the Rose. Everything, from a box of matches to a stick of wood, had now to be carried over twenty-four miles of glaciers, which included the Bilaphon Pass, on the backs of men, and of men none too desirous of venturing on such a rough route, and who might desert at any minute. The task was her-

culean, but it had to be accomplished. My idea had been to start with 100 coolies and get over as much food as possible at first.

The valley was alive with men and the Parsee said 100 would be ready to start on the day set. The night before he had his coolies ready and present, but when we struck tents in the morning only sixty turned up for loads. The only way was to leave, taking the most necessary things, for it never does to wait on such occasions, so off we tramped, the agent promising to send forty more loaded coolies the next day.

From the Saltoro valley we turned north and ascended the five-mile Ghyari Nala to the foot of the Bilaphon Glacier. Our last grass camp was at 12,000 feet at the base of the boulder-strewn snout of the Bilaphon Glacier. Henceforth all work was strictly mountaineering, moraine clambering for hours on end, followed by difficult marching thru belts of snow pinnacles, or over greatly crevassed ice areas. A mile an hour was not a bad stint for coolies loaded to fifty pounds and over, in such a region.

After two days' hard march camp was pitched on a moraine ridge at 17,000 feet, near the base of the great snow-fields leading up to the pass. Here were found the fifty loads of wood which had been forwarded by the agent. We reached this cold, elevated bivouac in a blinding snow storm which kept us up most of the night beating the snow off the tent roofs from within to prevent their caving in on our heads. This storm lasted sixteen hours, but that was a detail, for one has to exist thru many such, often of longer duration, in high Himalaya.

The usual thing happened afterward. The weather turned gloriously fine, and we had to wait two days to allow the mass of new snow to settle before the pass could be attempted. This storm also prevented the arrival of the second caravan of necessary supplies from Goma.

On a perfect morning, as the caravan was ascending to the pass, I with the porter Chenoz went aside a thousand feet to be photographed near some ice pinnacles. When the snapshot was finished, he and I went on over the snow, intending to join the others at a higher point. Of a sudden, without uttering a word, the porter disappeared a step in front

OUT OF THE DEPTHS

Mrs. Workman resting at the mouth of a deep crevasse from which she had been lifted by the guides' ropes

OVER A GLACIER RIVER

These icy streams, sometimes ten or twelve feet across, had to be crost frequently in the course of a day's march

of me into the glacier. Luckily for me I stopped short and thus did not share his fate. It was not possible to extricate him from the crevasse, eighty feet deep, into which he had fallen, for an hour and a half, and altho he was brought out alive and carefully cared for, he died that night from shock and long exposure under the ice. We waited here two more dreary days, while the guide and porters took the body of their confrère down to the grass region for burial. During this gruesome time, news was brought from the surveyors' camp on the Rose Glacier that a coolie had died of the results of falling into a deep glacier river. This caused a serious panic in that camp.

After ten days, when we had finally crost the Bilaphon Pass, the skies remaining clear, I succeeded in mak-

ing the first ascent of a beautiful snow peak of 21,000 feet lying west of the pass, which commanded an illuminating view of the Rose Glacier region. Then we went on to the Rose, where base camps were arranged, and the exploration of the upper Rose and its source was at once begun. Even the base camps, where boxes, bags and wood were stacked, were on ice sparsely covered by rock debris, and our own bivouacs beyond these were on snow or glacier ice with one notable exception.

This one we were fortunate enough to make on a small mountain spur at the altitude of 18,400 feet in the snow wilderness of the upper Rose plateau en route to the north water-parting, or as I have named it, the Indira Col.

There is just one place on this desert glacier where grass grows from July 15 to September and here *burtza*, a woody shrub, the roots of which can be used for fuel, is found. Here the sheep and goats that crost the snowy Bilaphon Pass with us were pastured in charge of a goatherd. It is a large shale promontory, descending from the peaks which form the barrier wall between the Rose and its largest east affluent, which we have named the Tarim Shehr Glacier.

This promontory, ice-bound on three sides by the Rose and its great tributary, lies opposite the point where the expedition first arrived on the glacier, and about it hangs the romance of the Rose. On it several acres of grass hillocks are found at hights varying from 15,700 to 17,000 feet. It is watered by glacial torrents and at a hight of 16 000 feet are two large, limpid blue lakes.

When I was sitting in my tent on the Rose Glacier during our first reconnaissance visit, I looked out after a snow squall just as the sun peered thru a rift in the clouds, transforming the grass on the distant peninsula into patches of golden green. Everywhere else ice, rock and storm reigned. The next day we struck across the three miles of intervening ice to visit this apparent oasis.

It took hours to reach. Distance counted not at all, what with fording ten or more glacier rivers often twelve feet wide, and climbing over stretches of huge corrugated séracs, such as are seen in the illustration. In the afternoon, after a very hard march, the lower grass area, border-

ing the Rose, was reached. It was certainly most difficult of access. No one, so far as I could learn, had ever been there, not a coolie of ours had ever stepped foot on the promontory, yet—most unfathomable of native mysteries—our coolies said they knew it was a good camping place and called it by the name Tarim Shehr.

The mystery deepened on the discovery not far from camp of a stone circle twelve feet in diameter. The stones of it had lain untouched for years and were covered with lichens. Inside the circle large ibex horns attached to the skulls were piled up certainly by human hands, and these were decayed, falling apart in shreds when touched.

At a higher camp on the same peninsula huge ibex appeared on the scene and grazed calmly within 300 feet of the tents. Large snow partidges flew out from the rocks when disturbed by footsteps. Foxes also made their home here, and we saw footprints of wolves. Coy little tailless mouse-hares ran in and out of the tents, eyeing us shyly; in fact, all the animal life of the region seemed to be concentrated upon Tarim Shehr, the only oasis of the Rose. Saxafraga, gentians, small orchids and edelweiss added life and color to the coarse grass tapis about the tents.

There is a story of this promontory. When I inquired among the learned men of the Saltoro valley as to whether they had any previous knowledge of the Rose, they told me this legend. The old time Baltis, inhabiting the Ghyari Nala, crost the Bilaphon Pass and met the Garkandis of Tarim Shehr, with whom they played polo. The "learned men" did not say how the Garkandis came to the isolated ice region of Tarim Shehr; they only reported that a large Garkandi city was supposed to exist there. The Baltis feared the Garkandis, who are said to have crost to the Ghyari Nala to steal cattle and destroy property in the Balti villages. On one occasion, so runs the legend, they kidnapped one of the best looking Balti women who was working in the fields.

A Balti high priest, Hazret Ameer, happened to be in the village at the time, and he gave the enraged Baltis a "Tawiz," or magic amulet, telling them to put it on the top of the Bilaphon Pass and ordered them to return, not the same way, but via Garkand to their village. The Baltis, having placed the Tawiz on the pass, disobeyed the priest's order and returned the same way from the pass. Soon after a great storm visited Tarim Shehr "and the snow from the mountains slipped and fell upon the

city," destroying it and its people, including those who had stolen the woman. The Balti priests of today say the calamity would have been even greater had the avengers of the woman gone around by Garkand home as ordered by Hazret Ameer, and that had they done so, the Rose Glacier would not now possess even its one fine grass oasis of Tarim Shehr.

The word Tarim in Chinese Turkestan is used for oasis, and the word Shehr in Persian means city. I have given on my map this name to the unique spot, in the heart of the Rose, surrounded by miles of glaciers and ice-girt peaks. As I have several times said, it was very difficult of access. Thus even as a base-camp we were unable to avail ourselves of its sheltering hillocks, and the work of exploration had to be carried on from camps pitched on the glacier ice.

It was on the site of the fabled city of Tarim Shehr that I became fully persuaded that Rose was the most suitable name for this glacier. We were camped there on September 15 of our first visit, in wild weather, waiting to recross the pass to Baltistan.

I had been kept awake late by great gusts of wind rocking my tent and more especially by the loud chanting of the coolies in their camp, which rose above the howling of the wind. Exasperated at last, I threw on a coat and went out into the frigid air to call the guides and have them stop the coolie noise. It was still snowing and blowing on the glacier, but above Tarim Shehr the clouds had broken and a full moon shone with silver splendor on an exquisite scene. As I walked I saw all about me the rolling hillocks covered with large feathery full blown snow roses. It was not an hallucination; they appeared completely formed, altho the snow-covered grass-blades aided no doubt in their composition. I buried my hands in their silvery, cold beauty. A tall snow peak, silvered from base to apex, looked down upon the Rose hills, the chant of the coolies rose stridently, yet in harmony with the now distant roar of the wind, and the moon, hung in a black sky, cast its resplendent light over all. The weird glory of the scene and the discovery of the roses of my Rose Glacier so impressed me that I returned to the tent without stopping the dirge of the coolies, feeling for the first time in years that their voices mingled fittingly with those of nature. I had quite forgotten that the rural Balti always chants prayers to the gods at the full moon, and doubtless on this evening our Baltis

were vigorously exhorting their favorite gods to take them safely back over the dangerous snow pass the next day.

Details of our numerous ice hikes cannot be given. They were in the main carried thru with much success, altho in a summer's Himalayan work it is never possible to do all one plans, particularly when most of one's goals lie from 17,000 to 22,000 feet. To reach a coveted important point of, say, 20,000 feet separated from one's glacier base by twenty miles of ice, may take two or three weeks. Coolie vagaries, non-arrival of supplies, weather conditions come in to interfere.

Of all interesting months I have past in Himalayan work the two seasons spent on the Rose Glacier were perhaps the most stimulating and satisfying. There was just so much time for activity at such heights, six weeks for us and perhaps seven for the surveying party, with forty-eight miles of Rose Glacier and its affluents to map.

It was a race between the weather on the one hand and between one's mental and physical energies on the other, and the prime stimulant of all was uncertainty. We might plan, organize and calculate the number of days and supplies needed for reaching a given objective, yet we seldom turned into our sleeping sacks at night with any certainty that the morrow's work would be accomplished as laid out. But when weather favored us for a week and a watershed, a new group of high peaks, or a snow pass which would lead home by an unknown route was discovered, all hardships and obstacles disappeared from memory in the supreme satisfaction of accomplishment of the tasks before laid out and so necessary to a successful exploration of the Rose. We reached the three most important geographical points on the Rose and had the satisfaction of discovering the water-parting ridge between the Indus River and Chinese Turkestan at this part of the Karakoram and the relation it bears to the Turkestan glaciers.

On reaching the valleys later on by a new route it was the privilege of this expedition to discover, I felt as if nothing ahead were worth the candle. Of what interest was the path seen leading away from the small outpost village arrived at? It would only wind on and on over passes and thru larger villages to the final vitiated air and commonplace environment of railways, motor cars and city civilization. Paths made by others had played no role on the vast snow expanses just left behind.

Paris

WHY I WEAR A SMOCK

By BOUCK WHITE

I REFUSE to dress in the fashion of a world that permits war. A refusal to wear the garment of civilization is an affront to civilization, the most energetic that could be devised, and, exactly because it is an energetic protest, I have adopted it. The hour demands an energetic protest. The murder madness that is upon the world is of unusual violence. And unusual measures are going to be necessary to combat it.

Nowhere in history, not in Babylon in its prime, not in the Rome of magnificent decadence, can I find another era when the money-lust was so unrestrained and universal as now. And this orgy of militarism is the result. War is a combination of the money-makers in one country to tread down and exploit the money-makers in another country.

And this dirty hunger for dollars is going from more to more. So that war, which is the money lust come to its red ripe fruitage, is maturing into grand and fatal fruition. Chemistry and all applied sciences are equipping men with the means of warfare on a scale ever more gigantic, ever more slaughterous. In the five decades since grandfather fell asleep, war, thanks to improvements in transportation, in man's conquest of nature, and his organizing intelligence, has grown fortyfold in frightfulness. I have on my mantelpiece the time fuse of a shrapnel shell which I got this summer at the firing line in Flanders. It is an infernal machine made with a nicety of craftsmanship that stamps it as the work of a highly intelligent monster. It gives me an uncanny feeling, as tho I were in the presence of a lunatic of highest education and of diabolic cleverness.

From five months as war reporter in Europe I came back to America this fall; back from a Europe that is passing away in darkness and in blood. I returned to America. And what did I find? An America sobered by the spectacle, and repenting of her own mad dollar mania, whereby she, too, is inviting the curse?

I found an America emptier of head and shallower of heart than when I went away. I found God driven further off, and Mammon more securely in the ascendant.

And among the rulers? In not one man in the seats of the mighty found I a statesmanly realization of the problem. Not one of them could I see pointing to Mammon as the seed and the infallible root of militarism, not one voice calling upon America to pause in her money madness and re-

Bouck White was a radical author and preacher, best known for his book, "The Call of the Carpenter," when he attempted to interrupt the services at the Calvary Baptist Church in New York and was imprisoned for disturbing the peace. He presented his side of this widely discussed case in an article, "Why I Am in Prison," in The Independent for October 26, 1914. He is now serving as the pastor of the Church of the Social Revolution in New York.—THE EDITOR.

turn to a life of fellowship. To the contrary, their only thought was to steer our nation into the same evil torrent, and, by a billion dollar preparedness, make America the next menace to the peace of the world. Oh, yes, I found the peace-peace-peace people and they were a more depressing spectacle than the preparedness crowd. The latter were criminal, but the former were stupid; and stupidity is more harmful to the world than crime. The peace-peace-peace people are very tender toward Mammon, and rage only against Mars. But Mars is the prog-

THE "AFFRONT TO CIVILIZATION"

eny of Mammon—its legitimate and inevitable offspring; by a demonstrated consanguinity, money-worship goes over into musket-worship.

Set thus in the midst of a people that was making great mirth at the moment when war's conflagration is spreading to envelop the earth, what was I to do? This is what I did: I stepped aside from that people. I have separated myself unto the task of telling the awfulness of modern war and its trend toward still more awfulness, unless society can be revolutionized into a scheme of things held together by heart ties instead of cash nexus. To these stupid glorifiers of the Golden Calf, I refuse recognition, even to the extent of wearing the clothes they wear.

Today, leisure class ideas are dominant; and leisure class clothing is, therefore, the fashion. I have thrown in my lot with the toiler class. And I give notice of that fact by wearing a garb that has been consecrated to toil by many thousand years of association therewith. Only by an overturn that will put labor at the top and leisure at the bottom can the world be saved from the red Niagara toward which it is at present swinging. Mammonism, the messenger of militarism, comes up only when men cease to be laborers and seek to exploit other men who are laborers.

To cure the sickness wherewith the present world is sick will not be easy. There is a remedy, but it is neither cheap nor pleasant. The remedy is an overturn—a revaluation of the values of life, whereby we shall find our joy in works of public aggrandizement instead of, as now, in works of private aggrandizement. They who are the pioneers in that work of overturn will have a bitter price to pay.

In an age of blatant materialism with its luxuriousness of raimenting, the churches at least should have been a sanctuary of lofty thinking and lowly living. But they have capitulated, yes have become the sanctuaries of dress and pomp and the prides of life. Judgment must begin at the house of God. I rejoice to be the preacher of a church in New York City where people dare to worship in the uniform of poverty. In assembling ourselves in divine service, we don sacredly the smock that by immemorial ages has been consecrated to toil. We exalt clothing into a religious principle. By every other means, and by this means also, we publish an insurgency against Mammon and the red hell of homicide it has let loose.

TWO KINDS OF SATIRE

There is an interesting contrast in the viewpoints of the two men who have recently satirized with unusual skill the follies of everyday life. They both write of the same subject—the foibles of humanity—and they both “show them up” without prejudice or favor.

But in their methods and their attitudes they differ widely. John Galsworthy is first, last and always a philosopher—and somewhat of a cynic, too. Stephen Leacock is ever the good-natured humorist, offering his readers a word for a laugh, and almost never failing to make the trade. In *Moonbeams from the Larger Lunacy* he has brought together a peddler’s pack assortment of fun-making. Spoof, a Sample of a Thousand Guinea Novel is a delicious satire on up-to-date fiction, in which for once “the eternal triangle” finds a brand new solution. Under the head of Afternoon Adventures at My Club are grouped some particularly clever character sketches of the bores that every man must know. Ram Spudd, the New World Singer and Passionate Paragraphs reduce to a delightful absurdity some of the present-day tendencies in literature. But perhaps the best of all is the ingenious suggestion of Education Made Agreeable, in which Mr. Leacock rewrites the romance of Calculus and plays up the journalistic features of Euclid, such as

AWFUL CATASTROPHE PERPENDICULAR FALLS HEAD- LONG ON A GIVEN POINT

The Line at C Said to Be Completely Bisected
President of the Line Makes Statement Etc.

In Mr. Galsworthy’s *The Little Man and Other Satires* there is none of this jolly trifling. Humor is subordinated to analysis and a moral frequently allowed to make itself evident. The character studies take on the dignity of types—in *The Plain Man*, the Critic, or the Housewife a whole class is keenly portrayed and subtly ridiculed. Each essay exposes, with the deft sureness of a master of words, some sham or flaw in people. The Latest Thing shows Mr. Galsworthy’s irony at its best—a poignant description of the restlessly modern woman who “had flung open all the doors of life, and was so continually going out and coming in, that life had some considerable difficulty in catching a glimpse of her at all.” The Voice of —? is a dramatic description of the popular love of the spectacular. All of the sketches are well worth reading—that goes without say-

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in any institution for savings, or invested in securities giving reasonable safety. Thus a deposit of \$1000 by a man aged 40 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, under any plan.

You Know This Trade-mark Through National Periodical Advertising

The man who puts his brand on the goods he sells sets his light where it will "shine before men" because he is not afraid to have it shine on *him*.

He wants it to shine on him as well as on his goods because he has *nothing to fear* and *everything to gain* from the glare. When he adds to the illumination of the trade-mark the full light of national advertising you may be sure he is certain of his goods—sure that you will like them. He is willing to risk his *fortune* and his *business future* on the chance of your approval.

He would not do this if there really were a risk, because he is a hard-headed business man. He has taken the risk out of his business by putting quality into his goods.

Deal with the man who is not afraid of the light. Buy the goods that bear trade-marks and are advertised nationally, because these are the goods that it is safest and most economical to buy—safest because *you know who is responsible* for them, most economical because there is a *lower selling cost* included in the price of nationally advertised goods.

Trade-marks and national advertising are the two most valuable public servants in business today. Their whole tendency is to raise qualities and standardize them, while lowering prices and stabilizing them.

The Independent

MEMBER OF THE QUOIN CLUB

The National Periodical Association

ing. But it is rather unfortunate that *The Little Man* is marred by such a trite caricature of the American, whose dialect and ideas are by no means representative and whose every other word is "vurry."

Moonbeams from the Larger Lunacy, by Stephen Leacock. Scribner. \$1.30. *The Little Man and Other Satires*, by John Galsworthy. Lane. \$1.25.

HUMAN RUSSIA

Russian Silhouettes, a collection of short stories, will add much to the fame of Anton Tchekoff as an interpreter of Russian life and thought. The simplicity of his style is refreshing and the people he describes delightfully human, with none of the introspective morbidity that characterizes so much of Russian literature. The *Stories of Childhood* are particularly enjoyable. In *The Steppe and Other Stories* are some longer, but rather less interesting stories of Russia—vivid descriptions packed with detail, and illustrations of the peasant philosophy, patient, naive, idealistic.

Russian Silhouettes, by Anton Tchekoff. Scribner. \$1.35. *The Steppe and Other Stories*, by Anton Tchekoff. Stokes. \$1.25.

MORE LOEB CLASSICS

There are five new volumes issued in the Loeb Classics, that fine series of small books giving the original text and the translation side by side. These include *Hesiod and Pindar*, and those who have never read Hesiod's "Works and Days" will be surprised to learn how much its gnomic sayings parallel the wisdom of Solomon's Proverbs. *Pliny's Letters* the reader will like to compare with Cicero's Letters already issued; and Apuleius story, ridiculous and extravagant, of the *Golden Ass*, is an early romance of adventure and witchcraft.

In *Greek Genius and Other Essays*, with papers on Shakespeare, Balzac and Parisian Life, John Jay Chapman gives seven essays to Euripides. The emphatic point in these is that the English genius and culture are so utterly different from the Greek, that the reader or translator inevitably spoils the original. He cannot feel it, he cannot understand it properly. And in particular the author falls afoul of Gilbert Murray, and at considerable length he delights to show how Sir Gilbert in his "Notes and Translations of the Bacchantes" has misrepresented the Greek dramatist by putting into his language religious and moral sentiments which Euripides had never meant to express. He says that "Shakespeare may come to his end and lie down among the Egyptians, but Homer will endure forever." We might wish that the author's style were somewhat more restrained. It overflows with similes and daring metaphors and emphasis.

A History of Latin Literature, by Marcus Dimsdale, is a volume of the Literature of the World Series, edited by Edmund Gosse. The early Latin poetry was accentual, and changed in imitation of the Greek to quantitative. This early Saturnian meter pays no regard to regular feet any more than

The GLEN SPRINGS

A Mineral Springs "Cure" and Hotel, known as THE AMERICAN NAUHEIM
The diagnostic and treatment methods, and the equipment embrace the best that advanced medical science has approved. Two of the Drinking Springs are highly Radioactive.

THE BATHS

THE BATHING SPRINGS are similar to the waters of Bad Nauheim, but about five times as strong. THE RADIUM EMANATION FROM BRINE SPRING NO. 2 AVERAGES 64.8 MACHE UNITS PER LITER OF WATER, or nearly three times as much as any other American Spring known. For the treatment of diseases of the Heart, Circulatory System and Kidneys; disorders of the Nervous System; affections of the Digestive System and liver; "Rheumatism", Arthritis, Gout, Obesity and Diabetes; such symptoms as Anaemia, Constipation, "Auto-intoxication", Insomnia and Neuritis, and derangements of the Organs of Internal Secretion, we offer advantages unsurpassed in this Country or Europe.

Situated in a private park with miles of well-built and graded walks for Oertel Hill Climbing exercise. Well-kept Golf Course. Tennis Courts, Clock Golf and Miniature Golf. Music, Dancing. Tobogganing, Skating.

does Hebrew poetry, which it much resembles. A line is divided into two parts with three accents in the first part and two in the second. Of these rude beginnings but few fragments remain. The true Latin literature begins with Ennius and Plautus. The author shows the conquest of the Hellenic influence in comedy and tragedy; and then follow chapters on Lucretius and Catullus, Cicero, Cæsar and Sallust, till we come to the Augustan Age of Virgil and Horace and Livy. Succeeding chapters explain the decadence of literary art till the time of Trajan and the African Latinity and the end of the national literature with Boethius. The history is given as completely as is feasible in a manual. The series is meant for the ordinary reader, and the quotations are translated into English.

Hesiod, the Homeric Hymns and Homerica, ed. by H. G. Evelyn White. *Pindar*, ed. by Sir J. E. Sandys. *Pliny's Letters*, ed. by William Melmoth. 2 vols. *Apuleius' The Golden Ass*, ed. by S. Gaselee, Loeb Classics. Macmillan. Each \$1.50. *Greek Genius and Other Essays*, by John Jay Chapman. Moffat, Yard. \$1.75. *A History of Latin Literature*, by M. S. Dimsdale. Appleton. \$2.

SOCIOLOGY FOR STUDENTS

The study of sociology is now sufficiently far advanced to warrant its systematic treatment in colleges without the assumption that every student of the subject will become a specialist in it. The *Introduction to the Study of Sociology*, by Professor Edward Cary Hayes of the University of Illinois, is therefore a welcome addition to the textbooks in this field, in that it presents a comprehensive outline of the subject, instead of an intensive analysis of some special aspect; and assumes a practical, every day application of the study, instead of an academic pursuit of abstractions. The author does not take for granted too much preliminary training in special sciences on the part of the reader, and introduces such references to biological and psychological data as are essential to an understanding of the problems discussed. The chapters on social control bring the reader directly into contact with the current problems of the day.

Introduction to the Study of Sociology, by E. C. Hayes. Appleton. \$2.50.

RUNNING DOWN A DREAM

How Mrs. Piper and her "spirit control," the fictitious "Dr. Phinuit," proved to be mistaken, is told in *The Quest for Dean Bridgman Conner*, by A. J. Philpott, the newspaper man who followed the trance trail into Mexico.

Boston: Luce. \$1.25.

LIVES DISTINGUISHED BY SERVICE

A dozen and a half short, racy sketches of noted Christian workers are found in the little volume by Mr. John T. Faris, *Reapers of His Harvest*. Men as far apart in time and character of service as John Wesley and Professor Steiner are included.

Philadelphia: Westminster Press. 60 cents.

AMERICAN MASTER WORKMEN

In *Early American Craftsmen* Walter A. Dyer sketches all too briefly the lives of the more important personalities in the early development of the industrial arts in America—such men as Duncan Phyfe, maker of beautiful furniture; Samuel McIntyre, master carpenter; Baron Stiegel, ironmaster and creator of exquisite glassware; Paul Revere, silver-

Can You?

CAN YOU work 14 hours a day and feel as fresh and strong as when you started?

CAN YOU eat what you want, whenever you want?

CAN YOU put enthusiasm and optimism in every task you undertake?

CAN YOU laugh and sing and shout from the sheer joy of living?

Bernarr Macfadden can—and tells **YOU** how in his new book

VITALITY SUPREME

—For Men and Women

Sent Free on Trial—No Money in Advance—Just Mail Coupon

What is it that makes men and women fail in business or social life? What is it that makes people old beyond their years? What is it that keeps **you** from earning more money—more power—greater happiness? The reason, as Bernarr Macfadden clearly points out, is largely caused by nothing else than **lack of vitality**.

It takes more than ordinary health—more than ordinary vitality—to come out ahead in the crush of modern competition. Never before was it more true that life is a struggle in which the "fittest" win. And of what does fitness consist? What brings these success qualities? **Vitality Supreme!** Analyze the men and women who have risen to positions of affluence and wealth and almost invariably you will find them endowed with a type of super health, **super vitality** that gives them the power to plan correctly and the **strength and stamina to smash all opposition**. Without **Vitality Supreme**, without this dreadnaught Force they would be "nobodys." With it they command and demand the world's best of everything. **And they get it!**

The Work of 30 Years

Bernarr Macfadden has already shown thousands upon thousands of men and women how to develop, attain and maintain this Vital Force. In his own case he has seen it bring him from the point of death to a degree of physical perfection that millions of people have admired. He has seen it build scores upon scores of run down, worn out, sickly men and women into **human dynamos of health and energy**. In his new book, **Vitality Supreme**, he writes not from theory, but from the rich fund of knowledge he has gained in his 30 years of study and practice. He now tells for the first time, and in plain language, the secrets of super-health that have completely revolutionized the lives of people who have heard him lecture, who have read his writings or who have been under his personal care.

Develop Hidden Forces

In **Vitality Supreme** Bernarr Macfadden shows you how to develop, expand and bring out your latent powers—hidden forces. He tells you how to walk, how to stand, how to eat. He shows you how to strengthen the stomach, how to rejuvenate the source of stamina and virility, gives a new and startling way to thoroughly, naturally, druglessly cleanse the alimentary canal (the source of 90 per cent of disease). He gives simple little exercises which can be practiced anywhere, at office, home or outdoors, for building

inner strength. He tells you how to purify the blood, how to bathe properly, how to dress correctly, how to sleep right, soundly, restfully. He shows you how the buoyancy, energy, ambition and force of youth can be maintained through middle age and in some cases to old age. And the wonderful part of this book is that by following the methods Mr. Macfadden suggests you begin to feel better, happier the first day, with almost no effort at all!

Partial Contents

Superb Energies that Throb and Thrill
Stimulating the Source of Stamina
Cleansing and Stimulating the Alimentary Canal
Pressure Exercises for Inner Strength
Functional Activity the Secret of Power
Straightening and Strengthening the Spine
How to Breathe Correctly
Strengthening the Stomach
How to Eat, What to Eat
Foods in the Cure of Constipation
Hints on Bathing. Facts about Clothing
Suggestions about Sleep
The Laugh Cure

Our Offer

"**Vitality Supreme**" with its 259 pages, profusely illustrated and handsomely bound in cloth, contains as much material as many books selling for \$3.00 or more. By special arrangement with the publishers of **Physical Culture**, the leading and most practical

health magazine of the day, it is now possible for you to secure a year's subscription to **Physical Culture**—12 big numbers—each copy containing over 100 pages of interesting and instructive information akin to the development of health, strength and vitality, together with Bernarr Macfadden's new book, for only \$2.00. The subscription price of **Physical Culture** alone is \$1.50. So you are getting a rare bargain.

Send No Money

Before committing yourself in any way, however, the publishers will send you "**Vitality Supreme**" together with the current issue of **Physical Culture**, on approval without deposit. Then, if after examination in your own home you feel you can

afford to be without this library of vital, practical youth and health-achieving knowledge, send the book back within five days after its receipt and you will owe nothing. If you decide to keep the book, send us \$2.00, and you will receive the magazine regularly for a year. There are no strings to this offer. No money is required in advance. Merely fill out and mail the coupon or mail a letter. But it is advisable to act today because this unusual no-risk offer is liable to be withdrawn at any moment.

"Instruction by correspondence is the cheapest and best way for the poor man"

Thomas A. Edison

Edison is Right!!!

You admit the International Correspondence Schools are a good thing. You'd take a course right now "if"—"except"—

"If" what? If you weren't so "over-worked," with such "long hours," or had more strength and energy?

Wasn't it Edison who stayed up half the night to educate himself in spite of every handicap you could ever have?

All big men who have made their mark in the world had the *ambition*—the *determination*—to improve their spare time, to train themselves for big work. You, too, can possess power, money and happiness if you'll only make the effort. The reward is great—it's worth it.

Here's all we ask: Merely mail this coupon. Put it up to us without paying or promising. Let us send you the details of others' success through the I. C. S., and then decide. Mark and mail this coupon now.

ELECTION NOTICES

The Annual Meeting of the Stockholders of the Corporation known as Henry Romeike, Inc., for the purpose of electing directors and transacting such other business as may properly come before the meeting, will be held on the 20th day of January, 1916, at 2 p. m. at the office of the Corporation, 106-110 Seventh Avenue, New York City.

HENRY ROMEIKE, INC.
 Per Albert Romeike, Secretary.

THE BANK OF AMERICA

New York, December 27th, 1915.

The Annual Election of Directors and Inspectors of Election of this Bank will be held at the banking house, Nos. 44 and 46 Wall Street, on Tuesday, January 11th, 1916. The polls will be opened at 1 o'clock P. M., and will be closed at 2 o'clock P. M. The transfer books will be closed from January 8th to January 12th.

W. M. BENNET, Cashier.

smith, engraver and bell-founder. The book is a good introduction to a subject worthy, on the biographical side particularly, of more extended treatment.

Century. \$2.40.

UNORGANIZED UNITY

Dr. William H. Cobb finds *The Meaning of Christian Unity* and its present actual existence in the spiritual bonds of the true Christian life. He holds that no forms are necessary or helpful. The heaven of Christian love is all-sufficient. No program of organization is needed beyond that of establishing the Kingdom of God.

Crowell. \$1.25.

WHAT THE STATE STANDS FOR

In this time of international upheaval, when national ideals are pitted against each other, it is fitting to examine anew what it is after all that constitutes a state. This, in *The People's Government*, a series of essays on the relations of force and law to government, Dr. David Jayne Hill attempts to do. Particularly illuminating is his discussion of the contributions of the American and French Revolutions to popular enfranchisement.

Appleton. \$1.25.

DAYS THAT ARE GONE

Reminiscent of days that seem gone never to return are William Winter's *Vagrant Memories* of the time when acting was a great art and great artists made it so. By intimate accounts of the personal conceits and vanities of actors as well as of their ideals of their calling, Mr. Winter reconstructs the days of Edwin Booth, Henry Irving, Ada Rehan, Clara Morris, and Laura Keane, to whom and to many more he was friend, comrade and critic.

Doran. \$3.

A NEW TYPE OF SCHOOLING

In *Prevocational Education in the Public Schools*, Frank M. Leavitt and Edith Brown explain the rise of the special schools for preadolescents, in which the usual work of the seventh and eighth school years is combined with practical handwork, and modified to make use of the concrete interests of the children. Here is much of significance to parents as well as to teachers. Most of the technical material has been tried out in some of the Chicago schools.

Houghton, Mifflin. \$1.10.

THE SYNOPTIC PROBLEM

Carl S. Patton's resumé of critical theories concerning the *Sources of the Synoptic Gospels* fills the real need among Bible students for a concise yet detailed account of recent investigations into the literary relationship of the first three gospels, clear enough for lay readers. Part 2 attempts to analyse the common non-Markan source of Matthew and Luke into two recensions. This more original effort is highly technical and the hypothesis exceedingly uncertain.

Macmillan. \$1.30.

FOR PIANO TEACHERS AND STUDENTS

In *Piano Mastery* Harriette Brower, herself a musician and teacher, prints a series of personal interviews with some thirty eminent pianists and teachers on how they obtained piano mastery; gives an account of a von Bülow class, records some hints on interpretation by Dr. William Mason and William H. Sherwood, and summarizes therefrom the vital points in piano playing; all of which makes up a volume of real worth and helpfulness for piano teachers and students.

Stokes. \$1.50.

UNSEEN SOURCES OF SUCCESS

Professor Arthur S. Hoyt has added to his previous practical volumes of instruction to young clergymen, a new book on the *Vital Elements of Preaching*, in which he takes into consideration the spiritual qualities of the pastor and the flock as contributing elements to the successful work of the ministry. He gives an analysis of the more intimate and less obvious qualities that give power and effectiveness to the preacher's work.

EFFICIENCY QUESTION BOX

CONDUCTED BY

EDWARD EARLE PURINTON

DIRECTOR OF THE

INDEPENDENT EFFICIENCY SERVICE

192. Mr. N. M., Peking, China. "I have read your answer to Question 138 in The Independent for September 6, 1915, regarding application of Efficiency methods to the farm. I agree with you that Prof. Bailey and the Farmers' Bureau are experts. By a curious coincidence, the same mail that brought your paper brought me a letter from a friend in which I learn that Mr. Geoffrey Burlingame, of Cazenovia, New York, is not only a successful farmer, but also an agricultural engineer, and that in a number of recent cases he has overhauled farms for other people to their satisfaction. Your correspondent will probably be grateful for this additional knowledge."

He will be, and we are. While the Service aims to cover the United States, new developments, constantly under way, temporarily may escape us. But to readers of The Independent the world is so small that a friend in China tells us in New York City what an Efficiency expert is doing a few miles up state. We call this efficient coöperation!

193. Mr. P. H. M., Wisconsin. "A lady well versed in ornithology wishes to take some kind of correspondence course that will enable her to write available articles on her specialty. Can you suggest any school or institution where she can get the help desired?"

What to write is more important than how to write. The first step is to find what has been written, where published, how made "available." Any current literature on the subject would be valuable. Particulars should be requested of the work of The National Association of Audubon Societies, 1974 Broadway, New York; *Journal of Outdoor Life*, 289 Fourth avenue, New York; *Field and Stream*, 456 Fourth avenue; *Outing Magazine*, 141 West Thirty-sixth street; *Suburban Life*, 334 Fourth avenue, New York; *Nature Study Review*, edited by E. R. Downing, University of Chicago; American Ornithologists' Union, Secretary John H. Sage, Portland, Connecticut. From these varied sources ideas should be gained as to what the publishers want. Suggestions on form of presentation might be had from *The Editor*, Ridgewood, New Jersey; *The Writer's Magazine*, "Writing English," published by Funk and Wagnalls, 360 Fourth avenue, New York.

194. Miss S. C., Ohio. "Will you put a teacher in the way of finding out how she may develop efficiency systems in regard to personal belongings, buying and saving, and advancement in her profession?"

Obtain copies of *Woman's Magazine*, Spring street, New York; *Housewives' League Magazine*, 450 Fourth avenue, New York; *System*, Wabash and Madison, Chicago; *American Club Woman*, 35 West Thirty-ninth street, New York. Study the advertising pages for suggestions. Look thru back files of Efficiency Question Box for ideas of possible value. A correspondence course in Efficiency, Accounting or Finance would be likely to help you. Other items worth investigating: "Family Purse" envelope system, Seaver-Howland Press, 273 Franklin street, Boston; "Economy Expense Book," George C. Woolson & Co., 120 West Thirty-second street, New York; "Household Expense Book," Noble Cutshaw, Salem, Indiana; topical index of published articles from *Engineering Magazine*, 140 Nassau street, New York. Write Secretary of Teachers College, 525 West One Hundred and Twentieth street, New York, for suggestions on ways to advance in your profession.

Anticipating Telephone Needs

When a new subscriber is handed his telephone, there is given over to his use a share in the pole lines, underground conduits and cables, switchboards, exchange buildings, and in every other part of the complex mechanism of the telephone plant.

It is obvious that this equipment could not be installed for each new connection. It would mean constantly rebuilding the plant, with enormous expense and delay. Therefore, practically everything but the telephone instrument must be in place at the time service is demanded.

Consider what this involves. The telephone company must forecast the needs of the public. It must calculate increases in population in city and country. It must figure

the growth of business districts. It must estimate the number of possible telephone users and their approximate location everywhere.

The plant must be so designed that it may be added to in order to meet the estimated requirements of five, ten and even twenty years. And these additions must be ready in advance of the demand for them—as far in advance as it is economical to make them.

Thus, by constantly planning for the future and making expenditures for far-ahead requirements when they can be most advantageously made, the Bell System conserves the economic interest of the whole country while furnishing a telephone service which in its perfection is the model for all the world.

HARTFORD

W. Douglas Mackenzie
President

Theological Seminary
Dean, M. W. JACOBUS

School of Religious Pedagogy
Dean, E. H. KNIGHT

Kennedy School of Missions
Secretary, E. W. CAPEN

Through these associated schools Hartford offers ample training, both scholarly and practical, for the Christian ministry; meets the present demand for trained lay workers in church, Sunday-school and social service; and gives special missionary preparation for the foreign field. Each of these schools has its independent faculty and its own institutional life, but together they form one interdenominational institution with the unity of a common aim and spirit.

THE MARKET PLACE

A REVIEW OF FINANCE AND TRADE

THE INVESTOR'S SERVICE

The Independent is now offering a Service for Investors in which personal attention will be given to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves.

PLACING JANUARY FUNDS

AT this period of the year when large sums are usually seeking a proper investment channel, discriminating people make selections which are not apt to cause them any worry in the distant future. There are bonds suitable for trustees, savings banks, widows, insurance companies, corporations, business men, private investors, etc. Savings bank bonds, commonly called legal investments, can form a part of the holdings of any class of investors, but the sort of a bond that a business man could purchase with a part of his surplus might not be suitable, or even safe, for a widow, a trustee or a savings bank.

Savings banks and trustees are guided in the purchase of investments by the laws of the states in which they are located, tho trustees are often given discretionary powers. State laws with respect to the investments of savings banks and trustees vary in conservatism; in New York, Connecticut and Massachusetts, for example, the laws are very strict tho not perfect, and the standing of a bond declared legal under their laws is not likely to be injured excepting in extraordinary cases. In other states, Maine for instance, the laws are so lax that the bonds of very weak corporations have been technically legal altho such bonds would not be purchased for a trust fund by any trustee with the average degree of intelligence. Trustees who invest funds according to the laws of states like New York can be reasonably sure that the moneys intrusted to them are safely placed.

In many states a trustee is liable for any loss that may result from the investment of funds in other than strictly legal issues. Trust funds that are honestly and efficiently managed should show no losses excepting the ordinary decreases in market value of bonds which occur during the periodical depressions. Such losses, however, are only book losses unless it is necessary for some reason or other to liquidate the holdings in order to secure cash. On the other hand, trust fund investments purchased in times of stress, for example in the twelvemonth ended June 30, 1915, should show a great appreciation in time. Bonds pur-

chased last year on from a 4.50 per cent to a 5 per cent basis are now selling on from a 4.25 per cent to a 4.75 per cent basis, and we do not yet seem to have reached the top of the movement. As a matter of general opinion, it appears as tho, with the continuance of easy money rates, the standard

bonds will reach their high level around a 4 per cent to a 4.25 per cent basis without much difficulty.

While trustees are usually confined to legal investments, diversification of holdings is desirable, particularly in large estates. Only geographical diversification is warranted in states like New York, where investments can only be in municipal bonds, railroad bonds or mortgages on real property in the state. In other states, where public utility bonds are included in the eligible list, a greater diversification can be effected. Geographical diversification is quite important and should receive more than passing notice.

Trustees and widows, particularly widows entirely dependent for a livelihood upon their income from securities, should not only purchase legal investments, but arrange their holdings to include securities of strong municipalities and railroads located in various

Bonds suitable for Trustees and Investors who especially require safety

Deposits made on or before January 10, 1916, will draw interest from January 1, 1916.

WILLIAM J. COOMBS, President.
CLARENCE S. DUNNING, Treasurer.

WELLS FARGO & COMPANY.

New York, December 23, 1915.

The Board of Directors have today declared a dividend of 3% upon the capital stock of this Company, payable on January 15, 1916, at the office of the Company, 51 Broadway, City of New York, to stockholders of record at the close of business January 3, 1916.

The Transfer Books will close at the close of business on January 3, 1916, and be reopened on January 17, 1916.

Checks will be mailed.

C. H. GARDINER, Secretary.

Union Dime Savings Bank

40th Street and 6th Avenue

An Interest Dividend (113th consecutive) has been declared at the rate of

Three and One-Half Per Cent Per Annum

Credited January 1, 1916, and payable on and after Thursday, January 20, 1916, on all sums entitled thereto under the By-Laws.

Money deposited on or before January 10, 1916, draws interest from January 1, 1916.

ALEX. P. W. KINNAN, President
FRANCIS M. LEAKE, Treasurer
FRANK F. HAZARD, Secretary

parts of the country. There are grain roads, coal roads, cotton roads, lumber roads, ore roads and roads carrying a widely diversified tonnage. There are cities located in sections where one or two industries predominate. Bonds of such cities or such railroads should not form a large part of the holdings of any trust fund or widow, but only small blocks of each should be bought after the intrinsic value was found to be satisfactory. Trustees and widows are not always able to judge investments but investment bankers of established reputation are always willing to give freely impartial and valuable advice, based on years of experience.

Only passing notice need be made here of the desirability of American municipal bonds, since it is generally known that they stand among the premier securities. Defaults in either principal or interest have been practically unknown in years. Municipal bonds are direct credit obligations of states or their political subdivisions and interest is unconditionally guaranteed by the taxing power of the community issuing them. Such bonds have become very much in demand during the past few years due to the fact that they are exempt from the operations of the Federal Income Tax Law; no certificate of ownership need be filed with coupons to be collected and no mention of the income from municipal or United States Government bonds is necessary on income tax returns. There seems to be every indication that the demand will continue, as the supply is small and competition has been very keen among investment houses. Good municipal bonds are now selling at prices to yield from 3.50 per cent to 5 per cent and better, all depending upon the standing of the municipality, and a ready market is maintained for them in financial centers.

First mortgage bonds of public utility corporations which serve large cities and have been in operation for many years should form a part of the holdings of conservative investors. In some states such bonds can be purchased by savings banks and trustees but in states where trustees are confined strictly to municipal and railroad issues such bonds are desirable for private investors and even widows can purchase well-secured public utility bonds to advantage. Public utility corporations that serve growing centers with electric power, railway lines, gas mains, etc., usually have enough demand for two or more commodities to enable them even in times of stress to pay interest and even dividends with regularity. While in the period of depression experienced in 1914-1915 some public service corporations had to defer dividend payments and public utility bonds declined in market value along with railroad bonds, this was an extraordinary period and the setback was only temporary. It was further accentuated by the "jitney" competition which was more or less of a bugaboo and has been so stringently regulated that it has begun to die out. Public utility bonds yield from 4.75

THE NEW WAY

TTTTT

per cent to 6 per cent and are quite readily marketable, altho they do not enjoy the same marketability as a bond in the class of Pennsylvania Consolidated 4s. Underlying bonds of well-known tractions and electric light or gas corporations operating in large cities like New York are particularly attractive investments for such trustees and widows as can purchase them.

From the list of railroad bonds that are legal investments in New York and other states, shown herewith as an aid to the reader, it will be seen that the yield ranges from about 4.05 per cent to 4.95 per cent. The yield is necessarily lower than that obtainable on public utility bonds, as the supply on legal investments is somewhat limited and due to the fact that we are dealing with the highest grade of securities, for which there is always a demand. Banks, institutions, trustees, corporations and business men create a healthy demand for legal investments.

In the case of a trustee of a fund from which a larger income than that obtainable from legal issues is required, it is permissible to invest in sound bonds not classified as legal if such trustee has discretionary powers and is a good judge of investments or deals with a firm of investment bankers which is known to be reliable. There are such bonds which yield considerably in excess of 5 per cent and if such bonds are purchased only with a view to increasing the average income, they are desirable additions to a trust fund, particularly when the fund is invested in bonds yielding as low as 4.25 per cent. In the list of bonds showing a higher yield than the legal investments only the better known issues have been selected with a view to meeting the requirements of investors who desire to own bonds which have a ready market.

The ordinary private investor or business man is allowed much more latitude in the selection of securities than the trustee of an estate. He should, of course, insist that his list include some legal investments, high grade short-term notes, general mortgage railroad bonds yielding around 5 per cent, industrial bonds not affected by war business to a great extent, public utility bonds yielding 5.50 per cent or better, and even preferred and common stocks of reputable corporations. Some business men make it a practise to watch railroads in the hands of receivers and study their bonds which appear to be intrinsically good. In a period of depression such bonds can be purchased at bargain prices and investors who purchased such bonds as St. Louis & San Francisco Railroad refunding 4s, Chicago & Eastern Illinois general 5s and bonds in that class have been rewarded with a substantial profit after it was generally realized that the bonds had a fundamentally good lien. We are still in a period of reorganization in so far as railroads are concerned and there are undoubtedly many railroad bonds which today are considered highly speculative which in years to come may have a sound position.

1915

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....\$27,964,578,109.00

Received premiums thereon to the extent of.....287,324,890.99

Paid losses during that period.....143,820,874.99

Issued certificates of profits to dealers.....90,801,110.00

Of which there have been redeemed.....83,811,450.00

Leaving outstanding at present time.....6,989,660.00

Interest paid on certificates amounts to.....23,020,223.85

On December 31, 1914, the assets of the company amounted to.....14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

Insurance

Conducted by

W. E. UNDERWOOD

A. A. M., Pastaskala, Ohio.—The Great Western Accident of Des Moines is a good little company, well managed. Total incomes of those you name were, in 1914: Great Western, \$347,617; Continental Casualty, \$3,057,588; Great Eastern, \$1,143,486.

B. R. L., Washington, D. C.—Figures quoted are for the Western Travelers Accident Association of Omaha, Neb., as of December 31, 1914: total admitted assets, \$56,514; total liabilities, \$13,384; total income, 1914, \$72,196; claims paid, \$48,986; expenses paid, \$21,293; total disbursements, \$70,279. None of the reference books I have list the Commercial Travelers Health Association.

C. P. W., Los Angeles, Calif.—Your accident policy in the Pacific Mutual, considering its unrestricted character and the multiple benefits it grants, is worth the price. That company also writes a combined life and disability policy which you should investigate. All the companies you name are first class. You have shown good judgment in your selections. No, I do not think you are spending too much on your family's protection.

G. K. E., Selah, Wash.—The United Insurance Company of Arizona, New York and Illinois was a promoters' scheme which only succeeded in victimizing a number of people thruout the country who subscribed for its stock. The organization was never completed, and practically all the money paid in by subscribers was used for expenses. The assets of the New York office of the concern were valued by the Insurance Department at \$6,500 in March, 1911. There is no probability that holders of its stock will ever receive anything.

J. C. B., Eagleville, Mo.—If the advantages claimed for total abstinence are completely set forth in the statement you send me, then I conclude that they are not sufficient, substantial to merit special consideration. The company has instituted a comparison between results attained in its abstainers' and its general classes, using an accumulative dividend policy for the purpose. In arriving at its periodical cash values that company includes *estimated* dividends. Let us compare its total abstinence results with those attained by a company which does not segregate abstainers from non-abstainers. I find in the statement you send that the illustration uses a \$1000 policy at age thirty, the annual premium for which is \$28.29, and that the cash value (including *estimated* dividends) at the end of thirty years is \$1096. I find that a thirty-year endowment in the Provident Life and Trust Company of Philadelphia, \$1000, costs \$29.58 a year (\$1.29 a year more than the other), and that, of course, being an endowment contract, the *guaranteed* cash value at the end of thirty years is \$1000. To this must be added the value of the dividends at that time. I think we can safely estimate them at 15 per cent of the premiums in that company. Compounding them at 3 per cent we have \$217, bringing the total estimated and guaranteed cash value at the end of thirty years to \$1217. Now we will allow the value of the \$1.29 a year in premium, which in thirty years amounts to \$63. Deducting the latter, we have a cash value in the Provident Life of \$1154 as against \$1096 in the total abstinence class of the other company. We can at least say that the case made by the latter is inconclusive—that it proves nothing in favor of total abstainers.

CONVENTION WEEK AT THE CAPITAL

SPECIAL CORRESPONDENCE FROM WASHINGTON

A CITY filled with the best brains of the two Americas. That describes Washington this week and will be a fitting description of the national capital during each of the thirteen days that the Second Pan-American Congress is in session.

Never before, perhaps, has such a comprehensive group of organizations of national and international importance been assembled in an American city as that which met in Washington the beginning of the week. To the hundreds of distinguished scientists, educators, civic workers and jurists who came as delegates to the Second Pan-American Scientific Congress from all the countries of the two Americas, were added an even greater number of men and women of prominence who attended the sessions of nearly a dozen societies and associations, meeting in the city on invitation of the congress. The combined attendance of delegates as well as men and women not officially connected with the organizations, who were attracted by their interest in the unusually comprehensive programs of discussions, numbered several thousands; and to the meetings of the numerous groups was added a brilliant array of social gatherings at which private citizens as well as government officials were hosts and hostesses to the visitors.

The Second Pan-American Scientific Congress opened its sessions Monday morning in the auditorium of the stately Continental Memorial Hall of the Daughters of the American Revolution, where a larger gathering could be accommodated than in the adjoining Pan-American Union building. With the entwined flags of the twenty-one republics of the Americas forming a background, the Vice-President of the United States, the Secretary of State, the Ambassador of Chile, president of the congress, and leaders of delegations from the other countries represented, delivered addresses which struck a warmer note of friendliness and union for the nations of the New World than has ever before been struck in even the most enthusiastic gatherings of Pan-Americans.

The outstanding fact at this initial session of the scientists was that for the time all thought of science was thrust aside while the speakers talked with earnest enthusiasm of the growing solidarity, political and economic, that is emerging in the feelings and thoughts of all the American republics as a reflex from

the great struggle that is taking place among the countries of the Old World.

To the impression of magnitude that the congress created by its initial session, with its assemblage of distinguished participants, was added on the second day an impression of diversity, for the congress then resolved itself into its nine component sections devoted to special fields of science and knowledge. The formal opening session of each of the sections was addressed by cabinet members and other high officials and again the note of Pan-Americanism in politics, economics and science was sounded. It was not until the third day of the congress, when the division of labor was carried further with each section dividing itself into several sub-sections, that the delegates began to consider in earnest the specific scientific problems which had drawn them together.

Another phase of the diversity of interests under the banner of science came with the second day of the con-

gress when most of the invited associations opened their sessions. Joint meetings between these associations and sections and sub-sections of the congress began on the following day. Organizations devoted to history, economics, education, health, civic advance, anthropology and the various technical professions and industries added their proceedings to the already diversified activities of the week.

Among these the American Civic Association met for its annual convention and proved by the greetings that came to it on the opening day from civic workers at home and abroad that it has won a place of international importance. The Marquis of Aberdeen, recently governor general of Ireland, testified especially to the spread of the influence of the association to Ireland. Last year, he said, because of the association's inspiration and thru the assistance of its officers, the pioneer civic exhibition of the island was held in Dublin.

What was in many ways the culmination of a week of unusual activities in the Capital was marked on Wednesday by a special session of the American Civic Association, presided over by Miss Margaret Wilson, for consideration of "The School as a Social Center." Delegates to many of the other associations, who happened to be possessors of dominant civic interests, left their special sessions for the time to attend the school center meeting and to join their enthusiasm with that of Miss Wilson in the movement for a wider and better use of the school plant.

The speakers at this meeting are leaders in some of the most vital movements before the country. Following Miss Wilson's introductory address, in which she urged the general adoption of the school social center plan for its value in developing democracy, Prof. E. J. Ward of the University of Wisconsin drew attention to the needs for individual development and culture to give strength to the nation and to the valuable aid toward this development that the great country-wide school organization, properly used, can contribute. The theme was developed further by Raymond F. Crist, deputy federal commissioner of naturalization, who described the work of the federal bureau of naturalization, in coöperation with schools and community centers, in the production of better citizens from the raw materials that immigration brings to our shores.

PAN-AMERICANISM

From an address by Secretary Lansing, who heads the governing board of the Pan-American Union, before the second Pan-American Scientific Congress in Washington:

Pan-Americanism is an expression of the idea of internationalism.

America will become the guardian of that idea, which will in the end rule the world.

The policy of Pan-Americanism is practical.

The Pan-American spirit is ideal. It is the offspring of the best, the noblest conception of international obligation.

The American family of nations might well take for its motto "One for all; all for one."

We must not only be neighbors, but friends; not only friends, but intimates.

The Republics of America are no longer children in the great family of nations. They have attained maturity.

The Pan-American spirit is a policy which this Government has unhesitatingly adopted and which it will do all in its power to foster and promote.

Whatever is of common interest, whatever makes for the common good, whatever demands united effort is a fit subject for applied Pan-Americanism. Fraternal helpfulness is the keystone to the arch. Its pillars are faith and justice.

JUST A WORD

"I have already built several air
castles with that \$100 prize" writes one
of our contributors to our contest on
"What Is the Best Thing in Your
Town?" Perhaps all the other con-
testants—a thousand or more—have
done likewise, and are wondering how
long a lease those air castles will re-
quire.

For when we first announced this con-
test we did not promise the decision for
definite date—and when we saw the
manuscripts come pouring in—over a
hundred in a single mail—we were
very glad that we hadn't. A careful
consideration of a thousand able pres-
entations of "the best thing in your
town," differing widely in subject and
in treatment, is a task as long as it is
pleasant.

However the contributions are being
judged with as much speed as is com-
patible with the consideration they de-
serve, and the prize-winner will be an-
nounced in an early issue. So many of
the articles are well worthy of publica-
tion that we plan to quote a great deal
and to use as many of the excellent
illustrations as possible, too. In case the
contributions that we want to use prove
to be too numerous for one issue, we
may continue to publish them at inter-
vals as a sort of informal department.

With a brilliant article called "Gov-
ernment of the People, By the People,
For the People," William Allen White
will inaugurate in an early issue of The
Independent a forward-looking series
of striking and significant articles on
"The Next Generation in American
Life."

In these articles, to be published at
regular intervals during 1916, men
and women who have studied long and
accomplished much in dealing with im-
portant phases of American life today
will project their knowledge of the
trend of our national development into
the future and tell what, in their judg-
ment, the next phases of American
evolution will be. Among contributors
to this series are Gutzon Borglum:
"The New Birth of Art in Ame-

rica"; George E. Vincent: "The Ex-
pansion of Popular Education"; Lib-
erty H. Bailey: "Country Living in
the Next Generation"; Melvil Dewey:
"What the Next Generation Will Read
and How"; Margaret Deland: "Women
in the World and at Home"; Shailer
Mathews: "Religion, the Church and
the People."

REMARKABLE REMARKS

PRESIDENT POINCARÉ—1916 will be our
year of victory.

LAURA JEAN LIBBEY—I do not approve
of indiscriminate kissing.

GUGLIELMO MARCONI—The plain fact is
that Germany is sick of the war.

FIELD MARSHAL VON HINDENBURG—The
Russian soup is getting ever thinner.

DR. KARL MUCK—I do not in the least
believe in popular music for the masses.

WILLIAM A. BRADY—It does not pay to
be decent. I know what I am talking about.

REV. F. L. STREETER—It makes a fellow
feel he is in the suburbs of heaven to be
in love.

SECRETARY LANSING—The ambitions of
of this country do not lie in the path of
conquest.

CROWN PRINCE FREDERICK WILLIAM—
Forward with God, for the Emperor and
Germany.

JAY E. HOUSE—Do not fall into the
common error of mistaking flapdoodle for
patriotism.

ANTONIO GHISLANGONI—In case of fire
the cellist will save his cello first and then
his wife.

MARION HARLAND -- Patchwork has
charms those who have never made it can-
not understand.

REV. GEO. W. SHELDON—Every old goat
in Pittsburgh is trying to hide behind some
old "burry" sheep.

FRANK A. VANDERLIP—There ought not
to be an idle man in the United States
for years to come.

SENATOR L. Y. SHERMAN—I shall here-
after endeavor to change my shirts every
time the moon quarters.

SUPERINTENDENT ELLA FLAGG YOUNG—
There is one objection I have to San Diego.
It is always windy there.

LINA CAVALIERI—A lovely woman in an
evening gown always reminds me of a
beautiful bouquet rising out of a vase.

WOODROW WILSON—For seventeen years
I taught my classes that the initiative and
referendum would not work. The trouble
is they do.

BILLY SUNDAY—It is radically wrong
when a prize fighter in fifteen minutes can
earn more than a country parson does in
fifteen years.

PROF. SCOTT NEARING—When the church
advocates armament it should pull down
the cross from the steeple and replace it
with the torpedo.

ED. HOWE—When I go to a hotel if I am
treated well I turn out the lights on leav-
ing my room. But if the clerk is snippy
I let them burn.

W. J. BRYAN—A thousand years from
now the name of Woodrow Wilson and
my name will be linked together in the
capitals of the world.

LILLIAN RUSSELL—Hold a pencil at
arm's length. Draw it slowly up to the
bridge of the nose, looking closely at it all
the time. Do this ten times.

MRS. S. B. FIELD—I know of certain
women in our suffrage states who have for-
nied themselves the privilege of mother-
hood until they receive the vote.

FRANCIS L. GARSIDE—When the oldest
daughter reaches sixteen her parents, with-
out going thru the formality of a vote,
make her the head of the family.

Are You Healthwise?

In China, doctors are paid *to keep people well*. And now America is wakening to the fact that many diseases are preventable—that many common ills are easy to avoid—and that old age may be put off—thru giving a little common-sense attention to habits of living. How to thus avoid the causes of disease, improving, protecting and preserving health by the most up-to-date methods, is told in

GOOD HEALTH

This is the magazine which teaches the up-building of health and strength by natural methods—scientific diet, exercise, rest, sleep, proper breathing, baths, recreation, healthful employment, right working conditions and hygienic home surroundings. The Editor-in-Chief is—

Dr. John Harvey Kellogg, M. D., LL.D.

for forty years Superintendent of the Great Battle Creek Sanitarium—an institution recognized by leading medical authorities throughout the world as the greatest in existence for teaching the principles of preventive medicine.

GOOD HEALTH, though a strictly scientific magazine, is not dull, dry-as-dust nor technical. On the contrary, every page of GOOD HEALTH is intensely interesting, written in simple, convincing English readily understood by anyone.

You can easily follow and put into practice in your own home its sensible, every-day teachings.

Special Anniversary Offer

Here is an opportunity you cannot afford to miss if you wish to keep pace with sane, sensible methods of health preservation—ideas which are practical and useful to you, and in your home.

GOOD HEALTH is fifty years old. We want to make our fifty-first year the biggest in our history and, to give our campaign a good start, we make you this special offer—*good for thirty days only*.

Fill out and mail the coupon on this page and we will immediately send you a *free* sample copy of GOOD HEALTH. Read and study it. Then, if you are convinced that this is a magazine which is a real necessity in your home—a magazine which will help to keep you, and every member of your family, healthy and happy, then send us only \$2, the price of a year's subscription. But, if you are not satisfied, notify us and we will cancel your subscription.

SEND NO MONEY—But be PROMPT

We do not ask you to take our say-so about GOOD HEALTH, for, of its usefulness to you, only you can judge. Therefore, send no money, but write *now* for *your* sample copy. Let this magazine stand on its own merits. That will tell the story—that will put the magazine on trial with you. Fair, isn't it? But you must be prompt, for this unusual offer is good for *thirty days only*.

GOOD HEALTH PUBLISHING Co.,
301 W. Main St., Battle Creek, Mich.:

You may enter my name as a subscriber to GOOD HEALTH for one year. Send me at once my FREE sample copy. If, after examining it, I am absolutely satisfied, I will promptly remit \$2 for my subscription. If I am not satisfied, however, I will notify you to cancel my subscription and the examination will have cost me nothing.

Table of Contents of a Single Issue of GOOD HEALTH

"Breathing Winter Sunshine." Dr. Kellogg tells why cold winter air is of benefit to the body and why we should live outdoors just as much in winter as in summer.

"Relief for Rheumatism." One of a special series of articles on this most important subject by Dr. Kellogg, which gives new and interesting information on how to avoid and relieve this dreaded suffering.

"Preventing Tooth Decay." An article telling you how to keep your teeth hard, sound and white.

"Poisonous Temper." In which Dr. W. H. Riley tells of the latest scientific discoveries on how lack of temper-control harms our physical well being.

"The Children in the Snow." Nothing is better for children than a good romp in clean snow. Mrs. E. E. Kellogg tells how and why.

"Breeding a Better Race." An article by A. E. Hamilton, M.A., telling the practical fundamentals of better race breeding.

"Exercise and Grow Thin." Not exercise that is work, necessarily, but exercise that is fun, is what Dr. Lydia Allen De Vilbiss tells about.

"Occupation for Shut-ins." Dr. Maude Kent tells how those who are confined indoors may be kept busy, useful and happy.

"Camping Out in Winter" is great fun, if you know how, and no one is better able to tell you than the outdoor expert, Alfred Russell.

"Adenoids Are Serious." Dr. Benton N. Colver tells how to avoid this common danger which threatens the throats of over a million children in this country.

"How to Overcome Stammering." A method of overcoming this embarrassing defect, by Anna Marshall.

"The Success of Open Air Schools." Containing a little girl's story about the fun she had learning her lessons, as well as growing healthy, in the open air.

"The Healthful Bed." One-third of your life is spent in sleep. How much attention do you give the important matter of your bed? This article contains helpful suggestions.

"Giving First Aid." Accidents are always happening. You may be the next victim. In this article, Dr. C. C. Hubley tells you what to do before the doctor arrives—information which has saved many lives.

"Eating for Health," by Lenna Frances Cooper, Chief Dietitian of the Battle Creek Sanitarium.

"The Little Green Fairy" tells children how to take care of their bodies, in language they can understand.

"A New Comfort Bath." Described by Martin Nevins.

"Wholesome Cabbage." Why it is healthful to eat plentifully of this popular vegetable.

"Why Skating Should Be Popular," by a young man who skates and knows the benefits to be gotten from this sport.

"Health News." Very latest methods of health improvement, protection and preservation approved by the scientific medical world.

"The Question Box." In which subscribers' health questions are answered by medical specialists.

"Book Reviews." The latest news of health books.

THE MOST TERRIBLE FORM OF MODERN WAR

THE BEGINNING OF AN ACTUAL GAS ATTACK MADE BY THE GERMANS ON THE RUSSIAN LINES. THE PHOTOGRAPH WAS TAKEN FROM A RUSSIAN AEROPLANE. THE SUN IS LOW IN THE SKY, AND THE GERMAN INFANTRYMEN STANDING

IN LONG LINES AT THE RIGHT OF THE PICTURE CAST LONG SHADOWS ACROSS THEM. CLOUDS OF GAS ARE ROLLING TOWARD THE RUSSIAN LINES. WHEN THE CHLORINE HAS DONE ITS WORK THE GERMANS WILL ADVANCE

NO DISUNITED STATES

SOME of our foreign critics, disappointed that the United States has not openly and officially espoused the cause of the Allies, have of late been describing us satirically as "the Disunited States," and the term has been caught up here and there by our own citizens, deeply troubled by the disloyalty of the hyphenated element in our population. The satire is harmless and alarm is baseless. There will be no Disunited States. That matter was attended to fifty years ago.

Nevertheless, the conditions that have provoked the jeer and the fear are interesting enough to deserve attention. When the European war began American reaction to the situation was instantaneous and tremendous. On every hand the remark was heard that American feeling had never been so nearly unanimous as it was in holding Germany blameworthy for the appalling catastrophe. It is not to be wondered at that France and Belgium expected that such unity of conviction, with so much apparent moral heat to give it driving force, would carry our people and our Government into active co-operation with the defenders of liberty.

Soon, however, interest in responsibility for the war diminished, and more specific issues began to engross attention. The rights of neutrals on the high seas, the right to export munitions, the possibility that this nation might any hour find itself actually at war, and the question of preparedness, became instant and vital topics. From that moment differences of attitude and conflicts of opinion multiplied. Today it is obvious to everybody that public opinion in the United States verges upon a state of intellectual and moral anarchy. Yet no greater mistake of judgment could be made than to conclude that our condition is one of disunity. Under the storm-lashed surface are the unsounded depths of our political ocean.

In political thinking nothing is easier than to see clearly every one of a hundred facts and a dozen big tendencies, and yet go all wrong. The facts and the tendencies must be seen quantitatively as well as qualitatively. Ratios count in the realm of human affairs as in mechanics. The American people do not get together on every question. There are some questions upon which

they are a unit and always will be; and there are some issues upon which they get together more or less, and with a good deal of shifting of pluralities from time to time.

It is because we fall into forgetfulness of these more and less relations that we waste time in debating the questions: What is an American? What is Americanism? The true answer to them is the simplest and most obvious fact in American life, and upon it the entire American people is a unit. An American is a man, born here or elsewhere, who wholeheartedly and unreservedly accepts and shares the good or the bad fortune of this nation. To it he gives his allegiance. He has renounced all other governments and every conflicting loyalty. We venture the assertion that there is no other issue upon which human beings might unite or divide that would bring together in feeling, opinion and relentless action so nearly one hundred per cent of the entire population of the United States as that of the single allegiance. If there are misguided residents here who are with us, but not of us, they will realize this truth in a bitter awakening before American public opinion gets thru with them.

There are other things upon which we are nearly united, for which the majority vote would be overwhelming. One of these is the supremacy of the nation and of the national government over all sectionalism, localism, racial differences, and class differences. Nobody wants to see any coercing of states or of interests if it can be avoided. But it is as certain as the rotation of the earth that if any state or any interest by cantankerous behavior endangers our relations with foreign powers or our internal peace and quiet, that state or that interest will get hurt.

We could add to the list, but these two items are enough. We shall differ, no doubt, over the extent and the method of desirable preparedness. We shall have pacifists and militarists. We shall have citizens exporting munitions and others demanding an embargo upon such traffic. Upon a thousand other things we shall differ; but upon the fundamental issues of Americanism and nationality we shall be, as we have been for fifty years, a united people. There will be no Disunited States.

AT LAST

A COMPLETE victory is all but won in our submarine controversy with Germany.

In the "Lusitania" case Germany consents to pay an indemnity for the American lives destroyed.

In the matter of German submarines operating in the Mediterranean Germany declares that merchant ships—except in case of flight or resistance—will not be sunk by German submarines until passengers and crew have been put in safety.

If any submarine commander should violate this principle and kill or injure American citizens in destroying a merchant ship, Germany will punish him and make reparation for the death or injury.

In the case of the "Persia"—the cause of whose sinking is still undetermined—Germany intimates that if it should prove to have been sunk by a German submarine, the foregoing procedure will be followed.

There is only one thing lacking in all this. Germany seems still unwilling to admit that the "Lusitania" was wrongfully sunk. It still apparently clings to the doctrine that its submarine warfare in the war zone about the British Isles was justified as an act of retaliation for the British blockade of Germany.

This the United States cannot admit. It is a contention unknown to international law. It is an unjustifiable contravention of the universally recognized rights of non-combatants upon the high seas. We could not accept as final a settlement of the "Lusitania" case involving even a tacit acceptance on our part of such a doctrine. It might involve us in the creation of a false precedent dangerous in the future to the vital principle of the inviolability of the lives of non-combatants at sea. But Germany has come far since the "Lusitania" was sunk; it ought not to prove an impossible task to induce her

to take this last inconsiderable step and end the matter. The people of the United States may well congratulate themselves upon a peaceful victory of great proportions. It is not only a vindication of the rights of American citizens; it is a triumph for principles of humanity and the rights of mankind. To contend that the victory might have been won more quickly and more lives and suffering saved if we had gone about the matter in a different way from the beginning is beside the point. That no man can tell.

That the victory has been won and won in more complete measure than many have believed possible is the outstanding fact. The whole world will be the gainer.

MONROE AND WILSON

NEARLY a century ago James Monroe proclaimed a doctrine that, probably more than any other single act of statesmanship, has brought peace and prosperity to the nations of this hemisphere. Tho never accepted as a principle of international law, the Monroe Doctrine as an American policy has been sufficient until today to maintain the independence of every nation in the New World.

The Monroe Doctrine, however, goes no farther than guaranteeing the nations of the New World from the interference of the Old. It does not guarantee them from the interference of the United States or of each other.

Last week Woodrow Wilson proclaimed a new Pan-American policy. In his address before the Pan-American Scientific Congress on January 6 he outlined his policy in these words:

It will be accomplished in the first place by the States of America uniting in guaranteeing to each other absolute political independence and territorial integrity. In the second place, and as a necessary corollary to that, guaranteeing the agreement to settle all pending boundary disputes as soon as possible and by amicable process; by agreeing that all disputes among themselves, should they unhappily arise, will be handled by patient, impartial investigation and settled by arbitration; and the agreement necessary to the peace of the Americas, that no state or either continent will permit revolutionary expeditions against another state to be fitted out on its territory, and that they will prohibit the exportation of the munitions of war for the purpose of supplying revolutionists against neighboring Governments.

These proposals if carried out will eventually bring into being nothing less than a Pan-American Confederation or League of Peace. They establish a defensive alliance against any nation within or without the league which attacks a member of the league. They create a method of settling controversies within the league by judicial process. They propose to remove some of the chief causes that now lead to civil or international war in the New World.

There is, however, one defect, in that they seem to maintain the status quo in all nations, even the backward ones. They would prohibit a liberty loving people from extending aid and comfort to a revolutionary minority in another country fighting for the cause of freedom against a tyrannical oligarchy. A league which guarantees the permanence of the existing régime and prevents any outside control over any of the backward republics or any outside aid to revolutionists may actually retard progress. Some plan must be devised for the growth of civilization in the dark spots of the world as well as in the light spots. Nations cannot and ought not to be kept to bounds they happen to possess at pres-

ent. A failure to recognize the possibility of such changes is one of the chief causes of war.

President Wilson has apparently provided no way for the progressive expansion of New World civilization. In the Pan-American Conferences we already have the germ of the idea that will bring this about. Let the president propose a legislative power for his Pan-American League in addition to the judicial and executive powers that he advocates, and then he will have provided a well-rounded plan for the development of peace, prosperity and progress of this hemisphere.

But, in any event, President Wilson's proposals are the most significant yet uttered by any New World statesman, not only for what they will accomplish if put into execution, but for what they logically lead to.

As Mr. Taft well says, "A League of Nations in the Western Hemisphere would be a definite, and, I think, a long step toward a League of Nations in both hemispheres."

RUSSIA'S SETBACK

IT has often been hinted that the British were not so much grieved as they might be by Russia's failure to run the steam-roller over all Germany within the first few months of the war. Too strong a Russia might have been hard to handle afterward. The Sydney, Australia, *Bulletin*, which is the *enfant terrible* of British journalism, gives frank expression to this feeling:

The enemy of the civilized world is destroying itself in the effort to destroy Russia, which is indestructible; and meanwhile the Britisher, who is able to regard the progress of the war with the cold and far-seeing eye of the business person, may console himself permissibly with at least one reflection. If Russia had been as strong as the blitherers averred and hoped, if it had been capable of routing the land forces of what everybody regarded as the world's greatest military power, it might have been well for the Allies' cause, but it would probably have been ill, in the long run, for the British Empire. National aspirations live longer than the most firmly welded alliances. At the end of the war Britain's hold on India and British interests in Persia would have been in no wise strengthened by the circumstance that Russia, in addition to its natural resources and its strength on a population basis, was efficient enough in the military sense to overrun western Europe. These are natural and obvious sentiments which need not conflict in any way with sympathy and warm admiration for a brave ally.

But probably now when Germany is grasping at Persia and the road to India, the British wish that Russia had been a little stronger than she proved to be. A good strong army from the Caucasus would be heartily welcomed on the Tigris, where General Townshend's division is besieged by Turk and Arab at Kut-el-Amara.

THE THREE SACRED TONGUES

IN the beginning of the sixteenth century there lived three great scholars versed in the three sacred tongues, Hebrew, Greek and Latin, the three languages of religion and literature, John Reuchlin, Erasmus Desiderius and Martin Luther. It was Reuchlin who gave again to the world of scholarship the forgotten Hebrew Bible; Erasmus was the first to print the Greek New Testament, while out of the two original languages Luther translated the two Testaments into the language of the people.

There is hardly a more notable production in literature than that in which Erasmus in one of his Colloquies beatifies Reuchlin on the news of the latter's death.

There are in it lessons that do not grow old. One of the interlocutors in the dialog tells how he had visited the University of Louvain, where he had heard a sermon by one Camelus, who had abused the new learning as impious. "A stupid camel, indeed," says his friend, "as if a thing was good because old, and bad because new." Then he went to Tübingen, where Reuchlin had just died; and there he met a Franciscan friar famed for his sanctity who related the wonderful vision he had seen in his sleep. He beheld beyond a bridge a marvelously beautiful meadow bespangled with flowers of all colors. As he was ravished with its beauty he saw Reuchlin approaching the bridge, gray haired, and clad in a single garment. There followed him at a little distance great obscene birds, as it were harpies, which sputtered and screamed after him, but did not dare to attack him. As he crost the bridge Reuchlin turned and said, "Depart, you can reach me no more with your detractions." With a foul odor, they flew away.

As Reuchlin crost the bridge there met him Saint Jerome, who embraced him and clad him in shining garments, like his own; for Jerome was the holy scholar, traduced and abused while alive, as was Reuchlin, who was master of the three sacred tongues, and had translated the Bible out of Hebrew and Greek into Latin. Jerome was not as the painters feign, squalid and infirm, nor did he need a lion to accompany him, but with all his years he was fresh and full of dignity. His garments, which reached to his ankles, were lucent like crystal, and embroidered to the fringes in colors of ruby, emerald and sapphire with texts of the three sacred tongues; and such were the garments he gave to Reuchlin. Then the whole heaven was thronged with welcoming spirits, so many that they would have obscured the sky had they not been themselves translucent. Jerome led his companion to the top of the hill where again he kissed him. There the heavens opened and they past up from view. Such was the Franciscan's vision, and the next day he learned that at that hour John Reuchlin died.

"Shall we not call him a saint?" the Colloquy continues. "But Rome has not made him a saint." "True, but who proclaimed Jerome a saint, or James, or John, or Mary? To us he shall ever be a saint." And so in memory of him they salute him in words like these: "O holy soul, do thou foster the sacred tongues, do thou foster those who study them. Let the sacred tongues prosper, but let the evil tongues perish infused with the poison of hell." And then follows a collect:

"O thou God who lovest the race of man and who thru thy chosen servant has restored to the world the gift of tongues thru which in olden time Thou didst from heaven teach thy holy Apostles by thy Holy Spirit to preach thy holy Gospel, grant that in all languages all men may preach everywhere the glory of thy Son Jesus, and that Thou mayest confound the tongues of false apostles who are conspired together to rebuild the impious tower of Babel that they may obscure Thy glory by striving to raise their own, for Thine only shall be all the glory with Jesus Christ, Thy Son our Lord, and the Holy Spirit, forever and ever. Amen."

When that collect is repeated we would add the name of Erasmus, who framed the prayer, to that of Reuchlin.

Do we live in evil days? We would not say it lest we be like the Camel of Louvain. The new is not worse but

better than the old. And yet in our American Louvains and Tübingens we find the sacred tongues dishonored, so that the utterance of the collect might be a prayer for their confounding. Learning is something vastly greater than it was in the sixteenth century, and room must be made for it, but may the time never come when our students of theology shall cease to foster the three sacred tongues, and our universities and colleges as well shall fail to send out graduates who have a knowledge of at least two of the languages that have given us our religion and our civilization.

AMERICAN NEUTRALITY

WHAT we Americans mean by national neutrality is generally misconceived by Europeans, even those inclined to be sympathetic. The United States is variously accused or suspected of being cowardly, mercenary, hardhearted, indifferent, inconsistent or torn by internal dissensions. But no matter what motives are ascribed to us it should be made plain to Europe that neutrality is no new thing with us, but the established policy of our country enjoined upon us by George Washington and followed persistently thruout our national life in spite of all inducements and incitements to depart from it. Daniel Webster has given a definition of it which might well be stamped at the head of the White House note-paper:

Our neutrality is not a predetermined abstinence, either from remonstrances, or from force. Our neutral policy is a policy that protects neutrality, that defends neutrality, that takes up arms, if need be, for neutrality.

American neutrality is not based on indifference, and it does not necessarily mean pacifism.

THE HOPE OF CHURCH UNION

NEXT to the work of making the world better, the Church's first task is to unify itself. The divided condition of the Protestant churches is nothing less than a disgrace. A multitude of its members of the elder generation know it and mourn it, but they do not seem to know how to go to work to correct it by actually getting together. Federation is about the best thing that they seem able to understand.

The task and duty awaits the accomplishment of the coming generation, and most fortunately they are getting accustomed to the idea and trained to the work.

Take the three organizations, the Young Men's Christian Association, the Young Women's Christian Association and the Young People's Society of Christian Endeavor—their members are members of all the sects, but their labors and interests are not for the sect but for the Church Universal. Of this the Christian Endeavor is an extraordinary example. Its societies are now found in every Protestant denomination, with one or two insignificant exceptions—something over a hundred denominations in all. It is a pity that there are so many, but the young people are not responsible for their formation or their continued existence, and it is a good sign of the times that they are ready to come together on a common platform and that their churches do not object to this union. There are something like ten thousand or more C. E. conventions, or union meetings, held every year thruout the world, which bring together the young people of all these denominations. Sometimes there are

only a few denominations represented in one locality and sometimes many. In the Pennsylvania state union, among five thousand societies there are no less than forty-seven different denominations. These meetings of these 80,000 societies thruout the world, with their four million members—and their number ever growing—are a fruitful promise of Church union not to be indefinitely delayed.

The Independent has a special interest in the history of the Christian Endeavor. It was Edward Eggleston, editor of The Independent, who organized in Brooklyn the church to which he gave the name of the Church of the Christian Endeavor. That name the Rev. Francis E. Clark chose as the name of the young people's society organized in his church, and Father Endeavor Clark has lived to see it cover the Protestant Christian world. He is now on a tour of visitation to direct and encourage his young people of both hemispheres.

THROWING THE BLAME UPON OXFORD

THE French in 1871 frankly acknowledged that they had been beaten "by the Prussian schoolmaster," and accordingly they set themselves to reform their educational system. The English, altho still confident of victory, are beginning to recognize that their educational system is in large part responsible for their inability to cope with the crisis. Professor Henry E. Armstrong, one of the foremost chemists of England, uses strong language on this point:

This country is governed primarily by and from Oxford. If the lessons of the war do not cause Oxford to reform, we shall be forced to confess that there is no health in us and, like the snark, our industry will "softly and silently steal away."

Since war has become a branch of applied chemistry the British are now paying the penalty for permitting Germany to oust England from that leadership in the chemical industries which she held a half century ago. Professor Armstrong calls the Oxford degree in chemistry "worthless for practical purposes," and urges that Greek and Latin have no right to monopolize the field as they have done hitherto.

It will be remembered that five years ago the necessity of reforming Oxford was generally recognized by those in charge of the university as well as outsiders. The resident staff favored the abolition of compulsory Greek, but the alumni of the university, especially the country clergy, voted repeatedly against any modification of the ancient régime.

THE FREEDOM OF THE SEAS

IN our present struggle with Great Britain and France to maintain the rights of neutral shipping on high seas it is well for us to remember that one of the Allies is, or should be, on our side of the controversy. Russia has always supported us in our former endeavors to establish the American principle of "Free ships make free goods," and this has at times drawn the two countries together by a bond of common policy. John Randolph of Roanoke, our Ambassador to Russia in 1830, did not put it too strongly when he declared that "From the reign of the illustrious Catherine the Great Russia and the United States have been identified in regard to maritime rights and principles." His successor at St.

Petersburg, James Buchanan, wrote to Count Nesselrode:

The maintenance of the principle has contributed much to the glory of Russia and constitutes one of the brightest pages in her history. . . . All those who can justly appreciate the vexations and outrages which neutral commerce has suffered from the practise adopted by one or two beligerents of capturing neutral vessels upon the high seas, merely because the property of enemies might be found on board, will ever award to her exertions the fame which she so justly deserves.

By the following year treaties had been made with Prussia, Spain, the Netherlands and South American states to maintain the "free ships, free goods" idea against British and French encroachments.

The "line-up" in the present controversy is the same as it used to be except that the three Scandinavian countries are added to our side and Russia is seemingly identified with the other. But it is not probable that Russia, in spite of her present alliance with France and Great Britain, has repudiated her historic principles on this point. At any rate her prepossessions in favor of free shipping might incline her to lend a more sympathetic ear to our protests than Great Britain and France, whose policy has always been opposed. It might be well for our Ambassador at Petrograd to sound the Russian Government on this point and see if Russia would use her influence with her allies to mitigate the unjust and injurious restrictions upon neutral commerce against which our Government protests in vain.

THE BACHELOR AND THE MARRIED MAN

THE report of the Derby recruiting scheme showing that 53 per cent of the unmarried men and 59 per cent of the married men have volunteered for the army, will give obvious opportunity for the wit of the misogynist humorist—and somehow most professional humorists are constitutional misogynists. But there is another and more probable interpretation of these figures than that which ascribes them to the desire of husbands to seek the comparative peace of the firing line. We find this in Kipling's familiar lines:

The bachelor 'e fights for one
As joyful as can be;
But the married man don't call it fun,
Because 'e fights for three—
For 'Im an' 'Er an' It
(An' Two an' One makes Three)
'E wants to finish 'is little bit,
An 'e wants to go 'ome to 'is tea!

The bachelor will miss you clear
To fight another day;
But the married man, 'e says, "No fear!"
'E wants you out of the way
Of 'Im an' 'Er an' It
(An' 'is road to 'is farm or the sea),
'E wants to finish 'is little bit,
An' 'e wants to go 'ome to 'is tea.

It is indeed the most serious defect of the volunteer system that the appeal to the patriotism of the people brings out the good citizen and leaves the slacker. It exposes the conscientious to danger and preserves the coward. Such a reversal of the law of natural selection by which courage and patriotism have been developed would prove disastrous to a nation if practised on a large scale and for long. In this regard universal military service has the advantage, for it takes in all except the physically incompetent and so does not tend to favor the selfish at the expense of the unselfish.

THE STORY OF THE WEEK

GERMAN RULES FOR MEDITERRANEAN SUBMARINES

On January 7 the German Ambassador at Washington informed our Government that the German submarines in the Mediterranean were under the following instructions. It is understood that the same rules apply to the Austrian and Turkish submarines.

1. German submarines in the Mediterranean had from the beginning orders to conduct cruiser warfare against enemy merchant vessels only in accordance with general principles of international law, and in particular measures of reprisal, as applied in the war zone around the British Isles, were to be excluded.

2. German submarines are therefore permitted to destroy enemy merchant vessels in the Mediterranean—that is, passenger as well as freight ships as far as they do not try to escape or offer resistance—only after passengers and crews have been accorded safety.

3. All cases of destruction of enemy merchant ships in the Mediterranean in which German submarines are concerned are made the subject of official investigation and besides submitted to regular prize court proceedings. In so far as American interests are concerned, the German Government will communicate the result to the American Government. Thus also in the "Persia" case if the circumstances should call for it. If commanders of German submarines should not have obeyed the orders given to them they will be punished; furthermore, the German Government will make reparation for damage caused by death of or injury to American citizens.

Three Hundred Miles of Battle

It was thought by some that there would be a cessation of activity on the eastern front during the winter, especially since the weather is unusually severe even for Russia. But during Christmas week the Russians undertook a new offensive along the southern section of the line between the Pripiet and the Dniester rivers. These rivers run eastwardly about three hundred miles apart, but they come near being connected by water, for two of their tributaries, the Styr and the Strypa, both have their origin near the Galician frontier. It was on or near these two rivers that the Austro-German advance halted last fall, and since this formed a good line of defense, no serious attempt has been made at a further drive eastward. The later efforts of the Germans were directed toward the capture of Riga and Dvinsk, in the extreme north, but in this they failed.

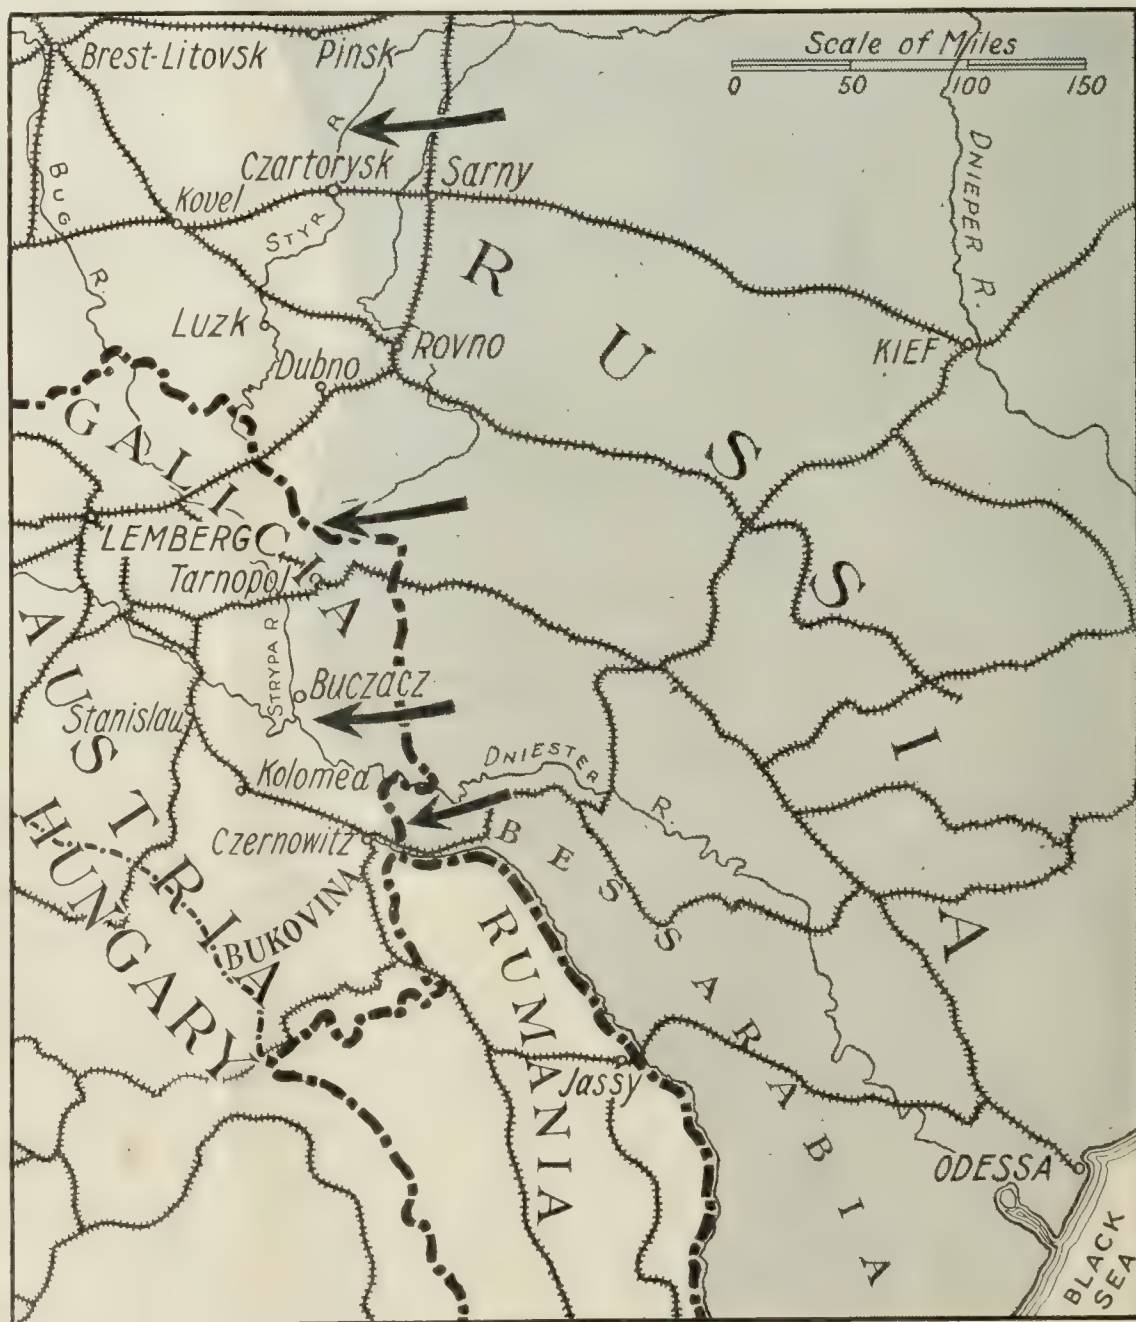

During the last four months the Russian army has been reorganized and obtained a new supply of guns and ammunition, largely, it appears, of Japanese manufacture. They are said to have 1,500,000 on this southern section between Pinsk and Czernowitz. Pinsk, the northern end of this section, is in the swampy valley of the Pripiet River. Czernowitz is situated on the slope of the Carpathian Mountains and some twenty miles south of the Dniester River. On the northern side of the Dniester there are also high lands of over a thousand feet altitude, in the midst of which stands Tarnopol, on the Sereth River. North of Tarnopol, are the three fortresses of Lutsk, Dubno and Rovno, designed to be the chief defenses of southern Russia. Two of these are in the hands of the Germans. The third, Rovno, they have not been able to take.

This, then, is the lay of the land in the new battlefield. The Russians seem to be concentrating their efforts on the southern part in the attempt to make

another drive up the Dniester to recapture Czernowitz and Lemberg as

they did in the first months of the war. On the north side of the Dniester they are attacking Buczacz on the road to Lemberg. On the south side of this river they have occupied the heights which overlook Czernowitz. The Russian army which is attempting to invade Bukovina is under the command of General Ivanoff and it is rumored that Field Marshal Mackensen, the conqueror of Serbia, has been brought back from the Balkans to oppose him. The Russians are said to have massed here 60,000 men on a front of less than a mile. After a bombardment of fifty hours, in which 400 guns took part, they began the attack and charged the German trenches fourteen times in one day, in spite of appalling losses. The Austrian War Office estimates the Russian losses in the recent operations at 50,000.

Further north the fighting is no less severe. The Austrians under General Pflanzer are trying to capture Tarnopol

THE NEW RUSSIAN OFFENSIVE

The three-hundred mile line between Pinsk and Czernowitz which the Germans have held ever since last September is now being subjected to energetic attacks from the Russians at various points. The line follows roughly the course of two rivers, the Styr running north and the Strypa running south. Both these have been crossed by the Russians, who are also directing an attack upon Czernowitz, the capital of Bukovina. If the Russians should regain Bukovina, Rumania would be likely to take the side of the Allies or at least permit the Russian armies to cross Rumania and invade Bulgaria from the north while the English and French at Salonica attacked Bulgaria from the south.

Paul Thompson

THE BUILDERS

Germany moves promptly to restore to their normal condition the territories her armies have seized. Here is a bridge being rebuilt in Poland. Railway engineers have been known to repair a bridge destroyed by the enemy, and needed for immediate advance, in six hours' time

and the Russians have taken the town of Czartorysk, which gives them a chance to advance along the railroad toward the important junction of Kovel.

The Submarine Question Both Germany and Austria-Hungary now seem anxious to satisfy the American Government on all points at issue. The voluntary assurance given by Count von Bernstorff, which we quote in another column, concedes the main points for which our Government has contended, and if these rules are faithfully followed there may be no further cause of complaint, at least so far as the Mediterranean is concerned. It is also promised in advance that if it turns out that the "Persia" was sunk by a German or Austrian submarine without warning or when it was not resisting or trying to escape, the commander will be punished and reparation made. It is said also that Germany has expressed a willingness to pay an indemnity for the loss of American lives on the "Lusitania" tho the wording of the disavowal demanded by the United States has not yet been agreed upon.

The "Frye" case was virtually settled by a note dated November 29, which has just been made public. In this the German Government agrees to leave the amount of the indemnity to be paid by Germany to be settled by two experts, one named by each of the Governments. The German Government has named Dr. Greve, of Bremen, director of the North German Lloyd. The German Government expresses regret that Dr. Greve cannot go to Washington in compliance with the desire of the American Government, owing to "the danger of capture during the voyage in consequence of the conduct of the war by England contrary to international law." The German Government regards the appointment of a neutral umpire as a third arbiter as un-

necessary if it is merely a matter of appraising the damages.

As to the arbitration of the questions of maritime warfare involved the German Government wishes to have the Prussian-American treaty of 1899 made the basis of procedure rather than the Hague rules. Until these questions are settled by arbitration

the German navals will sink only such American vessels as are loaded with absolute contraband, when the pre-conditions provided by the Declaration of London are present. In this the German Government quite shares the view of the American Government that all possible care must be taken for the security of the crew and passengers of a vessel to be sunk. Consequently, the persons found on board of a vessel may not be ordered into her lifeboats except when the general conditions, that is to say, the weather, the condition of the sea, and the neighborhood of the coasts afford absolute certainty that the boats will reach

the nearest port. For the rest the German Government begs to point out that in cases where German naval forces have sunk neutral vessels for carrying contraband, no loss of life has yet occurred.

The "Persia" case is still a mystery and, like the "Maine," may never be cleared up. The affidavits of the survivors throw no light on the cause of the explosion which blew up the steamer, for nobody saw a submarine and the only direct evidence to show that the "Persia" was sunk by a submarine is the statement of the second officer that he saw the wake of a torpedo. The number of missing is 336, of whom 119 were passengers and 217 crew. Of those saved 65 were passengers and 214 crew. Besides Consul McNeeley it seems there was another American drowned, for among the missing is the Rev. Dr. Homer R. Salisbury, a Seventh Day Adventist missionary, who came on board at Marseilles to go to India. He came from Battle Creek, Michigan, and is supposed to be an American. If the Austrian or German government has any information as to how the "Persia" was sunk it has not been made public.

Parliament Votes The amazing change which has come over Great Britain is shown by the passage of a conscription act in the House of Commons by a vote of 403 to 105. Counting out the Irish members, since Ireland is not included, there were only forty votes against it by the representatives of the country covered by the bill. Even the Labor party was divided, for ten out of the twenty-three representatives of that party voted for it. Among them was Arthur Henderson, leader of the Labor party, who had just resigned his cabinet position of President of the Board of Education, because the Labor caucus had decided that no Labor members should remain in the Government. The two other Labor men in the Coalition Ministry resigned for the same reason,

AN OLD CEREMONY IN TODAY'S WAR

The Austrians here have decorated their cattle with festive garlands in celebration of a victory quite as if they were living in the palmy days of the classics

William Bruce who was Parliamentary Under Secretary for Home Affairs and George H. Roberts, Lord Commissioner of the Treasury. The Cabinet also lost on this issue Sir John Simon, Secretary of State for Home Affairs, who made a speech against the conscription bill and criticized Lord Derby's figures.

According to Lord Derby's report the recruiting campaign of the six weeks ending December 15 induced 1,150,000 out of 2,179,231 single men and 1,672,261 out of 2,832,210 married men to volunteer. Many of the single men who have not come forward are ineligible or needed for the Government service for manufacture of munitions, but there are about 600,000 single men who are available and these the bill aims to get. Quakers and others who have "conscientious objections to undertaking combatant service" are exempt. The penalties of attempting to evade military service may be six months imprisonment and \$250 fine.

The Unionists and Conservatives all supported the bill and the most influential speech in its favor was made by A. J. Balfour, formerly leader of the Opposition, but now First Lord of the Admiralty in the Asquith Ministry. He said:

I have never favored conscription in any form, but it is no longer an abstract question. We are dealing with a stern reality. First, the Prime Minister has given a pledge for this bill which it would be dishonorable to ignore, and, second, the safety and success of the country are at stake. Let me say with the greatest emphasis that those of us who know the conditions in the field know that this bill is absolutely essential to the proper carrying on of the war.

If this house refuses this bill to the Government, it refuses what the Government considers an absolute military necessity. This is not a precedent for universal conscription. It is not the thin edge of the wedge, or the first drop of poison to corrupt our whole system. In truth, this bill is a tribute to voluntarism, for we have raised 6,000,000 volunteers, and now this bill merely brings in those few shirkers who have failed to respond to the volunteer system.

No future Prime Minister can ever use this bill as a precedent for permanently fixing on the country the taint of Prussian militarism.

Militarism is an affair of the heart, and it is in the hearts of the German people to have militarism, while it is in the hearts of Englishmen not to have it.

But for the moment we are dealing with a stern necessity, and our greatest danger is not that traditions will be abandoned, but that we are lulling ourselves with a great illusion of false security.

In spite of the large majority which the bill drafting single men into the army received in the House of Commons it is doubtful whether it can be put into effect without a general election, for the trades-unions are strongly opposed even to this partial measure of conscription. The National Labor Congress held its session at the same time as Parliament protested unanimously against any form of compulsory military service. On the specific question of Asquith's bill the votes in favor represented 783,000 workingmen and those against 1,998,000.

THE GREAT WAR

January 3—British complete conquest of Kamerun, Africa. Turks claim victory over Russians in Persia.

January 4—Italy has spent \$561,000,000 on war to January 1. Turks attacking British at Kut-el-Amara on Tigris.

January 5—Four members of British ministry resign on account of conscription bill. Russians attacking Cernovitz, capital of Bukovina.

January 6—Conscription bill for unmarried men passes House of Commons. Russians capture Czartorysk.

January 7—Germany agrees to settle "Frye" and "Lusitania" cases and ameliorate submarine warfare. Nancy bombarded by Germans.

January 8—Russian warships bombard Varna on Black Sea. Trenches on Hartmanns-Weilerkopf, Vosges, changing hands.

January 9—British abandon Gallipoli altogether. British battleship "King Edward VII" sunk by mine.

The Balkan Campaign In spite of repeated rumors of a Teutonic attack upon the Allied base at Salonica there have been no evidences of such a movement. It is in-

deed doubtful whether it would prove a profitable enterprise, for the French and British troops at Salonica are said to number over 200,000 and are strongly entrenched in the hills about the city. Having the command of the sea the Allies can land reinforcements and munitions to any amount directly on the docks at Salonica while supplies for the German and Austrian troops would have to be brought down on the single track railroad from Belgrade. If the Bulgars and Turks should join them in the invasion of Greece the Greeks would be quite likely to take up arms in defense of Salonica, which within the last four years they fought the Turks to gain and then the Bulgars to retain. If the Germans and Austrians try to take Salonica by themselves they will doubtless require more troops than the defenders and must expect heavy losses which they can ill afford, since they are already greatly outnumbered both in France and Russia and are extending the field of operations into Asia. Even if they should succeed in driving the Allies out of Salonica they could not hope to hold that city, since it can be bombarded at any time by the Allied fleet. But by letting things stay as they are a large body of Allied troops is virtually kept interned at Salonica and the Bulgars may be trusted to guard the border if they should attempt again to advance into Serbia.

What acts perhaps as a greater deterrent still is the energetic attack of the Russians on the Austro-German lines north of Rumania. If the Russians should again occupy Bukovina and Galicia, Rumania would be very apt to join with them and this would open the way for an invasion of Bulgaria from the northern side. It is reported that General Mackensen and many of his troops have been recalled from Serbia to meet this new danger.

The second Bulgarian army is said to have been brought back to Sofia. The first Bulgarian army is driving the Serbs thru Albania to the sea. The Montenegrins are stoutly resisting the Austrian invasion of their country.

Greece has protested to Washington and the other neutral governments against the violation of her neutrality thru the occupation of Salonica by the French and British and their arrest of the German, Austrian, Bulgarian and Turkish consuls at that port. Additional offense has been given to Greece by the Allies in the arrest of the Austrian and German consuls at Mitylene, and by the occupation of the Greek islands of Melos, in the Aegean, and Corfu, in the Adriatic. In retaliation for this the Bulgars arrested the French consul at Sofia and tried to arrest the British vice-consul, but he took refuge in the American embassy.

Underwood & Underwood

THE "VALERIE" BRINGS CABARACHE

A big Norwegian bark which put into port at New York the other day with a cargo of dye-wood from Buenos Ayres. There is a faint echo of the old clipper days in New York's shipping now that sailing vessels, which were thought to have gone forever, have been called back to replace steamers destroyed or interned in the war.

The withdrawal of the Allied troops from the Near East Anzac and Suvla shores of Gallipoli left only Sedd-el-Bahr, the tip of the peninsula, in the hands of the British. This apparently they intended to hold as a sort of second Gibraltar, for it commands the en-

THE "FILIPINO CARNEGIE"

trance to the Dardanelles and its possession would enable them to control the only entrance to the Black Sea, as they control the only entrance to the Mediterranean, Gibraltar and Suez. But even this foothold proves to be untenable. Heavy artillery, transported from Germany by the Orient railroad thru Serbia and Bulgaria, was brought to bear upon the British entrenchments and upon the French and British warships defending them. So the British and French troops have been withdrawn from Sedd-el-Bahr, without losses, according to the British report, with heavy losses, according to the Turkish report. All guns were taken away except seventeen, which were worn out and were blown up before being abandoned.

Whether the Germans have any serious intention of undertaking an invasion of Egypt is still questionable, for the hints of their elaborate preparations which are allowed to leak out may be intended merely to divert British troops to the Suez and so prevent the concentration of Kitchener's army in France. We hear, however, that Field Marshal von der Goltz has established his headquarters at Aleppo, from which point he can send troops by rail part way to Bagdad or nearly all the way to the Egyptian frontier. Since there is no knowing which way he intends to strike, the British are obliged to keep a sufficient force to meet an attack both on the Tigris River and the Suez Canal. Von der Goltz is one of the leading authorities on strategy in the world, his textbooks being used at West Point. For many years before the war he had

been engaged in reorganizing the Turkish army and planning their system of fortifications. For the training of the navy the Ottoman Government employed British officers. The troops under General von der Goltz are estimated at 300,000 to 500,000.

The Dutch and the Japanese lines running to the Far East have abandoned the Suez route and are sending their steamers around by the Cape of Good Hope. The insurance rate on all cargoes going thru the Suez has been trebled, which will make the expense practically prohibitive for most traffic. The activity of the Austrian submarines in the Mediterranean may account for this diversion of traffic, but it confirms the expectation of a conflict on the canal within a short time.

In northern Persia the Russians have had several engagements with the Persian insurgents in which both sides claim victories. The British at Kut-el-Amara, on the Tigris, are still holding their own against the repeated attacks of the Turks and Arabs.

War and the Industries Owing partly to the war demand, the price of gasoline continues to rise, and is now 22 cents a gallon. At the beginning of last year it was only 13 cents. In the House at Washington two resolutions were adopted, last week, one asking the Attorney General to report as to the existence of an unlawful combination in the industry, and the other providing for an inquiry by a House committee. The Attorney General replied that thus far there was no evidence to justify a prosecution for violation of the law against restraint of trade by combinations, and that the Federal Trade Commission had undertaken an investigation of the oil trade. It is now known that the commission has decided to inquire at once about the price of gasoline. The rapidly growing number of automobiles in use here, the demand from abroad, especially in and near the battle fields, and the decreased output of certain oil fields in this country, appears to account for the high price. Some predict that it will rise to 40 cents.

Reviews of the zinc industry for the past year show how it has been affected by the war demand. While the output of spelter increased by 38 per cent, the value of the product was \$139,000,000 against only \$36,000,000 in 1914. The demand for ammunition accounts for this change. We have imported large quantities of tin, nearly all of it from Malaysia. The effect of the war upon prices and transportation, together with our more intimate trade relations with South America, has promoted the establishment here of a new industry, the smelting and refining of tin ore from Bolivia. The work will be done in New Jersey, and on a large scale.

Few additional war orders have recently been reported. There have been negotiations for large quantities of shrapnel. The Canadian Car and Foundry Company, whose first order from Russia was for \$83,000,000 worth of shrapnel, was looking for \$10,000,000

Press Illustrating Co.

GERMANY'S SCIENTIFIC CHIEF OF STAFF

The success of the Germans in the field and their still more remarkable success in maintaining the nation when all commerce was cut off are due to the organization of industry under scientific direction. Dr. Walther Rathenau, the head of the General Electric Company, was called upon at the outbreak of the war by the Minister of War to take charge of manufacture of war material. His greatest achievement is the development of the process of making nitric acid from the nitrogen and oxygen of the air by means of the electric spark. This provides the nitrates necessary for ammunition and agriculture and frees Germany, probably permanently, from her previous dependence upon the British nitrate beds of Chile.

last week, to be used in the business, and the company's stock declined sharply in the market because the money was not promptly obtained. But \$4,000,000 was supplied by Russia, and the remainder was expected from the same source in a few days. Russia's original advance had been \$20,000,000, but a large part of this was distributed among the many manufacturers to whom the company gave sub-contracts.

Defense Plans in Congress It is admitted at Washington that the Government's plans for enlarging the army and the navy are in some danger of being rejected by Congress. The army plans are regarded with less favor than those relating to the navy, and there is pronounced opposition to the Continental force proposed by Secretary Garrison. In the House the Administration is in need of leadership for its policy, which is opposed by the appointed Democratic floor leader, Mr. Kitchin. Only with the aid of Republican votes can the new plans gain approval there.

In recent speeches opposition has been more prominent than support, even on the Democratic side. In some cases the opposition has been manifested in relation to side issues rather than to the plans. In the Senate Mr. O'Gorman and Mr. Hitchcock, Democrats,

have favored an embargo, or prohibition of the shipment of munitions. Mr. O'Gorman and Mr. Owen would have the Government prevent American citizens from taking passage on the liners of the belligerents. Several Republicans were in agreement with them on this. In the House Mr. Sherwood, of Ohio, a Democrat, in a long speech ridiculed and denounced the Administration's plans. To tax the people for them, he said, would be a crime. Mr. Bryan sent him a letter of congratulation, saying he hoped the speech would cause the defeat of the plans.

On the other hand, Senator Williams uttered a warning as to hostile action against this country after the war by the victorious side, saying that we should be bullied at least, and that we ought to enlarge both the army and the navy. Senator Chamberlain, chairman of the Senate's military committee, is in favor of compulsory military education, with a short term of service. Before the House Committee, Secretary Garrison has made an elaborate argument in support of his plans. Representative Gardner, of Massachusetts, whose advocacy of preparedness is well known, provoked a warm debate in the House by attacks upon pro-German plotters. His denunciation was so comprehensive that several Republicans who have many German-American constituents defended them and sharply criticized what he had said.

Strike Riots in Ohio Riots causing loss of life and the destruction of much property have accompanied a strike of 3600 employees of the Republic Iron and Steel Company and the Sheet and Tube Company at East Youngstown, Ohio. The men went on strike about three weeks ago for an increase of pay from 19½ to 25 cents an hour. After the United States Steel Corporation, on the 6th, announced an increase of ten per cent for more than 150,000 men, the Youngstown companies offered an increase from 19½ to 22½ cents. This was rejected. The riots began on the 7th in the evening. A mob of strikers gathered at the end of a guarded bridge which workmen who had not gone on strike must cross, and hooted at them, also throwing stones. A pistol shot was followed by several warning shots in the air from the guards. Then the mob shot at the guards. The return fire wounded several persons, among them two women. Immediately the mob began to set fire to buildings and to loot saloons and stores.

Before morning ten blocks of buildings, practically the entire business section of East Youngstown, had been destroyed by fire, with a loss of about \$2,000,000; nearly one hundred persons had been wounded, and eighteen of the town's twenty saloons had been looted and burned. The bottled liquors had been taken, and in the streets were seen barrels of whisky, with the heads knocked in, while drink-crazed strikers were around them. The small police

Paul Thompson

Gott strafe England, stamped on the briquets furnished as fuel for the soldiers at the front, may be expected to make the fire hotter. A Dutch customer who received this sort of fuel from a German dealer, however, refused to use it

force could do nothing. When the firemen came, the mob cut their hose and drove them away. One of the burned buildings was the post office. After some delay a party of policemen and citizens from the neighboring city of Youngstown dispersed and drove away the rioters. More than 100 were placed in jail. At daybreak three regiments of militia, 2400 men, arrived and they have since been on guard. It does not appear that more than three persons were killed, altho others may die of their wounds.

For a New Pan-American Agreement Until the close of the session of the Pan-American Scientific Congress, at the end of last week, the dominant topics were those relating to political association and coöperation. There were addresses in which business credits were considered, with plans for facilitating commercial interchanges. Two or three speakers drew attention to South America as an inviting field for investments which would promote trade with

the United States. Mr. Bryan said our Government might well underwrite loans to South American countries for development of their resources. He hoped the pending treaty, which provides for the payment of a large sum to Colombia, would be ratified. But political coöperation was the leading subject in the minds of delegates, and new prominence was given to it on the 5th by the news that what some have called an extension of the Monroe Doctrine had been proposed by our Government to the twenty American republics.

At the direction of the President, Secretary Lansing has formally laid before the Latin-American Ambassadors and Ministers, to be submitted to their Governments, the plan of a general treaty or series of treaties in which the United States and all the other nations of this hemisphere shall agree to guarantee the territorial integrity of the several countries; to maintain the republican form of government; to submit to settlement by diplomacy, arbitration, or investigating commissions disputes of all kinds, boundary disagreements included, but controversies affecting national independence excepted; to prohibit exportation of arms to any but the legally constituted governments, and to enact neutrality laws that will prevent filibustering expeditions from fomenting or carrying on revolutions in neighboring republics. There has not been time for a reception of answers from the nations to which the proposition was submitted.

In an address to the members of the Congress and their friends, on the 6th, President Wilson referred to this movement. A conference was recently held in Washington, he said, to consider the financial relations of the two American continents and to ascertain the practical means by which commercial intercourse could be facilitated. Those who took part in the conference realized that back of the community of material interest there must be a community of political interest. If nations are politically suspicious of one another, all their intercourse is embarrassed. The Monroe Doctrine, which this country always will maintain upon its own responsibility, did not, the President said, disclose the use which the United States intended to make of her power, with the implied and partial protectorate which she was trying to set up, and therefore fears and suspicions prevented complete confidence and trust between the Americas. There has been doubt, and it must be removed. He believed it would be removed by such an agreement as the one outlined above. Speaking of its requirements, he said he was confident that they would lead to something long prayed for by America. They were based upon self-restraint, respect for the rights of all, absolute political equality among the nations, and the eternal foundations of justice and humanity. The next session of the Congress will be held at Lima, Peru, in 1921.

HE IS AN ENGLISHMAN

The new warfare on the trench-fronts has become a grotesque masquerade since gas became a weapon. The picture on page 71 shows why it is necessary to clothe the men thus

SHOULD THE UNITED STATES FIGHT?

AND WHAT IS THE NATURE OF A PRUSSIAN?

BY G. K. CHESTERTON

HOW long will the war last? That's a difficult matter to determine. I may say, however, that I rather look for a sudden ending. Endings are sudden when you come to think of it, aren't they? We get into the habit of regarding most happenings as gradual. We watch the details of this stupendous conflict daily and our minds move slowly toward the contemplation of its definite end. Beginnings and endings are never gradual. Death itself is always a very definite happening and so I rather think Germany's end of this war may be as sudden as a volcano.

The Battle of the Marne dashed forever her hopes of conquest in the West. She then turned her face to the East in the hope of a definite decision. After many ups and downs, successes, failures, hopes and despairs, I do not believe she can now look for a definitely final decision there after her repulse in Russia. The likelihood of German conquest no longer exists. The only question for the Allies now is how long will it take for Germany to be worn out, exhausted. It is now only a question of *when*. When Russia sufficiently recovers herself to assume the offensive at the same time that the Allies push forward, the end will not be far off. Of course any conjectures of mine of this character must not be taken too seriously, for when you are dealing with self-respecting maniacs you can't be sure of anything. Self-respecting maniacs, because they really believe they're engaged in some kind of holy, uplifting work, which, sad to say, has to be forced on the rest of the world. They remind me of the Zealots during the fall of Jerusalem.

They have all the bump-tiousness of a gas balloon. They're far too stupid for any likelihood of an internal revolution, and even if there were any chance of it, Prussianism would nip it in the bud. And by the way, the Prussian hypnotism of the whole of Germany is one of the most amazing things I've ever heard of. Do you know that as recently as the taking of Schleswig-Holstein, Prussians

Mr. Chesterton, unlike most authors, is equally interesting whether he writes or talks. In both cases he is merely thinking openly and all the reader or listener has to do is to follow his train of thought thru all its nimble windings. The listener in this case is Percy Waxman, who went to Mr. Chesterton at his home and asked him to talk about the war. The following interview was the result.—THE EDITOR.

were regarded as *aliens* in Germany? It was not until after the intoxicating success of the Franco-Prussian War that the Prussian was able to make himself the symbol of Germany. He made the rest of Germany believe that he was divinely ordained to boss them.

BISMARCK typified Prussianism at its acme. Prussianism never consisted of a desire for leadership unless secured by conquest. And that idea holds good in Germany today. At one time the King of Prussia was actually offered the crown of United Germany, but he refused it on the

ground that he had no desire to gain a throne at the behest of the people. He must win it by conquest or not at all.

It is hard to say today where Prussia ends and the rest of Germany begins. All Germany is absolutely hypnotized. Why, an ordinary German is incapable of governing himself, and if you suggested that he could do it, you would offend his sense of state rule. That's Prussianism for you—an entire squelching of the individual and individual right. The German character, with its strange inability to see anything true about humanity, is wonderfully well exemplified by those curious creatures known as German governesses whom we see in so many English families; or rather did see, with their monstrously serious and monstrously sensitive temperaments.

They are just as likely to burn down your house for some imagined grievance as they are to perform some marvelous act of self-sacrifice which a normal person could see was entirely unnecessary. Germans today are nearly all of this hysterical governess type. When they find themselves in the wrong, they explode temperamentally, deliberately behaving as devils, while honestly believing themselves to be angels. They are nationally afflicted with an egregious form of self-love which in a large measure has been pandered to and fostered by their mythology.

Germans dignify their mythology with the name of history. Fancy calling that spurious Treitschke-Bernhardi rubbish about waking up the whole world to Teutonism, history. Germans keep on judging the historic by the pre-historic, which is to say the least, a curious habit. All this undefined twaddle about Celts and Teutons is largely German pedantry, and we were almost catching the ghastly complaint in England. Learning *real* history is a far more difficult task than to talk rot about the prehistoric. You can always detect the sham student of history by his love of indefinite terms. For instance, you hear a lot about Celts, Teutons and

G. K. CHESTERTON

Anglo-Saxons, whoever they are. Now if I say I'm an Englishman, it means something definite. You conjure up a picture of a man who likes tea and toast for breakfast, makes a fuss over his morning tub, is rather aggressively individual and that sort of thing. But if I say I'm a Teuton, it is really meaningless. Who knows any definite characteristics about Teutons? And yet it is just this vague kind of stuff that Germany has been yelling and screaming about for ages. She has told us time and again that we should love her more than we do, because the Germans and English all belong to the one great Anglo-Saxon-Teutonic family. Think of it. She has tried to prove to us by some mathematical formula that we are all one family. Utter nonsense. Who has more miserably and totally failed to understand us than the Germans?

Their colossal failure to understand anything about us almost proves that we must be related, for the failure of families to understand each other is proverbial. German "frightfulness," as exemplified by Zeppelin raids and submarine murders, not only shows an absolute misunderstanding of England, but is direct proof of German fear at home. Only the fearsome becomes desperate.

Germans regard the English joking habit as evidence of a ghastly shallowness and abandoned debauchery. With their own troops singing *Deutschland über Alles* in perfect time and perfect tune as they march into action, they look upon English light-hearted irony under such circumstances as approaching blasphemy. The newest battle-cry for our troops as they dash for enemy trenches is "Front seats two-and-sixpence." No self-respecting German would ever dream of using irony as a relaxation. This lack of humor is what produces Germany's somber egotism. Germany's idea, too, of a gentleman is what most other people regard as a cad. They seem to have a genius for thinking exactly the opposite things about humanity from what any one else in the world thinks.

Shortly after the war broke out, a typical Englishman of what is known as the old school, said: "If Germany should prove to be successful, Europe would be no place for a gentleman." That sums the matter up very adequately, I think.

There's been a veritable wave of the

democratic idea all over England. The great difficulty just now is its lack of coherence. The idea is growing here, there and everywhere, but it hasn't concentrated its forces yet, and the grievances it wishes to combat are not neatly labeled and ready to be destroyed. It is not a clean-cut task to instil the really democratic idea into English people. The issues are very complicated and entangled. Our evils are not labeled. Everything seems vague. When the French idea came about, there was King Louis pleasantly concrete as the foe of the democratic idea. So they cut off his head and the crown with it. With us we are mistily sensible of great grievances needing to be destroyed, but as yet we only feel them. Our tyrants aren't visible. They exist mostly as impersonal groups, not as individuals. What we seem to need is a sort of detective-democracy that will seek out what needs to be destroyed and then destroy it. We'll see daylight no doubt when the war gives us more time to look for it.

AS for America, I am sorry to confess that whenever the average Englishman talks about America, his viewpoint becomes tainted by the same sort of German folly that makes Germans talk of us and themselves as one big family. We are likely to think of America as Anglo-Saxon, one of ourselves, chip off the old block, one blood and such like nonsense. It is true, of course, that America and England do speak the same language—almost, but when it comes to race there must be veritable cataracts of blood running thru American veins by now that can't by any stretch of imagination be called Anglo-Saxon. I'm afraid many of us in England will never rightly understand America until we begin by regarding her as a great nation,—entirely dissociated from ourselves. Let us regard America as we might any other great nation speaking English, and we'll understand her better.

It is very idiotic to adopt any maternal attitude toward the United States. We make much of "one blood,

one tongue," and other accidental incidents whenever American policy dictates a course of action that appears favorable to the English mind. When, on the other hand, America, in pursuit of her own individual nationalism, commits some act we don't agree with, or does not commit some act we think she should have, we play the role of maternal scold. Too many Englishmen regard America as being in some mysterious way still bound up with ourselves by ties other than national friendship.

Whether America should do this or that in regard to Belgium, I don't know. I don't know enough of what her obligations were to pass an opinion. This much I do know, and that is that your President would have been foolish to bundle the American people into the hateful furnace of war just because many of my countrymen considered her bound to assist Belgium. England herself was in a very different position. She was in honor bound to help Belgium, and even if we hadn't gone to her assistance, we would have eventually been compelled to take a hand in the war for our own protection.

America is not in any such position, and why anyone should expect her to adopt the role of world-savior, I don't know. I have a great sympathy with America's difficulties in a most trying situation. I admire President Wilson very much, and I regret that both here, and at home in his own country, there has been a great deal of most unfair criticism, mostly due to cloudy vision.

He is paid by the people to protect the interests and welfare of the United States. He can't dip his country into Hell just to show the world he has a keen sense of being an individual savior. Why do people expect him to be a celestial person? There has been too much of this indignant rushing to protect the honor of others.

We know that America, like all other detached democracies, favors the Allies, but without cause why should they enter the bloody arena? I'm aware that there are many, many American citizens who think their

country should take a hand, including your famous American citizen Roosevelt (altho perhaps he may consider that term an insufficient description for him). It's for Americans to decide what they should or should not do, isn't it?

Beaconsfield, England

TO THE KINGS

By Harry Kemp

*When you've fulfilled the measure of your pride
And your starved honor has been satisfied,
Some plowman, driving deep his lusty share,
Will strike a skull to sunlight, unaware—
One naked skull to stare up at the sky
And shake your kingdoms with its irony!*

THE CITY AND FORTRESS OF BELGRADE FROM 3000 FEET IN THE AIR. NOTE THE SHELL CRATERS

WHAT IS A CITY?

BY RUDOLPH BLANKENBURG

FOR a period of four years I have been the chief executive of an enterprise which ranks among the oldest in the United States and is now owned by nearly 2,000,000 shareholders. A purely physical valuation of its entire plant amounts, at a notoriously moderate estimate, to \$2,700,000,000, of which some \$300,000,000 is represented by assets directly owned, backed by \$1,800,000,000 in assessed real estate and \$600,000,000 in personal property. It would be difficult to name many other corporations, however inflated their capitalization, which approach it in magnitude. And over against those real and tangible assets there exists only \$100,000,000 of liabilities, in the form of a bonded debt. Evidently here is an enterprise which is not merely solvent; it is positively rolling in wealth. Yet it stands in need to-day, most urgently, of an efficient administration of its affairs—not, I hope, quite so urgently as it did four years ago; but surely with a pressure of need that should enlist the active interest and coöperation of every one among its many shareholders, children by no means excepted. Oh, yes; those shareholders include children, by hundreds of thousands; and not only do they own a vital interest in the welfare of the enterprise, but their small voices are capable of exerting a powerful influence for its successful conduct.

In the past, it has suffered grievously from lack of interest on the part of many of its shareholders as well as from a chronic misconception of its purposes on the part of many others; in the same way it can suffer as much, or more, in the future. And because it is representative of very many other such corporations in this country—among them two of even greater magnitude, the majority much smaller—the essentials of its efficient management constitute the essentials of its class, with the nation as a whole as vitally concerned as are the millions of individual shareholders.

For the City of Philadelphia, like other cities, is in reality nothing but a coöperative corporation, the type of the oldest form of coöperative enterprise organized. Happily removed

Mayor Blankenburg completed his four-year term in Philadelphia at the close of the year. He was by charter ineligible for reelection, and the reform candidate to succeed him was badly beaten by the organization Republican, Thomas B. Smith. But Mr. Blankenburg retains the distinction of having given to boss-ridden Philadelphia four years of clean and business-like administration.—THE EDITOR.

MAYOR BLANKENBURG

from the necessity of coöperative defense, both by its era and its situation, this association of owning residents has developed into precisely such a business enterprise as is any other great corporation, requiring for its prosperous conduct precisely such business honesty and acumen as they do—and nothing else. For its aim it has the production of domestic safety, health, comfort and trade opportunities, to be supplied to its citizen shareholders at a minimum reasonable cost. It has properly no political service to sell and should have no political bias—less, indeed, than an industrial corporation like the United States Steel Corporation or a transportation corporation like the Pennsylvania Railroad. So purely non-partizan and so exclusively business are its functions that every smallest interjection of politics necessarily acts like the traditional monkey wrench thrown in among the cogs of a piece of machinery.

The round of its functions is simplicity itself. It assesses its share-

holders, directly and indirectly, for the sums required to provide them with the protection, comforts, facilities and necessities they desire. That is all. It has, inherently, no province or duty to meddle with the tariff, to support any party, to favor any political candidate. Its sole reason for existence is that it shall serve its shareholders effectively and economically. True, there are various political parties represented among its citizens; but what public service

corporation, like the United Gas Improvement Company, would tolerate the impairment of its efficiency or the waste of its income by reason of political conflicts among its stockholders? Yet in the municipal corporation of Philadelphia contractors allied with political bosses have been a chronic handicap; under the old Gas Trust, it lost \$400,000 a year for coal alone, paid for at extravagant prices or never so much as delivered when paid for.

It has been my main effort to eliminate the contractors and political bosses who, between them, controlled city councils, the body holding the purse strings of this enterprise. They have thwarted me as much as they dared; but withal we

have laid the foundation, during these four years, of the greatest development Philadelphia will have ever experienced. There will be available \$140,000,000 for my successors to utilize in the building of a system of subways and elevated railways, for the abolition of grade crossings, for the opening of 4000 acres of hitherto undeveloped land within two miles of the City Hall, for a sewage disposal plant, for the finishing of the Parkway, for the building of an art museum and for the construction of a dozen piers in the Delaware River that will equal the best to be found anywhere in the world.

This municipal business enterprise has \$140,000,000 to expend, if it choose, within the next four years. I fear itching palms will grasp again for the public funds, altho the people, the shareholders, having had a taste of honest administration of their affairs, will never return to the old, slovenly, dishonest way of carrying on city business.

Under existing conditions, the cit-

izen shareholders in the corporation must keep up an organization of disinterested, public-spirited men and women which shall be a constant menace to would-be plunderers, which shall hold them in check and, if necessary, take them into a court of justice as has been done in San Francisco and New York.

A permanent basis of efficiency can be attained only by the elimination of politics as a factor in the conduct of the city's affairs and by the inculcation of such a civic spirit as will make all citizens willing to serve the municipality. Today most cities are served by a less desirable class than could readily be obtained if genuine public spirit prevailed and induced men of merit to give their time, their probity and their brains.

Such fundamental changes, however, can be accomplished only by educating the shareholders in the protection of their own interests, and by fixing upon a few public officials the responsibility for honest and economical administration. When I appointed my directors I said to each of them:

"You have absolute control of your department. The responsibility must

be yours. Come and consult me whenever you wish; but for results I look to you."

That is what executive responsibility should amount to. In councils, in Philadelphia, there are 132 men of no responsibility except the responsibility which many of them think they owe to the bosses who made possible their election. We cannot expect anything in particular from individuals who, their individuality lost in a servile majority, have become nobody in particular. But if there were a small council, the citizen shareholders could get at every one of them. A council of nine, every one paid \$10,000 a year for his services, and a city manager paid an attractive salary, would produce best results, I think, in a city as large as Philadelphia. But even so small a council could be as dangerous as the present unwieldy number if the highly paid few were amenable to partisan influences. Men in such a position must think and act solely for the welfare of the corporation, just as directors think and act for a great railroad, when they have been wisely chosen.

It all resolves itself into this: that

the citizens shall take an intelligently selfish view of their individual interest in the welfare of the municipality. They must expect to know its business as they do their own private ventures and they must endeavor to conduct it at least as well.

Under conditions existing almost everywhere in the United States, as well as in Philadelphia, the hope of making such an ideal citizenship must begin with education of the very children. The results may not be immediately apparent; but they will be felt as the children grow. Some effect would follow speedily, for children really have an influence in the home; and child questions, the outcome of simple yet wise instruction in the schools, have made many fathers think who have not thought before. It is reasonable to expect that appreciable consequences would appear within a decade of the time when such instruction was begun.

There is hope for the suggestion, because the present generation of political bosses may decide that the full consequences of such a course in education will fall upon their successors, rather than themselves.

Philadelphia

AS USUAL

BY BURTON KLINE

I'M not thinking of Ezry. Whatever Ezry needs, it isn't money, certainly. He has plenty of that—and keeps it, too. For forty years he's been deaf as a hemlock post, and scarcely hears a word that his wife says. Hence it isn't sympathy he needs, either!

I'm thinking, instead, of Ezry's wife.

Ezry is seventy now. That makes her sixty-five. Spry, both of them, too. How Ezry does clamber down the rocks and into his dory!

That's life, for Ezry—a day's fishin' in his dory. God knows what he does with the rest of his time. For fifty years Ezry has had that cottage by the Maine shore. Nine months of the year it isn't enough for him. Even during the other three months when winter obliges him to live ten miles inland, it takes the devil of a storm to keep Ezry from his reg'lar Sunday visit to the cottage.

He likes the sea.

But I'm thinking of Ezry's wife.

I asked her once if she too liked the sea.

She said, "I have no use for water, except to wash in."

Yet every summer for forty years she has gone to that cottage by the sea, with Ezry.

It's a lonely place, far out on a ragged spit. Once a day the postman comes—at the urgency of duty. Otherwise nobody's there but Ezry. The Portland boat comes up. The Portland boat goes down. So does the sun. That's all.

But no, I'm forgetting. Ezry has still two other loves. To learn what they are, get a scratch on his dory, or pick one of his poppies. He grows all kinds of them—wonderful poppies.

But I'm thinking of Mrs. Ezry.

She, too, has money. At any time she could carry out her threats. And every spring for forty years she has threatened to cut the cottage and see life. Her nearest neighbor has seen California. The next nearest has done Europe.

I know what Mrs. Ezry does with her time. I see her knitting on the piazza of the cottage every afternoon. That's what she does with her fingers. But I know what she does with her mind. She thinks of Europe and California.

This spring Mrs. Ezry grew desperate—as usual. After sixty-five years, there isn't much left of life. And with Europe and California still to see.

Her guilty heart beat high when she went "up" to Boston and bought a new spring dress, as usual. And had three fittings "into" it. And pored over a dozen schedules and illustrated folders when she got home—with Ezry snoring away, as usual.

That was February the first.

Promptly on the 25th Ezry packed up for the shore, as usual.

On the 27th he said, "Well! Are you ready?" And with that Ezry's wife looked at Ezry.

They were young when they were married, forty-eight years before. And oh, Ezry could hear then, and wanted to hear! Sweet things he had heard, sweet things he had said. They all came back to her.

"Well, are you ready?" says Ezry.

And then what followed?

Ezry's wife put her lips to Ezry's ear and shouted, till Ezry must, and California may, have heard.

"Yes," she said. "I'm ready."

Boston

AFTER A WEARY DAY OF WAR

THE RETURN OF THE POETIC DRAMA

BY JOYCE KILMER

AUTHOR OF "SUMMER OF LOVE," "TREES AND OTHER POEMS"

LYRIC was something about Love and Death which just fitted in between the bottom of the page and the end of this month's instalment of the serial. Editors of magazines welcomed it if its rimes were correct, and if there was a little surprise in the last two lines. And if they had on hand a vacant painting or drawing by some well-known artist, they were glad to receive an interesting ballad to print on the page opposite it. But a play in rime, a poetic drama . . . !

What could one do with a poetic drama? To have it produced was out of the question, unless the poet hired a theater and a company. To have it published in a magazine was impossible, unless the poet were Dr. Henry Van Dyke or Mr. Theodore Roosevelt or some other public character. All that the poet could do with a poetic drama was to read it to his friends and to give an encouraging Boston publisher three hundred dollars to print it in a pretty little blue-backed volume with a neat pasted label.

But *nous*, it may be said, *avons changé tout cela!* *Nous* are all sorts of people—Stephen Phillips, Thomas Walsh, Alfred Noyes, John Masefield, Condé Pallen, Ridgely Torrence, Hermann Hagedorn, Josephine Preston Peabody, Edith Thomas, Lord Dunsany, about eighty-five other English and American poets, and the General Public.

Of course the General Public deserves most of the credit. The General Public has very recently shown its willingness to pay money to see poetic drama on the stage—even in vaudeville. And the General Public is now showing its willingness to buy books containing poetic drama, and to regard with cheerful enthusiasm magazines which give to this hitherto most unpopular form of artistic expression space which might have been filled with stories about young married couples living in the suburbs, or the personal narratives of Arctic explorers.

For the magazine editors to print poetic drama is even more surprising than for the publishers to bring them out. What changed the hearts of the magazine editors I do not know, but I am inclined to think that the activities of Mr. Thomas Walsh had something to do with it. For several years this poet has been putting into spirited verse romantic or amusing incidents in the lives of El Greco and Goya and Velasquez, and other

painters of his beloved Spain. His poetic dramas are so skilfully made, so colorful, so human, that they have appealed to editors as strongly as the best short stories would appeal, and they have been important features of *Scribner's* and the *Century*. Other English and American magazines, monthly and weekly, have followed the distinguished precedent set by the *Century* and *Scribner's*, and Thomas Walsh, Hermann Hagedorn, Ridgely Torrence and the rest now see, to their amazement, that poetic drama, the sort of writing which for years has been done only for its own sake, is now a thing which editors desire, a thing for which one receives money!

This is, the publishers tell us, the worst season for the sale of novels and the best season for the sale of books of verse the world has seen for many a year. And among the books of verse of the chief publishers, the poetic dramas are conspicuous. Here is, for example, Mr. John Masefield. He has given up the long narrative poem which made him famous, no longer does he write pseudo-epics like "The Widow in the Bye Street" and "The Everlasting Mercy." His newest book, *The Faithful*, is a play, the scene of which is not modern England but ancient Japan. Not all of it is in verse, but so rhythmical and imaginative is his prose that the play can only be classified as poetic drama. Mr. Stephen Phillips's new book, *Armageddon* (alas, that it is the last book that we shall have from this true poet!), is called a modern epic drama; it is a savagely realistic and savagely romantic play dealing (of course from an intensely British standpoint) with the great war. In connection with its publication in book form it is interesting to note that this poetic drama was one of the most successful of the wartime offerings on the London stage.

The Macmillan Company has published Mr. Thomas Walsh's *The Pilgrim Kings*. It contains many beautiful lyrics, but its chief reason for existence is found in "Greco's Last Judgment," "The Maids of Honor," "Goya in the Cupola" and the other brief plays in which the men who were Spain's pride utter their souls in English verse instead of in Castilian prose. The title poem of Miss Edith M. Thomas's *The White Messenger and Other War Poems* is a play; one of the strongest pieces of pacifist propaganda that has been published since August, 1914.

Mr. Alfred Noyes's *Rada*, a dramatic poem, was more popular than his narrative poem *Drake*; he has revised it in the light of recent events, and it has many new readers under its new title, *A Belgian Christmas Eve*. In Dr. Condé Pallen's *Collected Poems*, the two most conspicuous poems are dramatic in form—"Ablæ" and that interesting reply to Tennyson's "St. Simeon Stylites," "A Feast of Thaliarchus."

These are only a few of the books which illustrate the popularity and commercial practicability of the poetic drama. The return of the epic, confidently prophesied by admirers of Mr. Masefield's "The Everlasting Mercy," has failed to come about. But the poetic drama has returned; it has returned largely and triumphantly; a proof of this is to be found not in the work of one poet but in the pages of our greatest magazines and the lists of our greatest publishers.

It is possible that this may be traced back to the recent popularity of the printed drama. During the last three or four years, numerous publishers, among them Mr. Henry Holt, Mr. Mitchell Kennerley and the University of Chicago Press, have issued numerous series of plays. People have been buying and reading plays; being led to do so largely by the Little Theater movement and various amateur theatrical enterprises. Now, it is a fact that a play, even one that it is delightful to watch on the stage, is likely to be dull reading—unless the author be a wit like Bernard Shaw or Sir James Matthew Barrie. But a play which has, in addition to the exciting quality inherent in the dramatic form, the charm of high imagination, lovely rhetoric, and the forceful condensation which is the essence of poetry—this sort of play may be read with delight.

This fact the reading public has discovered; people have been taught to find pleasure in reading plays, and their reading of the prose play has prepared them for what is certainly the highest form of the play and perhaps the highest form of the poem—the poetic drama. And this shows that the public is prepared for the writer who shall combine at their best the art of the dramatist and the art of the poet; that the public is prepared, indeed, for its new Shakespeare.

New York City

THE TRIUMPH OF THE MAN WHO ACTS

BY EDWARD EARLE PURINTON

THIS is the day of the man who acts.

The world wants him, well knowing that he is bound to forge ahead and achieve what compels rightful admiration.

We respect a man because he has taken what we had, or acquired what we haven't. We respect the man who acts because he displays *control over crises*. This spells opportunity, this makes history, this creates destiny. For to see what should be done—then do it on the instant, caring nothing for appearance, precedent or preachment, is the common mark of the great of all time.

The man who acts possesses courage, promptness, faith, quickwittedness, farsightedness, a huge will, a holy zeal, and the power to mass his forces on a set point at a set time for a set purpose. Such traits are rare, worth money, and deserving of praise. They command the rewards of the world, they summon the gifts of the gods. If any boon to you be lacking, see why it goes to the man who acts.

Health attends the man who acts, Wisdom guides him, Hope frees him, Joy helps him, Power moves him, Progress makes him, Fame follows him, Wealth rewards him, Love chooses him, Fate obeys him, God blesses him, Immortality crowns him.

HEALTH attends the man who acts. Loss of health is, first, loss of initiative. Disease attacks inert bodies. Germs feed on dead tissue. Every sick man has begun to die; and conversely, no man thoroly alive can be sick. To be energized from head to foot—body, brain, heart and soul—is to be radio-active and hence immune. Never blame or fear a germ—typhoid, rheumatic, catarrhal or tubercular—blame your own negligence, fear your own ignorance, and make friends with the germs so they will do their work more eagerly. If a householder left a pile of garbage in his dining-room, then were driven to despair by rats and flies, who would pity him? We should say to him, "You are lazy, shameless and reckless—clean up or go to jail!" Yet we pity the invalid—who also has garbage in his dining-room or elsewhere in his body—and we say to him, "The way to be well is to fill up on more poison from the drug store!" when pills are used for pillars, health is bound to topple.

The finest remedy in the world is for a sick man to realize that he

At the request of many readers of The Independent we print here Mr. Purinton's famous inspirational essay. In the four years since it was written it has had a circulation of a million copies. Thousands of copies have been secured by big business establishments, corporations and government institutions for distribution among their customers, patrons and employees. The essay is reprinted in these pages by special arrangement with the Efficiency Press Syndicate and Granite Springs Estates, the owner of the copyright.—THE EDITOR.

himself must do something. He must eat less and exercise more; learn to breathe to the bottom of his lungs; find what water will do for him inside and out; smash the fripperies and follies of custom and expediency; understand what life means and get a real object for living; cultivate faith in himself and his fellows; work and play all over; study the birds and the trees and the stars, and be as frank and free as they—in short, get down to first principles, back to Nature, on to Destiny, up to God. Nothing is "incurable" save lack of courage. Many a man doomed to die has outlived his doctor, first by willing to have health, then by working to secure it. For perfect health is only a by-product of efficiency; whoever does things and delights in the doing thereby unconsciously grows deep chested, lithe limbed, red blooded, stout hearted, clear eyed, strong nerved, calm visaged, clean souled.

WISDOM guides the man who acts. No book contains wisdom. A book merely echoes what a man learned by doing things. Hence most of our pedagogs are busily engaged telling the young how to follow echoes. The crime in popular education lies in regarding the mind as a memory box instead of as a motor. The only hopeless fool is a highly educated fool. Many a "fool" who knew nothing but dared all became the world's idol. You see, we begin to have real education only as we long and dare to plan and execute our own adventures in life. What if we err? We have been honest. What if we suffer? We have been bold. What if we come to disaster? We have chosen the path of our heart, and tho our possessions vanish, our principles rise immortal.

No man has mounted the first step to achievement who has not learned

to make mistakes nobly and retrieve them gracefully. The child walks by trusting his muscles despite his falls. The man wins by trusting his aspirations, desires and hopes despite his failures. Civilization throttles instinct, doubts intuition, denies inspiration, attempting to substitute logic or policy or mob rule for the deeper, higher, finer voices of the soul. Not by heeding the warnings of timid friends or the mutterings of rabid enemies, but by forgetting, and if need be defying, the words and habits of others, choosing to heed the inner voices and follow to the end, do we grow apace in wisdom.

HOPE frees the man who acts. The chick is a timorous bird, the eagle a valiant. Why? Because the eagle knows the strength of his wings, by his action he overcomes his fear; whereas the chick, feeling his wings helpless, merely squawks and flutters at the approach of danger. Most men, and the vast majority of women, have had their wings clipped. Freedom in action they know not, hence they fear. What do they fear? Poverty, illness, enmity, old age, solitude, night, sorrow, unpopularity—countless things that lie in the shadows of ignorance and indolence. Fear is but chronic inability to act. And what we fear, we invite. If the business of being a desperado were as moral as it is hygienic, we might all profit by a course in brigandage. No man fears himself; hence the way to rout fear is to be one's self so thoroly and constantly that no outer shadow may intrude. Fears are the centipedes and lizards of the mind, hopes are the butterflies and larks. Hopes lead when we do as impulse or inspiration prompts; fears haunt as we lie prone. When a man despairs call him a drone. At least that will anger him—and ire gets action!

JOY helps the man who acts. The pessimist is always a theorist—never a practical man. From the nagging housewife, lacking system, love and tact, to the magazine "muck-raker," lacking a job and envious of men with good ones, the preacher of wo is always a person with an unsolved problem. But to the earnest and the energetic, life is a splendid game; and he who knows the game and "plays fair" is always expecting a victory. Men and women need to limber up; they are too dignified, too conventional, too timid, too expressionless, too unreal—and too rheumatic. A little boy in mischief is

always contented. We may not like the mischief, but the action of him is ideal, also the courage that defies a rule-of-thumb. And in mature life, the youngest, cheeriest, soundest man is he who always delves in something new. A destiny, like a diamond, is a matter of digging. Happiness lies at the heart of some herculean task. And the mere act of stretching our mental and spiritual muscles creates a physical buoyancy, to thrill and impel and renew us. Wo is merely a blind wish of a weakling. The lion, fettered and bound in his cage, presents a sorry countenance; the lion, speeding from his lair to the open, grapples with his foe and mightily exults in life.

POWER moves the man who acts. From the new science of experimental psychology we learn that the average man uses only a small fraction—a third to a tenth—of his inherent brain power. The rest lies dormant. Why? Because *original* thought is lacking, and that is the only kind that really builds the cells of the brain. Now, original thought and independent action are closely related. All discoveries and inventions, all great commercial undertakings, all humane projects and philanthropic institutions were the outcome of the brain of a man who had a new idea, recognized its value, became absorbed in it, worked it out for himself, and by proving it challenged the world's attention. The human brain is an electric battery, Universal Spirit the power house, and personal ambition the set of wires on which the current runs. Seldom is the battery connected aright, with the source of power above, or with the channels of power in human life. Great deeds are the products of great desires. And most human beings are so trivial, so unattractive, so commonplace, because whatever desires they had in childhood have been crushed in the world's routine of repression, monotony and apathy. Try this experiment: The next time you feel a conviction, inspiration or desire that seems unusual or even untenable—act on it, fully, promptly and implicitly. If the result seems a mistake, never mind—a new channel of power will have been opened in your brain, and as you grow familiar with this, you will be astonished at the increase in efficiency.

PROGRESS marks the man who acts. One of the popular fallacies of the day is that we can grow healthy, wealthy, happy or great by merely thinking ourselves so. Does an artist need only a frame? The

artist of character or achievement may well choose the right frame of mind—but to create the picture he must toil hard and long. The worst cases of failure, mental, moral and financial, that the writer has ever seen were those of habitual, professional thinkers and dreamers who scorned the busy life of the world, imagining themselves beyond the need of exertion. A definite plan of action, and a determined execution of that plan, must underlie all permanent advancement. History is peace where prophecy was action. The whole aviation art and industry is based on the unremitting efforts of two plain men—the Wright brothers, who kept trying while others merely talked. Ask such a captain of the world's progress as Frank A. Vanderlip or Elbert H. Gary what brought him where he is—he will say, "I did more than was expected of me."

FAME follows the man who acts. Not that fame is desirable—it is rather most uncomfortable. But to those who have not outgrown the small boy habit of wanting to carve their name on the scenery, this is an argument for action. Study the lives of famous men of the present time—Edison, Marconi, Burbank, Peary, Caruso, Wanamaker, Belasco, Roosevelt. Each of these can do, has done, some one thing better than anybody else. They were not content to be idle while things could be improved. They are great because they kept going in spite of great discouragements. Fame is but the echo of a man's determination. Only those remain obscure who did not take a strong enough vow.

WEALTH rewards the man who acts. The fortunes of the plutocratic families—the Astors, Goulds, Vanderbilts, Rothschilds and Rockefellers—were founded on the action of a man who first saw and filled a great public need. Money is the measure of what people want; but they have to be shown before they know what they want. They did not know they wanted the telephone, telegraph, sewing machine or automobile—until somebody foresaw the demand and prepared to meet it while his neighbors slept. Somewhere, in the acquiring of every great fortune, a man took his future in his hands and stepped off into space. Somewhere, also, he came back to earth so completely that his method, his machinery, his regularity, surpassed that of his rivals no less than his dream outshone theirs. Both in imagination and in execution the

builder of riches displays a lordly stride.

LOVE chooses the man who acts. When woman suffrage has become universal, the science of eugenics a part of the college curriculum, and sex instruction a feature of sound home training, the present standards of marriage will be standards no longer. Then the question will be, not, "Is the girl a beauty, a social queen, and a deft caterer to man's conceit?" but rather "Is the man a worthy specimen, physically, mentally and morally; will he make a true husband and a good father?" The right marriage dower is not coin for the woman—it is character for the man. So, when women legislate, the dower customs will be changed. Such a revolution will be hard for the ousted lords of creation to accept. The way to prepare for it is to do things, morally and spiritually, as eagerly and effectively as they have always done with brute strength. For the woman always yields to strength in the man. Even the poet—wan, soft thing—has a power of imagery that the millionaire must acquire if he keeps all of his lady's heart. The matinee idol and the soldier on parade maintain a semblance of action. This is what endears them to feminine worshippers. Would you win your lady's adoration? Do something, anything, that no other man she knows could or would do. For every woman's king must be a conqueror.

FATE obeys the man who acts. Luck is a myth, Chance plays no part in success. Whoever looks on a leader with envy merely looks at him with ignorance. For every man who attains supremacy of any kind has done something to earn it. Paderewski was born musical—yet so were thousands of others. What made Paderewski the world's greatest pianist was the habit he had of playing a note or phrase until he got it right—often three hundred times at a stretch. Edison was born with a gift for mechanics; but his matchless wizardry is only his capacity for work; he can go for weeks on half the food and sleep that his helpers demand. Beethoven, meeting deafness, went on writing music in his mind. Milton, stricken with blindness, learned to see with his soul. Napoleon, weak and sickly, grew healthy by growing lion hearted. All these men did things, either using a good heritage or overcoming a poor one, to an extent beyond the zeal or courage of the many. Each act, each word, each thought of our life today becomes a mosaic in the mansion of

our destiny. Thus we decree our fate to ourselves.

GOD blesses the man who acts. God is Light and Light is energy. God is Love and Love is power. Thus vitality is the backbone of virtue, and no man can be good who is lazy. The great religious leaders have called themselves most blest of God, and they were all men of action—Luther, Calvin, Savonarola, Spurgeon, Moody, Mott. God even prospers "bad" men who use their brains and bodies to effect. Their sins are punished, but equally their talents are rewarded. Why are the churches losing ground, why are false sects springing up? Because the churches have as a rule wasted their finest energies and opportunities in talking. You can't build a kingdom by splitting hairs. If clergymen had waked up fifty years ago, as they are now doing in the glorious effort called the Men and Religion Forward Movement, they would not now be apprehensive of Christian Science, New Thought, Mysticism, Socialism, or any other cult that really aims to supply what the Church failed to consider. In theology, the doctrines are dying, because bereft of deeds. A zealous Buddhist is a better Christian than a lukewarm Baptist. And there comes a time, in the growth of every soul, when he regards weakness as more unpardonable than wickedness. For sin is generally blind, while indifference knows well its own guilt. Honest effort, just that and nothing more, builds our estate in heaven. So the ignorant, the poor, the afflicted, the oppressed, have a better chance to be exalted hereafter, because they are forced by harsh necessity to exert themselves.

IMMORTALITY crowns the man who acts. John Jacob Astor thought to make his name undying by willing his fortune to his male heir. But the real immortality of John Jacob Astor was to come in a far different way; in the heart of the world he found his place when he gave up his right to live, that the weaker souls on the doomed "Titanic" might be saved. He followed an impulse greater than himself; and he will be remembered for that one smile in the face of death, that radiant moment when the god in him rose to the need and took command. Who before that night had known the name of Mrs. Isidor Straus? Who since that night has failed to honor her? In every home her likeness, and her choice of death with the man she loved, should be enshrined as a tribute to the power of the soul, the loyalty of love, and the

EAST AND WEST UNITED AT PROMONTORY POINT, MAY 10, 1869, BY JUNCTION OF UNION PACIFIC AND CENTRAL PACIFIC LINES

*Facing on the single track,
Half a world behind each back.
—Bret Harte, "What the Engines Said."*

Driving the Golden Spike completed the first line of this great railroad system and gave our country the first adequate communication between the Atlantic and the Pacific.

No other event in the History of Transportation was so widely celebrated or so important in the public mind—not even the building of the Panama Canal.

The completion of this first transcontinental line was the climax of a quarter of a century of agitation and three years of record-breaking construction. The occasion was celebrated by public meetings and parades in all great cities of the country. Every blow on the Golden Spike was recorded by telegraph over the whole land. Public rejoicing in San Francisco lasted three days.

Travelers and shippers know that the first road west is still first.

Encyclopaedia

Do
you
want
to get
ahead
?

Have you an ambition?

Are you really in earnest about it?

If you say to yourself "I would like more money to spend and less work to do" and call *that* ambition, you don't mean what we do by being ambitious.

Have you planned how you're to get ahead?

Are you working on your plans and ambitions?

If you *do* think and plan, you've got this far:

You've decided that the principal thing you need to get ahead is not brute strength or bigger muscles but a better trained mind and more "know how."

You cannot become a good porter, handling boxes of specie in a bank, or loading freight in a railway yard, if your wrist-bones are small or your lungs none too strong.

But weak lungs and puny wrists won't prevent your becoming a bank president or a railway manager.

The Help You Need

What you need is something that other people have learned and something that you can learn from other people. You'll have to *work* to get it, but not anywhere near as hard as if you were the first ambitious person in a bank or a railway or any other business. Those who "have been there before" started where you did, got where you want to get, and can share with you their laboriously learned "know how."

You can't expect to get much help from people in your office or bank, no matter how friendly they may be. You don't like to ask for help or hints or suggestions. And you soon learn that many who know the job best and can tell you right away whether you are right or wrong, *cannot explain why*, so that you never get the reason for what you're to do.

The new Encyclopaedia Britannica

contains careful summaries of what is known about electricity and its practical uses, about groceries, about banking, about railroads, about photography, about cotton and woolen goods, about engineering, about the manufacture of alkali or of coal-tar products, or any other business or manufacture—and in each instance the summary is written by one *who knows the subject* thoroughly at first hand and can convey knowledge to others. The Britannica is a work you can use for the narrowest, most technical part of the job you want to make good in.

And the Britannica will give another sort of help that you need constantly—*general information* on subjects connected with your work, written by men just as expert and accurate and trustworthy as those who write on your more particular specialty. In the railroad office the man who is successful is the one who knows a great deal about crops and ores and manufactures in the whole region that his railroad serves, and the latest decisions of the state public service commission.

Britannica

This encyclopaedia is the only general summary of all information that is written throughout by the highest authorities, practical experts on the subjects they describe, with the knack of telling simply and clearly what they know.

The new "Handy Volume" issue of the Encyclopaedia Britannica is the Britannica for the first time in a handy, compact form and at a price within the reach of every ambitious man or woman, boy or girl.

\$1 down and \$3 a month

(And better bindings a little more)

We Guarantee that the "Handy Volume" issue of the Encyclopaedia Britannica is complete and identical in contents—text, maps, illustrations, everything—with the Cambridge set now selling for three times the price; that it is made from equally high grade materials by the same printers and binders; and that it is smaller and more convenient.

We Guarantee that you will be perfectly satisfied with the Encyclopaedia Britannica and with our "Handy Volume" issue; and we will refund every cent you pay out for it, if within three weeks you decide for any reason that the books are unsatisfactory and send them back. Use them as you like; we don't say you must return them in perfect condition.

You cannot afford to miss the chance to know more about this aid to getting ahead.

It will cost you a stamp and a minute's time to sign the coupon and mail it for more details.

Why Not Really Go South?

One or two mild days don't make a Summer Climate, any more than one or two swallows make a Spring. To get warm weather *every day*, you must go where it is always Summer—where the temperature averages 72° Fahr., and there are probably more sunny days during the Winter months, than in two Northern Summers combined.

NASSAU - BAHAMAS

is the sort of place you find once in a blue moon. Tucked away on a small Bahaman Island, but two and a half days from New York or fifteen hours from Miami, Florida, Nassau has remained the same delightfully unspoiled British Colony that Southern blockade runners knew in 1861

Perfect Climate, Plus—

no end of interesting things to see and do. Surf bathing, sailing, fishing, tennis, golf, court golf, cycling, riding, driving, motoring, pony racing and polo all winter long. Cruises to the haunts of *Teach*, *Hornycold*, and "Jack Calico," the Pirate Kings.

OPEN ALL THE YEAR

divine import of supreme disaster. The world is full of heroes, of whom perhaps only the angels sing. But of all those whom the world forever honors, each one has taken a super-human risk, and so achieved a super-human task. This alone repays for the ills and hurts and heartbreaks of life; and this alone makes one immortal.

SUPPOSE now that a man wished more of the health, wisdom, joy, power and progress of action, how might we suggest that he energize himself for greater efficiency? By starting right now to put a few simple things into operation, letting their cumulative force renew and reconstruct his life. So our answer would be this:

Stop talking—learn to speak only in such a way that you and your friends will somehow profit thereby.

Stop worrying—when you can handle the present as well as God will handle the future, you will laugh at your worries.

Stop wishing—a wish is confession of weakness. Want what you want hard enough to get it, or else feel superior to the need.

Stop criticizing—only an ass wastes energy in braying.

Stop hesitating—it is the plunger who goes to the bottom of things. And whether gold or mud is at the bottom, the man who has found it rests.

Stop imitating—a real ruby is worth more than an artificial diamond.

Stop idling—either work, or play, or sleep, or travel; in short, make even your rest period a thing of ambition, volition, system.

Stop hurrying—when you teach your brain to outrun your body your body will stay quiet.

Sit up straight, walk with your chest out, look every man in the eye, and declare yourself as good as the best. Humility is not hump-shoulderness.

Go to the open window and take a dozen huge breaths, deeply and slowly, stretching your legs and arms at the same time, and feeling the purified blood leap thru your veins and arteries. Do this whenever you have a headache or a grouch.

Read books that build—not the mush in the six "best sellers." Goethe, Shelley, Browning, Emerson, Whitman, Darwin, Epictetus, Kant—these men produced food for the minds of real men. And of all literature of action, biography is best—you can judge the progress of your neighbor on the achievement path by the heroes whose lives he studies.

Eliminate idlers from your acquaintance. This includes all who enjoy play more than work.

Lose yourself in your work. Come early and stay late. Use every spare moment in developing methods first to work better and then faster. If there is a man higher up in the same business, devote an evening a week to studying how he got there.

Analyze your average day and find how many hours a week you waste. Then consider that your time outside of working hours is worth twice as much—because that belongs to you, while the other is only your employer's. Thus, if you earn ten dollars a day, every hour outside the office routine is worth at least three dollars—too much to squander.

Line your walls with portraits of the world's conquerors, starting with Napoleon and Lincoln, finishing with the greatest man in your own special field. Traits of character map themselves on the face. The countenance of a winning pioneer is of itself a heaven-born stimulus.

Picture yourself in absolute command of the place you aspire to, in permanent possession of the thing you want, with every ambition satisfied and every aspiration met. Failure is a fool's name for lack of grit; not being a fool, you will not talk of failure.

Face to the front, unceasingly and unqualifiedly. Consider that the past never was, excepting in the lessons it has brought. No man regrets while still he marches on.

Attack the hardest job in sight. Do this first. A little reflection will show what it is—probably a slipshod habit or ugly propensity or chronic weakness that needs handling without gloves. The man of might is he who was merciless to himself.

If you have done all these things, and whatever else occurs in the doing, then look for a chance to help somebody who is down, lift a burden that has grown too heavy, whisper a word of love and sympathy to the lonely, the forlorn, the misunderstood. For the sad and poor and helpless can most appreciate, and will most bless, the prompt and generous nature of The Man Who Acts.

New York City

The Wonders of Today

A thousand prominent scientists in both America and Europe were recently asked to vote on the Seven Wonders of the Modern World. Their answers are an interesting indication of the change in ideals and values that has taken place since the days of the Pyramids and the Hanging Gardens of Babylon. Wireless telegraphy comes first with 244 votes; the telephone next with 85. Whether the aeroplane or radium should be third is somewhat disputed, but the aeroplane has 167 to 165 for radium. The spectrum analysis and the X-ray have the next two places, and the Panama Canal, which of all these seven wonders is perhaps most like those of the Ancient World, comes last.

Only one ballot, made out by a distinguished chemist in Munich, named all seven of these wonders which won the final vote. Ninety-four scientists gave a place to anesthesia, but their votes were not enough to include it in the first seven.

The Works of John Masefield

"Mr. Masefield comes like a flash of light across contemporary English poetry. . . . His work possesses the dash and force, the spirit and temperament of life itself."—*Boston Evening Transcript*.

MR. MASEFIELD'S NEW BOOK

THE FAITHFUL A Tragedy in Three Acts

"Picturesque and strong as drama, it is yet more remarkable for its literary qualities. Written in rarely pure, simple, and pregnant English, it is rich in dramatic point and passages of genuine poetic beauty. The poetic value of the piece resides in its general conception, in its imaginative, concise, expressive prose and occasional interludes of heroic or plaintive lyrical verse, some of which is exquisite. . . . A striking drama. . . . A notable work that will meet with the hearty appreciation of discerning readers."—*The Nation*.

"The best play Mr. Masefield has written. . . . Based upon episodes in Japanese history, its situations are simple and dramatic. . . . the dialogue almost Attic in its intensity."—*The London Spectator*.

"A powerful work . . . a distinguished contribution to modern dramatic literature."—*Philadelphia Ledger*.

Cloth, \$1.25. Leather, \$1.50.

Other Plays and Poems by Mr. Masefield

Philip the King

and Other Poems

"Cannot fail to increase the already great reputation of John Masefield as a poetic dramatist. . . . Full of poetic imagination and dramatic force."—*The Nation*.

Cloth, \$1.25. Leather, \$1.50.

John M. Synge

A Few Personal Recollections

"The kind of description that would have pleased Synge—being quite free from sentiment or any kind of heroics."—*The Independent*.

Boards, \$1.50.

The Tragedy of Pompey the Great

"He is no statuesque Pompey, spouting prose lines masquerading as poetry. Masefield has given us Pompey the man. He has made human the men who surrounded the old Roman."—*The Pittsburgh Post*.

Cloth, \$1.25. Leather, \$1.50.

The Daffodil Fields

Second Edition

"Neither in the design nor in the telling did, or could, 'Enoch Arden' come near the artistic truth of 'The Daffodil Fields.'"—*Sir Arthur Quiller-Couch, Cambridge University*.

Cloth, \$1.25. Leather, \$1.50.

The Everlasting Mercy and The Widow in the Bye-Street

"Mr. Masefield is the man of the hour, and the man of to-morrow, too, in poetry and in the playwriting craft."—*John Galsworthy*.

Cloth, \$1.25. Leather, \$1.50.

A Mainsail Haul

As a sailor before the mast Masefield has traveled the world over. Many of the tales in this volume are his own experience written with the same dramatic fidelity displayed in "Dauber."

Cloth, \$1.25. Leather, \$1.50.

Salt Water Ballads

No living poet has caught the wild beauty of the sea, and imprisoned it in such haunting verse. John Masefield has done in these poems what many consider his finest work.

Cloth, \$1.00. Leather, \$1.50.

The Story of a Round-House

and Other Poems

New and Revised Edition

"John Masefield has produced the finest literature of the year."—*J. M. Barrie*.

"Ah! the story of that rounding the Horn! Never in prose has the sea been so tremendously described."—*Chicago Evening Post*.

Cloth, \$1.30. Leather, \$1.50.

SHORT-STORY WRITING

A course of forty lessons in the history, form structure, and writing of the Short-Story taught by Dr. J. Berg Eesenwein, Editor Lippincott's Magazine. 250-page catalogue free. Please address THE HOME CORRESPONDENCE SCHOOL Dept. 305, Springfield, Mass.

Health Test for Independent Readers

1. Do you have a keen appetite for all your meals and thoroughly enjoy them?
2. Do you ever use drugs to relieve indigestion?
3. Are you entirely free from constipation?
4. Do you ever use cathartics?
5. Have you studied the effect on the system of various foods?

DR. JOHN HARVEY KELLOGG, the greatest living authority on diet and digestion, has written a wonderful book telling how Indigestion, Constipation and the more serious ills which lead to so much needless pain and suffering may be avoided. It is a book for you, for every family, for every business man, for every housewife and society woman.

Into this book Dr. Kellogg puts the rich experience of 40 years as Superintendent of the greatest Sanitarium in the world, where he has studied and treated thousands of cases of indigestion, constipation and the more serious ills to which they lead.

This book is not *theory*. It is fact. "Colon Hygiene" is its name. In 400 pages, Dr. Kellogg tells you of all digestive disorders and points out how *simple it is* in many of these cases to obtain complete and permanent relief, through methods that can be applied right in your own home. Send us this coupon with \$2.00 and the book will reach you promptly. You take no risk. If dissatisfied for *any* reason, return book at once for prompt refund.

GOOD HEALTH PUBLISHING CO.

301 W. Main St. Battle Creek, Mich.

Send me, charges prepaid, "Colon Hygiene," for which \$2 is enclosed. If not satisfied I will return the book within 5 days, at your expense, and you will refund the \$2.

(Name and address in margin below.)

The New Books

IRISH PROSE AND VERSE

The Library of Irish Literature, the first six volumes of which have recently made their appearance, has a two-fold distinction. In the first place there is new and valuable material embodied in the volume entitled *Legends of Saints and Sinners*, a collection of folk tales which Douglas Hyde himself took down from the lips of peasants who still use Gaelic speech. Dr. Hyde translates them and so adds one more to the long list of services which he has rendered to Irish literature. The material in this volume has never before found its way into print, Gaelic or English. The excellence of the editorial equipment is the second distinction of this series. A reader who comes to Irish literature as a stranger will find the critical introductions and interpretations accompanying these volumes a present help to a right understanding and enjoyment of what he reads. For such aid thanks are due in the last analysis to the Irish Literary Revival, a movement of which we do not hear as much today as we did a decade ago, but which has had a lasting and tonic effect upon Irish literary criticism, leading Irish men of letters to bring the precise knowledge of the scholar and the spirit of culture to bear upon the task of appraising and expounding works of Irish talent and genius.

Dr. Hyde's volume is the only one that contains hitherto unpublished material. The remaining five are reprints, and of these but one is the reprint of a complete work, William Hamilton Maxwell's racy *Wild Sports of the West*, a book popular in its day, and even now fresher and more invigorating than many a book of the hour. It is the chronicle of a sporting summer in the Wild West of Ireland, interspersed with stories and legends. An introduction by the present Earl of Dunraven dwells upon its interest for sportsmen, and comments upon it as a picture of the sporting life of the reckless, devil-may-care Irish squirearchy, whose picturesque ways are now a thing of the past. The opening volume of the Library is a selection made by T. W. Rolleston of prose and verse from the writings of Thomas Davis. It is thoroughly representative as regards the prose, and includes all Davis's poems that have any value as poetry. The most popular of this series will certainly be *Humours of Irish Life*, composed of humorous short stories and selected passages from Irish novels from the time of William Maginn to the present day of the latest recruit to the ranks of the story-tellers of the Literary Re-

The Teaching of

ORAL ENGLISH

is the title of an address which Frederick Houk Law, A.M., Ph.D., delivered at Rochester, N. Y., before the English Section of The New York State Teachers' Association. This brochure is free to English Teachers. THE INDEPENDENT, 119 West 40th St., New York

vival. On the whole the short stories are of prime quality. Indeed the book would have been the better for the inclusion of more of these to the exclusion of the passages from novels. In *Irish Orators and Oratory*, Prof. T. M. Kettle has brought together representative speeches, or parts of speeches, beginning with Edmund Burke's "American Taxation" and including John Redmond's speech in the House of Commons on England's declaration of war in August, 1914. No one who has read this book will willingly omit the mead of praise that belongs to Prof. Kettle on the score of his introduction—a brilliant and illuminating piece of criticism.

Library of Irish Literature, ed. by Alfred Percival Graves, William Magennis and Douglas Hyde. 6 vols. Stokes. Each \$1.

THE CAUSE OF WORRY

Dr. William Lee Howard in his *Sex Problems in Worry and Work* puts in popular language some of the recent results of physiology and psycho-analysis, but avoids the extravagances of the ultra-Freudian school.

New York: E. J. Clode. \$1.

AN EXPOSE OF BAHAIISM

Dr. Samuel G. Wilson, in *Bahaism and Its Claims*, subjects this latest of oriental religions seeking hospitality in America to scathing criticism. From personal observation in Persia and study of the literature he charges the sect with dissimulation, quarrelsomeness, assassination and polygamy.

Revell. \$1.50.

THE "MEN OF THIRTY"

For an instant one wonders what more can be said about *The Barbizon Painters*, but Arthur Hoeber's biographical and critical essays prove delightful and informing. Not technical, they are however the more worth while in that they are written with the understanding and assurance of the fellow craftsman. The illustrations are many and include specimens of the early, less known work of these masters.

Stokes. \$1.75.

THE CHRISTIAN WAY

Professor Francis G. Peabody's books on practical Christian problems have always a grip in them that causes the reader to stop and think of his own relation to such questions. His *Christian Life in the Modern World* contains sane, clear, practical and deeply moving chapters on the social teachings and demands of Christianity, probing the defects in social life and raising the noblest ideals of service.

Macmillan. \$1.25.

A SOUTH CAROLINA STATESMAN

Full of entertaining anecdotes and vivid pictures of the times, D. D. Wallace's *Life of Henry Laurens* is none the less a valuable study of the Revolutionary period. Of French Huguenot blood, reared in the finest traditions of the South, Henry Laurens' services as President of the Continental Congress were great, and his imprisonment in the Tower one of the romantic stories of our heroic period.

Putnam. \$3.50.

FOR OLDER YOUNG MEN

The second series of admirable *Essays for College Men* chosen by Norman Foerster, Frederick A. Manchester, and Karl Young, of the University of Wisconsin, contains with the exception of Academic Leadership, by Paul Elmer More, selections which have stood the test of time and criticism. The first essay is What Is a College For? by Woodrow Wilson. Emerson's War and The Modern Equivalent of War, by William James, are timely reprints.

Holt. \$1.25.

"Sweets to the Sweet"—and what confection could better complement smiling eyes and ruby lips? The crisp, fragile wafers—the rich creamy centers of Nabisco Sugar Wafers make these dessert sweets beloved by all. In ten-cent and twenty-five-cent tins.

FESTINO—An almond-shaped dessert confection with a sweetened-cream filling of almond flavor.

"This is one of the few war books that have gone into a second printing. It has just been reissued in a popular edition at a reduced price. It deserves this honor, for it contains even more of popular interest than of professional value, though in the latter quality it is by no means wanting."—*N. Y. Times*.

WITH OUR ARMY IN FLANDERS

By G. VALENTINE WILLIAMS. With 16 Illustrations. 8vo. \$3.50 net.

The author of this book is the brilliant war correspondent who wrote a description of the Battle of Neuve Chapelle, which has been acclaimed as the most graphic account of fighting which has appeared during the war.

LONGMANS, GREEN, & CO.

443-9 FOURTH AVE., N. Y.

Independent Opinions

Whatever may be our several opinions on how large an army we should have, we all agree that it should be as efficient and economical as possible. Here is an interesting suggestion on this point:

The great lesson from all our own wars and the present Great War is that every regiment must have a depot battalion in which recruits and remounts are trained and from which the combat strength of the regiment is maintained by sending up trained men as casualties occur. The strength of the depot battalion varies from 25 per cent to 100 per cent of that of the combatant regiment. Consider the case of a French company—It went into an engagement on the 20th with 250 men and lost 135 men. By the 23d it had received from the depot battalion 185 trained men. It was engaged again on the 25th and lost 160 men. What would have become of an American fighting unit, with no feeder battalions to draw from? It would have been annihilated, as were the British regiments in the first months of the war.

Economy and efficiency require that provision be made for maintaining the strength of combat units, not the ruinous policy of our Civil War of letting the veteran regiments be shot to pieces and new green ones be raised and sacrificed to the better policy of the enemy.

Every captain in the Regular Army is capable of training three or four times more men than he is allowed now and in half the time. The Regular Army is the best school in this country for preparing men for war and it is training only one-sixth of its capacity working, with only one-sixth efficient. The strength of the Regular Army can be increased three times without adding one cent to the overhead cost and a thousandfold in efficiency, if in addition to increasing the number of enlisted men, regiments are trained in brigades, brigades in divisions, and divisions in field armies.

JAMES SANFORD

Bristol, Virginia

The Independent has received letters from officers of Howard and Atlanta Universities complaining that we have not properly recognized the standard of these two institutions. That they seek and claim equality of scholarly rank with leading institutions in the North is to their credit, and that their educational standard has risen we are glad to admit and are willing to be corrected. When students from these institutions and from Fisk University transfer to our better Northern colleges, if not received *ad eundem*, we are informed that they may expect to be put back only a single year. The three institutions we have mentioned are in the front rank of negro colleges in the South. We quote from the letter of the Dean of the College of Arts and Letters of Howard University:

In your interesting editorial of December 13th under the head "Three College Presidencies" you state: "We suppose that the training given at Fisk or Howard ranks hardly higher than two years at Harvard or Yale." This statement does palpable injustice to the curriculum at Howard as I presume it does to that of

Journalism As An Aid To History Teaching

By Edwin E. Slosson, Ph. D.

Literary Editor of The Independent
Associate in the School of Journalism, Columbia University

This address, which was given before the History Section of the New York State Teachers' Association at Rochester, November 23, 1915, has been published in pamphlet form and will be furnished free to teachers—Write to W. W. Ferrin, 119 West 40th Street, New York.

Fisk also. The College Department of Howard University requires fifteen units of secondary work as approved by the Carnegie Foundation for college admission. Our courses of instruction cover the usual range of four years of college work. Our faculty consists of twenty-seven professors and instructors, who by scholastic training and teaching experience are qualified for the work assigned to them. Many of these instructors are graduates of such colleges as Harvard, Yale, Dartmouth and Columbia, a number of whom have gained their master's degree and doctorate from these institutions. Our students frequently transfer to the colleges of the North and West and are usually admitted *ad eundem gradum*. The College of Arts and Sciences is recognized by the Regents' Board of New York as fulfilling the requirements of collegiate work in that state.

KELLY MILLER

Washington, D. C.

Miss Jane Addams' article on "The Food of War" in the issue of December 13 excites the indignation of Dr. Guillet of the Massachusetts State Normal School:

To this distressed woman all the combatants in this great controversy—like the aggressive Germans and the defenders of liberty and nationality and international law and comity—are on the same plane. In what a cool, supercilious manner this writer refers even to the "Lusitania" outrage, finding it really impossible, don't you know, to reach any just conclusion about it, so extreme and irreconcilable are the views held by London and Berlin, upon whose "extravagance" this lofty critic lingers as tho gloating over the frailties of poor mortals demented by war!

No one can read this mass of the most sordid details culled from hasty glances at newspapers and flying visits to garrulous soldiers, without reflecting that peace-at-any-price-ism leads inevitably to cynicism and misanthropy. And for the simple reason that so few people are for peace at any price. Many of the incidents she quotes are far more susceptible of a noble than of an ignoble setting and interpretation. But she seeks everywhere to produce the latter. How she was able to write her last paragraph and then publish the rest is more than I can understand.

CEPHAS GUILLET

Westfield, Massachusetts

The editorial of December 13 on "The Falsification of the News," in which we specified certain instances where the newspaper reader would get a wrong idea of what actually occurred, evidently express what many of our readers have felt and wanted to say. We quote from the letter of a New York banker:

An old friend of mine was wont to say: "That's what he said: what did he think?" If he is sincere we can respect the antagonist quite as much as the protagonist, but one who holds to anything in which he does not believe, that man is a hypocrite. The man who went to scoff and remained to pray we respect. The man who goes to church presumably to praise, and carps continually at the sermon, should remain away. The man who on Sunday fervently says "Amen" to the prayer "beseeching our heavenly Father with His favor to behold and bless this servant, the President of the United States," and on Monday holds him up to ridicule or scorn, ought to stay away from both church and the polls: for he is neither a good churchman nor a good citizen. If we had less "Falsification of News" we would have less falsification of statement, less false opinion, and party politics would be inclined to yield more readily to patriotism.

J. W. HURLEY, Manager

Order Before this Date

LAST CHANCE

to obtain the New International Encyclopædia (Second Edition) at the

LOWEST PRICE

at which it will be offered

The Price Will be Advanced February 1st

This date is so near that *immediate action* is imperative. Your need for a *good* encyclopædia is unquestioned. Your need for *THIS* encyclopædia is absolute. You *MUST* have it to be abreast with the times. It will contain a mass of vital, recent information, *not* accessible in any other general reference work—facts you need in your daily vocation and avocations.

Since every human enterprise derives its importance from its creators, Messrs. Dodd, Mead & Co., publishers of the

New International Encyclopædia

have surrounded the

Editors of the Second Edition

Frank Moore Colby and Talcott Williams

with a staff of specialists of national authority. Highest scholarship and widest scope are thus guaranteed.

As you look through the 24 volumes of this great work you cannot fail to be fascinated by the charm of its easy literary style, its clear, adequate explanations, its freedom from vexatious technicalities, its absolute impartiality in treatment of mooted questions; and further by its thousands of illustrations, many in full colors; its wonderful maps, its legible typography and rich bindings; and still further by the unusual accessibility of its information, each of the 80,000 articles, being placed in its proper alphabetical position so that it can be instantly found.

"PREPAREDNESS"

Its first essential is knowledge. Training alone wins the world's great victories, whether on the field of battle or in the battle of life. You must be ready with answers to the daily questions. This is no easy matter, with the field of human knowledge expanding at such a remarkable rate as it is at present.

WHAT IS TO BE DONE?

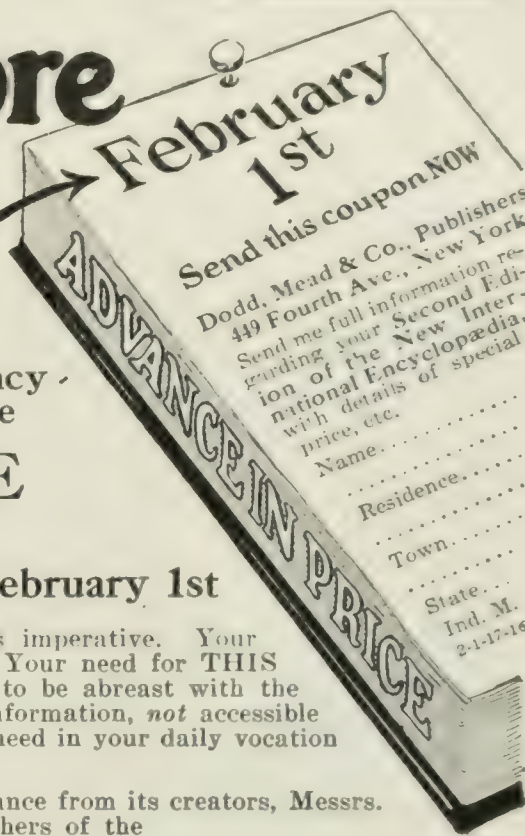

The New International Encyclopædia, Second Edition, fulfills every requirement. It is the busy American's best library of universal knowledge. It is a more practical question-answerer than a great university. It is at your service with the knowledge desired at any time of the day or night—at home, in the office, study, school or college. It is the only authoritative encyclopædia that is up-to-date. Its nearest competitor is six years old. Can you disregard the tremendous happenings of these last six years? Emphatically, NO!

Price to be Advanced February 1st. Order Now

Since this work is *indispensable* and you will buy it *eventually*, by all means secure it *NOW* at the *lowest price at which it will be sold*. The terms of payment are so liberal that they present no obstacle even to the slenderest purse.

Write for the Free 80-Page Book. It tells all about the Encyclopædia and the easy way to get it. Fill out blank spaces above and mail the slip to

Dodd, Mead & Co., Publishers, 449 Fourth Ave., New York

T. T. ANDERSON, Treasurer.

Efficient Living

is the name of a wonderful book just off the press. Every red-blooded man, from sixteen to sixty, needs this book as it will make him of more value to himself, his firm, his family and his community.

Write W. W. Ferrin, 119 W. 40th St., New York, and learn how you can get this book free of all charge.

The Market Place

STEEL AND PROSPERITY

At the beginning of the year, our iron and steel industry is in a highly favorable condition. New records of production have been made at the mills, which are overwhelmed with orders. The output of many of them is sold ahead as far as September. Never before since the Steel Corporation was formed have prices for future delivery been so high, and with respect to many products the prices at which sales have recently been made are above the highest figures of the last fifteen years. When comparison with the prices of one year ago is made, it is seen that advances have been as follows: pig iron, about 40 per cent, with Bessemer selling at \$21 a ton; billets, 60 per cent; bars, 75; beams, 80; wire nails, 40; plates, 100. Manufacturing plants have been, or soon will be, enlarged to meet the pressing demand, about 75 per cent of which is for domestic consumption. Plans have been prepared for 91 open-hearth furnaces, whose annual capacity would be 4,265,000 tons of ingots. Production at present is at the rate of 41,000,000 tons a year, against 16,000,000 tons one year ago and 35,000,000 in the year (1912) of largest output before this time.

At the base of the industry the pig iron furnaces have surpassed all previous records. In the last two months of 1914 and the first two of 1915, the average monthly output was a little more than 1,500,000 tons. But the product grew until last October, with 3,125,491, made a new high total. Those who thought this would not be exceeded were surprised by the figures shown for December. In that month 3,203,322 tons were made. At the present time the output is at the rate of more than 38,000,000 tons a year, which is nearly 5,000,000 more than the best previous annual total.

Those who are qualified to speak of this great and important industry agree in saying that there is fair promise of continued prosperity thruout the coming twelve months. But Judge Gary, chairman of the Steel Corporation, in a published statement, has given a few words of caution. It is true, he says, that demand for prompt delivery cannot be supplied, and that prices could easily be increased, altho he thinks some of them are high enough. Pointing to evidence of prosperity thruout the land, he fears inflation and severe jolts when normal conditions are restored. It is quite plain that he expects

WRITING THE PHOTOPLAY

A practical course of twenty lessons in the technique of the photoplay, taught by Arthur Leeds, Editor, THE PHOTOPLAY AUTHOR. 25-page catalogue free.

THE HOME CORRESPONDENCE SCHOOL
Department 103, Springfield, Mass.

Be a Doctor of Chiropractic

These Four Introductory Lessons FREE

These books take you through this wonderful science from its earliest history up to the present time. They read like fiction, yet they are true as gospel. Thousands are daily being cured of long standing diseases through Chiropractic. 30,000,000 Americans support the new drugless healing science—Spinal Adjustment. They prefer it to drugs or surgery.

Big Opportunity for Ambitious Men and Women

A profession less crowded than Law, Medicine or Dentistry. Large demand for competent practitioners. Resident and Extension (Home Study) Courses. Small Expense. Easy payment plan. We fit for State Board Requirements everywhere.

Elbert Hubbard's Book FREE for a Limited Time

If you write at once, we will include with our catalog and introductory lessons, a copy of the late Elbert Hubbard's Book "The New Science." Send a post card.

NATIONAL SCHOOL OF CHIROPRACTIC
Dept. N-1, 421-427 So. Ashland Blvd. Chicago

an earlier end of the war than many others can foresee. This is his view because, as he says, the war can yield little, if any, benefit to any one of the belligerents, or to the world at large, unless it be "the firm establishment of an international tribunal for the settlement of all international differences"; and also because every one of the warring nations "is starving for both men and money." After the close of the war our business men, he adds, will be confronted by new conditions. The belligerents will stop buying from us, and will seek to sell abroad the products of cheap labor. Therefore we must meet most difficult competition, unless we are then protected by an adequate tariff law. He also sees danger of overproduction and of undue expansion of credit, and says we should proceed with caution.

These opinions have been the subject of much comment. Men prominent in finance assert that there is no unsound expansion in banking. Others oppose his plea for tariff protection, saying that such competition as he predicts, if it should come, should be met by greater efficiency here and new economies of production. His great company, on account of its prosperity, has decided to increase by 10 per cent on February 1 the wages of more than 150,000 of its employees, at a cost of about \$12,000,000 a year.

Since the recent sale of 135,000,000 pounds of copper to the British Government, at a little over 21 cents, the price of this metal has risen to 24 cents a pound. At the beginning of last year it was between 13 and 14 cents. Even higher prices are expected. The price of lead is advancing.

PROMOTING INTERNATIONAL TRADE

Some months ago the Pacific Mail Steamship Company, owing to the requirements of the new Seamen's Act, withdrew from the trans-Pacific trade and decided to go out of business. To the International Mercantile Marine Company it sold five large ships, for \$5,250,000. These are to be used on the Atlantic. One of them, the "Siberia," recently arrived at New York from San Francisco, having gone around South America. This ship will enter the freight service between New York and London.

There remained in the company's possession seven smaller ships which have been engaged in trade between our West coast and Central America. These have now been purchased, for \$1,250,000, by the American International Corporation, the company recently formed in New York, with a capital of \$50,000,000, to promote the trade and commercial interests of the United States in foreign lands. The Corporation made this investment with the coöperation of W. R. Grace & Co., a house for a long time prominent in our trade with South America. The ships will be operated under the direction of this firm. In April last the

"Instruction by correspondence is the cheapest and best way for the poor man"

Thomas A. Edison

Edison is Right!!!

You admit the International Correspondence Schools are a good thing. You'd take a course right now "if"—"except"—

"If" what? If you weren't so "over-worked," with such "long hours," or had more strength and energy?

Wasn't it Edison who stayed up half the night to educate himself in spite of every handicap you could ever have?

All big men who have made their mark in the world had the *ambition*—the *determination*—to improve their spare time, to train themselves for big work. You, too, can possess power, money and happiness if you'll only make the effort. The reward is great—it's worth it.

Here's all we ask: Merely mail this coupon. Put it up to us without paying or promising. Let us send you the details of others' success through the I. C. S., and then decide. Mark and mail this coupon now.

INTERNATIONAL CORRESPONDENCE SCHOOLS Box E-1024 SCRANTON, PA.

twelve ships which have since been sold for \$6,500,000 were valued by the Pacific Mail Company at \$11,299,000.

The seven steamships will continue to be employed as they have been in the past, and will remain under the American flag. If they had been sold for service elsewhere and withdrawn from our Pacific coastwise trade, Central American ports would have lost shipping facilities of much value to them, and the trade connections of our Western States with the Central American countries would have been severed. This would have been unfortunate in its effect upon our commercial interests and might have checked a growth of friendly international relations which is much to be desired. The transaction is one of considerable importance, and it is a good beginning for the new American International Corporation.

INVESTING SMALL AMOUNTS

We have inquiries from those who desire to invest small sums from time to time, safely, in stocks or bonds, and who ask for an opinion as to the instalment plan. There are several trustworthy houses that sell bonds and stocks in this way, taking partial payments. We see no reason why the small investor should not use this method, provided that he selects a good house and marketable securities of recognized soundness, with an agreement as to a settlement if something unforeseen should prevent completion of the instalments. The investor of small amounts should also know that bonds of several prominent railway companies, the St. Paul and Burlington, for example, and of other great corporations, are now sold in denominations of \$100, instead of \$1000, and are offered by banking and brokerage firms.

The following dividends are announced:

American Telephone and Telegraph Company, \$2 per share, payable January 15.

American Telephone and Telegraph Company, coupons from 4 per cent Collateral Trust Bonds, payable January 1.

The Bank of America, semi-annual, 14 per cent, payable January 3.

Bank of New York, semi-annual, 8 per cent, payable on and after January 3.

German Savings Bank, 4 per cent per annum, payable on and after January 21.

Importers and Traders National Bank, 12 per cent, payable January 3.

Niagara Falls Power Company, \$2 per share, payable on and after January 15.

Otis Elevator Company, quarterly, preferred, \$1.50 per share; common, \$1.25 per share; both payable January 15.

Atlantic National Bank, semi-annual, 3 per cent, payable on and after January 1.

Westinghouse Electric and Manufacturing Company, preferred, quarterly, 1 3/4 per cent, payable January 15; common, quarterly, 1 1/2 per cent, payable January 31.

Union Dime Savings Bank, 3 1/2 per cent per annum, payable on and after January 20.

Franklin Savings Bank, 3 1/2 per cent per annum, payable on and after January 17.

Wells, Fargo & Co., 3 per cent, payable January 15.

United States Realty and Improvement Company, Coupons on 20-year Debenture 5 per cent bonds, payable January 3.

Westinghouse Electric and Manufacturing Company, common, quarterly, 1 1/2 per cent, payable January 31.

American Light and Traction Company, preferred, 1 1/2 per cent; common, 2 1/2 per cent, and 2 1/2 shares of common stock on every 100 shares of common stock outstanding; all payable February 1.

Globe-Wernicke Sectional Bookcases

BUILT TO ENDURE

You add sections as needed

THE pride and pleasure of owning good books is the more enhanced when your library is tastefully housed and adequately protected.

Globe-Wernicke Sectional Bookcases offer so many handsome styles and finishes to choose from that you can easily match your other furniture and suit your own ideas of the artistic.

As extra shelf space is needed, you add sections to match. You can arrange—and re-arrange—them quickly at will. Fitted with Patented Dust Proof Felt Strip that keeps out dust and prevents doors slamming. They cost no more than the ordinary kind and are built to endure.

Insurance

Conducted by

W. E. UNDERWOOD

FOR A YOUNG MAN

There lies before me a letter from a young man in Idaho who tells me he is twenty-three years old and would like to know what form of life insurance he should take. That inquiry is representative of scores received from young men during the past year, and I marvel that they have missed the innumerable army of expert life insurance solicitors who are canvassing this country daily.

A young man should endeavor to carry a twenty-year endowment policy. That form combines life insurance with savings. If, perchance, he requires a greater amount of protection for the money, he can make it an endowment for a longer term—thirty-five or forty years. In one of the standard companies the annual rate per \$1000 for a twenty-year endowment is \$44.55; a thirty-five-year endowment costs \$23.85; a forty-year endowment, \$21.25. An ordinary life policy is rated at \$18 a year in the same company.

Now, the ordinary life would serve almost as well if its holder would permit the savings made out of his premiums, inaccurately called dividends, to accumulate. Compound interest, a most potent factor, would perform wonders in creating a small capital for him. But that's the weak spot in the scheme. He will not persistently permit his dividends to remain. It is easier to pay \$15 premium than \$18, and the accumulative power of \$3 during, say, forty years is lost and the principal is dissipated. A dividend of 16½ per cent is common in good companies, and 16½ per cent of \$18 a year is worth in forty years, at 3½ per cent, \$296.48. Add the cash surrender value of \$520 to that, and we have an endowment of \$816.48. Charging the premiums paid with no interest, we have \$816 ultimate cash on a total expenditure of \$720.

A. H. A., Morgan Hill, Calif.—I am inclined to the opinion that the Inter-State Business Men's Accident Association of Des Moines ranks well among the assessment accident associations of its class. They are numerous. The Illinois Commercial Men's Association of Chicago, and the Iowa State Traveling Men's Association of Des Moines are prominent. Their premiums are lower than those of the stock companies for two principal reasons: they don't employ an agency staff, each member acting in that capacity, the principal expense being for a secretary and clerical force at headquarters; and as compared with the contracts issued by stock companies, the benefits are quite restricted. Every man earning a salary, having a family to support, should protect himself and them by carrying both life and accident insurance.

“Mac reports that your advance letters helped him open these new accounts.

“Good work, Mr. Harris. Keep it up. And stick to that classy new stationery on Construction Bond. We want the trade to have a good opinion of us.”

And now in *your* line, what does the trade think of *you*—judging you by your stationery and—do they think of you *enough*? If you want to “keep before the trade” to best advantage, keep *after* them with letters—and use a striking letterheading on good, substantial Construction Bond. It has the feel and crackle of true quality, makes the right kind of “first impression,” invites confidence, inspires respect.

For Business Stationery Above the Average Specify CONSTRUCTION BOND

You can get such stationery in your locality. In 214 of the principal cities of North America there are responsible, competent printers and lithographers who buy Construction Bond direct from us in large quantities and carry it in stock. They offer you prompt service, high class work and unequalled value in Construction Bond because of its big market and direct, economical method of distribution.

CONSTRUCTION

You can identify Construction Bond by this watermark, known everywhere as the guaranty of high quality and good value. Let us send you the names of those firms in your locality who produce fine stationery on Construction Bond. Write us on your business letterhead and receive free our Letterhead Suggestions and Ideas on Sales Letters.

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation. Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries.

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....	\$27,964,578.109.00
Received premiums thereon to the extent of.....	287,324,800.00
Paid losses during that period.....	143,800,874.00
Issued certificates of profits to dealers.....	90,801,110.00
Of which there have been redeemed.....	83,811,110.00
Leaving outstanding at present time.....	6,989,660.00
Interest paid on certificates amounts to.....	23,020,223.85
On December 31, 1914, the assets of the company amounted to.....	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

The Independent's Shakespeare Contest For American Schools

THE year 1916 marks the three-hundredth anniversary of the death of William Shakespeare, the man who "was not of an age, but for all time." To celebrate his greatness, and to encourage appreciation of his art, various institutions in all parts of the United States will hold civic celebrations. The New York City Shakespeare Tercentenary Celebration Committee says that "colleges, social settlements, churches, recreation centers, playgrounds, clubs, public schools, parochial schools, private schools, dancing schools, art schools, Public School Athletic League, gardens, Y. W. C. A.'s, Y. M. C. A.'s, Masonic lodges, and continuation classes in department stores" are among the institutions planning to take part.

To aid in this nation-wide celebration in memory of the great poet, The Independent will publish a series of eight articles concerning Shakespeare, his times, his works, and his relation to present-day thought, to appear weekly beginning with the February 14th number.

Every article will be accompanied by a list of books for further reading, and by carefully selected illustrations.

Every article will be designed to awaken interest in the reading of Shakespeare's plays.

The author of the series is Frederick Houk Law, Ph.D., Lecturer in English in New York University, and Head of the Department of English in the Stuyvesant High School, New York City. His close study of Shakespeare and the Elizabethan period, and his practical experience as lecturer and teacher, have enabled him to write a highly interesting and instructive series of articles equally suitable for schools, for clubs and for private reading.

The titles of the eight articles are as follows:

- | | |
|---|---|
| <p>Number 1. Shakespeare the Man: A résumé of the important facts in Shakespeare's biography; and an analysis of Shakespeare's attitude toward life.</p> <p>Number 2. Shakespeare's England: The conditions of life in Shakespeare's times, with especial reference to life in Stratford and in London, and with particular reference to Shakespeare's plays.</p> <p>Number 3. Shakespeare's Comedies: Plays of Fun and Fancy: The leading characteristics of the group of plays including The Comedy of Errors, The Taming of the Shrew, Henry IV, I and II, The Merry Wives of Windsor, Love's Labour's Lost, The Two Gentlemen of Verona, and A Midsummer Night's Dream.</p> <p>Number 4. Shakespeare's Comedies: Plays of Joy and Contemplation: The leading characteristics of the group of plays including The Merchant of Venice, Much Ado About Nothing, As You Like It, Twelfth Night, Henry V, All's Well that Ends Well, Measure for Measure, Troilus and Cressida, Pericles, Cymbeline, The Tempest, and A Winter's Tale.</p> | <p>Number 5. Shakespeare's Tragedies: Plays of Romance and War: The leading characteristics of the group of plays including Romeo and Juliet, Titus Andronicus, Henry VI, Richard II, Richard III, King John and Henry VIII.</p> <p>Number 6. Shakespeare's Tragedies: Plays of Character and Deepest Pathos: The leading characteristics of the group of plays including Julius Caesar, Hamlet, Othello, Macbeth, King Lear, Antony and Cleopatra, Coriolanus, and Timon of Athens.</p> <p>Number 7. Shakespeare's Relation to Present-Day Thought: The effect of Shakespeare upon the drama of today, upon literature in general, and upon daily thought and action.</p> <p>Number 8. Why One Should Read Shakespeare: a summary of the chief points of value to be gained from a reading of Shakespeare's plays.</p> |
|---|---|

The Independent Offers a Shakespeare Anniversary Medal

The Independent offers a Shakespeare Anniversary Medal for the best essay from any school in the United States on the life and works of William Shakespeare. Any American school, private or public, elementary or secondary, may take part in the contest, but the medal cannot be awarded unless ten pupils at least compete from that school. Each competitor must complete an original essay of from 500 to 2500 words and hand it in to the judges by May 5.

In case of elementary schools the school authorities shall select three judges from among the faculty, pupils or outsiders (including no contestants). In case of secondary schools the contestants themselves may get together and select any three judges they may choose except a contestant.

This contest is open free to all schools and a subscription to The Independent is not obligatory. If 1000 schools take part in this contest, 1000 medals will be awarded. Your school does not have to compete with any other school.

THE INDEPENDENT SHAKESPEARE CONTEST DEPARTMENT, 119 West 40th Street, New York:

A C O R R E C T I O N

In the issue for November 22, 1915, The Independent published an inter-
view with Yuan Shih-kai, then Presi-
dent of China and now Chinese Em-
peror-elect. We have since been in-
formed by the Chinese Minister at
Washington that the interview never
took place. Dr. Koo transmits to us a
cablegram from the Department of
Ceremonies of the Chinese Government
in which the following statement is
made:

Independent published on November 22
copyright article purporting to be state-
ment made by Yuan Shih-kai at interview
alleged to have been given to one Carl
von Ressler at which interview Presi-
dent is represented to have given categor-
ical replies to series of questions submitted
on behalf of Independent by his personal
secretaries Honorable Li-Chi-Tung and
Lieutenant-Colonel Semplee. You will state
on authority of President Yuan Shih-kai
that no such interview was ever given, that
no such person as Ressler is known in
Peking, that no questions were ever sub-
mitted on behalf of Independent, that no
such persons as Li-Chi-Tung and Semplee
are known in Peking; whole article is mal-
evolent fabrication.

The interview came to the office of
The Independent thru a channel in this
country which we have had no reason
in the past to regard as unreliable; and
came with every appearance of authen-
ticity. It is the same channel thru
which was secured the first interview
with Yuan Shih-kai, published in The

Independent for July 26, 1915. The
genuineness of that interview has
never, to our knowledge, been ques-
tioned.

In view, however, of the categorical
denial on the part of the Chinese Gov-
ernment, The Independent can only ex-
press its deep and sincere regret that
the alleged interview should have been
made public thru its pages.—THE ED-
ITOR.

From the picture entitled "Pacifists
at Play," on page 47 of The Independ-
ent for January 10, 1916, the credit
line was accidentally omitted. The pic-
ture is copyrighted by Underwood &
Underwood, New York.

T H E N E W P L A Y S

The Weavers. Wonderfully effective
presentation of Hauptmann's grim, gray
drama of capitalistic oppression and indus-
trial revolution. Unrelieved tragedy in-
fused with power of conviction that stirs
and stimulates. (Garden.)

Bunny. Melodramatic farce and roman-
tic fantasy, wistful charm and robust hu-
mor, brisk action and quiet pathos, com-
bined with rare dramatic skill. No more
delightful entertainment will you find in a
twelvemonth. (Hudson.)

Ruggles of Red Gap. Adaptation of one
of Harry Leon Wilson's stories. English
butler and two noble lords in Far-western
"high society." Fair to middling farce—
foolish, funny. (Fulton.)

Major Barbara, one of our "only living
Shakespeare's" poorest plays, which is in
no sense saying that anything that Bernard
Shaw writes is inferior to the products of
other playwrights. Grace George and com-
pany render it most effectively. (Play-
house.)

Cock o' the Walk gives Henry Arthur
Jones a chance to use the coming Shakes-
peare Tercentenary as the theme and to
provide a suitable rôle for Otis Skinner's
sympathetic voice and irresistible swagger.
(Cohan.)

The Devil's Garden—a book dramatized.
Badly constructed and over-emotional, but
well staged and at times very well acted.
On the whole the play drags. (Harris.)

The Washington Square Players present
four one-act plays: pantomime, farce, war
play—of a new sort—and delightful whim-
sicality, "The Roadhouse in Arden." Orig-
inal acting and artistic stage settings.
(Bandbox.)

The Pride of Race, starring Robert Hil-
liard. A harrowing negro problem play, full
of melodramatic situations, admirably act-
ed. (Maxine Elliott.)

Sadie Love is one of those matrimonial
farces in which clever lines, funny situa-
tions and some very good acting are spoiled
by the vulgarity of the whole idea.
(Gaiety.)

Hip! Hip! Hooray! There is nothing to
be seen in the United States like the Hip-
podrome, and this year's show beats all
previous successes in variety and magnifi-
cence. A skating ballet is a novel attrac-
tion. (Hippodrome.)

E. H. Sothern, in his revival of *Land
Dundreary*, which made his father famous,
presents a wonderful characterization of a
caricature. This generation will enjoy it as
much as the last. He has followed it with
an able revival of that sentimental an-
tiquity *David Garrick*. (Booth.)

EVERY SUPERIORITY
*of the PACKARD TWIN-SIX has been
Verified at the Hands of Owners*

WITH the production schedule now fully met, new cars each day are shattering all automobile traditions. ¶ On road, boulevard, track and mountain trail the twelve-cylinder motor has shown itself to be the eventual power for every particular service. ¶ It throttles down to the lowest pace or swings away to racing speed with such amazing ease that passengers are unaware of change. ¶ A new thrill awaits you, a new experience in luxurious travel, in your first Packard Twin-Six demonstration. *Arrange for it now.*

JANUARY 24, 1916

NUMBER 3503

SHALL THE UNITED STATES PROTECT ITS CITIZENS?

SIXTEEN American citizens, traveling peaceably upon their legitimate business in Northern Mexico, have been murdered. It is reported by the United States Department of State that they were killed because they were Americans.

What will the United States do about it?

The President promptly sent a demand to General Carranza for the "immediate and efficient pursuit, capture and punishment of the perpetrators of the dastardly crime." This is well, but what reason is there to suppose that it will be effective? What reason to believe that Carranza can accomplish what we demand?

Mr. Lansing declares that these law-abiding Americans were killed by bands operating under the orders of General Villa and in accordance with the general policy publicly announced recently by him. Señor Carranza is the *de facto* ruler of Mexico; the United States has formally recognized him as such. Villa and his lawless supporters offer the chief challenge to the completeness of his rule. Obviously Carranza would not permit Villa to flout his authority and terrorize Northern Mexico if he could help it. If Carranza cannot suppress Villa for his own sake, what likelihood that he can do so for ours?

General Carranza has already expressed his purpose to punish the murderers. The method he proposes to adopt is that of declaring the offenders, when he can ascertain who they are, to be outlaws and authorizing any citizen to arrest them without warrant and execute them without formality. This is not a civilized method of procedure. It may possibly secure the death of the guilty persons, but it is quite as likely to result in the death of innocent persons. It is not the application of governmental authority; it is a confession of governmental impotence and an invitation to anarchy. It furnishes a significant commentary on the inability of General Carranza's administration to execute the primary function of government.

It is not merely a question of punishing the murderers. The future must be secured and safety guaranteed to American citizens who have good and legitimate reasons for living and traveling in Mexico. The President's keen regret that the murdered Americans did not heed the Administration's specific warnings to stay out of the disturbed parts of Mexico is an unsatisfactory comment on the existing situation. It implies an evasion of our national duty to protect American citizens in their unquestioned rights parallel to the proposal of Mr. Bryan and other Democratic leaders, which we discuss elsewhere in these pages, that Americans shall be prohibited from traveling upon belligerent-owned merchant ships. It puts the issue squarely before the American people: Shall the United States protect its citizens?

This is a primary duty of governments. The citizen of a nation is entitled to the protection of his government unless he is engaged in some unneutral or other act that by its very nature relieves his government from the responsibility of protecting him. The responsibility is one which the government may not ignore without dishonor.

The United States must protect its citizens in Mexico. If it can do so effectively by requiring the Mexican Government to afford the necessary protection, well and good. If the Mexican Government cannot afford the protection, the Government of the United States must do it itself. An example of the way in which protection can be given is provided by the Allied march to Peking. In 1900 the lives of foreigners in the Chinese capital were in grave danger from the Boxer revolutionaries. The Chinese Government was impotent. Great Britain, Japan, Germany, Russia and the United States sent armed forces to Peking and rescued their imperiled nationals. Subsequently the allied forces withdrew and left Chinese sovereignty unimpaired.

The march to Peking suggests the course we ought to follow now. But in the present instance we should act alone; it is American citizens that have been killed, American citizens primarily whose future security must be assured.

UNLESS within a very brief time Carranza shows himself able to comply with our demand to punish the murderers and to provide guarantees for the future, the President should send armed forces into Northern Mexico. Those forces should demand and secure the full punishment of the murderers of Chihuahua. They should establish conditions of peace and order under which Americans may live and travel and pursue their occupations in safety and tranquillity.

At the same time the President should inform the *de facto* ruler of Mexico that we have absolutely no purpose of aggression against the Government and the people of Mexico. He should assure Señor Carranza that when the guilty have been punished and the security of Americans in Northern Mexico has been assured, the American forces will be withdrawn and the Mexican Government left in complete and peaceful possession of the pacified region.

Our course in returning to China the indemnity received for the killing of American citizens during the Boxer rebellion is an example of the spirit of unselfishness and international friendliness in which the United States can carry out a project of this kind. In that spirit we should act again. But we should act with a full determination that the rights of Americans shall be re-

spected and a sincere purpose to invoke the power of the United States to protect those rights whenever and wherever they are violated.

PREPAREDNESS BETTER THAN PREPARATION

NOW that we are being urged to increase our military efficiency it is time to examine closely what is the basis of such efficiency as is shown in this war. Germany is most frequently referred to as an example of what can be accomplished by preparedness, but it is commonly assumed that this preparedness consists in putting down concrete foundations secretly in the neighborhood of a fortress to be bombarded some years later, in laying up a stock of shells enough to last thru the war, and in having an envelope containing plans for all emergencies in the right-hand pigeonhole of von Moltke's desk. The concrete gun-bed legend was exploded long ago, and, while the Germans undoubtedly gained an advantage in the first days of the war by having abundant supplies of munitions ready for instant use and their campaign plans well worked out in advance, yet these advantages were quickly lost and do not account for the continued success of the Germans, which is more remarkable than their initial gains.

What we need to understand is not how the Germans got within sight of Paris within a month after the war began, but how they are able to get within sight of Riga and Salonica and Bagdad eighteen months after. The expenditure of shells has been vastly greater than even the Germans calculated, but their supply has not been exhausted because, as Lloyd George says, they were turning out last May nearly 250,000 high explosive shells a day, while the British were able to turn out only 2500. This was accomplished by converting all sorts of factories to provide for the army. Russia could not do this because she did not have the factories. England was slow in doing it because of the inflexibility of her industrial system and her national temperament.

The war now is being fought largely with new weapons of offense and defense and according to new tactics. In the introduction of innovations Germany has led and her enemies have imitated. We may explain the failure of the French and English to make first use of novel weapons like streams of fire and asphyxiating gases as due to moral scruples, but that does not account for the fact that the Germans were ahead of them in realizing the full value of such things as high explosives, machine guns and entrenchments.

It is quite likely that the German plans have gone a-gley as often as those of the Allies, but the Germans have been quicker at devising new ones to meet the changed conditions. Baffled on one front, they have turned to another and struck first, too. The gold stored in the war chest of Spandau castle for use in a future war was a drop in the bucket compared to the enormous expenditure required, but the reorganization of the financial and industrial system of the country has enabled Germany to stand the unanticipated strain with surprising equanimity. The food supply of Germany was known to be inadequate to such a long siege, but by carefully regulated distribution famine has been avoided.

In short, the resources of the Allies are vastly greater, but in resourcefulness the Germans have shown themselves superior. No preparations can be adequate for a war like this; the chief security is a high state of preparedness.

The lesson for America is obvious and encouraging. Our wealth and our workshops are our greatest defense. A million men in arms would not alone suffice to protect our country. Russia had six million and she was defeated. Doubtless we should have an army and navy strong enough to meet a first attack of any probable force. Our coast batteries should, we admit, have enough shells on hand to last them longer than fifteen minutes. But the important thing is to have back of this a well educated and adaptable people, with men in authority who can organize and direct the resources of the nation according to the needs of the hour.

A PAN-PACIFIC CONFERENCE

WAR will cease when the causes of war are apprehended and removed. The chief way of apprehending and removing the causes of war are first to agree on what they are and then to apply the remedy. Agreement results from deliberation based on the exchange of views. The exchange of views can best be carried on in a conference where representatives of the parties meet in personal contact.

These truths are elementary. But they show why conferences in the long run have the precedence over courts in maintaining the peace, for legislative bodies tend to prevent the issue from arising, whereas courts can only remedy the issue after it has already arisen and the bad feeling has been engendered. Arbitration, therefore, is neither the only nor usually the best way of preserving the peace.

Take the present war, for instance. Serbia appealed to The Hague court, but the proposition was not even considered in the various chancelleries of the great powers. Will not the verdict of history, however, in apportioning the blame, almost absolve Europe in her refusal to resort to arbitration after the crisis arose, and rather find all nations guilty for not making a determined attempt in times of peace to assemble together and thresh out their differences and thus lay the foundations for a durable peace?

Accordingly we give hearty welcome to the suggestion that has come from several quarters of late that a Pan-Pacific conference be held in the near future where the great nations with vital interests on the Pacific can assemble for the purpose of discussing and settling if possible the common problems that confront them. These nations would certainly include Japan, China, England, Russia, France and the United States. Whether Siam, Holland, Germany and the Pacific Coast Latin-American republics should be included is a detail of not supreme importance. Ex-President Eliot suggests that the conference be held in Honolulu early this summer, but probably that will be found to be too soon, for the nations will doubtless find it impossible to come until the war in Europe ends.

Next to Europe, the Far East furnishes the greatest issues now confronting world statesmanship. The issues of Pan-America are nothing to compare with them. The sooner, therefore, the nations seriously and jointly enter upon a discussion of the whole Asiatic question, the more likelihood is there that it will be settled by law rather than by war.

It is vital, however, that any Pan-Pacific congress that expects to bring about large results must be strictly official in character. Pacific problems can of course be discussed—and with profit—by all sorts and condi-

tions of private gatherings—but if any solution of them is wanted, they must be taken up by the governments themselves, who alone can act in the premises.

Let President Wilson, therefore, initiate the movement for a Pan-Pacific conference. Within a few days he has proposed a Pan-American policy that if carried out will prove the most important act of New World statesmanship since the promulgation of the Monroe Doctrine. He has now the opportunity to do an even greater service for the world.

THE PROGRESSIVES PROPOSE AMALGAMATION

UNLESS all signs fail or some one makes a blunder later, the Republicans and the Progressives will enter the Presidential campaign shoulder to shoulder. The Progressives have made the first move toward union. They have arranged their national convention for the same date and place as that of the Republicans—Chicago, June 7.

This step has been taken with the frankly expressed hope that the two conventions will nominate the same candidate and write the same principles into their platforms. Nothing but a possible short-sighted unwillingness on the part of the Republicans to meet these overtures in ungrudging spirit could now seem to stand in the way of a complete and harmonious readjustment of the relations of the two groups. It is possible, of course, that the Progressives may yet do something themselves to make the amalgamation difficult; but they have begun well. If they go on in the same spirit the Republicans must meet them or bear the responsibility for the continued lack of harmony.

The Progressive committee announced the continued allegiance of their party to the following principles:

- A broader nationalism;
- Regulation rather than disruption of efficient business organizations, behavior and not size being the test;
- A permanent, non-partisan, scientific tariff commission;
- Revision of the tariff to fit war conditions and for the protection of new industries introduced as a result of the war;
- Equal suffrage;
- Dethronement of the invisible government;
- An adequate merchant marine.

To these old planks, with their slight modification to fit the times, the Progressives add two new ones growing out of present conditions:

Complete preparedness, not only military, but economic; a preparedness that will unify American citizenship and create a renewed loyalty;

"The faith of our forefathers which made the American flag the sufficient protection of an American citizen around the world."

The declaration of the committee closed with the statement: "In this turning point in world history we will not stick on details; we will lay aside partisanship and prejudice. But we will never surrender those principles for which we stand and have stood. We will follow only a leader who we know stands for them and is able to put them through."

This was interpreted by some of the leaders, notably Mr. Perkins, as not necessarily meaning an insistence upon Mr. Roosevelt as the nominee, tho it is becoming increasingly evident that the thought of many, not only among Progressives but among Republicans, is turning in his direction.

The impulse toward amalgamation evidenced by this action of the Progressives is a good thing. The Ameri-

can people do not want or know what to do with more than two great political parties.

PRESIDENTIAL TERMS AND PRESIDENTIAL NOMINATIONS

IT is a very interesting letter from the pen of President Wilson written a month before his inauguration that the *New York World* has just made public. It raises several important questions.

In the letter Mr. Wilson declares his opposition to the proposal for a constitutional limitation of the President to a single term of office. It was written to the vice-chairman of the Democratic National Committee and probably put a quietus upon the movement then going on in Congress for a constitutional amendment upon the subject. Mr. Wilson's arguments against the proposal are convincing. He first declares his cheerful readiness to abide by the judgment of his party and the public as to his candidacy for a second term, and pledges himself "to resort to nothing but public opinion to decide that question." He then proceeds:

The President ought to be absolutely deprived of every other means of deciding it.

And yet, if he is deprived of every other means of deciding the question, what becomes of the argument for a constitutional limitation to a single term? The argument is not that it is clearly known now just how long each President should remain in office. Four years is too long a term for a President who is not the true spokesman of the people, who is imposed upon and does not lead. It is too short a term for a President who is doing or attempting a great work of reform and who has not had time to finish it.

To change the term to six years would be to increase the likelihood of its being too long, without any assurance that it would, in happy cases, be long enough. A fixed constitutional limitation to a single term of office is highly arbitrary and unsatisfactory from every point of view.

Put the present customary limitation of two terms into the Constitution, if you do not trust the people to take care of themselves, but make it two terms (not one, because four years is often too long), and give the President a chance to win the full service by proving himself fit for it.

As things stand now the people might more likely be cheated than served by further limitations of the President's eligibility.

We singularly belie our own principles by seeking to determine by fixed constitutional provision what the people shall determine for themselves and are perfectly competent to determine for themselves. We cast a doubt upon the whole theory of popular government.

I believe that we should fatally embarrass ourselves if we made the constitutional change proposed. If we want our Presidents to fight our battles for us, we should give them the means, the legitimate means, the means their opponents will always have. Strip them of everything else but the right to appeal to the people, but leave them that; suffer them to be leaders; absolutely prevent them from being bosses.

With this statement of the case *The Independent* is in hearty accord. The people are to be trusted. They can be trusted just as well to decide whether they want to reelect a President as to determine whether they want to elect him in the first place. The people in this matter do not need to be protected against themselves.

But Mr. Wilson's statement does not agree with the platform of his party upon which he ran for office. That document declared:

We favor a single Presidential term, and to that end urge the adoption of an amendment to the Constitution making the President of the United States ineligible for reelection, and we pledge the candidate of this convention to this principle.

Can a party convention pledge the candidate it nominates to any policy or principle? Obviously President Wilson does not believe that it can. For he refused to hold himself bound by the categorical pledge of his party associates. He took a position diametrically opposed to the one to which they sought to bind him, and induced Congress to accept his view rather than theirs. It is unfortunate, in view of his complete disagreement with this plank in the platform of his party, that President Wilson did not either make a protest while the convention was still in session or announce his dissent publicly when the matter came up in Congress. The President ought to be frank with the people on a matter of such fundamental importance.

On the question of his right to dissent from the view of the convention, however, we agree with Mr. Wilson. A nominating convention should have no power to bind its nominee to every last pronouncement of the platform it has drawn up. As a matter of actuality it has no such power, and most candidates are wont to recognize, without any particular blowing of trumpets, the fact that it has not.

But the matter goes deeper than that. There ought to be no such thing as a nominating convention. Again Mr. Wilson is right, for in his letter he said:

There ought never be another Presidential nominating convention and there need never be another. Several of the states have successfully solved that difficulty with regard to the choice of their Governors, and Federal law can solve it in the same way with regard to the choice of Presidents. The nominations should be made directly by the people at the polls.

He further declared that "conventions should determine nothing but party platforms and should be made up of the men who would be expected, if elected, to carry those platforms into effect."

This is all perfectly sound doctrine. But why has not Mr. Wilson urged upon Congress action along these lines? Three years ago he was confident that the change would surely come. For he said, "I think it may safely be assumed that that will be done within the next four years." But what has he done to bring about the change he advocates?

This is one of the important reforms in our political machinery that ought to be carried out in the name of popular government. President Wilson ought to have included the Presidential primary among the measures behind which he put the effective weight of his power and influence.

RELIGIOUS LIBERTY ACHIEVED

FOR over fifteen years a campaign for religious liberty has been going on in three of the South American republics.

In Ecuador, Bolivia and Peru no public worship was allowed except in the established Catholic Church, and no marriages could be contracted except under Catholic forms. Several years ago these restrictions were removed in Ecuador and Bolivia and full religious liberty was permitted; but in Peru liberty of worship was still forbidden, and any other than Catholic religious service had to be behind closed doors in private houses to which admission was by card. Altho petitions and protests had been directed over and over again from citizens of this country to the Peruvian Government seeking full liberty

of worship, it seemed as if the Congress of Peru would never yield.

We are glad to learn thru our State Department that with the beginning of this year that section of the Peruvian constitution which prohibited any public worship except after the Catholic manner has been annulled and legislation adopted granting full religious liberty.

This does not mean that Catholicism ceases to be the established religion of Peru, but only that other forms of religion may be freely and publicly exercised. But it is a great victory that at last, thruout the entire Western Hemisphere, religious liberty has been achieved. This marks an epoch in the religious history of the continent. No longer anywhere will those who would worship God in their own way be compelled to hide themselves behind locked doors. The Dark Ages have past away. No longer will those who are not of the established Church be compelled to live without the sanctions of legal marriage.

The next religious campaign will be over the question of an established church. At a period in the history of our older states it was thought the business of the government to care for and support religion. In New England the town meeting made contracts with the minister and paid his salary. In Maryland the Roman Catholic Church was established, as also in Louisiana and other states; in New York the Dutch Reformed; in Virginia the Church of England; but long ago the country learned that everybody should pay for his own religion, and that way the whole world moves. The example of the United States and Canada will before long be followed in South America.

OUR ELDEST BROTHER

THOUGH The Independent has got along in years so far that we can brag a bit about its age and cast aspersions on the "mushroom periodicals" of the day, we have to take off our hat to the *Congregationalist and Christian World*, which announces its one hundredth birthday. *The Boston Recorder*, of which the *Congregationalist* is the lineal descendant, was the first religious weekly newspaper in this or any other country. The hundredth anniversary number of January 6, 1916, contains contributions from some fifty well-known names, leaders of modern thought in various fields of religion, politics, philanthropy and literature. The record of its first century is a splendid one and we trust that its second century will prove to be no less prosperous and useful than its first.

A PEN PICTURE

CAN the reader guess what American statesman is characterized in the following pen picture?

Parliamentary government is government by speaking. In such a government the power of speaking is the most highly prized of all the qualities which a politician can possess; and that power may exist, in the highest degree, without judgment, without fortitude, without skill in reading the characters of men or the signs of the times, without any knowledge of the principles of government or political economy, and without any skill in diplomacy or in the administration of war.

No American statesman whatever. It is from Macaulay's Essay on William Pitt.

THE STORY OF THE WEEK

The Capture of Mount Lovcen

The Austrian occupation of the Montenegrin mountains behind Cattaro is, as we explain on page 129, a serious blow to both Montenegro and Italy. The aged King Nicholas has sent to Rome the Crown Prince Danilo Alexander and Crown Princess Jutta with a piteous appeal for help. What the Austrian victory means to him may be inferred from the following:

Lovcen is the Olympus of our race, the cradle of the dynasty, the stronghold which resisted the invasion of the Turks, even when they reached the walls of Vienna. Lovcen is more precious than if it were a colossal diamond.

His daughter, Queen Helena of Italy, is naturally supporting the appeal with all her influence and since Italy has always considered that the possession of Mount Lovcen by Austria would be inimical to her interests in the Adriatic, doubtless every effort will be made to recover it, but the chances are not hopeful, judging by the ease with which the Austrians have defended the mountains of the Trentino and the Karst ledges along the Isonzo River against the entire Italian army.

The Austrians had in the Gulf of Cattaro and in the outer bight three battleships, four cruisers and a number of torpedo boats and submarines. The heavy guns of some of the warships were brought to bear upon the mountains of the Montenegrin frontier by careening the vessels, and with this support the assault on the Karst barrier began on December 29.

The Montenegrin and Serbian troops defending the Cattaro frontier are said to number 3000, while the attacking force of Austrians was more than five times as great. Nevertheless they put up a stout resistance and it took the Austrians four days to capture the frontier entrenchments tho they used asphyxiating gases in the assault. This position was defended by twenty-two guns and four large mortars, most of which were taken intact by the Austrians and used against their fleeing foes.

The loss of Mount Lovcen soon followed this defeat and no attempt was made to defend the capital, Cetinje (variously spelled Cetinje or Cettigne and pronounced Chet-teen-yay). King Nicholas has removed his headquarters to Niksic (pronounced Neetshitch), about thirty miles from the coast—and is said to be negotiating a permanent truce.

Montenegro Yields

The capture of the capital of Montenegro by the Austrians virtually removes the third of the three buffer states first involved in the war. The Belgians in France and the Serbians in Albania are continuing the fight, but the Montenegrins are cut off from retreat and their king is said to have succumbed to the inevitable. Montenegro

THE GREAT WAR

January 10 — Austrians capture Mount Lovcen, Montenegro. German attacks in Champagne make slight gains at great sacrifices.

January 11 — French occupy Greek island of Corfu. British expedition to relieve besieged army at Kut-el-Amara is cut off by Turks twenty miles away.

January 12 — Allies blow up Greek bridges above Salonica. Four British aeroplanes brought down by Germans.

January 13 — French submarine sinks Austrian cruiser near Cattaro. Conscription bill passes second reading in Parliament by 431 to 39.

January 14 — Austrians enter Cetinje, Montenegrin capital. Heavy Russian offensive against Bukovina continues.

January 15 — Germany threatens reprisals for act of British warship Baralong. First thru train for Constantinople leaves Berlin.

January 16 — Russians advancing toward Kermanshah, Persia. British bombard Lille.

has not yet been overrun by hostile armies like Belgium and Serbia, but it

is surrounded on three sides by the Austrians and on the fourth side are the Albanians, hardly less hostile to the Montenegrins.

The conquest of Montenegro is an important victory for Austria, not because it adds much to her territory or relieves her of a dangerous foe, for Montenegro is both small and weak; but because it put Austria in secure possession of the bay of Cattaro, "the Gibraltar of the Adriatic." So long as this port was dominated by the guns on Mount Lovcen the Austrian warships were not safe here. In fact they were in October, 1914, driven out of the inner basin, the Gulf of Cattaro, as well as the middle basin, Teodo Bay, by the four guns of 4½ inch caliber which the French marines stationed on Mount Lovcen. If the French had carried out their plan of mounting 6-inch guns on the summit, the Austrian shipping would have been swept from the outer harbor and the forts about the bay reduced. The concrete foundations for these guns had already been laid when in May, 1915, Italy entered the war and undertook the defense of the Adriatic.

But the Italian navy failed to guard the Mouths of Cattaro as closely as the French and British had done previously, so the Austrian submarines have got out and have been raiding Mediterranean commerce with impunity. The Italians also failed to keep their promises to send troops and heavy guns to defend Mount Lovcen, altho they have been free to cross the Adriatic any time during the last seven months. So it seems as if Nicholas had lost his kingdom thru the neglect of his son-in-law, the King of Italy. In reality the fatal delay was doubtless due to a difference of opinion among the Italian authorities as to the conduct of the war, some of them being strongly opposed to any participation in the Balkans. Recently, however, it was decided to enter upon a campaign in Albania and troops have been transported across the Adriatic to Durazzo and Avlona, altho apparently too late to prevent the Bulgars and Austrians from overrunning Albania as well as Montenegro.

The Occupation of Corfu

The French have landed troops upon the Greek island of Corfu, which lies off the coast of southern Albania, and the Serbian soldiers are being brought here from Albania for recuperation. The wounded have been lodged in Achilleion Castle, the Mediterranean villa of the German Emperor, which was built for the Princess Elizabeth of Austria in 1890.

The German papers denounce the raising of the French flag over Achilleion as a personal insult to the Kaiser as well as a violation of Greek neutrality, worse even than the occupation of

HE KEEPS THE COW IN THE PARLOR—BECAUSE OF THE WAR

A Flemish farmer who has lost his outhouses and who dares not take the risk of letting his cow graze takes it indoors at night

Salonica since Corfu is, like Belgium, under a guarantee of perpetual neutrality by England, Russia, Austria, Prussia and France in the treaties of November 14, 1863, and March 29, 1864. Corfu was up to that time under the protection of Great Britain, but the inhabitants longed for union with their Hellenic brethren and manifestations of disaffection were frequent. Finally Bulwer Lytton, when Secretary of State for the Colonies, took the unconventional step of sending Gladstone, because of his interest in Greek literature, to the Ionian Isles as a commissioner to learn the desires of the people, and as a consequence the seven islands were transferred to Greece, which was then placed under a Danish prince. George, father of the reigning King Constantine.

The Greek Government has protested to the Allied Powers against this new violation of her neutrality, but is not likely to take any further action since the Allied troops already on Greek territory outnumber the Greek army. The Allied Powers have informed Greece that their occupation of the island is only temporary "in order to save the heroic Serbian soldiers from famine and destruction." It is claimed that the German and Austrian submarines have been using the sheltered inlets of Corfu for repairing, and replenishing their fuel.

The German Attack in Champagne It appears that the German assault of the French lines last week was a more serious affair than was at first reported. According to the French account the Germans bombarded their entrenchments along a front of five miles near the butte of Le Mesnil for four days, firing 400,000 shells in the last twelve hours. Then they charged, not in solid column as they used to but in four suc-

cessive waves. Three waves were stopped by the curtain of fire from batteries of the French 75's, but the fourth wave gained the first line of trenches for a distance of three or four hundred yards. Most of this was recovered later by the counter-attacks of the French. The Germans used asphyxiating gases but to little effect, for the wind changed and blew the fumes back over their own ranks. The French unofficial estimates give the enemy's losses as over 25,000.

The "Baralong" Case The threat of Germany to resort to reprisals if the British Government refuses to punish the officers of the "Baralong" may make this case one of the pivotal points of maritime warfare. According to the German note the British steamer "Nicosian" was overtaken by a German submarine on August 19, 1915, as she was carrying a cargo of mules for the British army. After the crew had been sent off in boats, and, while the "Nicosian" was being shelled by the submarine, the British patrol boat "Baralong" came up and signalled that she wanted to rescue the "Nicosian's" crew in the boats. Since the "Baralong" was flying the American flag and carried on her sides large shields of the American colors, she was allowed to approach, but when she came within range she opened fire with her concealed cannon and displayed her true colors. As the submarine sank under the fire the commander and most of the crew jumped overboard and some climbed up the ropes into the "Nicosian." The commander of the "Baralong," it is alleged, ordered his men to fire upon the Germans clinging to the ropes and swimming in the water. Then the "Nicosian" was boarded and the Germans found there, were shot. The commander of the submarine

who jumped overboard from the "Nicosian" and swam toward the "Baralong" was killed by a rifle shot as he held up his hands in surrender. This is supported by the evidence of six American muleteers, who have returned to this country. Their affidavits were presented by Count Bernstorff to our Government last October with the request that they be forwarded to England.

In his reply Sir Edward Grey expresses doubt of the correctness of the German version and offers to have the case referred to a neutral court of inquiry, say one composed of American naval officers, together with three cases of German atrocities committed within the same forty-eight hours; namely, the sinking of the "Arabic," destruction of a British submarine in Danish waters by a German destroyer and the attack on the "Ruel."

The German note in answer to this explains the "Arabic" case by saying that the commander of the submarine believed that the "Arabic" was about to ram his craft; that in the second case the submarine was defending itself by gun fire and that the "Ruel" was sunk as a reprisal for the British violations of international law. The German Government expected that when the evidence in the "Baralong" case was presented, based upon the affidavits of neutral witnesses, the British authorities would investigate the case for themselves, "not doubting for a moment that a court-martial composed of British naval officers would inflict suitable punishment for the cowardly and perfidious murder." The note concludes:

The German government, therefore, takes the ground, as the final result of the negotiations, that the British government, under empty pretences, has left unfulfilled the justified demands for an investigation of the "Baralong" case, and thereby has made itself responsible for the crime of defying international law and humanity, showing that it desires no longer to observe, in respect to German submarines, one of the first rules of war—namely, to spare enemies incapacitated for further action—in order to prevent them from conducting warfare at sea in accordance with established international law.

Inasmuch as the British government has declined to make amends for this outrageous incident, the German government feels itself compelled to take into its own hands punishment for this unatoned crime and to adopt measures of reprisal corresponding with the provocation.

A new phase of the war on commerce is expected to come by the declaration of a blockade of Germany by the British Government. Hitherto the Government has endeavored to attain the object by Orders in Council, but these failed to prevent food from getting into Germany and yet exasperated the United States and other neutral nations because of their violation of international law. Even England has been exporting food to Germany by way of Holland and the Scandinavian countries. For instance, the exports of cocoa to these countries are over a thousand tons a month more than they were before the war and cocoa is a very nutritious substance. With a formal and effective blockade the commercial

isolation of Germany may be made more legal and complete.

Yuan to Become Emperor It is announced from Peking that President Yuan Shih-kai will be formally made Emperor of China on February 12. He anticipated the honor by seating himself upon the Yellow Chair on New Year's Day. On December 11 the members of the State Council notified the President that the 1993 national citizens' representatives who had been consulted on the question had voted unanimously in favor of a constitutional monarchy and requested him to ascend the throne. Yuan replied, according to Chinese custom, with a modest refusal:

I, the President, find that the sovereignty of the republic resides with the people. Since the Citizens' Representative Convention has unanimously decided in favor of the constitutional monarchy there is left no more for me to say, but the fact of requesting me to ascend the throne is indeed astonishing. At the beginning of the republic, I made an oath to develop the republic to the best of my ability. Now, if I made myself Emperor I would break my oath, and there is no excuse on the point of faith.

My primary object, however, is to save the country and to save the people, and I do not care to sacrifice myself for the attainment of this object. But, in self-examination, I find there is nothing to justify me to cast aside the great principles of morality and faith. I hope the Citizens' Representatives who love me will not bear to force upon me the task which would be difficult for me to execute. I further hope that the General Representatives of the Citizens' Representative Convention will take careful and mature deliberation to request somebody else to ascend the throne.

But on the following day the State Council renewed its petition and Yuan Shih-kai accepted.

As was anticipated the news of the overthrow of the republic was the signal for an insurrection in the south, where the republican feeling is strongest. The Province of Yunnan is in active revolt under the leadership of its Governor, General Tang Chi-wao, and the movement is obviously spreading altho the censorship prevents anything from being accurately known. The Chinese Government has warned travelers and missionaries to stay out of the provinces of Yunnan, Kwang-si, Sze-chuen, and Kwei-chow. Yuan has announced that a system of compulsory military service will be put into effect at first in the provinces of Chili and Shang-tung and later thruout the empire. This plan, if carried out in the population of over 300,000,000, will produce the biggest army that the world has ever known.

Americans Murdered in Mexico

The murder of nineteen Americans in the Mexican State of Chihuahua has caused sharp debates in the Senate at Washington, where resolutions authorizing armed intervention have been introduced and supported in speeches attacking the policy of the Administration. On the 11th, a small force of soldiers who were formerly in Villa's army, commanded by General Lopez and General Reyna, stopped a train

Paul Thompson

AT HARD LABOR—BECAUSE OF THE WAR

An English woman worker standing at the rolling mill to catch the red hot plates as they come thru and return them. It is severe work for a man

near Santa Ysobel, about fifty miles west of the city of Chihuahua, took from it nineteen Americans who were on their way to the Cusi mines (owned by the estate of the late Potter Palmer, of Chicago), robbed them, tore off their clothing, and put them to death. The condition of their bodies, which have been recovered and brought to El Paso, shows that they were mutilated after the fatal wounds had been received. One of the men, Charles R. Watson, was general manager of the mines and chairman of the Chihuahua Miners' and Smelters' Association. Another, W. J. Wallace, was the general superintendent of the mining property. In the group were also the company's chief chemist, the foreman and the bookkeeper. A majority of the victims were graduates of our colleges or technical schools, and one, C. A. Pringle, had been a noted athlete at the University of California. The first news of the murders was brought by Thomas H. Holmes, the only member of the mining party who escaped. Accidentally falling into some bushes, he was concealed by them until night, when he began to make his way to a place of safety.

It is said that these men were invited by General Obregon, the Carranza commander, to return to the mines. General Trevino now says that at Chihuahua City they refused a military escort. Mr. Edwards, our Consul at Juarez, asserts that he was asked by Secretary Lansing to procure a protecting force from the Carranza leaders, and that General Trevino and General Gavira assured him that a military guard had been sent with the train. At Washington, however, it is said that Secretary Lansing's instructions related not to this party but to the protection of all Americans in the state. His warning that Americans should come out of Mexico had not been revoked. There is

evidence that Villa, resenting the recognition of Carranza's Government, had threatened to kill Americans. It is thought that in this way he planned to embarrass Carranza and to force intervention.

In response to a demand from Secretary Lansing, Carranza undertook to pursue, capture and punish the murderers. He declined the aid of Americans, offered from Texas. On the 13th, a small force of Americans and Mexicans, who were guarding property at Madera, captured General Almeida and General Rodriguez, of the Villa army. Almeida was at once shot, and Rodriguez was put to death a day or two later. Forty of their followers had been killed. It became known that two more Americans, George F. Pearson and Bert Kramer, had been murdered. At the request of our Government, American mining companies ordered their employees to leave the country. Several hundred refugees arrived at El Paso last week on special trains. General Huerta, for seventeen months President of Mexico, died last week at El Paso, where he had recently been subjected to four surgical operations. He was under arrest and was to have been tried this month.

The Question in Congress Before the nineteen men were killed near Santa Ysobel, our Senate had taken up the Mexican problem, and had adopted without opposition a resolution introduced by Mr. Fall, Republican, of New Mexico. This resolution, suggested by the pending nomination of Henry P. Fletcher to be Ambassador to Mexico, asked the President for information, mainly in answer to ten questions, relating to the recognized Government, its character and history, its assurances of protection for the lives and property of Americans, its ability to pay claims for

Underwood & Underwood

HAVING THEIR PICTURES TAKEN—BECAUSE OF THE WAR

The Germans are photographing the women and children of Northern France, identifying each by a number, and those who wish to move or travel must identify themselves before they can get passports

damages, etc. Mr. Wilson was requested to send all the reports of the Brazilian Minister who has been representing our Government, the reports of all our consuls for four years past, and a history of the occupation of Vera Cruz, with an explanation of the evacuation of that port. Speeches were made in which Republicans criticized the President's policy.

The news of the murders was followed by demands for intervention. On the first day, Senator Sherman, Republican, introduced a resolution (with a long preamble), providing that we should invite the six Latin-American nations that were members of the recent Mexican conference to join us in demanding action by Carranza, and, if he should fail, to stand with us in intervention, with the understanding that after the restoration of order we should withdraw. Mr. Borah and Mr. Gallinger, Republicans, made speeches in which it was said that the time had come for laying aside the policy of "watchful waiting." Mr. Stone, Democrat and chairman of the Foreign Relations Committee, said he had supported the President's policy and that of Mr. Taft for five years against his own convictions, for he had thought that armed force should be sent into Mexico. But he asked for delay now, in order that the President might pursue his chosen course. Senator Thomas, of Colorado, blamed the oil companies for the trouble.

On the second day there was a resolution in the Senate from Mr. Lewis, Democrat, authorizing the President to order the army into Mexico, to pursue the murderers and protect American property. In the House there was one authorizing such use of the army and the navy. The third day was marked by a bitter debate in the Senate, where the attitude of some Democrats had

undergone a change. Mr. Stone had been talking with the President. With Mr. Lewis he accused the Republicans of acting in the interest of politics. Mr. Lewis said they sought to make the Mexican question an issue because they had no other. Intervention would turn South America and Central America against us. Mr. Stone asserted that it would be monstrous to go to war after recognizing Carranza and without giving him an opportunity to do what is required. Mr. Fall attacked the President's policy, and Mr. Works, Republican, of California, put in a resolution empowering him to use the army in Mexico. In the House, Mr. Slayden, of Texas, Democrat, uttered a warning about danger along the border, where the patience of Americans was nearly exhausted. But Governor Ferguson, of the same state, had just published a statement in which he said that those opposing the President should remember that the United States was wholly unprepared for armed intervention. Mr. Roosevelt said that we should send the regular army at once, and that General Wood was the man to lead it.

There was no indication that the President would change his policy. He will continue, it is said, to look to Carranza for the capture and punishment of the guilty. If Carranza fails, other aspects of the question will be considered.

National Politics

At a meeting of the national committee of the Progressive party in Chicago last week a declaration of principles was adopted, and it was decided that the national convention should be held in that city on June 7, the date of the Republican convention there. "We take this action," said the committee, referring to the date and place, "believing that the surest way to secure for our

country the required leadership will be by having, if possible, both the Progressive and the Republican parties choose the same standard bearer and the same principles. We are confident that the rank and file of the Republican party and the very large independent vote of this country will support such an effort. If the Republican convention meets this crisis in the spirit of broad patriotism that rises above partizanship, the effort for a common leadership will be successful." George W. Perkins, the committee's chairman, said all the members hoped for agreement upon a candidate, who would "not necessarily have to be Colonel Roosevelt." There were indications that Justice Hughes was regarded with much favor.

The declaration of principles, after reaffirming the old platform, severely criticized the Wilson Administration, saying it had failed to deal adequately with national honor and industrial welfare, had suffered Americans to be slaughtered in Mexico and on the high seas, permitted American liberty to travel and trade to be subject to the arbitrary and lawless coercion of foreign belligerents, had made no adequate protest when the law of nations disappeared, and had shown a supine spirit, "whose sure consequence is the contempt of the world." Our people, it asserted, had become impatient of "leaders who hold that comfort, prosperity and material welfare are above honor, self-sacrifice and patriotism." Complete preparedness was demanded, not merely in military armament, but preparedness that would mobilize resources and create a spirit unalterably opposed to militarism while it would view the doctrine of peace at any price as futile, cowardly and unrighteous. In a letter to the committee, Mr. Roosevelt said we must insist on the most thorough-going preparedness to protect our rights against all possible attacks by any aggressors, and that this would be the best guarantee of any honorable peace.

President Wilson has not objected to the publication of a very long letter, relating to the proposed limitation of the presidential term, sent by him in February, 1913, after his election but before his inauguration, to Congressman A. Mitchell Palmer. This has been read with interest because of its bearing upon his candidacy for a second term and the Baltimore platform's utterance in favor of a single term. In the letter, most of which is an argument against constitutional limitation of the term of service, he pledged himself to resort to nothing but public opinion to decide whether he would be a candidate again in 1916. Constitutional limitation, he said, would be unsatisfactory from every point of view. We should fatally embarrass ourselves by it. One term of four years might be too short for a President engaged in a great but unfinished work of reform. The people might be cheated, rather than served, by limitation. In his opinion there ought to be no more nominating conventions, but nominations

should be made directly by the people at the polls.

It is generally understood that Mr. Wilson is a candidate for renomination. Ex-Senator Elihu Root has asked that his name be not permitted to appear on the primary ballots in Minnesota, saying that he is not a candidate. It is said that the New York delegates will go to the Republican convention without instructions in favor of any one.

The New Haven Trust Case

In the suit of the Government against eleven former di-

rectors of the New York, New Haven and Hartford Railroad Company, under the criminal provisions of the Sherman Anti-Trust law, the jury, after being out for fifty-one hours, brought in a verdict, on the 9th, acquitting six of the defendants and disagreeing as to the remaining five. Those acquitted are A. Heaton Robertson, New Haven, a lawyer and formerly a judge; Robert W. Taft, Providence, banker and manufacturer; D. Newton Barney, Farmington, Conn., prominent in electric lighting companies; James S. Hemingway, president of a bank in New Haven; Frederick F. Brewster, New Haven, a prominent merchant and yachtsman; Henry K. McHarg, Stamford, Connecticut, formerly one of the governors of the New York Stock Exchange. The most widely known of the five as to whom there was disagreement is William Rockefeller, brother of John D. Rockefeller, the Standard Oil multimillionaire. With him are Charles M. Pratt, associated with Standard Oil interests; Lewis Cass Ledyard, formerly

Underwood & Underwood

HOMELESS AND BITTER COLD—BECAUSE OF THE WAR

But this time it's industrial war—and the refugees are in East Youngstown, Ohio, where they were burned out in the fires that followed strike riots

counsel for the late J. Pierpont Morgan; Edward D. Robbins, formerly general counsel of the New Haven Company; and Charles F. Brooker, a brass manufacturer, and formerly the Connecticut member of the Republican National Committee. The number of those originally indicted was twenty-one, but immunity was granted to three, and six were permitted to have separate trials.

For seventeen ballots the vote was eight for acquittal to four for conviction of all of the defendants. Then, the judge having said that there could be a divided verdict, the jury by unanimous vote acquitted six. The defendants were accused of conspiring to monopolize the common carrier transportation of New England by acquiring and combining steam railroads, trolley lines and steamship companies. The trial consumed nearly three months, and there were more than 2,000,000 words in the record. It is said that the cost of the trial was \$200,000 to the Government, and \$575,000 to the defendants.

The Government has decided to try again the five men as to whom there was disagreement, and to proceed no further against those who were permitted to have separate trials. Two of these are George F. Baker, a prominent New York banker, and Theodore N. Vail, president of the American Telephone and Telegraph Company.

Higher Wages At the present time about 400,000 members of the four great railroad unions are voting to decide whether a demand for an eight-hour day, with time and a half for overtime, shall be made in April. Railroad officers held a conference last week about this movement. One of them afterward said that the demand would not be

granted, because the proposed change would mean great loss and might even drive some roads to bankruptcy. He estimated the increase of pay at more than 30 per cent and said the change might require the employment of 80,000 more men.

The Steel Corporation's grant of 10 per cent to between 150,000 and 175,000 men will add at least \$12,000,000 a year to the payroll. It is said that the number of the company's employees now exceeds 240,000. By the terms of the new agreement with its men, the Colorado Fuel and Iron Company is required to increase wages when advances are made in a kindred industry. Therefore an increase promptly followed the announcement made by the Steel Corporation. Other similar increases have since been announced. The Pennsylvania Steel Company has given 10 per cent to 6000 men, and the Harrisburg Pipe Company an equal advance to 2000.

Order has been restored at East Youngstown, Ohio, where twenty-six of the strikers have been indicted for rioting, burglary and the destruction of property. Work has been resumed in the mills, the strikers accepting an increase of 10 per cent. Thomas H. Flynn, general organizer of the Federation of Labor, publicly asserted that the riots had been caused by capitalists who desired to depress the price of the companies' stock, in order that they might buy it at low figures for a projected steel combination. As he connected the Colorado Fuel and Iron Company with the project, John D. Rockefeller, Jr., says that those who control that company have no interest in or knowledge of such a combination. In Meriden, Connecticut, two companies manufacturing silver goods have sued local unions for damages due to a recent strike.

LAWSON PURDY

The newly elected president of the National Municipal League has been president of the New York Department of Taxes and Assessments since 1906. He knows taxation thoroly and believes in the city manager idea. It is a new thing for a city official—and a New York city official at that—to have contributed so much to the cause of good city government that he deserves and receives such an honor as this

FROM STATE TO STATE

ALABAMA: Boys' pig clubs are becoming important institutions in this state. Demonstration agents, aided by teachers in rural schools, are organizing them everywhere, and the success of those boys who have been induced to keep up their interest in the work has attracted others to it. A report from one county gives a fair idea of what is being done in many others. Of 130 members enrolled last February fifty-one sent in the September report called for, tho only ten of these answered all the questions. These ten, however, with one pig apiece, showed a net profit of \$90. This, together with the valuable prizes awarded to the ten boys at an exhibition in October and the local fame achieved by their success, aroused the interest of many more boys, and this year's enrollment embraces nearly every eligible boy in the county.

ARKANSAS: What is known as the Newberry statewide prohibition law went into effect at the beginning of this year. This law and the Woods nuisance act form a combination which, it is believed, will make the manufacture, sale or gift of liquor in Arkansas too dangerous for anybody to undertake. Under the law as it now stands no person may plead guilty and no court may suspend sentence for a first offense. No second chance is to be given. All persons convicted must go to the penitentiary for at least one year.

IOWA: A recent survey of the farming situation showed that Iowa is no longer the grain-selling state that it was a few years ago. Of all the sales now made by its farmers 75 per cent represent live animals and animal products, 22 per cent crops and 3 per cent miscellaneous produce. In other words, the Iowa farmer has learned that there is more profit in feeding grain to animals than in selling it.

LOUISIANA: A large delegation of prominent Louisianians has been sent to Washington to induce Congress to open the port of New Orleans to Central and South American cattle. It was the ticky condition of these cattle that caused the Government to close this port to them, but since the port of Galveston is open to Mexican cattle, which are said to be no less ticky, the Louisianians hold that they are discriminated against. They say they have all the facilities for dipping cattle that Galveston has, and they want the same privilege of bringing them in. They also say that in addition to needing these cattle for their farms they can procure a large packing plant for New Orleans if the restrictions on importation are removed.

MAINE: High class municipal music on a self-supporting basis has been thoroly established by the City of Portland. It is now in the midst of its fourth successful season since Cyrus H. K. Curtis gave a great organ to the city as a memorial to

the former local musical leader, Kottschmar. Will C. Macfarlane, the municipal organist, receives a salary from the city, but the balance remaining after the winter subscription concerts and the summer pay concerts has more than offset this every year. So, while the city does the business, the cost to the city government is nothing; and some of the best musical talent in the world is heard at its concerts.

MASSACHUSETTS: The rivers and harbors committees of Congress are going to hear much about Massachusetts this winter. The people of the Merrimac Valley are going to tell them that this valley handles in value of raw material and finished product 7.5 per cent of the foreign trade of the United States; that this trade represents \$1,000,000 for every working day in the year; that it exceeds the foreign trade of Boston by more than \$97,000,000 a year and that, therefore, the improvement of the Merrimac River to Lowell, against which a United States engineer has twice reported, should be made. Also the people of Holyoke are going to show that they pay exorbitant freight rates because the one railroad reaching there has no competition, a condition of things which might be remedied if the Connecticut River were made navigable from Hartford to Holyoke.

MINNESOTA: At the recent largely attended convention of the Equity Coöperative Exchange in St. Paul farmers of Minnesota, Wisconsin, North Dakota, South Dakota and Montana organized what is to be known as the National Buying and Marketing Association. Its purpose is to cut out middlemen by buying supplies for its members directly and in quantity. It is not to interfere with the Equity Exchange, but is rather to work with it. Another incident of the convention was the breaking of ground for what is said to be the first terminal elevator to be erected by farmers in the United States. When the first shovelful of earth had been turned President Anderson of the Equity Exchange said: "This is the beginning of a day when justice will prevail in the grain markets of the country."

MISSOURI: The new Coliseum in St. Louis was one of the weightiest arguments used in favor of that city for the Democratic national convention of this year. The building is of concrete, steel and glass, and is said to be one of the best ventilated and lighted convention halls in the United States. Its acoustic qualities are so excellent that grand opera has been successfully given in it. The actual seating capacity is 14,000 persons, and there are many and ample committee rooms. All balconies and galleries have separate entrances. The Coliseum is within easy walking distance of the downtown hotels and two street car lines pass its doors, with transfer privileges to all parts of the city for one fare.

MONTANA: The successful completion of the first electrical unit of the Chicago, Milwaukee & St. Paul Railroad was celebrated at Butte after the electric locomotives had shown their superiority over steam engines on an up grade in the Rocky Mountains. In the test one train, weighing 2200 tons, was drawn with difficulty by three steam locomotives. Another train, weighing 3000 tons, was drawn by two electric motors which swept up the grade with no apparent effort. President Earling of the St. Paul road, after witnessing the test, predicted that steam will be supplanted by electricity on all the railroads of the country.

NEVADA: The "Jolly Good Fellows" of Reno to the number of about 100 combined charity with sport a few days before Christmas by spending a day in the mountains shooting rabbits for the poor of the city. As a result of what they called a day of delightful sport they marched into town that evening with more than 1200 rabbits, all of which were turned over to the Salvation Army and other philanthropic organizations. It is said that not less than 500 families who otherwise would have had no meat for their Christmas dinners were bountifully supplied.

NEW HAMPSHIRE: The United States Government has purchased, under the Weeks forestry act, a tract of 5500 acres in the White Mountains. This will be added to the lands already acquired and set aside as a public reservation. The new tract is situated on the slopes of the Presidential range and includes the summits of Mt. Webster, Mt. Jackson and Mt. Clinton. It contains one of the finest growths of virgin spruce remaining in the White Mountains region. This purchase gives the Government control of practically all the peaks of the Presidential range and brings its holdings in New Hampshire up to more than 270,000 acres.

NEW YORK: The special export course established a few weeks ago in connection with the College of the City of New York has proved so interesting to exporters that it has been necessary to prepare a waiting list. The course includes such branches as sales organization and sales methods in the foreign field, transportation problems and government regulations affecting international trade, special problems arising from war conditions and decrees and regulations of foreign governments. The direction of the course is in the hands of an advisory committee composed of recognized experts in marketing, financing, shipping and in legal and commercial education matters, representing the college, the Merchants' Association, the National Association of Manufacturers and the Board of Trade and Transportation.

NORTH CAROLINA: Colonel Benehan Cameron of this state, vice-president of the Southern National Highway, reports that

the completion of that transcontinental route is in sight. Colonel Cameron and President D. M. Potter of Clifton, Arizona, have been the moving spirits of this enterprise since its inception more than three years ago. With only a few gaps to fill, the highway is practically completed from Morehead, North Carolina, on the Atlantic, to San Diego, California, on the Pacific. It is intended especially as a winter route, lying sufficiently far south to avoid the snow and ice which in winter may block the Lincoln and other more northerly highways.

TENNESSEE: The experiment of working Negro convicts on the roads of Tennessee has convinced the State Board of Control that this plan is a great improvement upon the old contract system. Of fifty-five state prisoners, all Negroes and unshackled, who worked on the roads of Williamson County nearly all summer, twenty-five were made trustees and only three attempted escape. The health and tractability of the prisoners were said to be much better than under the old system. President Denton of the Board of Control says the experiment has been successful and that a number of contracts with counties will probably be made for next season's road work.

WEST VIRGINIA: Forty years ago the salt industry in the Kanawha Valley and Pomerooy Bend was one of the most profitable in West Virginia. Many thriving towns were built up about factories which produced salt by evaporation of water pumped from wells. Bromine was a by-product barely worth marketing. When the Michigan and other rock salt beds were developed and salt was dug from the ground the West Virginia factories could not compete and the towns were deserted, save for a few factories that struggled on in a very small way. These relied mainly on bromine, which the rock salt beds did not produce. Now the European war has sent the price of bromine from 25 cents to \$5 a pound, and the deserted towns are again becoming prosperous. One factory recently sold twenty tons to the Germans for \$200,000 cash. Bromine is used in the manufacture of munitions, especially asphyxiating bombs.

WYOMING: A land case of exceptional interest is going thru the Wyoming courts. Early in November a court commissioner issued an injunction restraining H. F. Ketchum and others from entering upon valuable oil lands in the Elk basin which they claim by right of location. The same land is claimed by C. L. Woods and others by right of discovery of oil thereon. Judge C. E. Raymond, sitting at Cody, has sustained the injunction, holding that the locators had done nothing to develop the land, while the discoverers of oil had given it the greater part of its value. The case will go to the higher courts.

THE WRONG WAR

BY PRESTON W. SLOSSON

Because of a war that came not
The world bleeds in a trench,
And mothers and wives are molding shot
For the German lad or the French;
For league on league the corpses lie
Looking to heaven and asking why.

The evil war is upon all lands,
The war that the great kings made,
Because the peasants had held their hands,
Because the workers had stood afraid;
The mercy shown to the lords and the crown
Is wringing blood from the field and the town.

Men die for the high lords' fancied gain
Who would not die for their own;
They sin for another the sin of Cain,
For another's guilt they atone;
Obedient servants to Kaiser and Tsar,
They are paying the price in shame and scar.

Oh, better had perished the Kaiser's name
In a clamorous forest of pikes and blades,
And the Tsar's tall palaces all aflame
In a bloody battle of barricades;
That Cromwell's ax or the guillotine
Had swept off the rubbish and left all clean!

L'Envoi

Prince, you are making a war today
Which is turning God's footstool Hell's own hue;
You are teaching your subjects how to slay,—
Why *didn't* they turn their swords on you!

WHY WE SHOULD READ BOOKS

BY CORRA HARRIS

AUTHOR OF "A CIRCUIT RIDER'S WIFE," "IN SEARCH OF A HUSBAND," "THE CO-CITIZENS"

WE cannot always choose the people with whom we associate in real life. And we cannot always escape such associations. One's own family may be of a different class. A woman may marry a brute, a man may marry a fool. Our children may be far removed from us in mind and sympathy. Poverty may force a man or a woman of refinement and the highest aspirations into the lowest strata of society where his or her companions are stupid or perverted by their condition into a poisoned sense of things and values which are abhorrent and destructive. Certain professions remove people from normal and healthy relations with their kind. Crime, or any other form of illness, may do the same thing.

These conditions exist because we exist. But whatever one's condition in life, there is a great society from which we may choose our companions, our thoughts and our scenes. The poorest laborer, the drudge, the man in the factory, or the woman in the sweat shop may choose companions from among the greatest men and women who have ever lived in poetry, history or fiction. Nothing else is so easy to accomplish. He may do it without changing his clothes, without toadying to his superiors in authority, without enduring those humiliations which often overwhelm him when he seeks to better his social relations. There is no society so good, so varied and so surely in reach of every man as that to be had from an intimate knowledge of books. Any man, however lonely, or friendless,

or removed from the currents of modern life, may, if he will, surround himself with philosophers, poets, the most interesting women in the world, and the wittiest companions, at a cost far less than the price he pays for saloon privileges, moving pictures, vaudeville shows or more doubtful forms of amusement.

The trouble is that the people, the great body of the people, have not yet discovered that life and character are finished in time and recorded in books, and that the life and character of living men are only phases, the illuminated script of passing conditions, not altogether worth the absorbing attention which they receive, and that these still transitory people are not nearly so helpful nor so refreshing as companions because they are swayed by all the uncertainties and errors of standard by which they live.

The only men who live forever are the dead men, or those great characters conceived by poets and other faithful interpreters of human nature.

Therefore it is better to balance the influence of one's transient mortal associations by acquiring a peaceful intimacy with these ever living men and women whose deeds, aspirations, loves and courage are recorded in books, who are never against us, who never despise us, nor fail us, nor betray us, being stripped now of that mortal part which renders all men uncertain, liable to hypocrisies, conceits and a sort of human heinousness which life in the flesh never quite escapes.

There is no braver, wiser, more Christian counselor for any man than Socrates, no nearer brother than Jesus, no more faulty or endearing character to be found in life or literature than that of King David. If one reads it simply, without prejudice and without the merely theological interpretations of preachers and commentaries, there is no book which compares with the Bible in charm, dignity and wisdom, and in the immediate companionship of great souls and little souls and just common souls. The men and women, the angels and even the God of this book are all co-temporary with us. This is the Book of all books for every man and every woman of whatever condition.

It is necessary to read histories in order to learn the facts, the forces which evolved and established such and such a civilization. But no history, however carefully compiled, is so veracious as interpretative fiction of the same period. Novels are to history what illustrations are to any text. They portray the lights and shades of character, draw the lineaments of life itself, as well as facts. They dramatize manners, customs, tempers, petty emotions, virtues and vices where history chiefly records the effects of these human elements upon society. The novels of Dumas, Balzac and Hugo are an essential part of the history of the French people. No man can know England without reading Dickens' novels. They contain the drama as well as the record of those reforms which completely revolutionized certain

English institutions. We cannot know our own country, even if we read every history, if we do not also read certain novels covering the same periods. In times to come, the historian himself must turn to the socialistic and suffrage fiction now being produced here in order to visualize to himself the changes in economics and forms of government which are now upon us. Fiction is the flesh and blood of literature, as history is its bones and sinews, and as poetry and religion and art show the wings and spirit of it. Nothing is so lasting, or so important to know as what is written in books. You may see all the moving pictures and only learn in the most casual way what is already preserved in the lasting forms of literature. And the moving pictures are reels which fail. They pass like the leaves on the trees, and you must turn again to the history or the novel to recall those scenes, however vivid. The retina of the eye does not retain the images of natural scenery through which you pass so swiftly during an automobile tour. At the end it is all blurred, one memory upon another memory. But there is scarcely a mountain, or plain or valley or desert in this country which is not perfectly visualized in some novel or poem, or history with an art and sympathy which approaches the vividness of that first scene in Genesis when the light was divided from the dark and the waters gathered together in one place, and when the dry land appeared, virgin clean from the depths of virgin seas,—all of life and the nature of life that is worth having, and that we *know* we have, is finished and recorded in books.

Even this is not enough to claim for the value of books. For the most inspiring and helpful men and women we can meet in them have no part in history. They have never lived at all in the flesh. They are, and will ever remain, immortal creations which sum up and portray in themselves more than any one living character can portray. They are the kindred of every man, and the mirror souls of all men, and of all women. The heroine of Hawthorne's "Scarlet Letter" is the eternal plea for all the women of her class, known or unknown—the secret companion of their sufferings, the very truth of their sad hearts. It is the fashion now to pass over the knights of King Arthur's round table. But it is a bad fashion, and has no basis in the truth of life. These men are still among us, still making lonely pilgrimages for the Holy Grail, and they find it. This is the good of reading poetry and of believing it. The

man who does that believes good of himself, which is a needful faith.

Thus one may learn what is best and that which is worst in himself and even in his generation by making the acquaintance of people, in fiction no less than in life. John Barclay, the hero of "A Certain Rich Man," is a typical American financier. To read this novel and follow this man thru the various phases of his development is to know and understand the methods by which wealth is acquired and markets controlled as the average reader never would learn from a treatise upon finances and industrial conditions, because this story dramatizes the power of wealth, and the frenzy of greed in a generous man's heart.

If you wish to understand racial distinctions, books compile these differences as you could never find them in the separate individual. Read Du Bois and comprehend the "Heart of the Black Folk," and read Booker Washington's autobiography in order to discover the way of their salvation, which cannot be found in Du Bois' lament.

If you would know the Jews, who are both spiritual and decadent, read Isaiah first, and then read the novels of a certain Jewish author in this country, who spent years in prison and whose only companions were characters chosen from books in the prison library.

If you desire to know the most genial and companionable side of England, minus war and hate, choose those of Joseph Conrad, a Polish Jew, who never saw or pronounced an English word until after he was nineteen years of age. He is today a master of that tongue, the gentlest, wisest and most whimsical interpreter of the English character. This was achieved by a study of English literature as well as of the English people. No foreigner has the time in his own lifetime to understand the people of his adoption without learning more of them from their books than he can from actual association with them.

This is a plea for reading books, not merely good books. For every thoughtful person has observed that the person who reads only "good books," "useful books" and "profitable books" is invariably afflicted with a certain invincible conceit, intolerance, hypocrisy and a meanness of the mind which is incurable. To read only good books is like associating with only the "best people"—very debilitating to the mind and character. It results in snobbishness and in a lack of knowledge and sympathy with other kinds of people—who are fortunately in the majority.

Therefore read books, good, bad and indifferent, as you would hearken to a good man, love something sadly kin to you in a bad one, and as you would bear with the frailties of just the common fellow. Thus only is it possible to attain a broader understanding, which is something mere wisdom often fails to impart. The point is to keep your balance and go ahead into books as you would make your way into any other mixed crowd. Bear in mind that the immoral man who preaches morality is a liar and a thief tho he speak with the tongue of men and of angels. Likewise the book which portrays vice even while affecting to condemn it, is really written to feed the reader upon offal, however masterly its style. But read it, in order that you may familiarize yourself with this commonest form of deceit in men and literature—not, however, for the purpose of condemnation, which is also one of the subtlest forms of self-congratulation, but that you may avoid this ignoble quality in your own character, which, if you are as observant of it as you are of other men's characters, you will find needs constant shriving.

Finally, but not least important, one should read books for the pleasure, the relaxation which comes from associating with other men's thoughts. If one seeks this same refreshment in society, he must furnish himself, go somewhere, and play his part, give as much as he receives or more, take his chances with fools or dangerous friends, while in a book the author lays the scene and plays all the fools, friends and women for his benefit. All that is required is that he shall read and understand. One of the most distinguished and one of the bravest and best men this country ever produced always kept one of Laura Jean Libbey's novels upon his desk. It was easy going after a hard day's work, reading this simplest syntax of love and adventure. Such books cannot injure any man unless he is a maudlin sentimentalist, and in that case nothing can preserve him. So he may as well, and better, take his foamy romance instead of the literally frothing society he would choose if he went abroad for the evening.

Books are not better comrades than people, but they are often safer and kinder, always less expensive and less exacting. And no one can know people without knowing the books into which they have been laid for generations, and out of which they all come, elegant or dingy replicas of other men and women who live and move in those pages.

WHEN WAR HAS PASSED BY

CARTOONS BY LOUIS RAEMAEKERS

spite of Dutch neutrality M. Raemaekers is not hesitant in speaking freely even when the outrages he attacks are distinctly partizan. He was born the year before the Franco-Prussian War, studied art in Amsterdam, Brussels and Paris, and has exhibited both portraits and landscapes. For eight years he has been busy with newspaper and magazine work, and the war has given him all his themes for the past year.

CHRISTMAS DAY!

Hypocrisy, manslaughter and despotism at
the manger

DOING THEIR BIT IN CANADA

BY GEDDES SMITH

SUPPOSE Congress should call for a volunteer army of six and a quarter million men. Can you imagine the mighty gasp that would go up from a hundred million throats? Yet, in proportion to her population, that is what Canada has actually decided to do—and is well on her way toward accomplishing.

If you took every man, woman and child in Canada, including the babies who couldn't stand up for themselves, and called every sixteenth person to step out and be measured for khaki, and then bought him a soldier's outfit, fed, housed and trained him for six months, and paid him \$1.10 a day from his enlistment until he was killed or retired, you would be doing no more than the Dominion is doing for the British Empire. And that takes no account of separation allowances, gifts of supplies and money, the Red Cross, or the Patriotic Fund. It is no slight thing for Canada to undertake to raise half a million troops from her population of eight millions—a population peace-minded like our own. It could not be done unless the country was united in support of the war.

We in the United States are living next door to a nation in arms, a training camp three thousand miles long. Enter it, as I did, by the familiar Niagara Falls gateway. On the American side, on Mediation Island in the little lake in the State Reservation, the A B C flag flies serenely in commemoration of the international peace making that was done at Niagara. But the bridge that you cross to the other side is guarded by sentries in khaki, rifles over their shoulders, bayonets fixed. Before the Clifton House, where the mediators sat, paces another guard. Queen Victoria Park is a military post. If you have business at the administration building you are received by a sentry who whistles shrilly for an orderly to conduct you into the soldier-filled offices.

Go further; the man in khaki is everywhere. Walk down Yonge street, the Broadway of Toronto, in the evening, when the ten thousand soldiers

quartered about the town are released from the barracks. They swarm over the sidewalks, in the poolrooms, the restaurants, the movie theaters, even in the jewelry auction rooms, where wrist-watches and trinkets for stay-at-homes can be bought. Highlanders with the rakish bonnet; fresh-faced young lads in swinging "British warms"; soldiers with girls, soldiers with their pals—who are often so much seedier than the men in uniform that you marvel at the improvement army rations and army garb can make—soldiers with more soldiers. You almost catch the habit of saluting, yourself. The

hard-skinned ruddy cheeks, the bristly yellow mustache, the swagger stick—these are omnipresent.

Or walk down quaint, tortuous St. Paul street in St. Catherine's, type of the smaller Ontario city; recruiting streamers flung across the road urge you to enlist, and all roads lead to the armory. Listen to the smoking room talk on the Pullman; here is a man on his way home, still husky from the chlorine gas that drove him from the trenches; here are two old army men whose boys are at the front in the old regiments; here is a farmer whose crops are in and who is on his way to enlist at the old home. In Prince Edward Island the best of the young fellows are missing this winter, so the girls tell you. Away across the continent on Vancouver Island an adventurous squad of clean-cut lads is learning that hazardous business of scouting by aeroplane. On Winnipeg's main street three or four battalions jostle each other with their recruiting stations, gaudy with posters. In Peace River

Crossing, away off at the end of the railroad in the north, the walls of the primitive hotel display the call to the colors. Edmonton of a Sunday flocks to greet returned soldier-invalids at special church services. Even the Yukon has sent its contingent.

Last summer men were in training at field camps scattered over the Dominion, one in each militia division. When cold weather came they "hiked" in to the cities, where in several cases they found admirable quarters at the fair grounds. Those who had spent the summer at Niagara-on-the-Lake marched to Toronto and took possession of Exhibition Park, where the biggest fair of all Canada is held every autumn.

Here I visited them one rainy morning when only occasional squads were marching over the soggy lawns. They had made a drill hall out of the largest building, and were filling it with a babel of orders and a patchwork of vibrating khaki, as squad by squad they went thru the manual of arms or stabbed imaginary foes

STIMULATING NATIONAL PRIDE TO GAIN RECRUITS

This poster, widely circulated in Canada, not only combines the Union Jack and the Maple Leaf, but bases its plea on the heroic conduct of the first Canadian contingent. Thirty thousand men were landed in England ten weeks after the war began and made Canada famous by their heroic conduct at the front. At Ypres they held a thin line against a bitter German attack

James, Toronto

RECRUITING MEN AND CIGARETS

There are hundreds of schemes on foot thruout Canada for adding to the comfort of men at the front—newspaper tobacco funds, bargain bake-shop offers, and the like. Here is a basket to catch gift cigarettes

with the bayonet. The overseas force is recruited both from the established militia regiments and from untrained civilians, so that men of all grades and no grade of military proficiency will be found in a single battalion. The seven thousand men then in camp were housed, a battalion to a building (1157 men of all ranks), in the exhibition halls. Long lines of wooden bunks in two tiers had been put up, and in one building the men were sprawling over them—bedding and equipment shoved to one side—while their platoon commanders lectured them; a fine display of Canadian manhood where prize pumpkins and potatoes had been shown a few months before. The refreshment pavilion had been brevetted mess hall, with army cooks in charge who were eager to explain how little they wasted and how good was the food. In the A. S. C. (Army Supply Corps) storehouse they were checking incoming edibles, and showed me tins of powdered milk on which—when transmogrified—they assured me cream would rise! Outside there were trenches for bomb practise and sham fights. The men would have more of that sort of training when their work in Canada was done and they were transferred to the Shorncliffe camps near London, to wait the call to France.

Down in the armory courtyard the rookies who had not yet been uniformed were flinging out their chests and shouting numbers in their first drill. Up at the University boys in khaki punctuated the strolling crowds in the corridors between lec-

Universities Companies, with college men in all the ranks, have gone. At the University of Manitoba this year only 67 out of 800 men students have failed to join either the O. T. C. or the overseas forces. St. Chad's, a little theological school in Regina, lost its whole student body and closed its doors.

At the end of 1915, when the Government announced that Canada's force was to be 500,000 instead of 250,000, there had actually been enlisted 220,000 men of all ranks, and nearly 120,000 of these had been sent overseas. Recruits had been coming in at the rate of nearly a thousand a day. Naturally the western provinces, where the proportion of foot-loose men of military age is large, have done better than the east. Alberta, with about a twentieth of the population, has raised over a tenth of the army. But for that matter Ontario, too, has done somewhat more than her share, and only Quebec has fallen far behind.

The French-Canadian situation has caused much discussion. Henri Bourassa,

At Toronto, as at a dozen other universities and colleges, there is an Officers' Training Corps which prepares men to accept commissions. There is no obligation on its members to enlist for overseas service, but they form the majority of the eight hundred undergraduates which this university alone has already sent. Naturally most of the officers thruout the Canadian Expeditionary Force are university men and four

leader of the Nationalists, has openly opposed recruiting, and the French-Canadian enlistments all told have been under 9000, from a total population of over two million. The devout Quebec Catholic is little moved by the plight of anti-clerical France, and has always been out of sympathy with the English-speaking majority in Canada. Yet Oliver Asselin, prominent in Bourassa's party, has offered to raise a regiment and has himself taken service, and the province is by no means wholly apathetic.

More than half the men already recruited from the Dominion are of British birth. The famous and unfortunate "Princess Pats" were mostly old British army men, with only a sprinkling of native Canadians. The percentage of native-born recruits has been climbing, but recent figures show that it had not yet touched fifty per cent—far below the ratio of native to foreign-born citizens. This is not surprising, for the home ties and the kin in the trenches must be the strongest motives for enlistment. The *Toronto Globe* asserts that the great mass of the native-born between twenty and thirty years old are still available for service.

England's difficulty with backward bachelors is not duplicated in Canada, where married recruits are now in the minority. Consequently, while the pinch is beginning to be felt in clerical offices, where trained young men can ill be spared, the effect in the shops so far has been chiefly to transfer jobs held by bachelor recruits to unemployed married men. But the Royal Northwest Mounted Police, equally notable for their efficiency and their gaudy uniforms (even the Canadian postman, in blue and red, outshines the sol-

ROOKIES DRILLING IN A VANCOUVER STREET

The pay commences with enlistment it is naturally impossible to outfit men immediately and drill often begins before the men are put into khaki. Six months' training is given them before they leave Canada

dier), have lost so many men, in spite of stringent restrictions, that the officers are forced to do prisoners' guard duty, and are in high dudgeon. In Leith, Alberta, there are already a handful of woman car conductors, but that is still a novelty.

Canada does more than send her men to fight. There is no space to enumerate the gifts that the Dominion, the provinces, and the people poured into Britain's storehouses in the early days of the war. "If you can't fight, you can pay," is the slogan for stay-at-homes. The women of Canada divide their energies between the Red Cross and the Patriotic Fund. It is a bad year for other philanthropies. Ontario alone has given \$1,875,000 to the British Red Cross. The Patriotic Fund, which supplements the separation allowances made to the wives and dependents of soldiers, has passed the six million mark. And if every man, woman and child in the Dominion has not bought something to eat, smoke, chew or wear and sent it off to some homesick Tommy in the trenches, it is not the fault of some thousands of shopkeepers who litter their windows with suggestive offers. As to the war loan of \$50,000,000, it is only necessary to say that ten hours after it was thrown open Ottawa had been assured of an oversubscription, and that after the subscriptions had reached \$106,000,000 the Government decided to keep an extra fifty millions and loan it to Britain to pay for war purchases in Canada.

Meanwhile it is not a pleasant year for Germans and Austrians in Canada. They are distrusted everywhere. A number have been interned. Rumors of German plots in the early days of the war filled Can-

ada. The Welland Canal revelations and actual attempts to destroy bridges justify the guards which have been placed at danger points all across the continent. But it is hard for the delicatessen dealers and their like—men and women who have lost their little circle of patrons and cannot collect their accounts from those who still do buy, because they're Germans, you know.

Canada has no such rigorous and muddle-headed censorship to fetter her newspapers as England has, but the telegraph news furnished by the press agencies is inspected before it goes out, and editors are warned not to print unauthorized matter. The Government has officially requested the press, moreover, to make no unfriendly editorial comment on the course of the United States.

This does not prevent a good deal of badinage and a pretty definite popular feeling that the United States has played a shabby rôle. "We don't want you to fight," the Canadian says. "Your navy isn't needed, you

James, Toronto

RECRUITING BY TRAMCAR

The work of getting enlistments is entrusted to the various battalion officers, and such novel methods as this sometimes result. Mass meetings, "recruiting concerts," handbill and poster publicity, and personal solicitation are all bringing in new men

your mercenary way about your shipping." This feeling of disappointment at America's attitude is well voiced by the *Winnipeg Free Press*:

Perhaps the official attitude of the United States will best be described as one of the tragedies of the war. For the spectacle of a great nation, which bled itself white for freedom, which has done vast things for democracy, and which has produced heroes and martyrs, now adopting an official attitude of unconcern while the bloodiest struggle of the ages against autocracy is in full swing, is depressing and uninspiring.

Canada feels so strongly that the Allies are fighting America's battle as well as their own that it seems entirely natural that Americans should enlist. Just how many have already done so is uncertain. There have been estimates, probably exaggerated, running as high as six thousand. A few adventuresome lads slip into Canada over the border, and there have been many enlistments from the western provinces, where the proportion of American immigrants is high. But at least there is an American Legion now being formed in Toronto, the Ninety-seventh Battalion, Canadian Expeditionary Force. At its head is Lieut.-Col. A. B. Clark, formerly of the Twenty-third N. G. N. Y., a Brooklyn regiment. Recruiting for this battalion, already two-thirds full, is going on all over Canada, the men who join being required to take the oath of allegiance only for the duration of the war. There are special physical restrictions, and it promises to be a

James, Toronto

DRILLING ON THE FAIR GROUNDS AT TORONTO

Recruits are gathered at the little villages and larger towns and first drilled in the local armories. Then they are concentrated at the divisional mobilization points in the larger cities. A recruiting train has done good service in Ontario

fine body of men. An ingeniously international device has been adopted: Canada's maple leaf in combination with the Washington coat of arms, which introduces the Stars and Stripes in an unimpeachable British-American version.

After all, a Canadian enlists in this war for much the same reasons as an American. I heard a young engineer who had just finished his job—a piece of railway construction—talking of his plans. "There's no more construction work," he said. "Hell, I don't want to go into the operating department. And I figure it this way: after the war I'll meet fellows I know on Yonge street and they'll say 'Were you over there?' and I'd feel pretty cheap to say 'No.' It's a shame not to back up men who need help." Here were three of the most powerful motives for enlistment: the desire for action, the pull of friends, the pressure of pride. At the other end of the scale were a crowd of applicants whom I saw in the Toronto recruiting station, forlorn ineffective men who were probably moved largely by the announcement, "Pay starts at once."

Certainly the king does not count for much in the matter, altho he fits well into stereotyped phrases like "Your king and country need you—now," which even that staunch liberal sheet, the *Toronto Globe*, prints every day. A genial Scotch railroad man put it this way: "George is a verra good fellow, but he don't bother me and I don't bother him." And it is doubtful, too, whether the idea of the Empire is responsible for Canada's devotion, except with the extreme Conservatives. Rather it seems to be a personal adherence to the old country and the old country friends on the part of those closely bound to

MAJOR-GENERAL THE HONORABLE SIR
SAM HUGHES, MINISTER OF MILITIA,
IN CHARGE OF RECRUITING

England; and then a firm conviction that Britain's cause is worth fighting for on its merits—a conviction that does not necessarily involve loyalty to the Empire or even patriotism. And to some extent there seems to be a national pride in Canada's own achievements. You hear the boast that Canada won the South African War for England; you can buy little books about *The Battle Glory of Canada*; the "heroes of St. Julien and Festubert" are invoked on recruiting posters.

It will be considerably harder to raise the second quarter-million than it has been to find the first. Canada began briskly, mobilizing a division within six weeks of the beginning of the war and putting 30,000 men into Great Britain before the middle of the first October, and has continued steadily, but she may well pause before going on to complete a levy that amounts almost to half the men of military age in the Dominion.

But she is absolutely confident of victory. And, curiously enough in so independent a member of the British family, she is quite content to furnish men and money and to let Britain run the war. "We're only amateur soldiers," a leading newspaperman said to me. "We would hesitate to think we knew as much about fighting as Kitchener." So there is little criticism of British blunders, and a cool, matter-of-fact way of talking and thinking about the war (always excepting that rather florid expectation of humiliating Germany), and, in a word, considerably more self-possession than might be expected from a nation which, long confident of her political vigor, has just begun to feel her economic strength, and yet chooses to remain British.

PEACE AT ANY PRICE

BY DAVID STARR JORDAN

Chancellor of Leland Stanford, Jr., University

Are we "For Peace at any Price?" Let us face the issue squarely. When we do this, the phrase has no meaning. For when the question really comes up, there is no peace to be had at any price. If any price will bring peace, real peace, let us pay it. In this war, no peace was offered at any price to Serbia, to Belgium, to France. Some sort of peace was offered at a price to Austria, Russia, Germany, and Great Britain. Should these nations have taken it at the price? This question each may answer for himself. And paying the price, would they have had peace, real peace, well worth the cost? And when real peace is offered, whatever the price, there is no need to talk of war.

What could not Europe have afforded to pay to prevent the great catastrophe? What has war cost Europe and when will it be able to repay?

And for us, we would see the price lists first. With Lincoln, we would count the cost. If we do not, it may stagger us. And will we get peace when we pay for it? Not the armed peace of fear and hate, for that is war scarcely half disguised, but the peace of mutual trust and international confidence. Sooner or later that must come, for as sure as the day follows night, the principle of federation must succeed unbalanced nationalism in the development of the civilized world.

IS THE CHURCH GOING BACKWARD?

BY REV. CHARLES STELZLE

WHEN the Federal Council of Churches—representing thirty Protestant denominations and seventeen million members—adopted its social service platform seven years ago, it was regarded as a great step forward. Various denominational agencies had been carrying on a social service propaganda, but it was felt that what was needed was an expression of opinion and a concrete program which should represent the entire Protestant forces of the United States. Included in this document were the statements that “the churches must stand for equal rights and complete justice for all men in all stations in life; for the right of all men to the opportunity of self-maintenance; for the right of workers to some protection against the hardships often resulting from the swift crises of industrial change; for the protection of the worker from dangerous machinery, occupational disease, injuries and mortality; for the abolition of child labor; for the suppression of the sweating system; for the release from employment one day in seven; for a living wage as a minimum in every industry; for the highest wage that each industry can afford; for the most equitable division of the products of industry that can be ultimately devised; for the abatement of poverty.”

Then came the statement which more than any other, perhaps, brought joy to the hearts of many social workers and workingmen in general: “To the toilers of America and to those who by organized effort are seeking to lift the crushing burdens of the poor, and to reduce the hardships and uphold the dignity of labor, this Council sends the greeting of human brotherhood and the pledge of sympathy and of help in a cause which belongs to all who follow Christ.”

The immediate response from both church and labor to the Federal Council's statement on the social question was most gratifying. Many of the leading denominations adopted the statement as their own social ideal; and leading labor papers gratefully printed the document.

But the long hoped-for revival of social justice has failed to materialize. Indeed, among most ecclesiastical bodies there is not even the same enthusiasm that was so apparent when the social

Charles Stelzle has devoted his life to the study of industrial problems; particularly the relations between the church and labor. He was for ten years superintendent of the Department of Church and Labor of the Presbyterian Church. He is on the staff of the Newark (New Jersey) "News" and is the author of numerous books on Christian problems—most recently "Church and Labor," "American Social and Religious Conditions" and "The Gospel of Labor."—THE EDITOR.

service platform of the Federal Council was adopted seven years ago. Within the past two or three years there has been a decided reaction in this respect, which has resulted in the dominance of the conservatives in practically every evangelical denomination in this country. At any rate, this is the impression that one gets from the discussion and the legislation which develops in ecclesiastical conferences and conventions.

At the Columbus meeting of the executive committee of the Federal Council of Churches, held recently, the hopelessness of securing action on any social or economic matter which involved legislation of any sort became quite apparent. And what great social reform *can* be put thru without legislation?

It was amusing to hear it reported that the Washington office of the Federal Council was carried on merely to seek national legislation on “spiritual matters”! Even the delegates representing the Southern Presbyterian Church—one of the chief objectors to political action—were compelled to smile!

The chief reason for this attitude on the part of the Federal Council

lies in the fact that it is unwilling to alienate those ecclesiastical bodies which object to the church having anything to do with questions which involve the state, even tho these organizations are few in number and comparatively small in their membership.

The decision of the Federal Council's executive committee is contrary to the well-understood attitude of the stronger denominations in their fight against the saloon. These denominations have long believed in taking direct political action when engaged in putting the saloon out of business. Precisely the same principle is involved in “one day's rest in seven” campaigns, in which, by the way, even the Federal Council has participated. It seems as tho the Federal Council were determined to take a backward step in its social program, for the sole purpose of retaining within its organization the denominational groups which for various reasons cannot coöperate in helping to secure social justice thru legislation.

But meanwhile—does the Federal Council's apparent desire to keep out of all legislative affairs, no matter how imperative, for the safeguarding of health and the conservation of human life, meet with the approval of the men and women of the churches who have been stirred by appeals for economic justice and social service? Furthermore, if the Federal Council declines to speak in the name of the churches in this regard, where is the religious body to which legislators and statesmen may look for guidance in social matters which are fundamentally ethical in character? If it is true that the great social problems now confronting us are deeply religious, is it not reasonable to suppose that an organization which makes a specialty of religion should have something definite and official to say about these problems—even to legislative bodies?

It is not a question of having the church interfere in purely political affairs, nor of attempting to control the state for its own benefit. It is entirely a matter of making a fight in behalf of helpless men and women by securing the enactment of such laws as will give them more of the blessings of life here and now.

New York City

A WINTER PICTURE

BY BLISS CARMAN

When winter comes, along the Silvermine,
And earth has put away her green attire,
With all the pomp of her autumnal pride,
The world is made a sanctuary old,
Where Gothic trees uphold the arch of gray,
And gaunt stone fences on the ridge's crest
Stand like carved screens before a crimson shrine,
Showing the sunset glory thru the chinks.
There, like a nun with frosty breath, the soul,
Uplift in adoration, sees the world
Transfigured as a temple of her Lord;
While down the soft blue-shadowed aisles of snow
Night, like a sacristan with silent step,
Passes to light the tapers of the stars.

THE WORLD OVER

Frictionless America

There is more than one way to reduce friction in the world. And tho the United States may not be entirely successful in bringing peace out of the Great War, we can at least claim that we smooth the way of the world in one respect.

For the United States produces more talc and soapstone than all the rest of the world combined. Moreover our production has nearly doubled in the last decade, so that we now produce about 170,000 short tons a year, valued at about \$1,860,000.

Talc is a simple mineral of which soapstone is a massive impure form. Because of its softness it has a wide and varied use: talcum powder can be used for putting a tire on an automobile or (we can't resist it) attire on a lady. In the schoolroom it takes the form of chalk, and in the factory it bleaches cotton cloth or becomes one of the ingredients of paint. One of its chief uses is as a filler for many kinds of paper.

There are nine states in our country that produce talc. Fifty-seven per cent of it comes from New York and about forty per cent—mostly in the form of soapstone—from Vermont.

Y. M. C. A. and the War

There was a time when the Y. M. C. A. did not stand very high in the opinion of the English people, when it was regarded as a rather flabby, colorless institution, by no means occupying the place in the life of the community that it fills on this side of the Atlantic.

But with the coming of the war the Britisher's opinion altered. Of all the work done for the British Army and Navy none stands so high in public estimation as that of the Y. M. C. A.

Within a few days of the outbreak of war it had two hundred and fifty centers, and today there are over a thousand such centers within the Empire—one as far afield as Mesopotamia. France has nearly a hundred, India forty, Egypt thirty, and so on.

The "huts," as the Y. M. C. A. calls its tents or buildings, are by far the most popular places in the great camps, whether at the bases or in England. Thousands of the troops use the huts for recreation, and as reading or writing-rooms—the Association gives away about 11,000,000 pieces of stationery a month, which are chiefly used by the men for writing home. The organization of athletics at the base camps is largely in the hands of the Y. M. C. A. too.

The huts are also used for religious services, the

OPERATING THE NEW STREET CLEANER

INSPECTORS APPROVE ITS WORK

only condition being that no one shall interfere with another's religion. The religious side is, indeed, placed in the forefront of the Association's endeavors to help the soldiers—tho there is none of the "button-hole" method; the men are influenced by what is done, not by talk.

Munition works have sprung up all over England in the recent months and the Y. M. C. A. is doing highly useful work in providing huts near the great centers, where the workers, who come in such crowds that the localities cannot deal with them immediately, can obtain food and find sleeping accommodation. Another excellent piece of work is the establishment of open-all-day-and-night refreshment bars and rest-rooms near the great railway stations in London where men going to and returning from the front often arrive in the middle of the night, tired out and with nowhere to go.

AN ENGLISH ARMY "HUT"

Tommy Atkins writes home—and has his picture taken

Cleaning Streets by Suction

A new method of street cleaning which will do for the streets what the vacuum carpet sweeper is doing in the home in the way of better sanitation has been tried out in Sandusky, Ohio. This suction street cleaner was sent over the streets the day after they had been cleaned by the old broom machine method, and four cubic yards of dirt were swept up from 27,280 square yards.

The revolving broom is especially made so that it will dislodge even the finest particles of dust. The dust is carried by the broom into an air current created by a large suction fan and from there it goes thru a conduit to a dust box in the rear of the machine.

There are two compartments to this large dust box (which is in the form of a trailer and can be detached), one receives the heavier particles of dirt and the other the powdery dust.

A test of the machine was made on an asphalt block of pavement which contained the accumulated dirt of the entire winter with the result that the amount of dirt swept up by the machine averaged eighteen cubic yards to the mile of thirty-foot pavement.

The trailer can be detached and a watering cart put in its place, and even the broom can be removed and a squeegee attached to scrub the streets. The squeegee developed for this machine is composed of adjustable shovels each having a flexible shoe, which will enable the shovels to adjust themselves to the irregularity of the pavement.

More Nerve

Crossing a river on a rope bridge to test the condition of one's nerves is the latest method advocated by physical culture instructors. The idea originated with W. Ward Beam, of the Philadelphia College of Pharmacy, who has made it a part of the regular course of physical culture for both men and women students.

One advantage of the method is that the outfit required is both cheap and easily portable, as it consists simply of two stout ropes, one of which is fastened between two trees on the opposite banks of a river, and serves as a support for the feet, while the other is stretched overhead and used as a balance by the person crossing the stream.

The whole object of Mr. Beam's plan is to harden the nerves of the students. We lack nerve, he says, chiefly because we never do anything to cultivate strength in this direction. Crossing a stream on a rope

White Studio

THE PRESENTATION OF "THE SEVEN GIFTS"—AN OUTDOOR CHRISTMAS PLAY IN NEW YORK

he considers one of the very best exercises to correct this fault. It isn't such a nervy thing to do, but it simply shows a lack of nerve to be afraid to do it.

New York's Christmas Fantasy

New York City has had a community celebration of Christmas often, but the climax of its entertainment has always been a tree. This year the committee in charge decided to give a play.

Of course the difficulties in the way were many. It must be out of doors, to insure room enough for all who would share in the celebration. It must suit people of all ages. It must be something different—not the wise men and the manger, not Santa Claus with fairies and brownies, but something to include all these, the real holiday spirit, the very essence of Christmas.

And Mr. Stuart Walker, playwright, producer, and the creator of the Portmanteau Theater, met all these conditions, and more. On Christmas night in Madison Square his company gave, for the community tree committee, a fantasy called "The Seven Gifts."

It was the story of the seven who came with their presents to the court of the Emerald Queen. Not a word was spoken, from the appearance of the Wanderer, asking what the theater was and why the great audience was assembled, till the lights dimmed, leaving the Dear Child and her doll sitting on the throne. Yet not a guest had the least difficulty in following the pantomime, for occasionally a sentence on the screen told who was coming next, or just what was to happen, to make absolutely sure that no one was puzzled; a device borrowed from the movies, but used at either side of the stage, so that the action of the fantasy was never interrupted.

The Lowly Man, who thought to better his gift by imitation; the Haughty Lady who learned from the Humble Woman consideration for others; the Richest Man in the World, finding that a mere bauble interested the Queen more than his rare gifts; the Strolling Player, whose gift, a playlet telling the adventure of Pierrot and the Moon-

lady, was filled with imagination and beauty; the Bravest Man who presented a tiger skin, introducing a delicious comedy touch in his contest with the tiger, impersonated by Jack-in-the-box; and last of all the Dear Child, whose gift of a battered doll was the only one worthy of the name, for it alone came from the heart and represented some sacrifice.

At the climax of the fantasy, the community Christmas tree suddenly burst into light, its decorations becoming an integral part of the play.

But the remarkable thing about this performance was not the success of the committee's plans, nor even the success of the Portmanteau Theater folk, but the fact that this fantasy, given in a portable playhouse, in the people's park, is a step toward a civic theater. It suggests wonderful possibilities of what may be done, all during pleasant weather, by presenting in any of the parks performances free to all the city.

A Census Curiosity

Tucked away in the huge census volumes are many interesting facts. Perhaps one of the most remarkable concerns the ages of our population. In the accompanying chart is shown the age

THE AGES OF OUR POPULATION

The vertical line thru the center divides the males (on the left) from the females (on the right). The horizontal distance from this line shows the number (by hundreds of thousands) of males or females at each year of age

distribution by single years of the total population of the United States in 1910. The vertical line thru the center divides the males from the females. The horizontal distance from the vertical line shows the number (by hundreds of thousands) of males or females at each year of age. Thus there were in 1910 about 950,000 males at the age of ten.

The fact that this country receives annually a large immigration, tends to broaden the age pyramid or triangle from about the twentieth year. This gives the triangle a somewhat smaller base than if the numbers were recruited entirely by births.

The peculiarity about the shape of the age pyramid lies in the fact that at certain ages the lines project over those directly underneath. This would imply that there must be an extremely large number of persons at these particular ages. But there is a strange regularity noticeable with regard to these projecting lines, for beginning at about the twenty-fifth year we find that at the ages ending in 5 and 0 there is an extraordinarily large number of survivors. This is probably due to the fact that those who are in doubt about their exact age report themselves as "about forty-five" or "about fifty."

In one respect the women of this country have been great sinners in reporting their ages. It is evident that the native born women who were from fifteen to twenty-four years of age in 1910 must have been the survivors of the group who were five to fourteen years of age in 1900. Since death had been continually reducing their numbers during the ten years elapsed, we should expect to find a much smaller number from fifteen to twenty-four in 1910 than from five to fourteen in 1900. On the contrary, we find that this group of women had apparently increased in numbers by 40,513 during the decade from 1900 to 1910! The obvious explanation is that a large number of women who should have reported their ages as twenty-five or over in 1910 preferred to be considered from twenty to twenty-four. It seems to take more than ten years for a large number of our native women to pass from their fifteenth to their twenty-fifth year.

THE CONQUEST OF THE BLACK MOUNTAIN

THE MEANING AND IMPORTANCE OF THE AUSTRIAN INVASION OF MONTENEGRO

THE capture of Mount Lovcen by the Austrians as a military operation is insignificant compared with the constant conflicts between the millions of soldiers who confront one another in France and Poland, for Montenegro is the least of the twelve nations involved in the Great War and the casualties of the assault will not appreciably swell the daily death list. Yet on some accounts it is an event of tremendous significance and far-reaching influence. It means for one thing that another of the smaller countries is likely soon to lose, at least for a time, its freedom and independence; the seventh of such to be overrun by hostile or alien armies, Luxemburg, Belgium, Serbia, Greece, Albania, Persia and Montenegro.

When King Nicholas of Montenegro celebrated his seventy-first birthday on October 8, 1912, by declaring war on the Sultan, he little realized—tho there were many who did and warned him—that he was thereby precipitating a general European war which would be likely to engulf his kingdom. How should he realize it? It was the custom of his country to fight the Turks on any favorable opportunity. Every boy babe is pledged at birth to avenge Kasso, the battle in which the Serbs and Montenegrins were defeated by the Turks 526 years ago as they were again defeated a month ago by the Austrians and Bulgars on the same field. Ever since then the men of Serbia and Montenegro have worn a band of crape on their crimson caps, to be removed only when all their race shall be free. There is no question of volunteering or conscription. Every man is a soldier and his wife is his commissary department, cooking his meals and carrying them to him at the front. The law requires there what the law here forbids, that every man carry a revolver whenever he steps out of doors. And every bride goes out into the desert alone to practice the widow's keen, that she may be ready suitably to lament the death of her husband in battle whenever his time shall come. The history of Montenegro, said Gladstone, "excels in glory all the war annals of the world."

But native courage of this primitive kind is of no avail against modern scientific warfare. From the concrete emplacements of their hidden forts about the Mouths of Cattaro the Austrian howitzers shelled the rocky heights above and the Montenegrins were almost as helpless as the Aztecs against the Spanish matchlocks.

Tourists have often wondered why these forts, constructed twenty years ago, were so placed that their heaviest guns pointed inward and landward toward insignificant little Montenegro instead of outward and seaward whence some foemen more worthy of their steel might be expected to come. Now we know why. We see that the Austrians were right in suspecting that when the time came it would not be Montenegrins they would have to fight but more powerful nations behind them. It is then not surprising that it was French and Russian cannon which replied to them from Mount Lovcen and that Italian troops are hastening to its defense. What is surprising is the Allies did not send such aid before. It seems that the fatal words "too late!" which, as Lloyd George says, have dogged all the operations of the Allies, must here again be used. If the hundreds of thousands of Italian lives which have been wasted in vain attempts to break the Austrian lines to the north had been spent in the Balkans it may be that Serbia, Montenegro and Albania might have been saved and the Kaiser kept from Constantinople.

Italian interests are here almost as closely concerned as in Trentino

or Triest. The Queen of Italy is the daughter of the King of Montenegro. The Albanian and Dalmatian coast has long been coveted by Italy. And if Italy is to become again "Queen of the Adriatic" she must possess the Bocche di Cattaro, for it is one of the strongest as well as most beautiful of the harbors of the world, and has played an important rôle in the history of many nations. Teuta, the pirate queen of Illyria, made here her haven, over two thousand years ago, and Rome had to resort to bribery to accomplish her overthrow. Greeks, Romans, Goths, Byzantines, Venetians, Turks, Spanish, Russians, Austrians, Hungarians, Bosnians, Serbs and French have at one time and another held possession of this landlocked bay.

The reason of its strategic value may be seen by a glance at the map. The Bocche di Cattaro or the "Cattaro Mouths" form a triple harbor, a veritable naval cerberus. It would be foolish for any warship to try to penetrate such a labyrinth. The entrance to the inner harbor is still called Le Catene, from the chains that used to be stretched across it to keep out pirates, but doubtless mines take their place nowadays. Here probably have been hidden the Austrian submarines which have recently been raiding the shipping of the Mediterranean.

Cattaro looks like a Norwegian fiord which somehow has got misplaced on the Dalmatian coast. It is a jagged channel cleft into the limestone ridge known as the Karst or Carso which stretches along the eastern shore of the Adriatic and forms the boundary between Italy and Austria further north. Against this rocky barrier about Görz the Italian armies have been beating in vain for many months. The culmination of the Karst is Montenegro, a disorderly heap of mountains, and barren ledges, cuplike sinks and deep crevasses, blistering hot in summertime and freezing cold in winter. Let geologists explain it how they will, the natives have their own theory, which other people may prefer because it is easier to imagine. When, according to the legend, God Almighty was putting the finishing touches to crea-

THE GULF OF CATTARO

By the capture of Mount Lovcen the Austrians have made secure their naval base at Cattaro, called "the Gibraltar of the Adriatic" because of its impregnability. The narrow inlets of the bays are flanked with cliffs over a thousand feet high beneath which the Austrian dreadnoughts were sheltered even from Montenegrin guns. The carriage road which zigzags up the mountain side to the eyre of the Montenegrins is esteemed by tourists one of the most picturesque drives in the world. Just beyond Mount Lovcen is Cetinje, the capital of Montenegro, where the Austrian flag now waves

1916 ATLAS With New War Maps Given FREE

To the readers of *The Independent* who take advantage of this offer now made in connection with

Webster's New International

 **The Only Grand Prize** (Highest Award) given to dictionaries at the Panama Pacific International Exposition was granted to Webster's New International and the Merriam Series for superiority of educational merit.

This New Creation The *Merriam Webster*—

A Complete Reference Library in Dictionary Form—with nearly 3,000 pages, and type matter equivalent to a 15-Volume Encyclopedia, all in a single volume, in Rich, Full Red Leather Binding, can now be secured by readers of *The Independent* on the following remarkably easy terms: The entire work in full leather (with 1916 Atlas)

DELIVERED for \$1.00

and easy payments thereafter of only a few cents a week
(In United States and Canada)

on SUPERIOR INDIA PAPER

REDUCED ONE HALF

In Thickness and Weight

India-Paper Edition

Printed on *thin, opaque, strong*, superior India Paper. It has an excellent printing surface, resulting in remarkably clear impressions of type and illustrations. What a satisfaction to own the *new Merriam Webster* in a form so light and so convenient to use! This edition is *one half* the thickness and less than one half the weight of the regular edition. Size $12\frac{3}{8}$ in. x $9\frac{3}{4}$ in. x $2\frac{3}{4}$ in. *Weight* $7\frac{1}{2}$ lbs.

Regular-Paper Edition

Printed on strong book paper of the highest quality. Size $12\frac{3}{8}$ in. x $9\frac{3}{4}$ in. x $5\frac{1}{2}$ in. *Weight* 16 lbs.

Both Editions are printed from the same plates and indexed

Over 400,000 Vocabulary Terms, and, in addition, 12,000 Biographical Names, nearly 30,000 Geographical Subjects, besides thousands of other References. Nearly 3,000 Pages. Over 6,000 Illustrations.

"To have this work in the home is like sending the whole family to college."

The only dictionary with the New Divided Page, characterized as "A Stroke of Genius"

THE ATLAS

Is the 1916 "New Reference Atlas of the World," containing nearly 200 pages, with 128 pages of maps, beautifully printed in colors, with marginal reference indexes, besides illustrated description of PANAMA CANAL, all handsomely bound in red cloth, size $10\frac{1}{4}$ x $13\frac{5}{8}$.

To those who respond at once we will send

a copy of "Dictionary Wrinkles," containing an amusing "Test in Pronunciation" (with key) entitled "The Americanization of Carver," and also a "Red Facsimile Booklet" of interesting questions with references to their answers.

Name

Address

tion by sowing the stones evenly over the land, the bag burst as he past over Montenegro and all the stones he had left were spilled there.

Montenegro is about the size of Connecticut and Rhode Island taken together, and has about the population of Rhode Island alone. The Black Mountain it has been called in all ages and all languages; Kara Dag is the Turkish name for it and in the Serbian tongue, which is also the Montenegrin, it is known as Crngora, not so impossible to pronounce as it appears, for the Slavs have discovered that if you roll an *r* you can make a vowel of it. The initial *C* is pronounced *Ch* or *Tch*.

The Montenegrin people are among the most warlike in the world, but in numbers they are insignificant, for even before the war their war strength only amounted to 30,000 or 40,000 men, that is, about the same as the mobile troops of the United States army.

Right at the head of the inner gulf of Cattaro, and less than three miles from salt water, is the Sacred Mountain of Lovcen (pronounce it Lovtchen and you will get it as near correct as can be expected). This is 5770 feet high and overlooks on one

side the Bocche di Cattaro, where Herzegovina, Dalmatia and Montenegro meet, and on the other the valley which conceals Cetinje, the village capital of Montenegro. Here Ivan the Black made his stronghold when the Turks drove him out of the lowlands of Scutari over four centuries ago. Gathering his little band of mountaineers about him he pledged his people to perpetual warfare until the Turk should be driven back into Asia and the assemblage then and there decreed that any Montenegrin who left the field of battle without orders when fighting the Moslems should be drest in woman's clothes and driven out of the country by the women with blows of their spindles.

One of the first undertakings of the Allies after the declaration of war was an attempt to capture the Bocche di Cattaro. On August 12, 1914, the French and British warships in the Adriatic bombarded the Austrian forts at the mouth of the bay while the Montenegrins attacked them from the land side. But their efforts then and since were in vain.

Ivan the Black is not dead but sleeping, say the Montenegrins. Hidden in a cave in the heart of Mount Lovcen, he sleeps, like the Emperor

Barbarossa, waiting for the day of his triumph when all Europe has been free from the Turk. Three years ago when his successor, King Nicholas, threw down his gauntlet to the Turk, Black John must have felt that the time had come for him to awake, for it seemed that with Serbia, Bulgaria, Greece and Montenegro fighting shoulder to shoulder the Cross must surely drive out the Crescent. But the Allies fell out over the parting of the spoils, leaving their task unfinished, and now at the invitation of three Christian Powers the Moslem armies are being brought back into Europe. Surely the sleeping hero must have groaned as he heard over his head the march of Austrian boots and the rumble of the cannon wheels.

But this is not the end of it. History does not so reverse itself. Let us reread for our encouragement the poem Chesterton wrote three years ago on "The March of the Black Mountain":

But men shall remember the Mountain
Tho it fall down like a tree,
They shall see the sign of the Mountain
Faith cast into the sea;
Tho the crooked swords overcome it
And the Crooked Moon ride free,
When the Mountain comes to Mahomet
It has more life than he.

A WAY TO HELP THE ARMENIANS

BY WILLIAM T. ELLIS

AUTHOR OF "MAN AND MISSIONS," EDITOR AFIELD OF "THE CONTINENT"

THE apparent hopelessness of the case of the Armenians now suffering "deportation" has been the last touch of horror to a situation perhaps without equal in the world's history. There has seemed almost nothing that could be done to aid them. Civilization has stood helpless. The Turkish Government has turned a deaf ear to all appeals. It shuts the doors of the land against all relief expeditions. Missionaries are not allowed to assist the suffering with food and raiment, except in the most limited and local way. What can be done?

There occurs to me one plan that should be practicable. Since Red Cross and missionary relief work are interdicted, why should not the United States Government do in this case what it did in Europe immediately after the outbreak of the war—so enlarge its consular and diplomatic staffs that the exceptional needs of the sufferers could be met? The splendid company of tactful, efficient, resourceful young men who

have passed the examination for the consular and diplomatic service are uniquely qualified to meet this condition. By drawing upon consulates and embassies which are not especially crowded, and by utilizing the waiting list, the State Department can at once marshal a force adequate to administer relief within the respective zones of the consulates and embassies.

Prompt action would save tens of thousands of lives. Great-hearted America has already given, or will quickly give, to these national representatives, all the relief supplies that can be administered. Turkey will doubtless extend the privileges which she has already granted Ambassador Morgenthau; Persia and Russia would not think of objecting to the enlargement of America's representation in the regions of distress. Even now at several consular cities there are camps of Armenian refugees numbering many thousands, with no one to administer relief. Does not this seem to be clearly one

of the higher obligations of humanity devolving upon American diplomacy?

The possible centers for this service are familiar to the State Department and to all who have followed closely the Armenian tragedy. Aside from additional help at Constantinople and Teheran, the most obvious points, now maintaining consulates, where immediate and important relief work can be done are Aleppo, Alexandretta, Harput, Urfa, Brusa, Mersina, Trebizond, Samsun, Smyrna, Bagdad, Bassorah, Damascus, Jerusalem, Beirut, Tripoli, Haifa, and Jaffa and Tabriz. In addition Konia, Afion Kara Hissar, Van, Aintab, Mosul, Bitlis, Diarbekir, Urumiah and Hamadan at present call for the oversight and assistance of accredited representatives of the United States Government.

Even if there were no precedent for this special service, the situation is unprecedented and calls for red blood rather than for red tape.

THE NEW BOOKS

A PROPHET OF THE MOVING PICTURE

To Vachel Lindsay, twentieth century troubadour, author of General Booth's "Himmelfahrt" and similar poems of fantasy and feeling, belongs the honor of being the first to bring out a book of serious criticism of *The Art of the Moving Picture*. He has seen widely and he criticizes frankly, praising and condemning actors, producers and technique. As a subtitle to the volume he suggests "How to Classify and Judge the Current Films," then in accordance with the custom of estheticians from Aristotle to Ruskin he proceeds to arrange his categorical pigeonholes and fit the films into them. His first category is Action Pictures which are "sculpture-in-motion"; his second is Intimate Pictures which are "paintings-in-motion," and his third is Splendor pictures which are "architecture-in-motion."

But fortunately, he, like the other art critics, soon forgets his rigid classification and rather ill-fitting analogies and gives us some of his personal impressions and eloquent imaginings. His comparison of the technique of D'Annunzio as shown in "Cabiria" with the art of Griffith as shown in "Judith of Bethulia" is well considered, altho in our opinion he hardly does justice to the Carthaginian drama. But the motion picture which most rouses his enthusiasm is "The Battle Hymn of the Republic," produced by the Vitagraph Company four years ago. "This film should be studied in the high schools and universities till the canons of art for which it stands are established in America." Of the Intimate Pictures he prefers Cabanne's "Enoch Arden." Of the Action Pictures he distinguishes "The Spoilers," of Rex Beach and "Man's Genesis," an old Griffith Biography, which, after being shelved for awhile, has recently entered upon a new season of popularity.

But the best part of the book is the latter half, in which Mr. Lindsay lets his imagination go as to the possibilities of the future film and its influence upon our ideals and morals.

"Author-producer-photographer, who would prophesy, read the last book in the Bible, not to copy it in form and color, but that its power and grace and terror may enter into you. Delineate in your own way, as you are led on your own Patmos, the picture of our land redeemed. After fasting and prayer, let the Spirit conduct you till you see in definite line and form the throngs of the brotherhood of man, the colonnades where the arts are expounded, the gardens where the children dance.

"That which man desires, that will man become. He largely fulfils his own prediction and vision. Let him therefore have a care how he prophesies and prays. We shall have a tin heaven and

a tin earth, if the scientists are allowed exclusive command of our highest hours."

The producer who wants to get ahead of the times should attach Vachel Lindsay to his staff—if indeed such a rolling stone can be attached by any salary. His is the sort of inspiration which the motion picture business needs.

The Art of the Moving Picture, by Vachel Lindsay. Macmillan. \$1.25.

THE ANTICHRIST

Since Nietzsche, the Slav and fierce hater of everything German, is nowadays regarded as the chief inspirer of Germanic egotism and militarism, it is necessary to become acquainted with him and there is no better introduction to his personality than Halévy's *Life* which now appears in cheaper edition. It is a sympathetic study of this strange and contradictory character, but only incidentally explains his views. For that one should turn to some of Nietzsche's own works, preferably

"Thus Spake Zarathustra," or if one prefers a compendium, an excellent volume of selections is provided by Willard Huntington Wright in *What Nietzsche Taught*. This gives abundant quotations from each of Nietzsche's works, prefaced with an explanation of the leading thought and of the circumstances under which it was written; in short, just what the beginner needs.

Nietzsche and the Ideals of Modern Germany, by Professor Stewart of Dalhousie University, Halifax, is one of those books which explain why American universities are always trying to entice Canadian professors over the borders. In scholarship, style and temper it is admirable, and remarkably free from partizan exaggeration and misconstruction, considering the time, place and purpose of the lectures here published. As an analysis of Nietzsche and a contribution to the history of modern thought the book would doubtless have been better if it had been written five years before the war or ten years after—but it would have found fewer readers than now.

The author would then probably have also considered Nietzsche's influence over other countries than Germany. He devotes a footnote to France but omits mention of Russia and Italy, where, to judge from recent literature, Nietzscheism has been rampant. But we long ago resolved never to find fault with an author for not writing on some other subject than he did and Professor Stewart has debarred us from criticism on this point by the limitation of his title. His analysis and refutation of Nietzsche's attack and Christianity is excellent and we agree with him that Nietzsche has had a bad influence over German ideals and character. But we question whether the Great War as a whole can be summarized, even "very roughly" as a conflict of "Nietzschean immoralism against Christian restraint," considering that many of the races involved are followers neither of Christ nor Nietzsche. Judging by its literary manifestations German ruthlessness in war draws its sanction more from the Old Testament than from Nietzsche.

Life of Friedrich Nietzsche, by Daniel Halévy. Macmillan. \$1.25. *What Nietzsche Taught*, by W. H. Wright. Huebsch. \$2. *Nietzsche and the Ideals of Modern Germany*, by H. L. Stewart. Longmans, Green. \$2.10.

BABYLON

Professor Jastrow, of the University of Pennsylvania, is as well known abroad as in this country as an authority on Assyriology. He has devoted himself especially to the study of the religion of Babylonia. *The Civilization of Babylonia and Assyria* is a comprehensive work covering the excavations, the decipherment of the cuneiform script; the history of Babylonia and Assyria, their gods, temples and cults, their commerce and art, followed by seventy pages of specimens of their

Josephus' History of the Jews, a book to which every Bible student is constantly referred, is out in the handy Everyman's Library form.

Dutton. Cloth 35 cents; leather 70 cents.

On Nazareth Hill, by Edward Bailey, describes northern Palestine, as doubtless it looked to the carpenter Joseph and the lad Jesus. The clear pictures and explanatory notes make the handy book of real value to the Sunday school worker.

Boston: Pilgrim, Press. \$1.

Tales with a moral, of course are *Stories of Thrift for Young Americans*, by M. T. Prichard, and G. A. Turkington, but they are direct, interesting, unforced, and will be helpful in making plain the value of economy in effort, strength and time, as well as money.

Scribner. 60 cents.

How to Become an Efficient Sunday School Teacher, by Wm. A. McKeever, is not a guide to lesson teaching, but a study of the problems confronting boys and girls, which, after all, is probably what the Sunday School teacher most needs to understand.

Cincinnati, Ohio: Standard Pub. Co. \$1.

The Boy Scout Movement Applied to the Church, by N. S. Richardson and O. E. Loomis, is introduced by the chief scout executive, James E. West, and is a valuable handbook for Boy Scout workers, and a suggestive study of boy needs and how to treat them for all who have to do with growing boys. It gives the history of the organization, plans for all sorts of activities and a broad minded discussion of the aim of all these efforts, and the methods and qualities necessary to success.

Scribner. \$1.50.

literature. This splendid volume gives the results of the latest discoveries, and a very complete knowledge of the general subject. The illustrations present not only the older and familiar work of Botta Layard, George Smith and others, but the results of the latest diggings in both Assyria and Babylonia.

Civilization of Babylonia and Assyria, by Morris Jastrow. Philadelphia: Lippincott. \$6.

CARD PUZZLES

Twenty mystifying *Card Tricks* so clearly explained by L. Widdop that anyone can quickly learn to do them. None of them demand proficiency in sleight of hand.

Philadelphia: Lippincott. 35 cents.

BOWNE'S PHILOSOPHY

Ralph Tyler Flewelling in *Personalism and the Problems of Philosophy* gives a discursive exposition of the Christian philosophy of the late Borden P. Bowne in its relation to other systems. Professor Rudolf Eucken, of Jena, in his introduction, speaks highly of Bowne's work.

Methodist Book Concern. \$1.

OPERAS

One hundred and ten operas, classics and recent productions, are described in *The Opera Book*, by Edith Ordway. She gives the name of composer and librettist, the date of the first performance, the singing parts of the different characters, and the plot in scenes. The book is illustrated by pictures of noted singers in their roles.

Sully & Kleinteich. \$2.50.

A GENTLE CHRONICLE

Hempfield, by David Grayson, is the story of a little group of people who foregathered in the office of a weekly newspaper, *The Hempfield Star*. From editor to office boy the staff of the *Star* is attractive, Hempfield is no Spoon River, and the reader of the quiet annals of a pleasant town is glad to live there and share the village stories full of friendly but very human goodness.

Doubleday, Page. \$1.35.

SHAKESPEARE

An excellent student's edition of Shakespeare's plays, each in a separate volume of convenient size and attractive print and binding—*The New Hudson Shakespeare* fills an ever-present need. An explanatory introduction gives the sources, date of composition and editions of each play, considers the dramatic structure, the diction and versification, presents a brief sketch of each of the characters and a general criticism of the whole play.

Boston: Ginn. 30 cents each.

INDIANS OF THE PLAINS

Dr. Grinnell's *The Fighting Cheyennes* is a contribution to American history of the greatest value, a record of the red men of the plains who, with their pitiful yet glorious story, are fast disappearing. Much of this story the writer has gathered from their own lips; and it reveals what sturdy manhood has been wasted. The history is one of thrilling adventures, but, related in the colorless manner of a court record, it is a book for reference rather than for reading.

Scribner. \$3.50.

ROLLAND'S MUSICAL STUDIES

A book to be welcomed by all students of musical history is Mary Blaiklock's translation of Romain Rolland's *Some Musicians of Former Days*. This has passed thru four French editions and become one of the classics of musical criticism in France. In it the author of "Jean-Christophe" treats of the Place of Music in General History, the Beginnings of Opera, the First Opera Play in Paris: Rossi's "Orfeo," and of many musicians.

Holt. \$1.50.

Dress Cottons Linens, Shirtings, etc. For Spring and Summer 1916

Reg. Trade Mark

We take pride in the fact that although the European War has greatly curtailed the importation of foreign fabrics, we have been able to gather together the most exclusive and comprehensive assortment now displayed in New York.

The collection includes many new and modish color combinations.

Imported Handkerchief Linens—

A fine sheer quality of Linen, shown in a number of smart designs, Stripes, Checks, Coin Spots and two-tone effects, 36 inches wide at 85c. yard. And the same quality in a complete range of new plain colorings, 36 inches wide at 75c. yard.

Skirting Fabrics—White grounds with colored woven awning stripes, the smartest fabric for Sport Skirts, 40 to 45 inches, 95c., \$1.25, 1.50, 1.75 yard.

"Linen Eponge"—This is one of the most popular of fabrics, White and all shades in three widths, 36, 45 and 54 inches wide, \$1.00, 1.25 and 1.50 yard.

Imported Voiles—Fine sheer quality in upwards of 100 new designs, White ground with colored spots, Stripes, Checks, large and small floral effects, 40 inches wide, special at 65c. yard.

"Pikella"—A new French fabric resembling a fine corded Piqué. White with colored Stripes or Checks, the season's newest fabric, 32 inches wide at \$1.25 yard.

French Voiles and Marquissettes—White grounds or colored grounds, woven color Stripes, Checks, Plaids, very smart, 40 inches wide, 75c. to \$1.75 yard.

White Skirting Fabrics in a big range of new weaves. Cords, Checks, Oxfords, Corduroys, Whipcords, Bengalines, etc., 50c. to \$2.25 yard.

Shirtings, Silks, Flannels—Special attention is given to this department wherein we carry a complete stock at all times, of Madras Shirtings, French Percales, Imported Cheviots, Spunzyk, Japanese Habutai Wash Silks, Peau de Crepe and all the other fabrics now in vogue.

Samples of any of these lines mailed on request.

Here Is the Camp for Your Boy

where he can spend his summer in real boy fashion; where he has every facility and the right men to teach him how to manage a canoe, play ball, swing a tennis racket and make things with tools. When your boy returns from a summer or part of a summer at **CAMP YUKON**, you will be astonished and pleased to see how he has improved in health, physique, stamina, and all-round manhood. No more beautiful location for a camp could be imagined than on Lake Cobbosseecontee in the magnificent hard wood grove, sixty miles from Portland, Maine. A readable booklet, full of pictures, will tell you all about **CAMP YUKON**. Write personally to Frank D. Smith, Director, 203 West 102nd Street, New York, and you will receive by return mail something that will be to your advantage and that of your boy.

LITTLE TRAVELS

The Independent invites inquiries from its readers pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. This Department is under the supervision of the BERTHA RUFFNER HOTEL BUREAU, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Offices at Hotel McAlpin, Broadway and 34th street, New York, and Hotel Stewart, San Francisco, Cal., where personal inquiry may be made. Address inquiries by mail to INFORMATION, The Independent, New York.

PEBBLES

The trouble with the belligerents is that each side is unbeaten and knows it.—*Buffalo Enquirer.*

The proposition that cemeteries be turned into bird sanctuaries is one of grave importance.—*Trenton State Gazette.*

"The choir of the Memorial church was full Sunday and the music was excellent."

Some do sing better in that condition.—*Federal Record.*

Lady—And you say you are an educated man?

Wearied Will—Yes, mum, I'm a roads scholar.—*Michigan Gargoyle.*

"I assure you, madam, my ancestors came over with the first settlers."

"Very likely. We had no immigration laws then."—*Baltimore American.*

Student (writing home)—"How do you spell 'financially'?"

Other—"F-i-n-a-n-c-i-a-l-l-y, and there are two r's in 'embarrassed.'"—*Harpers.*

First American Citizen—Just back from London?

Second American Citizen—Yes.

"What steamer were you rescued from?"—*Life.*

Villain—"Where are those papers?"

First Assistant Villain—"In the blacksmith shop!"

Villain—"Ha, ha—I suppose being forged?"

First Assistant—"No. being filed!"—*Michigan Gargoyle.*

"Pa," inquired a seven-year-old seeker after the truth, "is it true that school-teachers get paid?"

"Certainly it is," said the father.

"Well, then," said the youth indignantly, "that ain't right. Why should the teachers get paid when us kids do all the work?"—*Ladies' Home Journal.*

An impecunious actor was approached by a friend, who said:

"Hello, Jones! I hear your watch has been stolen."

"Yes," said Jones, "but the crook that got it has already been arrested. Just imagine! the fool took it to the pawn-shop. There it was at once recognized as mine, and the thief was locked up."—*Harpers.*

One day a keeper was out walking with a number of harmless lunatics, and the party met a pedestrian not far from the railway tracks. With a nod toward the tracks, the traveler asked one of the lunatics:

"Where does this railway go to?"

The lunatic surveyed him scornfully for a moment, and then replied:

"Nowhere. We keep it here to run trains on."—*New Idea.*

The special-article writer had been sent for by the magazine editor. "We want a piece," said the magazine editor, "about the high cost of gasoline. The wholesale price this morning is twenty-two cents a gallon. Jump on the oil trust, for about five thousand words. How much do you want?" "Twenty cents a word," said the special-article writer, "is my price." "Gosh!" said the m. e., "that's a lot." "I know," the writer admitted, "but I can get it; and I have to charge all I can get."—*New York Tribune.*

The train stopped in a Prohibition town. A man thrust his head out of a window and excitedly called out: "A woman has fainted in here! Has any one any whisky?" A man in the crowd reluctantly put his hand to his hip pocket and drew forth a bottle about half full, and handed it up to the man at the open window. To the astonishment of all, the man put the bottle to his lips and drained the contents. Then, as the train pulled out, he called back to the bewildered onlookers:

"It always did make me nervous to see a woman faint!"—*Everybody's.*

The Market Place

OUR SECURITIES ABROAD

In response to the British Government's invitation or request, address to owners of American securities, in accordance with the mobilization plan, so many have been sent in that the Bank of England has found it necessary to extend the hours assigned for the receipt of them. The Government has published a list of the prices it will pay for about fifty issues of American bonds, and to this list additions are to be made.

There have been large holdings of United States Steel Corporation stock on the other side of the Atlantic. It has recently been ascertained that since the beginning of the war the number of shares of the common stock so held has been reduced by sales from 1,285,636 to 696,631, or by about 46 per cent. The 589,005 shares thus sold back to buyers here are worth at present prices about \$51,000,000. Sales of the preferred stock were only 37,723 shares, or 12 per cent of the 312,311 shares held abroad. Continued payment of the 7 per cent dividend prevented many from selling, but suspension of the dividend on the common shares made them less desirable. Less than 3000 shares were owned in Germany. The greatest quantities were held in England and Holland, the first of these countries having 801,497 shares of the common stock four months before the beginning of the war, and the second 357,293.

MORE LOANS

Norway has negotiated here a loan of \$5,000,000, represented by notes or bonds at 6 per cent, with a term of seven years. Nearly a year ago there was another loan of \$3,000,000, on notes for two and three years. A banking syndicate in New York recently bought from Argentina 6 per cent notes for \$6,000,000. This makes a total of \$46,000,000 borrowed here by Argentina since the beginning of the war. There were two loans of \$15,000,000 and \$25,000,000, also at 6 per cent. A few days ago the President of Peru asked his Congress to authorize the negotiation of a loan of \$15,000,000 in New York.

At the end of the year it was reported that Russia was seeking a loan of \$60,000,000, and that a prominent trust company in New York had the matter in charge. It does not appear that progress has been made in the negotiations. The supplementary loan of \$50,000,000 to Great Britain, arranged by groups of banks in London and New

For Doctors—Nurses—Hospitals—Sanitariums

There has just been published, in book form, with *scientific food values under each recipe*, the complete Battle Creek Sanitarium diet. This includes instructions for making over 700 different dishes—soups, relishes, entrees, stews, vegetable and cereal roasts, salads, breakfast foods, pies, cakes, puddings, frozen desserts and many others—some substantial, some delicate and all thoroughly scientific. Under each recipe is given the percentages of fats, carbohydrates and protein for each dish and each helping. With this book, you can make up an accurately balanced diet to meet any need. The author is Miss Lenna Frances Cooper, Chief Dietitian of the Battle Creek Sanitarium, who offers this work as the result of years of practical experience and scientific research at this greatest of all diet institutions. Miss Cooper's book is called "The New Cookery." It contains over 400 pages with many illustrations, and is bound for use in diet kitchens and laboratories. Chapters on special invalid diets. Price complete only \$1.50—postage and packing 20c additional. (Remit \$1.70.) Order today. You take no risk. If not entirely satisfied, return book at once for prompt refund. Send order to—

\$3000 a Year More—5 Hours a Day Less

R. F. Brune is President of a California wholesale and retail grocery business. He got a bigger income—he got easier hours—but he got more—he got the satisfaction of feeling himself perfectly fit—bigger than his business. The kind of good he got you too can get from the

Course in Personal Efficiency

Prepared by Harrington Emerson—Taught by the Review of Reviews Company

Your course in personal efficiency has paid me more than 6000 per cent dividends. I can now say that if I had learned ten years ago the principles your course teaches I would be very rich today.

Your course increased my income \$3000 a year, and shortened my business day 5 hours. I can name one improvement that 99 out of every 100 grocery stores haven't made that would save \$1000 a year for every 2 clerks employed and cost less than \$100 to make. Formerly, I was doing a business of \$6000 a month with 8 clerks and 3 delivery wagons and worked overtime on Sun-

days. Since I applied some of the principles your course teaches I do now a \$9000 a month business with 4 clerks and 2 delivery autos. Work easier and less than 8 hours a day, with no overtime or Sunday work.

I reduced my floor space one-third, renting the saved space, thereby reduced rent one-half, also saving more than half the steps the clerks formerly had to make. I honestly believe that the fundamental principles of success in private and business life are to be formed from your course.

(Signed) R. F. BRUNE.

After that letter what is there for us to say—except that Efficiency will do as much for any other business as it does for the grocery business—it will do as much for you as an individual, as a professional man, as it did for R. F. Brune,—this course brought one author health and saved him 3 hours a day—this course brought a draughtsman a big new job—this course saved a State Treasury thousands of dollars—this course brings to each and every man and woman, to you who read this, the quickest, shortest way to reach a goal—more money, less work, better health—more fun.

This Book—FREE

14 Chapters—In Colors—Illustrated

Send for this book. It contains the answer to the ever-present question of "Where is the Money Coming From?" It tells you just what Efficiency is—what it has done for others—what it can do for you. Some of the Chapters:

What is Efficiency? For whom is Efficiency? How you are taught Efficiency. Are you ear-minded or eye-minded? Find out what you are actually doing with your time. Most failures are due to guess work. You use only half your power. To what do some men owe their success? Health culture. Personal finances. Mr. Emerson's message to you.

Efficiency is an express road to success. The ordinary way of doing is like a local—stopping at way stations of mistakes and ignorance—Take the express and go straight to success.

DIVIDENDS

American Telephone and Telegraph Company

A dividend of Two Dollars per share will be paid on Saturday, January 15, 1916, to stockholders of record at the close of business on Friday, December 31, 1915.

G. D. MILNE, Treasurer.

American Telephone and Telegraph Company

Four Per Cent. Collateral Trust Bonds

Coupons from these bonds, payable by their terms on January 1, 1916, at the office of the Treasurer in New York will be paid by the Bankers Trust Company, 16 Wall Street.

G. D. MILNE, Treasurer.

THE IMPORTERS & TRADERS NATIONAL BANK OF NEW YORK.

New York, January 11, 1916.

At the annual meeting of the stockholders of this bank, held today, the following named gentlemen were duly elected Directors for the ensuing year:

Charles F. Bassett
Isaac D. Fletcher
Henry R. Ickelheimer
William A. Jamison
James W. Lane
Adolph Lewisohn

H. H. Powell
Henry Spadone
Edward Townsend
Edward Van Volkenburgh
John J. Walton
P. B. Worrall

At a subsequent meeting of the Board of Directors, Mr. Edward Townsend was unanimously re-elected President, and Mr. Edward Van Volkenburgh and Mr. H. H. Powell were unanimously re-elected Vice-Presidents.

H. H. POWELL, Cashier.

York, and based upon collateral deposited in the Bank of England, became effective a few days before the close of the year. Bonds of the \$500,000,000 Anglo-French loan, a few of which were sold at a little less than 94½ in the last days of December, have now risen to 95½.

INTERLOCKING DIRECTORATES

At the annual meetings of the stockholders of national banks, last week, there were many changes in the boards of directors, owing to the requirements of the Clayton Anti-Trust law. This law says that after October 15 next "no person shall, at the same time, be a director or other officer or employee of more than one bank, banking association, or trust company organized or operating under the laws of the United States," if the entire resources of either institution exceed \$5,000,000, and that "no private banker or person who is a director in any bank or trust company organized and operating under the laws of a state," if the institution's resources are more than \$5,000,000, "shall be eligible to be a director in any bank or banking association organized or operating under" the Federal laws. The purpose of this prohibition was to prevent what have been called interlocking directorates. Some of the directors affected by it will wait until October, but a majority decided to comply with the statute at the present time.

As an example, the effect upon the board of the National Bank of Commerce, in New York, may be shown. Four directors resigned. These are Frank A. Vanderlip, president of the great National City Bank; Albert H. Wiggin, president of the Chase National Bank; F. L. Hine, president of the First National Bank, and W. A. Simonson, vice-president of the National City Bank. Mr. Vanderlip also retired from the boards of the Farmers' Loan and Trust Company, the American Security and Trust Company, in Washington, and the Riggs National Bank, in the same city. James J. Hill, the well known railroad man of the Northwest, withdrew from the board of the Chase National Bank, and was succeeded there by his son, James N. Hill. The elder Mr. Hill has been a director of national banks in St. Paul and Chicago. A. Barton Hepburn, chairman of the Chase National's board is no longer a director of the First National, in New York, and he also resigned from the board of the Fidelity Trust Company, in New Jersey. Many changes are to be made in trust companies and state banks.

THE COUNTRY'S RAILROADS

In the last four months of the old year the railroads of this country handled more freight than in any preceding period of the same length. The number of their cars was insufficient, and the shortage was increased by congestion at or near Eastern ports, where for a long time there have been more than 40,000 cars on sidings or in terminal yards, waiting to be unloaded. The New Haven Company recently

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

You Can Weigh Exactly What You Should

You can—I know it, because I have reduced 32,000

women and have built up as many more—scientifically, naturally, without drugs, in the privacy of their own rooms; I can build up your vitality—at the same time I strengthen your heart action; can teach you to breathe, to stand, to walk and to correct such ailments as nervousness, torpid liver, constipation, indigestion, etc.

One pupil writes: "I weigh 83 lbs. less and I have gained wonderfully in strength." Another says: "Last May I weighed 100 lbs., this May I weigh 126, and oh! I feel so well."

Expressing poise—balance—ease

asked several other roads for loans of locomotives, but got only three. Congestion has now been slightly relieved by the many embargoes upon freight. The protests of commercial associations against the reduction of the time allowance for free storage from 30 to 15 days have had no weight with the Interstate Commerce Commission. It was reported last week that the Boston and Albany Company was clearing away the accumulation of cars at Albany at the rate of 1100 per day.

Earnings have been very perceptibly affected by the great increase of traffic. This is shown by the reports of several companies. The latest report of the Interstate Commerce Commission relates to November. In that month returns from 89,295 miles of road showed an increase of net earnings from \$26,000,000 to \$48,000,000. While the increase of operating expenses was about 11 per cent, there was an addition of 31 per cent, or \$30,000,000, to the gross revenue. The largest gains were in the East, where the net revenue per mile rose from \$351 to \$713. These profits have caused orders to be given for considerable quantities of new equipment.

Such advances as might reasonably be expected as a result of this improvement have not yet been seen in the prices of shares, altho there were considerable net gains in the past year. The continued selling of our railroad stocks by foreign owners has had some effect, but the stability of railroad stocks at times when the entire list was subjected to depressing influences has been shown by the record.

During more than half of the past year the condition of the railroads was unfavorable, and promise of betterment was not seen. There is evidence of this in the record of construction and bankruptcies. Only 933 miles of new track were built—the smallest addition in any year since 1864. The new mileage had declined from 3071 in 1913 to 1532 in 1914. The mileage held by receivers in October last, 41,000, was the greatest ever known, but at the end of the year it had been reduced to 38,661. This, however, is nearly one-sixth of the entire mileage. The prospect at the present time is quite encouraging, with no cause of trouble in sight except a possible controversy with the four great unions of employees this spring.

A billion units are believed to be beyond the capacity of any human mind to grasp. But we are becoming accustomed to speaking of money in terms of the billion, with billion-dollar Congresses, exports of a billion and the immensity of war finance.

A French newspaper, the better to impress its readers with the magnitude of the "loan of victory," exceeding 14,000,000,000 francs—in our money \$2,800,000,000—reminds them that "only 1,007,212,000 minutes have elapsed since the death of Christ." That is certainly a striking allusion. Even counted in our money, the aggregate of dollars poured out of the "woollen stocking" of France is more than twice the number of minutes in the centuries since the dawn of the Christian era. . . . With all the belligerents the debt is piling up so that it is counted in billions, while a billion itself cannot be counted or scarcely comprehended.—*Providence Journal*.

There are wonderful results to be secured both in garden effects and for household cut flowers with Gladioli, Cannas, Dahlias, Montbretias, etc., and at such a small outlay of time and money! Just try an assortment of our imported-to-order bulbs this year. By planting in proper combinations and intervals you can have an abundance of beautiful flowers steadily from spring till frost, and with practically no trouble at all.

Our Plan Saves You Half

This is our plan. You tell us what bulbs you wish. We order them for you directly from the growers in Holland, where the best bulbs come from. Long experience and frequent visits to Holland and personal acquaintance with the growers enable us to buy each kind from the best specialist in that variety, and as your bulbs are packed by the grower and then forwarded to you as soon as they reach this country, you get much better bulbs and at much less than they would cost you if passed through the usual middlemen. Thousands of customers buy their bulbs through us every year and they can tell you. You need not pay for your bulbs until after delivery, nor take them if not satisfactory. (References required from new customers.) But remember—

You Must Order Now— Not Later Than March 1st

Our prices and the quality of bulbs secured depend upon buying direct from the growers for April and May delivery. These are just a few of the prices our plan secures you:

	Dozen	100
Gladioli America, 1st sized bulbs	\$.25	\$ 1.40
Gladioli XXX Mixture, finest offered	.30	2.00
Choicest Named Dahlias	1.00	6.00
Choicest Large Flowered Cannas	.85	5.50

For prices on other items and on smaller quantities, send today for our Import Price List. It is Free, write for it now.

Seeds We have a limited quantity of specially selected, pedigreed seeds representing choice varieties of everything grown in Mr. Elliott's private garden, that this year, for the first time, are offered for sale, and at no advance in prices. These are highest grade seeds produced. Write for list and prices of flower and vegetable seeds at once.

Thomas Edison

Edison is Right!!!

You admit the International Correspondence Schools are a good thing. You'd take a course right now "if"—"except"—

"If" what? If you weren't so "over-worked," with such "long hours," or had more strength and energy?

Wasn't it Edison who stayed up half the night to educate himself in spite of every handicap you could ever have?

All big men who have made their mark in the world had the *ambition*—the *determination*—to improve their spare time, to train themselves for big work. You, too, can possess power, money and happiness if you'll only make the effort. The reward is great—it's worth it.

Here's all we ask: Merely mail this coupon. Put it up to us without paying or promising. Let us send you the details of others' success through the I. C. S., and then decide. Mark and mail this coupon now.

INTERNATIONAL CORRESPONDENCE SCHOOLS Box E-1024 SCRANTON, PA.

W. E. UNDERWOOD

BE CAUTIOUS ABOUT CHANGING

There is no business in the world that is worked more assiduously than that of life insurance. The companies are numerous; their field representatives aggressive; and competition is keen. The struggle for applications long ago bred two evils which legislation has endeavored to eradicate—one called "twisting," which consists in persuading an insured to lapse a policy he has for the purpose of replacing it with one issued by the company the agent represents; the other, "rebating," is a division of the agent's first commission with his customer. Nearly, if not quite, all the states prohibit these practices. But the laws are not implicitly obeyed thruout the country.

On general principles, and in the vast majority of cases, "twisting" is unprofitable to policyholders, and always profitable to the agent who does the "twisting," for he makes a commission on the new policy he places. Policyholders should regard a "twisting" proposition with suspicion. There are exceptional cases where a policyholder, having made a bad choice, either because the system under which he is insured is faulty, or the financial condition of the company is or becomes unsatisfactory, is warranted in changing a poor equipment for a good one. But these situations are comparatively rare. Time is an invaluable element in life insurance, and he who has invested even but a few years under a policy will find difficulty in securing compensation for the time past if he abandons that particular venture.

The injustice of "rebating" is obvious. Nearly all policyholders must pay their first premiums in full. Those who secure a discount on them by accepting a portion of the agent's wage, are receiving the service rendered by the insurers at a price lower than that paid by their associates, and the essential principle of equity is violated. Aside from this, the practice abridges the fair reward the agent should receive for his labor; for I am of those who hold that the man who can persuade his neighbors to protect his family and himself properly thru life insurance has conferred a favor, compared with which the agent's compensation is but a trifle.

Not infrequently readers seeking information and advice thru this department, after describing the line of insurance they are carrying, certain faults in which they have discovered, ask if they would not do better by surrendering it and securing new policies in its place. It is for that reason I have

briefly discussed "twisting" and its disadvantages on this occasion. In most cases, such changes are as risky as "swapping horses when crossing a stream."

WAR LOSSES OF AMERICAN LIFE COMPANIES

As previously reported in this department on several occasions, the general effect of the war in Europe on the mortality experience of the American life insurance companies transacting a foreign business may be set down as negligible up to the end of 1915, after seventeen months of perhaps the most sanguinary fighting in the history of the world. In a statement just issued by President Kingsley, of the New York Life, the American company with the largest European business, we find that the total deaths amongst its members, due to the war, number but 534 from August 1, 1914, to December 31, 1915; and that for the twelve months of 1915 the toll was 409.

By way of illustrating the matter, Mr. Kingsley contrasts this record with the company's mortality due to common causes. For example: we find that during 1915, deaths of members due to accidents numbered 448; to cancer, 707; to pneumonia, 772; to tuberculosis, 950.

In further demonstration of the claim previously made by the management that the war would have no material effect on the company, Mr. Kingsley furnishes us with the percentages of "actual" to "expected" mortality for the years 1912, 1913, 1914 (five months of war) and 1915 (twelve months of war). The "expected" mortality is that for which the premium rates provide; the "actual" is that which, at the end of the year, is found to have occurred. In 1912 the "actual" was 76 per cent. of the expected; in 1913 it was 73 per cent.; in 1914 it was 73 per cent.; and in 1915 it was 73 per cent.

These figures leave no room for apprehension on the part of American policyholders of companies transacting a foreign business. As has been shown, there are greater hazards than war to be encountered by those who constitute the largest companies. As Mr. Kingsley has pertinently observed: "In the grim battle of life with its inevitable mortality and its unnecessary slaughter, the mortality of a world war, even while it is being prosecuted, amongst a membership that is also world wide, is about 91 per cent. of that caused by accident in the same membership; 58 per cent. of that caused by cancer; 53 per cent. of that caused by pneumonia; and 43 per cent. of that caused by tuberculosis."

E. G. S., Ames, Ia.—Young men, because the probability of survivorship during many years is very strong and also because their producing powers are constantly growing, should, if they can, take some of the endowment forms of life insurance. At twenty-two one with an income and without immediate family responsibilities should be able to maintain a twenty-year endowment. If more protection is desired for the premium, take a thirty-five-year endowment.

1916

ATLANTIC MUTUAL INSURANCE CO.

ATLANTIC BUILDING, 51 WALL STREET, NEW YORK

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries.

Chartered by the State of New York in 1842, was preceded by a stock company organized in 1811, which was liquidated and part of its capital, to the extent of \$100,000, was taken over by the present company, which was then reorganized and rechartered with a bonus and interest at the expiration of ten years.

During its existence the company has insured property to the value of \$27,904,578,100.00

Received premiums thereon to the extent of \$27,924,800.00

Paid losses during that period \$13,820,874.00

Issued certificates of profits to dealers \$9,801,110.00

Of which there have been redeemed \$3,811,450.00

Leaving outstanding at present time \$6,989,660.00

Interest paid on certificates amounts to \$2,000,000.00

On December 31, 1914, the assets of the company amounted to \$14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

Hartford Policies Buried in a Keg at Midnight

After the conflagration that swept Charleston, S. C., during the Civil War in 1861, the policy holders in the Hartford Fire Insurance Company despaired of collecting their claims against an "enemy" corporation. Proofs of loss could not be forwarded through the battle lines, and the Company was under no legal obligation to pay.

"Give me your papers," said the Hartford's local agent. "I will take care of them and you will get your money." The documents, together with other valuables, were placed in a keg and buried at midnight in the middle of a large field which was afterwards ploughed over. There they remained until the end of the war, when they were forwarded to Hartford and the claims promptly paid. This is the motive back of the

INSURANCE SERVICE OF THE TWO HARTFORDS

For over a century the Hartford Fire Insurance Company, through war, panic and disaster, has met every honest obligation fully and fairly. As a result it writes today more fire insurance than any other company in the United States.

The Hartford Accident & Indemnity Company in the field of casualty and bonding insurance is noted for the same prompt, fair treatment of its policy holders for which the parent company is famous.

The two companies, between them, write practically every form of insurance but life insurance.

Check on the coupon below any form of insurance in which you may be interested. Mail it to us and we will send you full information.

BOTH SIDES

A DEBATE

PUBLIC DEFENDER

RESOLVED: That the office of Public Defender should be created thruout the United States.

THE idea of a Public Defender, who, in the name of the state, shall defend persons accused of crime, just as the Prosecuting Attorney prosecutes them for the state, was first considered by the states about twenty years ago. The first state to establish the office was Oklahoma, in 1911. The model for other localities, however, is usually the work begun in Los Angeles County, California, in January, 1914, described in *The Independent* of October 18, 1915. Brief prepared by Mary Prescott Parsons.

ARGUMENT FOR THE AFFIRMATIVE

I. Some change is needed in our method of administering criminal justice.

A. Innocent persons are convicted.

1. Courts are overcrowded.

2. The innocent often plead guilty. (a) They are ignorant of the safeguards allowed them by the law. (b) They prefer accepting a minimum penalty to the delay of trial. (c) Unscrupulous lawyers advise them to plead guilty.

3. Some convictions are due to lack of proper counsel.

4. Fees or political advancement of Prosecuting Attorneys sometimes depend on the number of convictions secured.

B. It discriminates unjustly against the poor.

1. They cannot afford expert counsel.

2. Assigned counsel, serving for nothing or for nominal fees from the state, are rarely satisfactory, being often (a) young lawyers lacking experience, (b) older men who have been failures, or (c) competent lawyers who are too busy to give the necessary time.

3. They cannot meet the necessary expenses of defense.

II. Needed reforms can best be accomplished thru the creation of the office of Public Defender.

A. Such work is properly a function of the state.

1. The state admits the right of the accused to defense and should provide means to make the defense adequate.

2. The Public Defender's work provides such means. (a) It insures able and just defense to the poor. (b) It makes appeals possible. (c) Respect of the public and the courts for the Public Defender prevents the following evils: 1. Convictions because of popular clamor. 2. Overpunishment. 3. Unnecessary and damaging indictments. (d) It secures equal justice for all classes.

B. The work of the Public Defender is economical for the state.

1. More cases are dismissed without trial.

2. Money is saved by coöperation between the Prosecutor and Defender.

3. Costly delays are eliminated.

4. Unnecessary imprisonments are prevented.

C. The need cannot be met by the following proposed substitutes:

1. Legal aid societies. (a) Their income, from private funds, is inadequate and uncertain. (b) It is wrong to make citizens depend upon charity to secure their rights.

2. Payment of counsel and other expenses of defense by the state. (a) Being unsystematized, this would cost more than the Public Defender. (b) It would lead to favoritism and graft.

III. Aside from criminal cases, the Public Defender directly benefits the state.

A. Economically.

1. Small debts are collected at a minimum expense.

2. Many persons are thus prevented from becoming public charges.

B. Socially.

1. It raises the standards of criminal courts and criminal lawyers.

2. It tends to prevent anarchy by assuring security and justice.

3. It tends to increase the number of just convictions.

4. It diminishes crime.

IV. The success of the Public Defender has been established in Los Angeles.

ARGUMENT FOR THE NEGATIVE

I. Office of Public Defender is unnecessary.

A. The assertion that innocent persons are convicted is unfounded.

1. It is not supported by facts.

2. It loses sight of the many safeguards now provided by the law. (a) Assumption of innocence. (b) Duty of the Prosecuting Attorney to prevent unjust indictments. (c) Necessity of indictment before prosecution. (d) Requirement of unanimous verdict for conviction.

3. Protection against "shyster" lawyers can be accomplished by better administration of jails.

4. Assigned counsel give good service. (a) Reputation depends on it. (b) No lawyer who neglects his duty is allowed to continue with a case.

B. Present methods with some changes will insure justice to rich and poor.

1. Laws should be amended to prevent the escape of wealthy criminals, not to enable poor criminals to escape also.

2. Where Prosecuting Attorneys' fees depend upon convictions the remedy should be a change in the laws.

3. Payment of necessary expenses of defense by the state would be preferable to the creation of Public Defenders. (a) It involves less radical changes in the laws. (b) It is less expensive. (c) It is satisfactory.

C. Much of the work of the Public Defender is now done by other agencies—Prosecuting Attorneys, probation officers, legal aid societies.

II. Public Defender not practically useful.

A. Its seeming success in Los Angeles is of too short duration to be a criterion.

B. The Public Defender could not try to acquit the guilty as well as the innocent.

1. This would merely block the work of the Prosecuting Attorney.

2. A legal battle between two public officials would destroy respect for law.

3. It would double the work and expense of the courts.

4. Public funds would be misspent.

C. The office would not be justified if the Public Defender should defend only those whom he believed to be innocent.

1. He would usurp the functions of the judge and jury. (a) He would be obliged to give up a case if he found evidence of guilt. (b) The fact that he undertook the defense would prejudice the court in favor of the accused.

2. There would be no one to defend the prisoner who refused to plead guilty on the advice of the Public Defender.

3. His services would be sought only by the few who were innocent.

4. We should not establish the office for these few. (a) The work of the Public Defender would coincide with that of the Prosecuting Attorney. (b) Adequate safeguards now exist.

D. The Public Defender could not always undertake the collection of debts.

1. The office would be swamped by the number of unjust claims.

2. Expensive investigations would be necessary to distinguish genuine from false.

III. It would be unwise for the country.

A. It would be expensive at first.

B. Ultimately the state would have to defend in all criminal cases.

1. It would be hard to draw the line.

2. It would be the only way to prevent injustice to persons of moderate means. (a) The Public Defender and his assistants would be able lawyers for the poor. (b) The rich could employ experts.

C. It would be dangerous.

1. More criminals would escape.

2. Crime would increase.

3. It would endanger the liberty of citizens. (a) It would give one man too much power. (b) Citizens would be defended by a paid servant of the prosecution. (c) It would lead to the denial of their right to employ private counsel.

4. Once created, the office would be difficult to abolish.

5. Free administration of justice is socialistic.

A L A C A R T E

The New York, New Haven and Hartford Railroad Company, which our readers have possibly seen references to in the papers during the last year or so, runs a de luxe, excess fare, pan-parlor car train every day from New York to Boston yclept the Merchants Limited.

The Editor of The Independent, as befits his dignity and position in the community, is accustomed to grace this train with his presence, whenever the search for some mute inglorious Emerson, or some impulse to improve his Harvard accent—he was but educated at Yale—or some other imperious demand calls him to the Athens of America.

Last Friday it was his fortune to be aboard this aristocratic conveyance. On hearing the proclamation of the third call for dinner about 7 p. m., he started to go forward when he learned, much to his surprise, that in addition to a dusky lady's maid and other lucullan appendages too numerous to enumerate, the Merchants Limited now boasts of two dining cars—one forward providing a table d'hote dinner, the other rearward furnishing an à-la-carte service.

The Editor before making the momentous decision confronting him visited both cars. He found that the table d'hote car was half empty, but the à-la-carte car was packed to the limit. There was even a waiting line in the alley next the galley.

Without imposing on the valuable space of The Independent, or on the more valuable time of its readers to the extent of telling in which car the Editor dined (or was it in both?), or on what delicacies he made his repast, suffice it to say that having eaten his money's worth, he surreptitiously seized a menu from each car, while the steward was not looking, and then went back to his coach, the "Eurydice"—for such was its name—and sitting down in his green upholstered revolving chair (it stuck fast and wouldn't revolve as every parlor car traveler knows) he critically compared the purloined menus before him.

And what pray do you think was the result? You can hardly guess. He

found that the two menus were alike with the exception of Buttered Beets, Banana Fritters and Saltines on the table d'hote bill of fare and Gherkins and Fried Haddock with Allemande Sauce on the à-la-carte bill of fare. The Editor then made a brief calculation with his fountain pen on the back of a discarded paper sanitary drinking cup that he found under the ice cooler. He discovered—*mirabile dictu*—that the precise dinner that cost \$1.25 in the table d'hote car, if ordered in the à-la-carte car would cost exactly \$6.25, or five times as much.

Now you can't stump the Editor of The Independent, if you ask him when the Great War will end or who is going to win it. He knows to a certainty whether he of the gleaming teeth or he of the envisaged whiskers will be the Republican nominee next June, or whether some darker horse like President James, of the University of Illinois, will be chosen (the James boom is now and hereby launched. The Editor would prefer the court of St. James's). He can even fathom the reason why "and jetsam" invariably follow when the word "flotsam" is used. But what for the life of him he cannot understand is why five times as many presumably human beings deliberately choose the à-la-carte service when they have to pay five times as much for it as they would for the same fare in the table d'hote car with second and third helps thrown in to boot. The mystery becomes more insoluble when it is remembered that the patrons of the à-la-carte car frequently pay considerably more than \$1.25 for their meal.

J U S T A W O R D

The Ice Ballet at the Hippodrome has set the example for the latest fad of New York fashion—ice skating. Toe dancing on skates, with all the whirls, glides, spirals, jumps, and pirouettes conceivable, is the principal feature of the exhibition, in which Miss Katie Schmidt, whose picture appears on the cover of The Independent for this issue, takes a leading part. This is the first appearance of the Ice Ballet in America, altho Berlin has found it a popular entertainment for some years.

About the war?—yes. You've read scores of articles. But here is a fragment from one in the war—a Frenchman with a seeing eye and a touch of philosophy. Captain Paul Vignon, he is, and Dr. Charles Peabody, of Cambridge, has translated, under the title *The Meeting*, his vivid reflections on a phase or two of the horror he lives in day by day.

"Good or bad government must go back to good or bad citizenship," writes Thomas R. Marshall, Vice-President of the United States, in a paper on *The Essence of Democratic Government* which he will contribute to an early issue. The Vice-President makes a ringing defense of "Jeffersonian democracy."

Useful Books for Everybody

SOME books are designed for entertainment, others for information. This series combines both features. The information is not only complete and reliable, it is condensed and readable. These volumes are replete with valuable material, compact in form and unequalled in point of merit and cheapness. They are the latest as well as the best books on the subjects of which they treat. No one who wishes to have a fund of general information or who has the desire for self-improvement can afford to be without them. They are 6x4½ inches in size, well printed on good paper, handsomely bound in green cloth; with a heavy paper wrapper to match.

EACH 50 CENTS

THE FAMILY FOOD. By T. C. O'Donnell. How to get the most efficient food for little money, with food-values, menus, and a balanced diet.

THE FAMILY HEALTH. By Myer Solis-Cohen. To keep well, read this book. It treats problems of ventilation, heating, lighting, drainage, clothing, and food.

THE FAMILY HOUSE. By C. F. Osborne, Architect. Helpful hints as to what to look for in the location of a house, amount of rent, exposure, and fixtures.

CANDY-MAKING AT HOME. By Mary M. Wright. Two hundred kinds of candy-fondant, fruit and nut candies, cream candies, fudges and caramels, bonbons and little cakes.

THE CARE OF THE CHILD. By Mrs. Burton Chance. A new treatment of an ever new problem, in its mental, moral and physical aspects.

HOME DECORATION. By Dorothy T. Priestman. You may learn here what is good taste in the treatment of walls, furniture, ornaments, etc.

RECEIPTS AND REMEDIES. By Louis A. Fleming. A thousand and one "best ways" to preserve health, comfort and appearance.

FIRST AID TO THE INJURED. By F. J. Warwick. What to do in all kinds of accidents and the first stages of illness. Illustrated.

NURSING. By S. Virginia Levis. The fullest particulars given for the care of the sick in all of the simple and serious ailments of life.

DEATH DEFERRED. By Hereward Carrington. Read this and live to be a hundred. A practical discussion of human life and how to prolong it.

ELECTRICITY. By George L. Fowler. If you wish to install a door-bell, construct a telephone, or wire a house, the information is here.

THE HORSE. By C. T. Davies. Are you choosing a horse, raising or keeping one? You need this handy little compendium of the latest veterinary science.

THE DOG. By John Maxtee. All the essentials of dog-keeping are given, from kennel to show bench, from biscuit to flea-bane.

GOLF. By Horace Hutchinson. This standard book gives a complete history of the game, instructions for the selection of implements, and directions for playing.

DAIRY-FARMING. By D. S. Burch, State Dairy Commissioner of Kansas. A practical book telling what cows to buy and how to make dairying pay.

CHICKENS. By A. T. Johnson. A book that tells all about chickens, how to raise them, combat disease, and otherwise care for the growing brood.

FLOWERS: HOW TO GROW THEM. By Eben E. Rexford. With the help so clearly given in this book no one need fail to raise flowers.

HOME GAMES. By George Hapgood, Esq. A collection of the newest and best ways of amusing people who have come together for a good time.

PARLOR GAMES. By Helen E. Hollister. With this volume at hand no one need ever be at a loss for games of amusement, entertainment and instruction.

SOLITAIRE AND PATIENCE. By George Hapgood, Esq. Fifty games; here are fifty friends for as many moods and able to make a lonely hour pass quickly.

WHIST. By Cavendish. The beginner's best friend and the experienced player's constant companion.

DANCING. By Marguerite Wilson. A complete instructor, beginning with the first positions and steps and leading up to the square and round dances.

DANCES OF TO-DAY. By A. L. Newman. An up-to-date manual of the latest dances with clear diagrams and photographs.

CONVERSATION. By J. P. Mahaffy. What to say, just when and how to say it, is the aim of this work.

STORIES WORTH TELLING. By Herbert Leonard Coggins. The cream of all the funny stories. Illustrated by 100 pictures by Claire Victor Dwiggins.

READING AS A FINE ART. By Earnest Legouvé. The suggestions contained in this work of standard authority will go far toward the attainment of this accomplishment.

CLASSICAL DICTIONARY. By Edward S. Ellis, A. M. All the classical allusions worth knowing, so arranged as to lose no time in looking them up.

BUSINESS LETTERS. By Calvin C. Althouse. An expert here shows by numerous examples from real business how to write letters.

SHAKESPEAREAN QUOTATIONS. By C. S. Rex. Here are more than one thousand subjects, arranged alphabetically; under each apt quotations are given.

BIBLICAL QUOTATIONS. By John H. Bechtel. Thousands of quotations, arranged alphabetically by subjects, providing quotations for each one.

CIVICS; WHAT EVERY CITIZEN SHOULD KNOW. By George Lewis. Information on such topics as the Monroe Doctrine, Behring Sea Controversy, Extradition, Treaties, etc.

SLIPS OF SPEECH. By John H. Bechtel. No necessity for studying rules of rhetoric or grammar; this book teaches both. It is counselor, critic, and guide.

ETIQUETTE. By Agnes H. Morton. Success in life is often marred by bad manners. Social blunders may be prevented by the knowledge of the right thing to do.

QUOTATIONS. By Agnes H. Morton. A clever compilation of pithy quotations, alphabetically arranged according to the sentiment.

EPITAPHS. By Frederick W. Unger. Full of quaint bits of obituary fancy, with a touch of the gruesome here and there for a relish.

PROVERBS. By John H. Bechtel. This volume contains a collection of proverbs, old and new, indexed to enable one to find readily just what is wanted.

THINGS WORTH KNOWING. By John H. Bechtel. Information for everybody, about health, household affairs, business, domestic and foreign countries: all indexed.

A DICTIONARY OF MYTHOLOGY. By John H. Bechtel. The convenient arrangement here makes knowledge of mythological subjects easily acquired.

PRONUNCIATION. By John H. Bechtel. Over 5,000 words, pronounced in the clearest manner, according to the best authority.

PRACTICAL SYNONYMS. By John H. Bechtel. Invaluable for enlarging your vocabulary and cultivating a more precise manner of speech.

THE DEBATER'S TREASURY. By William Pittenger. Directions for organizing and conducting debating societies, with a list of over 200 questions.

PUNCTUATION. By Paul Allardyce. Few persons can punctuate correctly. Keep this book on your desk to remove difficulties and make all points clear.

ORATORY. By Henry Ward Beecher. A unique and masterly treatise on the fundamentals of true oratory.

ENGLISH WRITERS. By R. V. Gilbert. For those who wish to know the main facts about our great writers.

STORIES OF THE OPERAS. By Ethel Shubert. This gives the complete story of every opera ordinarily produced in America and many less frequently heard.

JOURNALISM. By Charles H. Olin. What is news, how is it obtained, how handled, and how to become a journalist? These questions and others are answered.

ASTRONOMY: THE SUN AND HIS FAMILY. By Julia MacNair Wright. Can you tell what causes day and night, seasons and years, tides and eclipses? Here is your information.

BOTANY: THE STORY OF PLANT LIFE. By Julia MacNair Wright. The scientific study of Botany made as interesting as a fairy tale.

LAW, AND HOW TO KEEP OUT OF IT. By Paschal H. Coggins, Esq. Every busy man and woman will find here information on just such points as are likely to arise in everyday affairs.

PARLIAMENTARY LAW. By Paschal H. Coggins, Esq. This is parliamentary law in a nutshell, for people who need plain rules, and the reasons for them.

SOCIALISM. By Charles H. Olin. Here is given, in a clear and interesting manner, a complete idea of the economic doctrines taught by the leading socialists.

PLUTARCH'S LIVES. By Edward S. Ellis, A. M. The lives of the leading Greeks and Romans of ancient times, in concise form.

READY-MADE SPEECHES. By George Hapgood. A collection of carefully planned model speeches to aid those who, without some slight help, must remain silent.

AFTER-DINNER STORIES. By John Harrison. Nothing adds so much zest to a dinner as a good story well told. There are hundreds of them, short and pithy.

TOASTS. By William Pittenger. What would you not give for the ability to respond to them? This little book will tell you how to do it.

LETTER WRITING. By Agnes H. Morton. This admirable book shows, by numerous examples, just what kind of letters to write for all occasions.

ASTROLOGY. By M. M. Macgregor. If you wish to know in what business you will best succeed, or whom you will marry, here is the solution.

DREAM BOOK. By Madame Xanto. The old traditions proved by time and the experience of famous Oriental, Celtic and early English observers.

CURIOUS FACTS. By Clifford Howard. Why do you raise your hat to a lady? and why do you offer the right hand? The answers are here.

PRACTICAL PALMISTRY. By Henry Firth. Follow the directions here and every hand will tell you its story like a printed page.

VENTRILOQUISM. By Charles H. Olin. This book exposes the secrets of the art completely, shows how anyone may learn to "throw the voice." Fully illustrated.

CONUNDRUMS. By Dean Rivers. This book contains an excellent collection of over a thousand of the latest and most up-to-date conundrums.

MAGIC. By Ellis Stanyon. Full descriptions of all the well-known tricks with coins, handkerchiefs, hats, flowers and cards. Fully illustrated.

FORTUNE TELLING. By Madame Xanto. All the approved ways of piercing the future by cards, dominoes, dice, palmistry or coffee grounds.

PHYSIOGNOMY. By Leila Lomax. How can we judge of character? Physiognomy as here explained shows clearly how to read character in every face.

PHRENOLOGY. By C. H. Olin. How to examine the head and learn how its shape influences character.

HYPNOTISM. By Edward H. Eldridge, A. M. By following the simple and concise instructions contained in this complete manual, anyone may readily learn how to exercise this unique and strange power.

GRAPHOLOGY. By Clifford Howard. Anyone who understands Graphology can tell by your handwriting what sort of person you are.

The following titles are published in full red morocco leather, flexible, with the title in gold, and each book in a box. In this form they make very handsome gift books. Price, \$1.00 each.

After-Dinner Stories
Bridge, and How to play It
Business Letters

Stories of the Operas
Conundrums

NUMBER 3504

PRACTISE WHAT YOU PREACH, MR. PRESIDENT

WHY all this fuss about the Postmaster-ship of New York?

If one may believe the reports, the question which the president is trying to decide is whether he shall appoint a certain Tammany politician or some other politician. But why a politician at all?

The one thing a postmaster ought to know is how to run a post-office. What do politicians know about that?

There is just one logical, sensible appointment to be made. The present postmaster, Edward Morgan, does

know how to run a post-office. He has been at work in the New York post-office for forty-three years. He was assistant postmaster for ten years and postmaster for the same length of time. There is no breath of criticism of his efficiency. How could New York hope to have better postal service by putting a politician in his place?

Here is a sharp and clean cut issue between efficient public service and selfish spoils politics. Here, Mr. President, is a splendid opportunity to make good in practise the high political morality you have so earnestly preached.

PUBLIC RIGHTS AND INDIVIDUAL OPPORTUNITIES

AMONG American public men Mr. Justice Hughes is hardly surpassed in the sanity of his judgment, the clearness of his intellectual perceptions, the breadth and sincerity of his devotion to human rights. Time and again in his career upon the bench of the Supreme Court his voice has been heard with unmistakable force upon the side of the public welfare as opposed to the technical rights of special interests and the privileges of property.

In a recent address before the New York Bar Association, Justice Hughes made illuminating comment upon a subject of vital importance to our national progress, a subject apparently purely legal, but in reality intensely human. It is concerned with the "due process of law" section of the Fourteenth Amendment to the Federal Constitution. That section provides, among other things, that no state shall deprive any person of property without due process of law.

It is one of the historic clauses of our national Bill of Rights securing life, liberty and property. It was enacted by the Fathers as a defense of individual opportunity against possible governmental tyranny. As such it was and is an indispensable part of the fundamental law of the nation. But with new times and new conditions of industry and of life it has come to be invoked with greater or less success as an instrument of industrial aggression against the general welfare.

Within the past few years it has been appealed to with success in the single state of New York to prevent the Legislature from prohibiting the manufacture of cigars in tenement houses—although every student of the subject knew that such manufacture was attended with grave dangers to the public health—and to make impossible the enactment of a Workman's Compensation Act. In other states it has been appealed to, happily without success, to prevent a legislative restriction of hours of labor for women.

The success of the appeals to this constitutional pro-

vision for the purpose of estopping legislation in the public interest has arisen largely from three causes: A misconception on the part of judges as to their proper function in such cases; a misinterpretation on their part of the real purpose of this provision; and a judicial ignorance of or unwillingness to take proper account of the real facts of life involved.

Justice Hughes puts an unerring finger upon these three causes and in relation to them sets the judicial function in its proper perspective. On the first point he says: "It is manifest that the prohibition was not intended to override legislative action by the views of judges as to its wisdom." This is perfectly true. It is the business of the Legislature to decide whether a given piece of legislation is wise or not. It is only the business of the judiciary to determine whether the Legislature has the Constitutional right to enact the legislation and whether in so doing it has violated any fundamental individual right.

In regard to the second point he says:

What was thus sought was not a privilege to deny the legislative authority to enact reasonable measures for the protection of the safety, health, morals and welfare of the people, not to make improvement or rational experimentation impossible, but to preserve and enforce the primary and fundamental conceptions of justice which demand proper notice and opportunity to be heard before a competent tribunal in advance of condemnation, immunity from the confiscation of property, and, with respect to every department of government, freedom from the exercise of purely arbitrary power.

This aspect of the case could hardly be better stated.

On the third point Mr. Hughes declares that the judicial function of scrutinizing legislation in order to conserve what have been deemed to be the essentials of liberty is not likely to be disturbed "so long as judges in the discharge of their delicate and difficult duty exhibit a profound knowledge and accurate appreciation of the facts of commercial and industrial activity. . . ."

This undeniable fact has been stated by another

prominent American in the succinct phrase, "Judges should know life."

This keen and forceful presentation of an important aspect of the judicial function affords new, convincing proof of Mr. Hughes's eminence among the members of America's judicial system. It is an admirable illustration of the qualities of mind and spirit which have given rise to the strong and growing demand, with which *The Independent* strongly sympathizes, for the nomination of Mr. Hughes for the Presidency. It also suggests the reason why the nomination of Mr. Hughes would not be an unmixed benefit. We need just such qualities upon the bench. They are not so common there that their loss even in the person of a single judge would be lightly felt.

Mr. Hughes would make a splendid President; but he is already a splendid judge.

THE PARAMOUNT ISSUE

THIS country at the present moment is quite literally in the grip of an epidemic of influenza. Indeed the disease is so widely diffused that it is easy to understand why the term pandemic should be used because it affects practically the whole people. It has considerably raised the death-rates in every important city of the country and New York City during the past three weeks has had double as many deaths from pneumonia and related diseases as during the corresponding weeks of last year, and of preceding years. The affection carries off particularly the old and the young, but also those of all ages who are in delicate health. It is one of the most insidiously dangerous diseases that we have, and will undoubtedly have been the direct or indirect cause of many thousands of deaths before the present epidemic has exhausted itself.

Grip is due to a bacillus which was discovered by Pfeifer in Germany nearly twenty-five years ago, shortly after the first great modern epidemic of the disease which began in Turkestan or Southern Russia in the spring of 1889. Within a year the disease had spread to nearly all parts of the earth. Ever since then it has become endemic in most of the countries of the West and every winter sees a number of cases of it. Whenever the season is very damp, the sky much overcast and the temperature not low, the atmospheric conditions seem to favor the growth of the bacillus of influenza. Dry cold weather with cloudless skies greatly lessens the danger. After all our best germicide is sunlight. The bacillus of influenza seems to be particularly susceptible to its germicidal influence and to thrive on dark damp days. The present rather mild damp winter has fostered its virulence and by tempting people to be out more than usual has aided in the diffusion of the disease.

While influenza is an air-borne disease, it is not due to a miasm, that is, to some active element in the air, but to the presence in the atmosphere surrounding the people who have the disease of the germs of the affection. Because of this no one who has influenza should ever cough or sneeze without having a handkerchief before his mouth or nose. The disease constantly runs thru families. It is contagious; that is, it is spread by contact and not by an infection of the air or the water or food. Boards of health have taken up the crusade to lessen expectoration on the street and in cars and pub-

lic buildings. All the oral and nasal secretions should be disinfected. This seems an over-meticulous precaution to take, but any one who wants to spare members of his household will find it well worth while to adopt it.

The disease, like diphtheria, does not protect against subsequent attacks except perhaps for a few weeks immediately after recovery. On the contrary influenza at the beginning of winter often seems to make people particularly susceptible to the disease later in the season and the danger of pneumonia as a complication rises with each succeeding attack. There is always danger of contracting the disease in crowds. Many people would escape attacks if after working all day in close, dry, overheated offices, when the mucous membrane has become incapable of protecting them thoroly, they did not have to ride home in crowded cars. A walk in the free open air at that time for fifteen or twenty minutes would probably arouse the vitality of their mucous membrane and make it better able to protect them. Quinine and whisky are still taken as prophylactics, tho they are not only useless, but probably predispose to the affection. The one all-important prophylactic is fresh air both day and night. Even in rainy weather and when the temperature is low the windows of the sleeping room should be kept open. The disease is practically never caught overnight, as many people think, but has an incubation period of three or four days. Thus when people tell their physicians that they caught the grip sitting in a draft yesterday morning or last night they are usually quite wrong. When we have reached a stage of civilization in which the present barbarous crowding of cars during rush hours will be looked upon as a relic of savagery, influenza will probably cease to be the danger that it has been at nearly all times during the wintry weather in the last twenty-five years.

CRUMBLING REPUTATIONS

IT is an old saying that those who begin a war are not the ones who carry it thru. The military organization like any other gets rusty in disuse, and when the stress and strain of actual combat puts it to the proof it is found that the men who have come to the head of it in time of peace are not always the best fitted to lead it in war. The McClellans have to be retired and the Grants promoted.

The present war is not the same war as that which started in August, 1914. It is being fought mostly on new battlefields with new weapons by new men under new leaders. The changes in the staff have been proportionally as numerous as the changes in the rank and file. When we look over the back numbers of illustrated periodicals or the early issues of some current "History of the War" we find that few of the names and faces which figured there are now prominent in the despatches.

On the Russian side the Grand Duke Nicholas, who was then hailed as a supreme strategist—of the Fabian type—has been banished to the Caucasus. Ruszky, Rennenkampf and Sievers have been removed from commands. Radko Dmitrieff, the "Bulgar Napoleon," is in retirement, but professes himself ready to head a Bulgarian rising against King Ferdinand.

On the German side von Moltke as chief of staff soon proved not to have the genius of his name. Von Kluck, von Deimling and von Hausen, who led the German armies in their first onslaught against the French, are hardly heard of nowadays. The Prussian Crown Prince, the "Victor of Longwy," is doubtless still alive in spite of having been reported killed at various times and places, but since his failure either to keep up with the march on Paris or to capture Verdun he is no longer "featured" in the official communications. The redoubtable von Hindenburg, who knew his way blindfolded thru the swamps of East Prussia, seems to have got stuck in the swamps of Courland and von Mackensen has taken his place in the limelight. In the Austrian army those who were in command at the start have been largely replaced by German generals or by the promotion of other Austrian officers.

In France before the war recurrent scandals had disclosed a deplorable condition in the army, where political, racial, sectarian and secret society influences were shown to control the appointments. The fatal month of August revealed cases of incompetency if not of cowardice or treachery in the higher commands. But Joffre had the courage to remove generals by the score without fear or favor and replace them by able men, whatever their previous rank or their political pull. So the French army is now practically under new management and Joffre himself has been raised to a position of more extensive scope, but perhaps less personal power.

In the British army, where it has long been alleged that court favor and social position counted for more than military proficiency, the weeding out process was less prompt and drastic than elsewhere, but the changes quietly and gradually made have revolutionized the command. When the summer past without the expected advance Field Marshal French was withdrawn. When the Gallipoli campaign failed Sir Ian Hamilton was removed. And now General Nixon, who commanded the ill-fated expedition up the rivers of Mesopotamia, has been sent home.

These removals do not, of course, necessarily mean incompetence. In some cases illness is alleged as the reason for the resignation, and we may well believe it. Never before in the history of the world has the fate of so many millions been placed in the hands of a single man and the only wonder is how human nature can stand the strain of such terrible responsibility without breaking down.

LET US HAVE CLEAR THINKING

SENATOR WORKS of California and Senator O'Gorman of New York gave expression in the Senate the other day to a view of the submarine problem that seems to have considerable popular approval among the unthinking. They seem to assert that American citizens sail the waters infested by submarines at their peril. They seem to deny the right and the responsibility of the United States Government to assure them of protection against deliberate attacks by war-vessels of belligerent nations. Mr. Bryan in the *Commoner* categorically asserts that American citizens should be prohibited by law from sailing on belligerent ships.

This is mere confusion of thought.

It may well be that it would be the part of wisdom and prudence for Americans to travel in war zone waters

only when the most pressing occasion demands, and then, wherever possible, on neutral ships.

So it would be wise and prudent for a citizen of a great city to keep out of a thug-infested neighborhood after dark. But this obligation of personal precaution on the part of the individual does not relieve the city police of their duty of protecting him from thug attack or absolve the courts of the state from their obligation to punish the thug if caught.

Nor is the National Government relieved of any of its responsibility for protecting American citizens in life and property wherever they are proceeding upon their lawful occasions. It is lawful for non-combatants to sail the high seas so long as the vessels on which they sail do not violate certain well understood rules. Except in the case of resistance or flight, a merchant ship may not be sunk until the safety of the non-combatants on board has been assured.

This principle is unquestioned by the German and Austrian Governments. The first has said in the "Arabic" case:

Liners will not be sunk by our submarines without warning and without safety of the lives of the passengers, provided the liners do not try to escape or offer resistance.

The second has declared even more explicitly in the "Ancona" case:

The Imperial and Royal Government can also substantially concur in the principle . . . that private ships, in so far as they do not flee or offer resistance, may not be destroyed without the persons aboard being brought into safety.

Since the offenders in these two cases do not question this principle, why should any Senator of the United States or Mr. Bryan, even by loose implication?

The rights of American citizens upon the high seas are beyond question. It is the duty of the United States Government to maintain them against encroachment by any nation. It cannot release itself from this obligation by any attempt to throw the responsibility upon individual Americans to travel the seas only in American or neutral vessels.

It is of vital importance that the issue should not be confused. On this subject everyone, even United States Senators and editors, ought to strive after clear thinking.

A COUNSEL OF WISDOM

IT may be a counsel of perfection, it is at least a counsel of wisdom, that Mr. Gutzon Borglum has offered in his plan for permanent peace. The creative imagination which he puts into sculpture he has brought to bear upon constructive statecraft.

In letters to the *Evening Post*, Mr. Borglum singles out, as a factor in the European war, which, after the conflict is over, will be recognized as one of the keys of final peace, the right of free and unrestricted trade with the world, and freedom upon the high seas and thru the great waterways of world commerce.

A dozen great nations have been growing with mighty strides. They will continue to grow; in wealth, population and power. They must have opportunity, outlet for energy, room. The opportunity is the world, but the world is a finite area. The nations cannot each and all expand territorially without limit. The alternative is economic expansion through trade. Monopolization of trade, or of ports, or of trade routes by one or more

nations is a highly dangerous repression of the expansive energies of the nations that are shut in or out. It is the old-time Mississippi River steamboat device of sitting on the safety valve. The "sooner or later" result is not doubtful.

This bit of sociology is not new, but Mr. Borglum's further proposition we think is. He proposes that the United States take the initiative in creating a great merger of the international highways and commercially strategic points. We should put into the pool the Panama Canal Zone and certain Pacific islands, or ports, in the Hawaiian group, in the Philippines, at Guam and at Samoa. The European Powers, on their part, should put in the Straits of Gibraltar, the Dardanelles and the Sea of Marmora, the Suez Canal, the Kiel Canal and Heligoland, and various minor places. All of these routes and places should be put under an International Board of Governors, to fortify, govern and administer.

That the scheme is theoretically sound, that practically it would be, as Mr. Borglum says, "good business," we suppose will not be denied. It is the sort of thing that "big business" has evolved to prevent those industrial conflicts that were threatening to become of warlike destructiveness, and it is a step in the direction of that League of nations which already is clearly indicated as the next stage in political integration, upon which all hope of worldwide and enduring peace necessarily rests.

Unhappily it is because it is practical and business-like that we do not dare to expect that Mr. Borglum's plan will easily be put into realization. It is concrete and specific, and there's the rub. It is easy and reputable to subscribe to a world peace program until we are asked to make over a definite right or other valuable consideration. We are glad to bless and help mankind until we are urged to put a certain sum into the contribution box. Yet, only by putting it in, shall we get on.

UNDERSTANDING WAR NEWS

IF, as Disraeli said, war is useful because it teaches us geography, we fear that many people are not learning their lessons.

The following list of questions designed to discover the amount of knowledge possessed on the Great War has been used in New York University, Bowdoin and Barnard Colleges and elsewhere.

Where is Gallipoli?
 What is the capital of Bulgaria?
 What countries bound Serbia?
 In what country is Salonica?
 On what sea is Montenegro?
 Who is in command of the French army?
 Who is the Prime Minister of England?
 Who is Von Bethmann-Hollweg? Poincaré? Venizelos?
 Briand? Von Hindenburg? General French? Sir Edward Grey? Viviani?
 Name, with proper title, the ruler of Germany, Greece, England, Italy, Bulgaria, Russia, Turkey.

The results show a general neglect of current events in our institutions of higher education. No one gets every question right, and the averages of the various classes are usually between fifty-two and sixty-three per cent. Some cases show a surprising degree of ignorance of the fundamental facts in the Great War, even among students of maturity, and in some cases teachers. The King of England was variously named as Edward V, Edward VIII, George II, III, IV, and VI. Gallipoli was located in Italy, Austria, Greece and Buda-

pest. Viviani was commonly supposed to be an Italian, but one student thought him a "Mexican general," and another a "poem by Tennyson." Montenegro was quite naturally placed upon the Black Sea, Salonica was supposed to be in Poland, Italy, Serbia and Turkey. Poincaré, it appears, is a "French artist."

The questions are not altogether well selected. It is, for instance, of little importance to know the name of the Sultan of Turkey, for he is less of a "ruler" than Enver Pasha, and those who persist in speaking of Albert as "King of Belgium" are not necessarily ignorant of what has happened there. But most of the questions ask for no more knowledge than is essential for the comprehension of what one reads in the daily newspaper.

The lamentable ignorance of this necessary minimum has been generally interpreted as indicating that our college students do not read the war news, and they have been scolded in many a chapel talk and editorial for neglect of the papers. To us the results of the quiz seem to show that they are guilty of something far less excusable. We fear that they *have* been reading the war news, but have made no effort to understand it. Such diligence and complete absorption in the required studies as to prevent a student from looking at a daily or even a weekly would indeed be unwise, but not discouraging. But to think that students of all people should read day by day the narrative of the epoch-making events now occurring in Europe without knowing or caring what it meant, is most appalling, for it shows that they have not yet learned how to read. It is better not to read at all than to read without any effort at understanding, for this habit is not only a waste of time but destructive to the intellect.

These students may, indeed must, know how to read books, but reading newspapers is a different art. The first thing to learn about it is to skip the headlines except as a guide to what the topic is. The headlines of the dailies are often unreliable and sometimes intentionally misleading as to the nature of the news beneath. To compare the history of the war as written in the headlines of certain American papers with the actual course of events would be an amusing tho profitless occupation. Second, it is impossible to understand the progress of a campaign without a map of the field of operations. Third, it must be remembered that the date and place at the head of the despatches are often put on in the office and so cannot be relied upon to indicate the source. Fourth, nearly all the cablegrams coming to us from any part of the world are subjected to British censorship, and the wireless messages from Berlin are subjected to German censorship. Fifth, the various belligerents differ widely in the authenticity of their reports, but none of them is as prompt and candid in admitting its defeats as it is in announcing its victories. Sixth, sending out false rumors of intentions and even false news of events is the custom of warfare.

But making due allowance for these things, it is quite possible for anyone to gain from the news a tolerably correct idea of the course of the war. For those who cannot give the time necessary for reading critically the full despatches day by day, the weekly periodicals provide a means for keeping well informed. There is no excuse for contemporary ignorance of one of the most tremendous periods in the world's history.

THE STORY OF THE WEEK

The Montenegrin Mystery

Last week our narrative closed with the capture of Mount Lovcen and the occupation of the Montenegrin capital by the Austrians. The next chapter, which would be still more exciting, cannot yet be written because the dispatches, triply censored in most cases, throw little light on the actions of the defeated King and leave his motives altogether in the dark. At the beginning of the week it was reported that King Nicholas had surrendered to the Austrians. In the middle of the week it was officially announced by the Montenegrin consuls that the King had never consented to surrender, but would stay and fight to the last. At the end of the week we learn that he has fled to France.

According to the first report the King of Montenegro, after the loss of Mount Lovcen had made his capital, Cetinje, untenable, had retired into the interior. At Grahovo, thirty miles west, he is reported to have surrendered his sword to General Herlees of the Austrian army and issued a proclamation declaring that the country could only be saved from ruin by surrender and calling upon his people to receive the Austrian troops with rejoicing. All of the Montenegrin cabinet are said to have signed the agreement of unconditional surrender.

The Austro-Hungarian terms stipulated that in each district the men should be required to bring all of their arms to some designated place for surrender. This requirement, tho obviously necessary, was particularly objectionable to the Montenegrins since to them, as to Americans, "the right to keep and bear arms," is regarded as essential to a free people. The army, or part of it, refused compliance with these terms and under the leadership of General Martinovitch retired into Albania and established themselves at Scutari. This city, it is said, they propose to defend with the aid of the Albanian

THE GREAT WAR

January 17—British relief column within six miles of Kut-el-Amara. King Nicholas of Montenegro surrenders to Austrians.

January 18—Allies bombard Bulgarian port of Dedeagatch. Kaiser Wilhelm and Czar Ferdinand of Bulgaria meet at Nish.

January 19—Austrians attacking Italian positions on heights opposite Görz. Sweden resents British interference with her mails and commerce.

January 20—England calls to the colors 100,000 unmarried recruits between nineteen and twenty-two years of age. Montenegrin army will oppose Austria at Scutari, Albania.

January 21—Russians continue attacks north of Czernovitz. Yuan Shih-kai informs Japan that re-establishment of the monarchy is postponed.

January 22—Russians from Caucasus approach Erzerum. Austrians take Montenegrin ports of Antivari and Dulcigno.

January 23—King Nicholas of Montenegro flees to Italy. England raided by German aeroplanes.

troops of Essad Pasha, a curious instance of the whirligig of time, for it was Essad Pasha who three years ago defended Scutari for many months against the attacks of the Montenegrins and when King Nicholas finally got possession of the city, April 27, 1912, the British took it away from him and gave it to the Prussian Prince, William of Wied, who is now fighting the British to regain it.

King Nicholas blamed Italy for the loss of his kingdom. The French, he said, had given him guns and kept him supplied with food until Italy entered the war and assumed responsibility for the defense of the Adriatic. Since then Montenegro has been neglected and at the time of the surrender of Mount Lovcen his troops were fighting against odds of ten to one, altho they had not received rations for five days.

These reproaches aroused counter recriminations in Italy. Altho the Queen of Italy is the daughter of King Nicholas, the censor allowed the press to indulge in a furious tirade against him and even to cable abroad their accusations of treachery. He was charged with having made a secret compact with Austria some months ago by which he was to be given the Albanian town of Scutari and Serbian town of Mitrovitza in exchange for the surrender of Mount Lovcen to the Austrians. According to the alleged agreement the Montenegrins were to refrain from any active assistance to the Serbs and to offer only formal resistance to the Austrian invasion.

The indignation of the Montenegrin King and Queen at these accusations of bad faith and cowardice are surmised to be the reason why they refused to accept the hospitality of their son-in-law, the King of Italy, but past thru Rome on their way to Lyons without staying overnight. But King Victor Emmanuel and Queen Helena came down to the station at Rome to see Queen Milena of Montenegro and brought with them their children, Prince Humbert and Princesses Yolanda and Mafalda, whom their grandmother had never seen. With Queen Milena were two of her daughters, the Princesses Xenia and Vera. King Nicholas, who also had escaped thru Scutari, arrived at the Italian port of Brindisi, four days later. The Montenegrin Crown Prince, Danilo Alexander, has been for some time in Italy and Prince Mirko, who arrived there recently, will go back to the army at Scutari.

Another week has past The Balkans and still the Teutonic and Bulgarian armies show no signs of moving on Salonica. On the contrary, it is reported that the 16,000 Austro-German troops who had occupied Monastir on the Serbian side of the Greek frontier have been withdrawn because of the difficulty of keep-

THE CROSSES

This photograph of a Russian military graveyard near Sokal is startlingly suggestive of the Raemakers cartoon, "Kreuzland, Kreuzland, über Alles," which we reprinted last week

THE WAR IN ASIA

The British relief expedition going up the Tigris River has nearly reached Kut-el-Amara, where the army which tried to reach Bagdad has been besieged by an overwhelming force of Turks. The Russian expedition, which is advancing thru Persia in that direction, is between Hamadan and Kermanshah. Another Russian force is fighting the Turks west of Lake Urmia and a third has advanced half way to Erzerum. The object of these movements is to gain possession of the valleys of the Tigris and Euphrates, once the seat of rich and powerful empires and capable of being restored to their pristine prosperity thru irrigation. One of the main causes of the war was the conflict of interests between the Germans who were trying to enter this region by railroad from the west and the British who were working their way up by the rivers from the east

ing up communications, since the only railroad from Monastir runs to Salonica. The French and British at Salonica are therefore able to continue their work of fortifying the hills about Salonica without interruption except from the flying visits of the aeroplanes.

There are all sorts of unauthenticated rumors of further aggression by the Allies on the neutrality of Greece, such as demands for the expulsion of the German, Austrian and Bulgarian representatives, landings of Allied troops at Piraeus, the seaport of Athens, etc. The King of the Greeks has given out another interview to an American correspondent because he says he cannot get a hearing in the French or British press. In it King Constantine says:

It is the merest cant for Great Britain and France to talk about the violation of the neutrality of Belgium and Luxemburg after what they themselves have done and are doing here.

Just look at the list of Greek territory already occupied by the Allied troops—Lemnos, Imbros, Mitylene, Castelloriza, Corfu, Salonica, including the Chalcidice Peninsula, and a large part of Macedonia. In proportion to all Greece it is as if that part of the United States which was won from Mexico after the Mexican War were occupied by foreign troops—and not so much as by your leave.

What matters that they promise to pay for the damage done when the war is over? They cannot pay for the sufferings of my people, driven out of their homes. They plead military necessity. It was under the constraint of military necessity that Germany invaded Belgium and occupied Luxemburg.

It is no good claiming that the neutrality of Greece was not guaranteed by the Powers now violating it, as was the case in Belgium, for the neutrality of Corfu is guaranteed by Great Britain, France, Russia, Austria, and Prussia. And yet that has not made any difference in their action.

And what about that plea of military necessity? Where is the military necessity of destroying the Demir-Hissar bridge, which cost a million and a half drachme

and which was the only practicable route by which we can revictual my troops in Eastern Macedonia?

They say that they are occupying Castelloriza, Corfu, and other points in search for submarine bases. The British Legation at Athens has a standing offer of £2000, a great fortune to any Greek fisherman, for information leading to the detection of a submarine base, but never yet received any news about a submarine base in Greece, and never yet have any submarines been seen supplied from Greece.

In reply the Allies claim that they are not "occupying" Greek territories but only making temporary use of them with the tacit consent tho under the formal disapproval of the Greek Government, and that the population welcome their advent instead of opposing them as the Belgians did the Germans. "It was from the coasts of these islands or peninsulas that the pirates who sank the 'Ancona' and the 'Persia' set out." As for the bridges destroyed, they will be paid for later.

The German Emperor and the King of Bulgaria met at Nish, the former capital of Serbia, and exchanged compliments and honors. King Ferdinand was made a German Field Marshal and Emperor William honorary commander of the Twelfth Balkan Infantry Regiment. This is the first time that a German Emperor has visited Serbia since Frederick Barbarossa.

The Tigris Relief Expedition

One of the most remarkable campaigns in the war is that of which the outside world has heard the least, the British invasion of Mesopotamia. General Sir John Eccles Nixon, who was in command first, secured the head of the Persian Gulf and the oil fields to the north and then dispatched two expeditions into Turkey, one up the Tigris and the other up the Euphrates. The former under General Townshend had got to the ancient Persian capital of Ctesiphon last

November and London was expecting to hear that it had reached Bagdad, only twenty-five miles away, when it was met and defeated by an overwhelming force of Turks. The British beat a retreat downstream a hundred miles to Kut-el-Amara, a position on the northern side of the Tigris which the Turks had entrenched, but had failed to hold, as the British advanced up the river. Here General Townshend was compelled to stop and wait for reinforcements to come up the river, for he was enveloped on all sides by a force of Turks said to number 60,000 and commanded by German officers. The British troops are probably less than 40,000. Two British gunboats which tried to reach the besieged garrison were stopped by the shallow water. The Turks were well provided with artillery under cover of which they made repeated attacks upon the British trenches. On Christmas Day they managed to effect an entrance on the northern side, but were driven out with heavy losses.

The relief expedition under General Aylmer came up the Tigris to Sheik Said, an Arab village about twenty miles below Kut. Here they found the Turks entrenched on both sides of the river, but dislodged them on January 11, and pushed on to within seven miles of Kut. Here a battle took place last week in a heavy rainstorm. The losses were heavy on both sides and victory is uncertain. If the relief expedition can break thru the Turkish ring and the two forces united, the advance upon Bagdad may be resumed, for it should be easier for the British to get supplies up the rivers from the Persian Gulf than for the Turks to get them from Constantinople, for the German railroad probably lacks at least three hundred miles of reaching Bagdad. It is said that the Germans have brought from Constantinople 3000 automobiles to bridge this gap across the desert.

General Nixon, whose Mesopotamian campaign came to such an unfortunate ending, has been relieved of his command and recalled on the ground of ill health. Lieutenant General Sir Percy Lake, chief of the Indian staff, has been appointed to his place.

The Caucasian Campaign

In the effort to relieve the dangerous plight of the British on the Tigris, the Russians are sending two expeditions south from the Caucasus. One is advancing from the Caspian Sea toward Kermanshah, the headquarters of the Nationalists, as the Persians opposing Russian and British control of their country call themselves. They have received the support of Turks and Germans and have possession of many of the cities of central Persia. The Russian expedition has taken Hamadan and gone about fifty miles beyond toward Kermanshah. But even when they have reached that city there will still be 150 miles of mountain and desert between them and the beleaguered British garrison at Kut-el-Amara.

The other Russian offensive is di-

rected toward Erzerum, which is about sixty miles southwest from the boundary line of the Russian province of Transcaucasia. The Russians undertook an invasion of Turkey in this quarter more than a year ago, but met with such stout resistance a few miles from the frontier that the effort was abandoned. The Armenians of this region welcomed the Russian invasion and in some places rose against the Turks because they had reason to believe that the Allies intended to set up an autonomous Armenia. But the failure of the Russians to occupy the country left the Armenians exposed to the vengeance of the Turks and more than a million have been massacred or driven into the desert to perish.

The new Russian invasion of Armenia began early in January with an advance across the frontier at various points on either side of Mount Ararat along a front of a hundred miles. Their chief point of attack seems to be the ancient city of Erzerum and in this direction they have got as far as Koprikoi, about twenty-five miles from their goal. The Russians took Erzerum in 1829 and again in 1878, but each time it was by the insistence of England restored to the Turks.

Restrictions on Commerce It is expected that Great Britain will soon declare a real blockade since it has become evident that the system of search and seizure is not preventing Germany from getting goods from neutral countries or even from the United Kingdom itself. France and Italy, which have hitherto been reluctant to sanction a blockade, are now said to be consenting. The United States, which has protested vigorously that the stoppage of shipping thru the British Orders in Council was unwarranted by law, could not object to a legal blockade. But according to international law a blockade must be effective, must be impartial and must not apply to neutral ports. Here is likely to arise the difficulty with the United States and other neutral powers, for the British fleet has so far not been able to control the Baltic Sea and the German imports which it is now desired to prevent come in thru Holland and the three Scandinavian countries.

These nations are already incensed by British interference with their commerce and any further restrictions are likely to alienate their sympathies from the Allies. Especially do they resent the action of the British authorities in searching their mail for contraband and subjecting their letters to British censorship. In retaliation for this the Swedish Government is holding up the English mail passing thru Sweden to Russia and has prohibited the export of chemically prepared wood pulp to England. This will increase the embarrassment of English periodicals, many of which have had to suspend publication on account of increased expense and less advertising. The British Foreign Office has assured Mr. Page, our Ambassador at London, that mail from American to neutral ports which has

been found on opening by the British censor to be "innocent" will be allowed to go forward without delay.

On the opening of the Riksdag the King of Sweden spoke strongly of the interference with neutral commerce. He said:

The belligerents have neglected in ever increasing degree the written international laws for the protection of neutrals and limiting violence in war. The Swedish Government has more than once been obliged to intervene against attempts to put Sweden's industrial and commercial life under the usurped control of another Power.

The seizure of the Swedish steamer "Stockholm" by the British fleet while on her way from New York to Gothenburg has caused intense feeling against England and some are urging that Sweden should enter the war on the German side not only for the protection of her commerce but to free Finland from Russia. The "Stockholm" when taken to Kirkwall was found to contain 1500 tons of oleo, pork and beef, which in the opinion of the British was more than was needed by the Swedes.

The Situation in Mexico Following Carranza's promise, given in response to Secretary Lansing's demand, that the murderers of nineteen Americans at Santa Ysobel should be pursued, captured and pur-

ished, three parties of troops were sent to look for Villa and his men. Villa they did not find. He was hiding in the mountain fastnesses with which he became familiar when he was a brigand. But Colonel Baca-Valles, who had been called Villa's executioner, was taken and brought to Juarez, where he was publicly put to death. His body was exhibited there by the side of the body of General José Rodríguez, one of Villa's commanders, who was recently at the head of 4000 soldiers. Colonel Ayana, also one of Villa's officers, had been captured and shot. Carranza, at Queretaro, published a decree declaring that Villa, General Costa, Colonel Lopez and certain other "reactionary leaders" were "outside the pale of the law," and authorizing any citizen to capture them and put them to death.

Hundreds of American refugees arriving at El Paso said that Villa's men were looting ranches and mines. In the vicinity of Torreon a considerable force composed of followers of Villa and Zapata, with men who had been in Huerta's army, had recently defeated a part of Carranza's army. The commander of this force is General Argumedo, who proclaimed his hatred of all foreigners. It is said that his men were shouting for Felix Diaz, and there has been published a story about a new revolutionary project in his interest which was

GERMAN SOLDIERS AS FRENCH JOURNALISTS

Mailing the 100,000 copies of the *Gazette des Ardennes* which the German military authorities publish three times a week for the people of the French territory which they occupy

recently the subject of inquiry by our Government. It was said that a loan was to be obtained in New Orleans, that 5000 men were to cross the boundary from Guatemala, that 5000 were to be added by the Governor of Oaxaca, and that Salina Cruz was to be attacked. Arms and ammunition were to be shipped to the soldiers by way of Guatemala. But Felix Diaz is in New York, and he says that, so far as he knows, the tale is all nonsense. He adds that Carranza should have a chance to restore order, but he does not believe Carranza can do it.

At the end of the week it became known that an American ranchman, James B. Akers, had been killed by two Mexicans while he was trying to recover stolen cattle, not far from Juarez. The Mexicans were captured by Carranza's soldiers and are to be put to death. Reports from Oaxaca said that the bodies of eight Americans were hanging from trees in that state. There was no truth in the published report that seven United States cavalymen had been captured, on the Texas border, by Mexican bandits. Investigation concerning the murders at Santa Ysobel shows that at the request of Watson, one of the victims, Carranza had sent nearly 1000 soldiers to the mining settlement. Neither the Carranza authorities at Chihuahua City, nor the Wason party, thought that an armed escort was needed. Some say, however, that Watson had at first suggested that there should be one. The party had passports from Carranza officers.

Dispatches from Queretaro, Carranza's headquarters, say that he and his followers have decided to abandon Mexico City as a capital, and to build a new capital at Dolores Hidalgo, in the state of Guahajuato. They intend to sell nearly all of the Government buildings in the present capital, and think these can be sold for \$50,000,000. Foreign Governments and foreign investors will suffer considerable loss by the pro-

posed change. Dolores Hidalgo is a town of 6000 people.

The Question in Congress

In our Congress no action concerning Mexico was taken last week, but there were many speeches and a few additional resolutions. One introduced by Senator Gore provides for a neutral zone in northern Mexico, to be policed jointly by our army and Carranza's. When, as a part of the remarks of Senator Lippitt, the clerk began to read a newspaper editorial attacking President Wilson, objection was made, and the reading was stopped by vote of the Senate. Mr. Borah spoke in favor of immediate action upon a pending resolution, authorizing the President to use the army in Mexico. He was unwilling to wait for a report from the Committee on Foreign Resolutions. Mr. Lippitt referred to a published story to the effect that our Government had privately agreed with the six Latin-American nations represented in the Mexican Conference that it would not intervene without their approval. Mr. Stone said the story was not true. Mr. Lippitt remarked that if he had been in the President's place when the news of the Santa Ysobel murders came he would have sent the army into Mexico immediately and would have kept it there until every American resident was as safe as he could be in Washington.

In reply, Mr. Stone said he did not believe that many of the Republican Senators really thirsted for war. Those who had spoken indiscreetly and unwisely were speaking only for themselves. A declaration of war would break the hearts of the conservative and sensible men in the party. Mr. Newlands said it would not be difficult to push the nation into war with Mexico or Europe. He urged the Senate to leave the matter in President Wilson's hands.

At a meeting of the Foreign Rela-

tions Committee, Mr. Lodge and Mr. Borah argued for a favorable report authorizing the President to use the army in Mexico, saying that such a report would have weight with the Carranza Government and might assist Mr. Wilson. This was not the view of the Democratic members of the committee. They asserted that a favorable report would embarrass the President. Nothing was done. It is predicted that a motion to take the resolution from the committee and act upon it in the Senate would surely be defeated. The great mass of information called for by Senator Fall's resolution has not yet been sent to the committee, and therefore there has been no action upon the nomination of Mr. Fletcher, to be Ambassador. Senator Sherman introduced a resolution asking the Government about the story concerning an agreement with the six Latin-American nations.

In the House, Mr. Mondell, of Wyoming, made a speech in which he criticized the President's course with some bitterness. Mr. Wilson's policy, he said, had been not one of "watchful waiting," but one of "mischievous meddling, impertinent interference, base betrayal, and callous indifference to the welfare of Americans." The logical fruit of it was the murders at Santa Ysobel.

At the close of a ten weeks' trial in Philadelphia the jury brought in a verdict for the defendant in the suit of the Bluefields Steamship Company against the United Fruit Company, a corporation of large capital which has many steamships in the fruit trade with Central America and the West Indies. This was known as the Banana Trust suit, was brought under the Sherman act, the Bluefields company asking triple damages of \$15,000,000, alleging that the defendant corporation, exerting influence partly by means of stock interest, had ruined its business.

By the Supreme Court at Washington the suit of the Government against twelve prominent transatlantic steamship companies—among them the Cunard, Canadian Pacific, White Star and Hamburg-American—has been dismissed. The defendants were accused of violating the Anti-Trust law because by agreement they had apportioned the steamer traffic. In the lower courts, four judges concurring, it was held that this was a "reasonable restraint of trade," but the use of what were called "fighting ships" against competitors who were not parties to the agreement was found to be unlawful. The suit is dropped because the agreement has become "void of actualities on account of the war."

In the Senate, Mr. Norris has introduced a bill making it unlawful for an interstate railroad company to purchase the stock of any other railroad company or corporation without first securing the consent of the Interstate Commerce Commission. This was suggested to him, he said, by the recent failure of the Government, in the suit under

the Anti-Trust law, to convict any of the former directors of the New Haven Railroad Company. The minority stockholders of that company, who have sued those directors for \$102,000,000, on account of losses alleged to have been caused by improper purchases of railroads and steamship lines, ask the Federal Court in Boston to permit them to amend their suit and to authorize them to proceed in the name of the company. They say the present directors will not proceed against their predecessors in any movement to compel restitution.

The suit for dissolution of the Corn Products Refining Company, which is accused of monopolizing the trade in glucose, is now on trial. Answering an inquiry, the Department of Justice says that the recent agreement of the National, American and Federal Baseball Leagues is not in violation of the Anti-Trust law.

Labor and Wages Ten years of litigation in the Danbury hatters boycott case now ends with an order from the Federal court in New Haven for foreclosure proceedings affecting the real estate of 140 defendants. In nearly every instance the home of a union workman is involved. D. E. Loewe & Co., of Danbury, manufacturers of hats, sued more than 200 members of the hatters' union for boycotting them, and got a judgment of \$252,000. To satisfy it, the property is to be sold. The defendants expect that other union men thruout the country will save them from loss, as the boycott was ordered or approved and supported by national unions. Both the American Federation of Labor and the national Hatters' Union have promised to aid the men in Danbury. The Federation has asked all of its members to make a contribution on January 27, equal to the pay for one hour's work.

It appears to be a foregone conclusion that the result of the balloting in the four great unions of railroad employees will be practically a unanimous vote of the engineers, conductors, firemen and trainmen of all the railroads in favor of the proposed demand for an eight hour day (instead of ten hours) with time and a half for overtime. The demand will be presented in the first week of March, and at one of the meetings of executive officers when the movement was started resolutions were passed saying that the unions would not again submit to arbitration.

In a strike riot at the works of the Edward Valve Company, in East Chicago, Indiana, on the 19th, one man was killed and five were wounded. A party of strike guards met a party of strike-breakers, whom they were to escort to the factory. Each party believed the other to be composed of strikers, and began to use their revolvers. In a short time the police and a considerable number of strikers were in the fight. The man killed was a guard. In New York the waiters' union, which recently won in a strike on the East Side, is about to call out 6000 men on the West Side. About 20,000 garment workers are on strike, and there are in-

dications that the number will be increased to 60,000 if certain demands are rejected. These demands are for a forty-eight hour week, a wage increase of 25 per cent, and improved conditions. In sixteen states the miners' agreements expire this year. The union has been holding a convention at Indianapolis. It is said that an increase of 10 cents a ton will be sought by the bituminous miners, and that those in the anthracite field will ask for an addition of 20 per cent.

To 25,000 men employed in the mines and smelting works at Butte, Anaconda and Great Falls, Montana, an addition of 25 cents a day has been voluntarily granted. An increase of 10

per cent, from February 1, has been given to 30,000 employees in the Michigan and Minnesota iron ranges. In New Bedford, 32,000 in the cotton mills are to have 5 per cent more pay. In a glass factory at Washington, Pennsylvania, 1000 will receive an addition of 8 per cent. At Syracuse, the Solvay Process Company is distributing among 8250 men special bonuses amounting to \$414,000. By agreement with employers, the wages of the plasterers in New York City will hereafter be \$6 a day. The Utah Copper Company gives notice of an increase of 25 cents a day, to be paid as long as the price of copper exceeds 20 cents a pound. The price is now 25 cents.

AT SALONICA—A BRITISH WAR NURSE MAKING CAMP
OUT-DOOR EXERCISE FOR WOMEN

FROM STATE TO STATE

ARIZONA: Many Arizona people are interested in the experiment being made by the Federal forestry service on 50,000 acres of the old Santa Rita range. Twelve years ago this range was withdrawn because it was "broken down," but now it is so far restored as to make it suitable for these experiments. The plan is to fence the range into four divisions, two being used for summer range and two for winter. Eight hundred cattle are to be turned in, this number to be increased or decreased as experience suggests, the object being to determine just how many the 50,000 acres will support thruout the year. Two distinct types of land are included in the range, one growing mesquite with scanty grass among the brush, the other growing grama grass, which ripens in the fall and makes excellent winter feed. Information gained here is to be applied to similar tracts in other states.

CALIFORNIA: Paul Shoup, president of all the electric railroads of the Southern Pacific Company in this state, says that, owing to the competition of automobile omnibuses and freight carriers, his railroads are not earning money enough to pay operating expenses, taxes and street paying; that they even have to borrow money to pay interest on their bonded indebtedness. He is campaigning the state in an endeavor to secure the passage of ordinances putting automobiles used for commercial purposes in competition with electric lines on an equal footing so far as taxes and franchise costs are concerned. Several of the cities and towns which his lines serve have promised him this relief.

COLORADO: In November, 1914, the electors of Colorado adopted statewide prohibition, to become effective January 1, 1916. In 1914 state liquor licenses were held by 1430 saloons, 345 drugstores, 69 clubs, 63 rooming houses, 31 cafes and 14 breweries. Most of these took out licenses for 1915 and did business up to the last hour. Authentic information as to the number of persons in the state employed in the liquor traffic on December 31 last is lacking, but in Denver, where there were 520 saloons, the Labor Council now says 5000 men were deprived of employment; and the council demands that Governor Carlson call a special session of the Legislature to provide work for them. Mass meetings of the unemployed and demonstrations on the grounds of the State Capitol are of frequent occurrence. Meanwhile other states, notably Pennsylvania, are crying aloud for men to help in their farm and manufacturing industries.

CONNECTICUT: The Boardman Apprentice Shops have now been an established part of the New Haven public school system for more than two years, and the claim is made that they constitute the most

complete trade school of its kind in America. The school is a business proposition and an educational institution combined. Contracts are taken for outside work and the pupil workmen are paid at regular union rates for these jobs. They are now building a handsome \$8000 bungalow for a private citizen, the classes doing all the work to prepare it for occupancy. All the printing for the Board of Education and the renovating, plumbing, wiring, painting and decorating of the school buildings is done by these boys, while the girls cook for and conduct the school restaurants and carry on a large dressmaking department, filling orders for everything from a baby's dress to a wedding outfit.

IDAHO: Southern Idaho bids fair next year to be one vast seed farm. The success last year of the many farmers who raised great crops of clover, alfalfa, timothy and other products for seed has induced many others to specialize next season in these crops. In the Twin Falls country one farmer on fifteen acres raised \$3000 worth of white cloverseed; another, near Buhl, put 320 acres to clover and alsike and received more than \$16,000 for his seed crop; a third received upward of \$10,000 for seed from eighty acres. In the seed bean section, near Wendell, twenty-two bushels were threshed to the acre, while near St. Anthony the seed pea crop brought more than \$1,000,000, and in the Long Valley timothy seed threshed twenty-two bushels to the acre. Buyers from large seed houses took most of these crops at good prices.

NEBRASKA: The Omaha Bureau of Publicity has begun a campaign for the advertising of its city and state thru the medium of motion pictures of their principal industries and attractions. The plan is to show the pictures, accompanied by lectures, during thirty-minute daily periods, covering several weeks, in the public schools, the purpose being not only to inform the pupils, but also to make them "boosters" for their state. The pictures will also be shown to the general public of Nebraska before being sent on their advertising journey to other states.

NEW HAMPSHIRE: The question whether military instruction shall be given in the high schools of this state is provoking wide discussion. A plan which was some time ago laid before Henry C. Morrison, State Superintendent of Public Instruction, by the New Hampshire branch of the League for National Defense, met his approval in some respects, but he said he was not in favor of having our higher educational institutions become the chief medium of preparation for the national defense. "Military drill in the high schools," he said, "should be the smallest part of any con-

tribution which the young men might make to the national preparedness."

NEW JERSEY: For some time the physical supervision of children in Newark up to one year of age has been exercised by the Bureau of Child Hygiene. Now it is said the Board of Health intends to exercise similar supervision of children above one year old up to school age. Dr. Elmer G. Wherry, chairman of the Board of Health committee on child hygiene, says that children frequently retrograde after their first year and before they come under the supervision of the Board of Education. "Part of the economy inherent in extended supervision," says Dr. Wherry, "lies in the fact that if the child entered school in perfect health there would be little lost time in the school career and less backwardness in school work."

NEW MEXICO: A California syndicate is reported to have bought 11,000 acres fifteen miles north of Santa Fe, the purpose being to cut it into ten and twenty acre tracts, plant trees and crops and build a modern house on each tract, with a view to selling to colonists, who will be permitted to pay for the land and improvements out of the crops. The houses are to be built at once and the crops planted early in the spring.

NORTH DAKOTA: Under the constitution of this state school lands bearing lignite coal must be withheld from sale. A year ago the Board of University and School Lands with a view to selling lands in Burke, Divide, Dunn, Mercer, Stark and Williams counties, ordered an examination of them. State Engineer Bliss has just completed the task of examining 468,822.12 acres, of which he recommends the withholding of 265,068.35 acres as being coal lands under the constitutional definition. This is a much larger proportion of coal lands than was counted on when the constitutional provision was made. Now it is believed an amendment will be adopted under which surface rights may be sold while reserving title to the coal and all necessary rights of entry for the mining of it.

OKLAHOMA: The Oklahoma Federation of Women's Clubs is centering its efforts on the eradication of illiteracy in this state. For several years it has given prizes for literary productions and has advanced money to young women to enable them to secure college education and become self-supporting. Now the federation is establishing moonlight schools thruout the state and offering special prizes to volunteer teachers of them.

OREGON: Manager J. G. Camp, of the Klamath Falls branch of the Reclamation Service, is making the final test of a novel plan for reclaiming 80,000 acres of the finest agricultural land in Klamath County. Tule Lake is a broad, shallow body of water covering a

rich deposit of soil which rests upon a bed of lava. Not far away is a large fissure in the lava bed known as the "Big Crack." Manager Camp's plan is to bore a tunnel from the fissure to a point under the lowest part of the lake bed, then sink a shaft to meet it and let the lake drain into the Big Crack.

PENNSYLVANIA: The dairy farmers of this state are experiencing the greatest difficulty in obtaining help enough for the feeding and milking of their cows. The high wages paid by the manufacturing plants, especially by those producing munitions, have attracted not only country boys and regular farm hands, but also the "floaters," who have been relied on in the past to furnish needed extra help. Then, too, immigration has been greatly reduced. Farm wages in this state have doubled in the last year, yet it is impossible, even with the aid of the state and Federal employment bureaus, to get men enough for the comparatively little work necessary upon farms in winter. Thinking forward to the planting season, some say prosperity may yet starve the state.

VERMONT: Of the 1816 accidents reported to the Vermont Industrial Accident Board in the first five and one-half months of its existence, 1327 were finally settled in that time either by agreement of the parties, approved by the board after investigation, or by order of the board after hearing. Of the remaining 489 more than half had been practically closed, but were not so classed because the final papers, showing that the medical expenses and compensation due had been paid, had not been filed. In no case had either side appealed from the decision of the board, and in only one case had either employer or employee been represented before the board by an attorney. Everybody concerned—and that includes nearly everybody in the state—seems highly satisfied with the working of the new law, which has saved so much time, litigation and money to both employers and employees.

WISCONSIN: The prohibitionists of Wisconsin hope to drive liquor out of the northern part of this state without the necessity of submitting the question to vote of the people. In 1854 large portions of northern Wisconsin, northern Minnesota and the upper peninsula of Michigan were set apart by the United States as Indian reservations, the treaties stipulating that no spirituous liquors should be sold or used in that territory. Minnesota temperance workers recently succeeded, after a long fight, in convincing the Federal authorities that the prohibiting clause in the treaty was not abrogated when the Indians ceded the lands back to the United States. Now Wisconsin temperance people claim that the Federal Government must enforce the prohibition in their state as it is enforcing it in Minnesota.

THE WORLD'S FUNDAMENTAL ERROR

BY DARWIN P. KINGSLEY

INTO the terror and chaos which today misrule the greater part of the world certain questions are increasingly thrusting themselves:

First, What was the fundamental error in the civilization of the world on August 1, 1914?

Second, What fundamental change must be made in order to correct that error?

Of written and spoken answers to the first question there is no end. Answers to the second question are naturally fewer, because the facts necessary to coherent thinking cannot be arrived at until the first question has been answered.

All the peoples of all the warring countries believe their cause is just, that they are fighting defensively for their existence. And the paradox of it is that all these beliefs are true. They are all fighting for existence and for fatherland.

I heard Dr. Bernhard Dernburg say in the early days of the conflict, defending Germany for her invasion of Belgium, that the act was a necessity, that a nation could not be expected to consent to its own destruction.

Commenting on our last and formal protest to Great Britain, against what we deem her violation of international law, and her disregard of the rights of neutrals, one of the great London dailies, justifying England's determination to retain control of the seas at all hazards, said "A nation cannot be expected to commit suicide."

These expressions from either side, almost identical in phraseology and absolutely identical in philosophy, reflect the existence of a cause of war not often referred to, under the compulsion of which, however, the whole world rests today.

THE flames which burst into a world conflagration fifteen months ago were not only already burning under cover fiercely everywhere in Europe, but unquestionably were lighted, unquenchably lighted when world civilization based on the doctrine of sovereignty began to take form centuries ago.

The civilization of 1914 rested on that doctrine. And what is sovereignty? Sovereignty is final authority, the thing greater than the law, that indeed protects the law. Sovereignty is the highest expression of authority in a civilized state, not inferior, however, to the authority of any other sovereignty, be that sovereignty physically greater or smaller, and not qualified in its completeness by any other power.

The president of the New York Life Insurance Company attacks the problem of international relations freely and directly in this address, which made a profound impression upon Mr. Kingsley's hearers at the recent annual dinner of the Chamber of Commerce of the State of New York.—THE EDITOR.

Pirie Macdonald

DARWIN P. KINGSLEY

This is the language of sheer authority, and sovereignty is the doctrine of authority. Democracy can no more live in its atmosphere than Jefferson's theory of inalienable rights can live in a world ruled by 42-centimeter guns and superdreadnoughts. Its demands are such that peace is now only a period of preparation for war. If any branch of human endeavor is anywhere developed along purely commercial lines, it is almost certain ultimately to be held an error. Highways should be built for military purposes; railroads should primarily be planned to transport armies; ships of commerce should be so constructed that they can be converted quickly into cruisers or transports. In obedience to the demands of sovereignty, the shadow of war rests over us at all times.

At the very outset sovereignty assumes that it must ultimately fight, that war is its true explanation, and, therefore, it reserves the right to take the last dollar of its citizens or subjects, and, if necessary, to demand the sacrifice of their lives as well. The favorite phrase of sov-

eignty runs this wise: "In defense of our liberties and our soil we will fight to the last man."

Whatever the form of government, the sentiment is the same. Behind that sentiment and in obedience to its necessities the prejudices, the provincialisms, the misconceptions, the hates, the fears, and the ambitions that so bitterly divide nations, were born. On the first of August, 1914, they had grown to uncontrollable proportions.

Add to these conditions the fact that we were living in the age of electricity, when the impalpable and imponderable ether had become not a dead wall, but a shining highway thru infinite space, when the spoken word was seized by a messenger whose speed and orbit far out-reached the imagination of the people who kept and guarded for uncounted centuries that glorious word picture finally exprest in the first chapter of Genesis, and the conclusion is inevitable—in such an age, and in a world so small, a civilization based on eight great aggressive unyielding unconditioned sovereignties was no more possible without war than that two solid bodies should occupy the same space at the same time under the laws of physics.

Unconditioned sovereignty was the fundamental error in the civilization of 1914.

A STRIKING feature of this war is that its divisions do not follow the usual lines of cleavage. Neither race nor color nor religion is primarily responsible for the conditions in Europe, nor for the cataclysm which has occurred. Christians are fighting Christians; Jews are killing Jews; Moslems are against Moslems; whites are murdering whites; men of color are fighting their kind; Saxons are fighting their own breed; Slavs are against Slavs. The special favor of the God of the Christians is blasphemously claimed by both sides.

The ordinary causes of war had unquestionably decreased on August 1, 1914, but the hope which that fact held out to many of us proved finally to be a false hope. In the impact of unyielding sovereignties, in the fear which created a race in armaments, in the belief that national preservation was the supreme duty and sovereignty the supreme good, there was abundant fuel for the fires already lighted. The conflagration was certain. Every new invention by which time and space were annihilated, presumably bringing humanity

increased comfort and safety and happiness and efficiency, served even more markedly to increase international friction. Sovereignities were jammed together; they met everywhere; they jostled each other on every sea; they crowded each other even in desert places. They had no law by which they could live together. They could have none. Each was itself the law. When, therefore, thru the elimination of individual prejudices and provincialisms on the one hand, and the conquest of time and distance on the other, the world had reached a point where human brotherhood was conceivably attainable, humanity found itself in the clutch of this monster called sovereignty. Then came the tragedy! Not alone in squandered life and property, but in missing the great moment prepared thru centuries of human fidelity and suffering, the moment when humanity was prepared to see itself thru eyes suffused with sympathy and understanding rather than as now thru eyes blinded by hate and blood-lust.

THE people of the various great powers of the world in 1914 in fundamentals were not dissimilar. Never in the story of man's evolution had he been so nearly homogeneous. Everywhere he had approached common standards. His dress was much the same over most of the Christian world, and this uniformity had even made headway against the ancient prejudices of the Orient. He thought much the same everywhere. His standards of justice were strikingly alike. He was kindly and merciful. His vision reached far beyond the borders of his own land, and he was beginning to understand that all men are brave and should be brothers. The various instrumentalities that brought all peoples severely face to face, that promised still further to increase understanding and sympathy and therefore the prospect of peace, unhappily and finally had just the opposite effect. Men grew in international sympathy; sovereignities did not. Men dropt their prejudices; governments did not. The rigid barriers which geographically delimit nations became more rigid and more unyielding as individual knowledge grew and common sympathy spread. The light that penetrated to the individual and banished his bigotry could not penetrate national barriers as such. Its effect indeed was not to banish the darkness, but to cast deeper shadows. The condition that made men gentle made nations harsh; the impulse that drew the peoples of the world together drove sovereignities apart. The movement which foreshadowed a demo-

cratic world, the brotherhood of man, meant the end of the existing international order, and sovereignty instinctively knew and feared that.

So far as governments would permit, men made world-wide rules of action. They traded together internationally when tariffs allowed. They joined in great coöperative movements where race and creed and all the usual distinctions that separate men were ignored—ignored because men found when they came face to face that the old hates and prejudices were based on lies. The units of humanity became homogeneous; the units of civilization, the great sovereignities, did not. Here were two irreconcilable conditions. Sovereignities were in desperate straits. Each, menaced by every other, assumed that its integrity must be preserved at any cost. None was able to change its point of view; none was permitted to qualify its attitude toward other sovereignities, because each feared, as Shakespeare puts it, that

To show less sovereignty than they,
Must need appear less King-like.

No sovereignty except that of Germany saw, fully, what this meant. Germany saw it long ago. Sovereignty from the beginning meant ultimate world-dominion by some nation. It could mean nothing less.

THIS explains why the splendidly efficient machines of modern civilization, moving, from the standpoint of the individual, coöperatively, happily and helpfully under the guidance of powerfully advancing human sympathy, were on the first of August, 1914, suddenly swerved by the savagery of unregulated internationality and sent crashing into each other. How complete the ruin of that collision no one can yet tell! What was destroyed, or is to be destroyed, is not yet clear. Was it democracy? Or was it sovereignty? The ultimate destruction of one or the other is probable. World peace is possible under either, but not under both.

Out of this hideous ruin will sovereignty ultimately arise rehabilitated and increasingly aggressive? Will a group of powers finally emerge substantially victorious and will the controlling power of that group by perfectly logical processes gradually make its civilization dominant over the whole world? That is the only process by which sovereignty can ever bring permanent peace. So long as there are even two great unconditioned sovereignities in the world, there can be no lasting peace.

Or is it possible that out of the ruin will come the revolt of humanity? Will a real Demos appear? A

democracy that has no frontiers, the Democracy of Humanity? Remembering not only the slaughter of 1914 and 1915, but the program of slaughter followed all thru the Christian era, will the people say with young Clifford in Henry VI:

Oh War, thou Son of Hell.

Is it conceivable that they may say to sovereignty—

You have in some things served us well in ages past. You have awakened in us heroic aspirations and led us to noble achievements; but now, alas! your hands drip with innocent blood, you are guilty of deeds which the beasts of the jungle would not commit—deeds that show you to be inherently and necessarily, in the present condition of the world, the arch enemy of the human race, and therefore we must now fundamentally modify your demands.

Milton, in the Sixth Book of "Paradise Lost," tells how Satan, rebellious, and all his hosts, after a terrific struggle, threw themselves headlong

Down from the verge of Heaven.

He tells us, too, how the Almighty stayed his own hand because

... he meant
Not to destroy, but root them out of Heaven.

Flanders and Poland tell a tale of horror, record the use of machines and instruments of destruction, register a story of cruelty and hate, such as even the Miltonic imagination did not compass. The Satanic crew now busy in Europe, whether their blood guilt is the result of dynastic and race ambitions or, as I believe, the product of forces beyond their control, must in like fashion be cast out if we are ever to have peace in this world.

That process will raise profound issues here. The Transatlantic problem includes more than lies on the surface. What indeed of democracy? Will it again be strangled as it was at the Congress of Vienna a century ago, under the leadership of Austria and Prince Metternich? We are involved because if democracy has a future in Europe, it will largely be the result of its triumph here—a condition that Metternich and his fellow reactionaries did not have to face.

For a hundred and thirty-five years of organized life, and indeed thru all the years since the settlement of Jamestown and the landing at Plymouth, America has been the beneficiary of the human race. Wrapt in her all but impenetrable isolation, beyond the reach of dynastic ambition, and until recently substantially beyond the impact of other sovereignities, and therefore measurably unaffected by internationality and its savagery, she has taken to

her bosom the restless, the wronged, the adventurous, the bold, the brave—of all lands, indeed she has gathered into her fertile soil seed sifted from all the world.

Our country has not been unworthy of the opportunity. With all her blundering, she has done well; and whether she is now to be branded as selfish after all depends on what she clearly stands for when this war closes. One great thing she has done—perhaps the greatest democratic thing that men have ever done. She has shown how so-called sovereign states can be merged into a larger state without losing their individuality and without parting with democratic principles. She has shown how local citizenships can coalesce into a master citizenship and yet remain vital. But, unless we misread the signs of Fate, she is now nearing the period when she must do more than that, or prove herself recreant and an unworthy beneficiary.

BEFORE considering what we should do in the interest of humanity, what we should do to discharge our obligation and our duty, let us consider what we should do at once, not as a measure of philanthropy, but as a measure of safety.

First, we should arm, and arm adequately; not because we believe in that theory of government; we do not, we hate it; nor because we believe in that method of settling international difficulties, but because we must at all hazards protect this home of democracy from the Satanic brood which, driven from Heaven, apparently fell in Flanders and Poland.

Second, we must at the same time try at least to show that we are as great as Fate has decreed that we may be.

"But specifically," you ask, "what should we do?"

We should signify our willingness to meet representatives of all the considerable powers of the world in an international congress, the purpose of which shall be similar to that of the convention which met in Philadelphia in 1787. That convention met in the historic mansion where the Declaration of Independence was signed. Those two great assemblages, the second no less than the first, have made the words "Independence Hall," in the imagination of the plain people of all the world, to shine like the Divine Presence over the Mercy Seat.

We should in that congress stand for the civilizing and humanizing of international relations by whatever steps may be necessary. If to do that the present doctrine of unconditioned

sovereignty must be abandoned, if as a nation we must surrender what each colony seemed to surrender in 1789, we should stand for that. We should find when the time came—as our fathers did—that we had actually surrendered only a little false pride, a little hate, a little prejudice and a little fear, and had entered, as the colonies did, upon the only order that leads to peace and true greatness.

If such a program were presented to the stricken people of Europe at this war's close, it probably would not raise any larger problem than Washington and Franklin and Madison and Hamilton faced in 1787. The whole civilized world is no larger nor more obsessed by prejudice than the colonies were then. You remember how bitterly they hated each other. Perhaps you recall what Mr. James Bryce says in his "American Commonwealth," that if the people of the colonies had voted directly on the adoption or rejection of the Federal Constitution, it would not have been adopted.

You certainly recall that New York State was against it, and the convention called to vote on it was hostile until Alexander Hamilton compelled acceptance by the force of his logic and eloquence. We narrowly missed reverting to political chaos.

John Fiske calls the years between the Peace of Paris and the adoption of the Federal Constitution the critical period of American history. So indeed it was. During that period prejudice was put aside, jealousies were overcome, hatreds were forgotten, and the common aims of the people, their natural sympathy, their homogeneity, were gathered up into a triumphant democracy.

No exact figures are available, but the population of the European states now at war—excluding Japan, Turkey, Asiatic Russia, and the Balkans—was at the beginning of the nineteenth century approximately the same as the population of the United States now. Our territory, geographically, is about equal to that of the countries I have included.

At the close of the Napoleonic Wars the people of Europe expected a new order and the end of war. They looked for the United States of Europe. Metternich and his associates denied that hope and so readjusted continental Europe as to strangle democracy. But the dream of the people was borne over seas and the United States of America in 1915 is the colossal fact which damns the continental sovereignties of 1815, and points the way to a regenerated Europe.

Emerging from this hopeless, senseless, and desperate struggle, the people of Europe will desire democracy as never before. They first brought democracy to us. Shall we now take it back to them?

We shall not, of course, reach the ultimate goal at one bound. A world state modeled after our Federal Constitution may be a long way off, but a real beginning would be a transcendent achievement. Ex-President Taft's League to Enforce Peace, with its modest suggestion of a modified sovereignty, if achieved would be worth centuries of European diplomacy.

We did not ourselves achieve peace immediately after 1789, nor a national citizenship, but after our feet were once fairly set in the way of the Constitution, the people would not be denied. Once the people of Europe feel their feet firmly set upon a road that leads away from the savagery which now commands them, away from the slaughter which periodically claims their sons, from the shame that claims their daughters, no dynastic or degamogic ambition can indefinitely deny them the achievement of the civic brotherhood which is the glory of America.

The people of Europe are not essentially different from us. They are bone of our bone and flesh of our flesh. The difference lies in this: We have been the darlings of fortune. We have realized the noble vision of democracy which Europe glimpsed and lost a century ago. After a hundred years of agony, the Fates bring again to those stricken peoples conditions not dissimilar to those of 1815.

IF now we arm—as we should—and do only that, we shall show ourselves a nation of ingrates. If we arm and say to Europe that we are ready at any time to disarm, ready with them to create an international state, a state in which the central authority shall act directly on the people as our Federal Government does—a state democratically controlled as our Union is—a state in which international questions shall be settled as our interstate questions are—a state in which war would ultimately become as impossible, as unthinkable as it now is between Massachusetts and New York—if we do that, aye, if we try to do that—we shall show ourselves morally at least to be worthy descendants of the intrepid men who signed the Declaration of 1776, worthy successors of the great democrats who fashioned the charter of our liberties in 1787.

New York City

THE CALL OF FLORIDA

BY E. P. POWELL

ONE of the most astonishing sights in the traveling world is the annual flow and flux of tourists in Florida. It starts when the snow begins to bluster in Maine and Minnesota; and the tide turns back when the winds grow mild in Massachusetts. It is exactly like the passage of birds, and for the most part it ends in a sort of robinade. Robins and bluebirds come South to feed and flutter in our bayheads, and pass away the shortest and coldest days. They gather in huge flocks to reach us, and they go North in the same flocks in March. Tourists differ only in that they are picked up by railroads, stop at notable stations, herd in costly hotels; and when they go North know little and have seen little of the real South.

Florida is almost the same size as New England, and one would know very little of New England if he confined his tours to Boston and Providence. I have seen tourists of a dozen years who did not know that the backbone of Florida, for seventy-five miles north and south, was a ridge of hills; and who had never seen the hundreds of lakes which gem the whole of the center of the state. Florida in reality is a vast tropical garden thrust out into the ocean; but at the same time it is becoming a stock farm for the whole of the United States. The palms are mainly along the coast, and with them are the swamps and alligators. The orange country and home-building land lies more inland. It is here that our Northerners should find their way, not only to escape the cold and find the best of all climate, but to discover the real values of the peninsula. I was fortunate enough to be dumped in the very heart of the state, and here I found the conditions so admirable that I have constructed my old-age home on Lake Lucy, among the orange groves and loquats.

A neighbor of mine, a Pittsburgh millionaire, tells me that after searching the world for a wholesome climate, he found nothing better than central Florida. If you want to find his home, you will get off at a little station, in no way associated with wealth, and trek it down thru the pine woods, until you come to a ninety-thousand-dollar ranch; but you will see at a glance why he came here; the lake on the borders of which he has built is one of the deepest and sweetest bodies of water you ever saw. It is just big enough for one man to hold as his private possession. All around here you will note

Mr. Powell, long a neighbor of Elihu Root at Clinton, New York, spent his winters on the shores of Lake Lucy, at Sorrento, Florida, and for several years before his death spent all his time there. The possibilities of Florida fascinated him and he wrote much of agricultural development there and elsewhere. This is the last article from his pen which The Independent has in its files.—THE EDITOR.

his Jersey cows, his velvet-bean fields and his cow-pea gardens, and groves of oranges and grape fruit.

Five miles away we come upon another sort of ranch, that of a Chicago merchant. Here you find stock raising carried on extensively, pointing the way to what Florida must do in the immediate future. It is going to breed cattle to rival Argentine, and to replace the lost ranges of Texas. Home-building will go on in Florida in spots, but a vast part of this Southern New England will be given over to herding cattle, with goats and sheep. It looks now as if the Jersey and Guernsey would rival each other, but the Swiss-belted are going to have something to say about it. All this will end in a Florida cow, a cross of the tough little native with the best and most successful hybrid.

You should see the effect on the better stock, having full pasture range for nine months of the year or ten; and ultimately to be fed bought rations only for two or three months. We have new grasses that will serve all the purposes of timothy and bluegrass, and there will be plenty to export. Natal gives us fine crops for mowing on high pine lands, and Rhodes grass does full as well on low lands. Velvet beans are just as good as cottonseed meal or a little better, for protein, and cow pea hay cannot be surpassed. My Jerseys play like kittens, and act more as the Ayrshires do in the North, frisky and frolicsome.

The effect of the climate on folk is no more enervating. There are more hot noons; but we get in the tropical habit of staying indoors from eleven until three. We get quite as much work done, taking advantage of the cool mornings and the cool evenings. Beside this habit of working early and late, we have the whole year to work in. One does not easily get accustomed to a winterless year, a year when the plow can be put into the soil every day, and winter gardens are planted as regularly as summer gardens. We plant potatoes

in January, and then again in September; lettuce, cabbage, and green peas coming almost every month in the year. I cannot say that we do not get a little more tired of some of these delicious foods than if we had to wait for them till midsummer. Mosquitoes we have; but in the lake region they are kept well under by the fish in the lakes, that swallow the larvæ. Malaria we leave to the marshy sections, and these are not one whit worse than in New Jersey and Michigan.

The passion of Florida just now is good roads. County after county is voting to bond itself for improvements of this sort. The main lines are being constructed, in some cases paved brick; in other cases with clay, which, spread over the sand a few inches thick, dries into a solid roadway not likely to be broken up. Where the strain is not so heavy, pine needles, which can be raked up anywhere under the pines, make a very good driveway. It will be a good many years, however, before the bulk of the driving follows any other lines than the cattle trails under the trees. The state where the razor-back lorded it, and wild cattle had their own way up to within five years, is rapidly coming under the control of stock laws. The automobile has to be credited with much of this change, and with more ahead.

By all means the tourist or the homeseeker, going to Florida for the winter, should hire a cottage. Chasing about in rail cars gives him, at the very best, a narrow vision and false opinion of the territory. Let your cottage be somewhere in the central part of the state, but near enough a town to hire a motor; provided you do not own one yourself. It is possible to get such a cottage for about \$25 per month, nestling on the banks of a small lake and in easy reach of the post office, depot and stores.

Make sure that the cottage is free from infection; is not already the property of mosquitoes; and that the water supply is perfect. These are vital points, and they are exactly where you are liable to discover neglect. It is a curious suggestion, but important, that you demand a cellar under the house. For an unknown reason central Florida has imitated the coast sections, and left out the cellar. This is utterly without excuse, for a good cellar I know to be possible and wonderfully enjoyable. Without it you have no place to store your vegetables, and, during a hot summer day, a really good sub-

RIDGE OF HILLS GEMMED WITH
HUNDREDS OF LAKES

apartment makes a cool room for your rocking chair.

Now from this "pou sto" start out, as you get the inspiration, and hunt up the state. Three or four of these excursions, in your own automobile, will show you more than you would get in a month of railroad traveling.

Be sure not to locate near a swamp, and listen not at all to land sharks. Look for yourself, and observe for yourself, even where the towns are of good size, and the land fairly well settled. It will take at least half a century to make a large part of this state comfortably inhabitable. Old traditions are also as thick as mosquitoes. I found at Sorrento that commercial fertilizers were so much in demand that the value of crops was about used up before getting them. The art of making soil, and the use of lime; especially the value of legumes and of all sorts of weeds was a part of agriculture not yet apprehended. Even barnyard manure remains unused, to breed flies.

Another peculiarity of these frontier counties is the passion for getting rich quick. The majority of settlers exhaust their surplus money rapidly, in speculative crops—with the possibility of coming out at the end of the first year or the second, bankrupt. Melons are a fascinating crop, grand to look at, when paving forty or fifty acres with forty-pound fruit; but this crop invariably runs a gauntlet of ravenous middlemen. Citrus fruits turn in a fortune occasionally; but it is by no means certain that the annual crop will be profitable.

The settlers first conviction will be that Florida soil is worthless; tho he sees that it has been able to grow great forests of pine and oak, eighty feet tall. He has to learn in the first place that the soil is very sour, and needs a heavy annual dose of lime; and, if he has not a supply of barnyard manure, he will need to supply commercial fertilizers until he can grow legumes and plow them under, but no longer. He will wonder at the provision of Nature to secure fertility. Hardly anything else is growing wild but legumes; and if he will make the conditions such that he can plow them under, as well as feed himself and cattle from them, he will soon have the fattest soil that was ever cultivated.

The Northern farmer will not know anything about what to do with a climate that is divided into a dry season and a wet season. It rains every day in haying time, and it very seldom rains thru the winter, that is, during the six months beginning with November. A home in Florida needs a good well and a big cistern to tide over dry spells.

The one thing I have missed above all others in Florida is brooks. I would immensely like to see a brook here and there, gurgling, laughing, tumbling, and playing as only a brook can. The best substitute is a small lake, half a mile to a mile across; full of fish, while the herons and egrets surround it, doing their own fishing, and flocks of ducks play over the surface; while during the winter robins and bluebirds crowd the bayheads that pour into the lakes by the thousands.

As to what crops you should plant, you need to decide nothing at all till you get here. Nine settlers out of ten begin at once with speculative crops, such as the citrus fruits and melons. If the object be to create a home, begin with such fruits, cereals, and so forth, as can be consumed by the family. All our Northern vegetables, potatoes, tomatoes, beans, cabbage, thrive as well here as in Ohio. I am growing apples, pears, plums, quinces; and should have plenty of cherries, only that they forget the calendar—blossoming out whenever it happens. Peaches and pears frequently do the same thing; yet we have new sorts of peaches and of pears, from China, that do remarkably well; and they have crossed with the older sorts. We are in sight of something superb.

Yet you cannot possibly find in Florida a duplicate of New York or New England. You have not only to work all the year round, but you must learn some features of farming entirely novel. As for the ordinary tourists, whether they come for a short season or for a home, in the bulk no more whimpering set can be discovered on the globe. Homesick from the outset; uneasy, restless, on the go, hunting for a place that will demand nothing of them, as to their brains; and little as to their hands. The Florida home builder must be content to be a pioneer, and build from the bottom up, with as much self-denial and persistence as characterized the New Englanders when they went westward. With such settlers Florida is destined to lead the states in agricultural industry.

STONEHENGE

BY BATTELL LOOMIS

(Stonehenge was recently bought from the estate of Sir Edmond Antrobus by a Mr. Chubb)

O Lean, long lain! O Lean, long lain!
Where are thy graves, O Neolithians?
Where are thy tombs that ye burst not from them?
Lean men—lank of hair, thin of shank and belly-spare—
Hurlers of bronze at dinosaurs,
Masters of mammoths, foes of the bear,
Wild in thy worship—who built to the Sun
Or the Serpent a temple ere God had begun—
Where are thy graves, O fierce Neolithians!

Strong tho thy tombs, ye should burst them asunder,
Raising the wail of thy war-cry like thunder,
Warriors, quarriers, keen in revenge,
Time's obese insult is on thy Stonehenge!

O Lean, long lain! O Lean, long lain!
Is the callous clean gone that once crackt at thy labors?
Do ye forget how at midnight and morning
Ye toiled at the ways?

Do ye forget how thy stern Druids charg'd thee?
Delay not to fortify praise.

How grew yon trilithons? Dost not remember
The heating with fire, the hissing, the Ember
Enthusiasm!
Living past flame and the waters that choke it,
The heave of thy back and the heft that nigh broke it,
The craft of the shirker who hit on the lever
(Ere Archimedes)

And his who twined vines that by tribal endeavor
The vast bars should rise in their circle of wonder
To rest on the up-stones thy great will thrust under?

Wake, Masons of Stonehenge, unearthen the fell club
That beat back the she-wolf and finished the cub,
Warriors, quarriers, keen in revenge,
Time's obese insult is on thy Stonehenge—
Thy world-marvel's sold to none other than Chubb!

THE FINE ART OF SKATING

BY GEORGE H. BROWNE

AUTHOR OF "A HANDBOOK OF FIGURE SKATING," "THE NEW SKATING"

LIFE is short, art is long; and few arts are longer than the beautiful modern art of skating. All praise, therefore, to the deft performers on the New York Hippodrome stage and other metropolitan ice-surfaces, if they succeed in rousing Americans to a real appreciation of the possibilities of this wonderful art of physical self-expression. But expensive skating equipment and professional instruction will not alone, or very quickly, make artistic skaters, no matter how ardent the "craze" for dancing on the ice. Any couple may have great fun in waltzing and in two-stepping with the sprawl and the clatter of the old American "locomotive" figures, instead of in quiet, rhythmic, gliding form; and in the sunny winter out of doors, this vigorous exertion on skates may be as exhilarating and health-giving as any sport on the calendar; but it is not "skating," according to the standards of the latest developments of the art.

These require patience, persistence, and esthetic sensibilities—not so much exceptional strength, as skill in the expenditure of moderate force—not so much expensive skates and costumes, as the intelligent appreciation of the problems to be solved. The solution is within the power of nearly everybody, old and young; but it is not to be bought; it is to be won only by intelligent study, consistent practice, and some hard work; yet the struggle with the difficulties is the most fascinating in the whole realm of combined physical and intellectual effort, and the accomplishment is worth all the effort it costs. For of one thing, at least, we may be sure: all that is claimed for physical self-expression in its most artistic form, esthetic dancing, may be claimed with greater force for artistic skating, for the simple reason that in skating, the gliding motion is continuous—there are not the unavoidable pauses that turn the graceful poise, even for a moment, into a rigid pose. This superiority of skating as a means of physical self-expression is ample justification for the effort needed to overcome the technical handicap of skates; a handicap, however, which in these days of improved tools and instruc-

tion is reduced to a minimum. Balance on the skate-edge once acquired, however, the freedom of action in skating, quite as complete as in swimming, is nearer than in dancing to the perfect freedom of flying; which, alas, is not yet attainable by man. The possibility of physical self-expression, therefore, thru the freedom of skating, is practically unlimited.

The recent revelation of these possibilities by the European professionals, expatriated by the war, strikes the American public as something new. There is, however, nothing new about the skating they represent except its simple system. The elements of all figure-skating have been reduced to two, the curve and the turn (on one foot). Combinations of these outside and inside edges and turns, forward and back-

ward, together with loops, pirouettes and jumps, make up all the figures skatable. The fine art of the new skating in the International Style, however, is chiefly in the manner of execution, or in good form—arms and legs slightly bent, and all members of the body contributing to an artistically beautiful performance on the ice, which by the grace and charm of its harmonious movements, may satisfy the esthetic sense of both performers and spectators. Experience has proved that for the execution of every figure, there is usually one position and movement that is easiest and most conducive to success. These positions often strike the beginner as unnatural; but the finer balance required by the more difficult figures makes it economical for the beginner to learn the correct positions at the start, even if they seem at first like artificial poses. To make these positions and movements easy and natural is the challenge and the charm of the art. Grace is the perfect, responsive obedience of a moving person's body to his will, the perfectly adequate expression of that will in his positions and movements. Not, however, until the positions and movements required by the new skating can be assumed unconsciously and automatically, can the skater be graceful. No physical attribute is

more to be desired than rhythmic grace. Some can never acquire it. None can acquire it more quickly or more effectively than in modern artistic skating. Modern artistic skating, therefore, is the finest of physical arts.

Some of the beauties of this fine art are being daily revealed to theater goers by professional skaters, chiefly from Berlin. Their evolutions, however, savor too much of the very kind of skating that fifty years ago Jackson Haines revolted from in the New York Skating Club. He carried to Europe in 1865 no great repertory of figures—rocking turns had hardly been discovered—and he died (1875) before the first bracket was skated; but he was a dancing master by profession, and though he "always skated alone," he introduced into Vienna long.

AN INSIDE FORWARD AND OUTSIDE BACKWARD HAND-IN-HAND SPIRAL

The skaters are Miss Edith Ritch and F. F. Munroe of the Skating Club of Boston

graceful, sweeping curves and dance steps to music—a style which the dance-loving Viennese soon developed into pair-skating. The Jackson Haines American style and the Jackson Haines two-stanchion, round-toed skate immediately spread all over Europe.

The British, meanwhile, had brought their big, flat curved, stiff, combined skating to a high state of perfection. During the '80's the Continental Style, as expounded by the Viennese School, was modified by the addition of the new rocking turns on big (English) circles; so that when the International Skating Union was formed in the early '90's, a new style of skating was ripe for standardization in the annual European and World's Championship competitions that the Union began to hold. The holding of the World's Championship for 1898 in London opened the eyes of the British to the resources of the Continental Style, and the National Skating Association adopted it in 1900. In that year I published, in my *Handbook of Figure Skating*, an exposition of the Continental Style, from the official documents and from correspondence with European skaters; and in the winter of 1902-3 I saw it for the first time. On my return, I published a full exposition of the International Style (1904) and began to demonstrate it on a pair of Jackson Haines skates which Salchow, the world's champion, sent me from Stockholm. My crude efforts undoubtedly deserved the ridicule I endured (I was forty-five years old!); but I stuck to it, and now the laugh is on my side. Irving Brokaw, who won the United States championship in 1906, took up the International Style the next year, and in February, 1908, with Karl Zenger (Champion of Germany in 1905), gave on Greater Boston rinks the first exhibition of pair-skating in the International Style in this country. He is today our most accomplished skater in this style.

A PAIR-SKATING FIGURE
George Müller and Fräulein Elsbeth Müller, instructors at the Boston Arena, skating thru a long spiral

Boston skaters had long been practising English combined skating in a compromise style; so that when the Arena was built in 1909-10, there was an appreciable number of accomplished skaters ready to profit by the professional instruction which

THE NATIONAL CHAMPION PAIR-SKATERS
Miss Theresa Weld skating with Nat W. Niles on Hammond's Pond, Brookline, Massachusetts. Niles is a ranking tennis player

the Boston Club has since enjoyed for six consecutive years. It is not surprising, therefore, that Greater Boston has had for several years the best skaters in the United States in the International Style.

The Skating Club of Boston has exchanged friendly visits with the Minto Club of Ottawa (1904), and the Winter Club of Montreal (1908), and their competitions have brought out the best International skating in America. No European or world's champion has ever come to the United States; but, thanks to the generous efforts of Mr. Brokaw, the Skating Union of America held the first competition in the International Style at New Haven in March, 1914, in which Norman

Scott, of the Winter Club of Montreal, won the Men's Championship, Miss Theresa Weld of the Skating Club of Boston, the Ladies' Championship, Mr. Scott and Miss Chevalier, of Montreal, the Pair-Skating championship, and Mr. Nat W. Niles and Miss Weld, of Boston, the Waltzing Championship. Last year there was no International competition either here or abroad; but the New England Association held a competition in Boston, in which the Men's Championship was won by William P. Chase.

The illustrations printed herewith tell better than words of the charm of this style. The sensations of these exhilarating big curves and spirals in graceful form, the accurate striking and gliding, partners coming together and separating in perfect rhythm with each other and with the beat of the music, the limitless combination of figures, control of which challenges the intellectual and physical skill and ingenuity of young and old alike—provide a variety of physical and esthetic pleasure and a free opportunity for self-expression, such as no other out-of-door sport provides; for skating of this kind is sport and art in one, and can be acquired earlier and pursued later in life than any other.

THE GREATER ENGLISH NOVELISTS

BY EDWARD EVERETT HALE, JR.

THE last few months have seen a good many novels of note in England. Probably most people would agree that the most eminent English novelists of our day are Arnold Bennett, H. G. Wells, John Galsworthy, and Joseph Conrad. Of these the first three have produced works which may be reckoned among their best. Next to them in current interest at least come the younger group, Hugh Walpole, D. H. Laurence, J. D. Beresford, Compton Mackenzie, Oliver Onions, and George Cannan. These have not written so much, but Mr. Walpole and Mr. Mackenzie have published books which, if not so large in scope as the work by which we have come to know them, are excellent in their kind. To them should be added Mr. W. Somerset Maugham, hitherto best known as a dramatist, whose *Of Human Bondage* was lately republished in this country. But best worth reading are the books of the three who would count as England's most distinguished novelists. Mr. Conrad rests on the laurels of his *Victory*, which by this time is well known.

Mr. Arnold Bennett's *These Twain* has long been looked for with interest, and now that it has appeared it has probably answered all expectations. A trilogy would seem to be a dangerous thing; it is said that continuations are dangerous, but to go on continuing! Perhaps such books are not continuations; it may be that all three are implicit in the very beginning. One cannot say. Even in these days of literary gossip and confession nothing that you want to know about authors can be found out. The real secrets of authors are well kept. At the end of *Clayhanger* the author indicated *Hilda Lessways* and *These Twain*; perhaps he had it all in mind from the start, beginning with *Clayhanger* on the bridge looking forward to life he ends with *Clayhanger* on the bridge looking back over experience. Between the two have passed many years and with the years the boy has grown into a man. But it is the same Edwin just as it is the same Hilda, as real and living at the end as at the beginning, and just the same however different, like the people around them. Not pleasant people to live with, one may think, but people it is good to read about nevertheless. For—as is the way with Arnold Bennett—one sees that life, even the life of such obviously dull and disagreeable people (not all of course, but a good many of them) has in it something fine and, if not noble, at

Readers will be interested in comparing this study of the recent work of the older English novelists with the article on several of the younger men, "The New Realists," contributed to *The Independent* for August 30, 1915, by Dr. Hale, who is professor of English in Union College.—THE EDITOR.

least distinguished. (And if this be so with such as Edwin and Hilda, Clara and Auntie Hamps, how much more with nicer people like ourselves.) The three books make for Arnold Bennett sufficient title to fame. He can almost vie with Richardson in the matter of length, and he can certainly vie with that great master of the secrets of the human heart in the largeness of his appreciation of life.

Mr. Wells is, of course, a very different sort of person, whether greater or less is a matter of little immediate importance. His *Research Magnificent* is not (I feel) one of his greatest works, but it is very characteristic. It is not exactly one of the autobiographies which he foretold in *The World Set Free*, of which he there gave a specimen in his extracts from Frederick Barnet's *Wanderjahre*, but it is of much the same kind. A little of the irregularity of real life is given by the fiction that Benham's papers have been turned over to White to make a book of, and that the novelist turns about and about in his material as Carlyle was distracted by the paper bags of Teufelsdröckh. Still one can make out the idea, and that's the thing with Wells. Benham is the successor of George Ponderevo in *Tono-Bungay*, of Remington in *The New Macchiavelli*, of Stratton in *The Passionate Friends*. The man sets out to live a fine life, or at least to determine (for posterity?) what is most of a limitation. He sees particularly fear, sex, jealousy, prejudice—the last enemy to be conquered—one feels that he might have generalized as was done centuries ago and say, once for all, *Self*. It is wonderful that a man can go on and on, talking of his ideas for the regeneration of the world, and make us think that he is telling of men and women, of Benham and Amanda—but Mr. Wells can do it.

Mr. Galsworthy's *The Freeland*s belongs not so much with *The Dark Flower*, which preceded it, as with the earlier books by which he became known. Those five books presented Mr. Galsworthy's indictment,

we may call it, of the complacent conventionality of the upper half of society. *The Patrician*, *The Country House* and *The Island Pharisee*, *Fraternity*, and *The Man of Property* gave us a view of the nobility, the landed gentry, the "intellectual," the middle class of business people, and showed how in all of them life meant the crushing of the original man or woman, the idealist, the adventurer, the wanderer, anybody whose own life was more important to him than the way other people chose to live and look on life; they were in a way an incentive to revolt, if not a textbook of revolution. After that demonstration Mr. Galsworthy seemed rather to settle back and view life with less of definite criticism, though still ironically as always. In his next novel, *The Dark Flower*, he had in mind no especial element of our present civilization, but one of the necessary limitations of life in general as we know it. In *The Freeland*s he has in mind something particular, the dominance exercised by the land-owning class, and the extension of that influence over the lines and affairs of other people.

It is worthy of mention that in none of these books nor in any other of the best English fiction of the year do we get an echo of the war nor anything that seems a direct influence of it. Mr. Walpole, it is true, pauses in his study of the spirit of our century of which *The Duchess of Wrex*e was a beginning, to give us a fanciful view of childhood in *The Golden Scarecrow*. Mr. Compton Mackenzie's *Plashers Mead* is a tragic episode in a life something like that of Michael Fane. Mrs. Ward's *Eltham House* is based on a suggestion of nineteenth century history transferred to the earlier years of the twentieth. Sir Gilbert Parker's *The Money Master*, though perhaps suggested by thoughts and feelings aroused by his own work for England, yet bears no obvious mark of connection with the great events now stirring the world.

England is said to be powerfully moved by spiritual forces, and it would be astonishing if it were otherwise. But it would be hard to find in the best English novels much that we might not have expected had England been at peace. It is not strange. Our own great civil struggle, which is the thing most like the present war that we know anything about, produced little in fiction till many years after. It may well be so in England today.

Schenectady, New York

THE SILHOUETTES OF CAPRI

BY EULALIE OSGOOD GROVER

WEARING a loose gray robe, and with sandaled feet, Karl Wilhelm Diefenbach presents a striking figure as he moves thru the narrow streets of the quaint old town of Capri, that delightful place whose people, from the happy, dark-eyed peasants to the owners of beautiful villas, appear to have drunk from the fountains of joy and peace.

Many years ago Herr Diefenbach was exiled from his northern home because his ideas concerning life and religion were too radical to be tolerated in his home autocracy. He believed that all men should be free and equal, and should live at peace with each other. He believed that it is not God's will for man to feed upon the weaker animals, but that men and animals are essentially alike, differing only in the degree of their development. Because of this belief he was considered demented and, as a dangerous citizen, was compelled to leave his Fatherland.

He found his Paradise, as he calls it, on the lovely island of Capri, and there he is living his quiet life in undisturbed happiness. Many young artists seek him there to study the mystery of his palette and the delicacy and charm of his drawing.

He attempts to

make no proselytes for his philosophy of life, tho he enjoys talking of it with those who care to listen.

On the hights of Anacapri Herr Diefenbach has an exhibition studio, to which these artists and art lovers find their way. But Diefenbach's drawings are known to thousands who have never visited Capri, and especially to the children, whose naïve outlook on life he has never ceased to share.

His most unique and strikingly beautiful work is the frieze painted in black silhouette upon the stuccoed walls surrounding his tropical garden. It is a series of running, leaping, dancing figures of children and animals, the very incarnation of

grace and gaiety. Single figures, also in silhouette, are painted above doors and windows, and all are equally charming.

Thirty-four of these pictures are reproduced in panel form to illustrate a long poem by the artist, which he entitled: "Meines Lebens Traum und Bild; auf Rauher Bahn zu den Sternen hinan," or "Per Aspera ad Astra."

The picture and poem together make a masterly plea for

Frieden auf Erden,
Für Menschen und Tiere,
Heiligen Frieden der ganzen Natur!

Indeed, we have in this combination poem-picture a noble peace epic.

Tho well along in years, Herr Diefenbach, in his quiet corner of the world, is doing original work without thought of reward. Much of this work deserves to be ranked with the best of modern European art. His color is vibrant and realistic; his drawing is true and full of grace; his subjects and design reveal the poet and philosopher.

But to the world and the world's children he stands as the sympathetic creator of those rippling, elfish processions of light-hearted youngsters who skip thru the silhouettes of Capri.

THE MONROE DOCTRINE

Our most disputed public policy could have had no better interpreter than Professor Albert Bushnell Hart, of Harvard University, whose study of *The Monroe Doctrine* is a storehouse of information and intelligent comment, not only upon the relation of the United States to Latin America, but also upon its position in the world at large. The book is careful and scholarly but at the same time racily written; a perpetual quiet chuckle at the irony of events runs thru the volume to the delight of the reader. For example, after severely criticizing Secretary Olney's aggressive attitude towards Great Britain in the Venezuela boundary dispute of 1895, Professor Hart continues:

All the suavity of Seward, the courtesy of Evarts, and the finesse of Blaine, had not availed to break up the notion that the British Empire was a great power in America, as well as in Europe, Asia, Africa, and Australia. The rough and inconsiderate despatches of Olney and the undiplomatic firmness of Cleveland accomplished that miracle.

Professor Hart narrates the chief political events in the history of the Doctrine and its various interpretations given in "the formal statements of ten presidents and twenty secretaries of state." The narrative is, in general, well presented, altho the author seems to have confused (on page 151) the two attempts made under Grant and under Roosevelt to purchase the Danish West Indies. But the history of the Doctrine has been written more than once and the chief importance of the new study lies in the author's own interpretation. He rejects the idea that the Americas are any longer to be regarded as apart from the international polity of Europe and Asia: "The fiction of the Two Spheres may be dismissed, for it is neither a social fact nor an international need." He is skeptical as to the possibility of any Pan-American federation, even in the form of a customs union, and is somewhat excessively alarmed at the financial protectorates established under Roosevelt, Taft and Wilson over the Central American and Caribbean republics. He fears that in time these may become dependencies and eventually colonies which cannot be assimilated into our system of self-governing states.

Rejecting what he terms the "Monrovoid" doctrines of Pan-Americanism and imperialist expansion, the author bases his own conception of the Doctrine upon the "permanent interest" of the United States in the political status of parts of the world liable to become a menace to our peace and safety. "If the

"THE TRIUMPH OF THE MAN WHO ACTS"

by Edward Earle Purinton in the January 17th number is worth the year's subscription price. I received the book, 'Efficient Living,' and think it is fine. I think The Independent is the best magazine published."—Samuel D. Hooker, Muskogee, Okla.

THE INDEPENDENT

119 WEST 40th STREET, NEW YORK

To Stop Colds and Grippe

"Trust in God and keep the bowels open." This was the old-fashioned doctor's prescription. And—modern medical science proves he was not far wrong. Any good doctor will now tell you that your ability to resist colds and grippe depends largely upon your general health and the condition of your bowels. A constipated condition and other colon disorders destroy your power to resist disease. This is fully explained by Dr. John Harvey Kellogg in his latest book "Colon Hygiene." In this work, Dr. Kellogg tells you just what to do to keep in condition to combat colds and grippe. For over forty years, Dr. Kellogg has been Superintendent of the Battle Creek Sanitarium, where he has observed, treated and prescribed for thousands of cases. The benefit of this experience he gives you in "Colon Hygiene." He deals with facts—not theory. What Dr. Kellogg recommends is good, sound, common sense. It appeals to your intelligence. You follow his teachings because it is right to do so. No drugs—just natural methods, applied at home. "Colon Hygiene" includes 400 pages, with numerous illustrations, diet tables and full instructions for exercise, rest and sleep. Price only \$2 postpaid in the U. S. Order today. You take no risk. If not entirely satisfied, return book at once for prompt refund. Send order to—

GOOD HEALTH PUBLISHING CO.,

301 W. Main St., Battle Creek, Mich.

Doctrine is not a bulwark to the United States," he writes, "it never ought to have been born, and it will certainly die out." He urges the defense of the Monroe Doctrine by a very considerable extension of our army and navy, for policies do not enforce themselves and "without a different kind and degree of military preparation on our part, the time may come when Brazil will pronounce a new doctrine forbidding European nations to meddle with the feeble United States."

The Monroe Doctrine, by Albert Bushnell Hart. Boston: Little, Brown. \$1.75.

BEHIND THE SCREENS

Ernest A. Dench endeavors to satisfy the curiosity of the public as to "how they do it all" in his little volume *Making the Movies*. The adventures, the tricks, the methods and the accidents of motion photography in the studio and on the battlefield are told in a lively manner.

Macmillan. \$1.25.

BATTLES AND BYSTANDERS

The Black Fiddler, the Hired Man, the Refugee, the Planter, and a Man from the Ranks are some of the many authors of *Battleground Adventures in the Civil War*, a picturesque and very human record of the war's effect on communities and on individuals. How property was destroyed and industry disrupted, and how much those not directly concerned in the fighting suffered is shown by these graphic impressions, collected and edited by Clifton Johnston.

Houghton, Mifflin. \$2.

A LIFE OF JESUS

Mary Austin, in *The Man Jesus*, seeks to bring home to present day readers the sense of Jesus' towering humanity projected on the background of His natural and social surroundings. She writes her brief but brilliant story in the light of Gospel criticism and interprets Jesus' life entirely from the naturalistic point of view. Her book is reverent and suggestive, but destructive of dogmatic and traditional notions.

Harper. \$1.20.

MORE WAR POEMS

Even if Amy Lowell and Sara Teasdale had never written, Edith M. Thomas would have to do much better than she has done in *The White Messenger and Other War Poems* to justify her publisher's claim, that she is "the foremost woman poet in America." The volume is full of serious, sincere verse; but one must be more than earnest to be effective. In most of the poems, Miss Thomas is far too didactic to be poetic; it is only when she paints a strong picture like "Spilt Wine" that the artist emerges.

Boston: Badger. 50 cents.

HEALTH THRU EDUCATION

No movement in recent times gives a better practical demonstration of Humboldt's maxim—What you would have in society place first in your schools—than that for improved community health. An excellent compendium on this topic is found in *Educational Hygiene*, edited by Professor Louis W. Rapeer. The tables, diagrams, etc., make this a valuable reference book for every school and health administrator.

Scribner. \$2.50.

SYSTEMATIZING WELFARE WORK

An attempt to point out the methods and principles applicable to child-helping agencies is made in *Elements of Record Keeping for Child-Helping Organizations*, by Georgia G. Ralph, of the Russell Sage Foundation. The various relations in which records are needed, and the advantages of adequate records are fully set forth. Miss Ralph makes no fetish of red tape and system, and expects records, after being standardized, to give way to new forms adapted to changing conditions.

Survey Associates. \$1.50.

*"Promise me that
you will try
Sanatogen—"*

AND at last he does promise. He tries Sanatogen, he takes it three times a day. Skeptical at first, his doubts soon vanish, for gradually but surely there is wrought a change which spells better health, a new happiness to himself and those dearest to him.

The kindly, tonic effect of Sanatogen arouses the nervous system, not by falsely stimulating it, but by persistently feeding cell and tissue with its own concentrated, pure nourishment.

Now, also a relish for food returns, digestion is wonderfully improved—for remember, nerves and digestion depend on each other, and Sanatogen by aiding digestion and strengthening the nerve centres, restores harmony to both.

Such is the action of Sanatogen, well-known to thousands and thousands of grateful people to whom Sanatogen has brought better health, stronger nerves, improved digestion, renewed efficiency of body and mind.

The world's most famous people know Sanatogen's effects from personal experience—the medical profession of five continents know them—and no less than 21,000 physicians have so testified in writing.

When will you know and feel the good Sanatogen is capable of doing?

Grand Prize International Congress
of Medicine, London, 1913

Arnold Bennett, the famous novelist, writes:

"The tonic effect of Sanatogen on me is simply wonderful."

Sir Gilbert Parker, M.P., the eminent novelist-statesman, writes from London:

"Sanatogen is to my mind a true food-topic, feeding the nerves, increasing the energy, and giving fresh vigor to the overworked body and mind."

EFFICIENCY QUESTION BOX

CONDUCTED BY

EDWARD EARLE PURINTON

DIRECTOR OF THE

INDEPENDENT EFFICIENCY SERVICE

195. Mr. C. S. C., Missouri. "I am a Canadian who has lost a leg and have a badly crippled arm as a result of fighting in the trenches in France. I am visiting relatives here and am anxious to get something to do to earn my living in this country. In Canada there are so many wounded soldiers at present, there is no chance there. I have read your Efficiency articles while convalescing and they have been a great help to keep my spirits up."

You don't want sympathy—a real soldier never does. But you have our respect and admiration, beyond words to express.

Write for opinion to Vocation Bureau of International Correspondence Schools, Scranton, Pennsylvania. Find which of the large Western dailies or weeklies publish a department of letters from readers, then forward your problem, typewritten, 150 words or less, for other readers to help you solve. Obtain from a friend in Toronto or Montreal a list of Canadian societies and business houses in Chicago, St. Louis and other large cities, then mail each secretary a typewritten letter of request for any position you could fill. Describe the training and talent you possess, with brief list of former positions, and opening statement of war experience.

196. Miss E. M., Colorado. "Since The Independent has been coming to us, I have been especially interested in The Question Box, and venture to send a question on behalf of a young friend, which may prove to be of inestimable value. She is a high school senior, loves children, ranks high in her studies, and desires to teach. She is handicapped by slight deafness. What other avenues of livelihood are open to her?"

Cannot the deafness be cured? Why should a bright, capable girl doom herself to a life of miserable inactivity because she has not yet found a remedy for a minor trouble that would probably soon yield to scientific treatment? Let her investigate the good hospitals in a large city for the relief of eye, ear, nose and throat.

Has she tried, meanwhile, such mechanical aids to hearing as the Mears Ear Phone, The Acousticon, and other devices are said to be? Why give up her ideals anyway? Why not prepare even if hopelessly deaf, to teach in a school for the deaf, or a correspondence school, or some other kind of school not requiring intentness of ear? There is no "misfortune" that cannot be turned to good account.

197. Mr. J. T. W., Ohio. "Can you direct me how to secure advice on choice of vocation, from photographs and description? I should be very much obliged to you."

Write to Miss Jessie A. Fowler, 1358 Broadway, New York; also to Dr. Kathryn M. Blackford, care of Review of Reviews, Irving place, New York; also to Meyer Bloomfield, Director of the Vocation Bureau of Boston, Boston, Massachusetts; also to Dr. Edgar C. Beal, Vocational Advisor of the West Twenty-third Street Y. M. C. A., New York.

198. Miss H. K., Ohio. "I should appreciate your advice on how to prepare myself most efficiently for child welfare work of such a character as that done by the Federal Children's Bureau of Washington, D. C. What is the best method of finding out qualifications for applicants to the Bureau? I am a college graduate twenty-six years of age, have been engaged in child welfare work as playground director with a Chautauqua system during the past summer."

Apply direct to the Federal Children's Bureau, stating your purpose, qualifications, experience, and giving references to

show value of work you have done. General ideas and information to assist you might be obtained from the literature of the Hull House, Chicago; of the Bureau of Child Hygiene (Dr. S. Josephine Baker, Director) in the New York City Department of Health; of the Child Welfare Committee, No. 30 East Forty-second street, New York; of the Children's Aid Society, 105 East Twenty-second street, New York; of the American Institute of Social Service, Bible House, New York; of the Juvenile Court, Denver, Colorado; and of the International Sunday School Association, 1416 Mallery Building, Chicago.

199. Miss N. S., Pennsylvania. "In a recent number of The Independent you referred to Barrett's 'Modern Banking Methods.' Kindly tell me the publisher, and price, of this book."

For your benefit, and that of many readers who inquire about the titles of books, names of publishers, prices and other details of literature on Efficiency, we have arranged a plan to save you time and money. The Efficiency Press Syndicate, Woolworth Building, 233 Broadway, New York City, is a clearing-house for Efficiency publications of all kinds. We have secured from this Syndicate a promise to furnish readers of The Independent with details of books and other literature, on various modern Efficiency lines. Mail to the Syndicate a list of books, or subjects, in which you are interested, ask for particulars, enclose self-address stamped envelope for reply.

200. Mr. H. J. C., New York City. "I have read your articles with interest, but will you tell me how to protect myself against the efficient man who meets me at every turn in the road? For example, the present day salesman has been educated up to such perfection that he sells me things I don't want. He is so efficient that he makes me do things I don't want to do, which are not altogether beneficial. I know of many others like myself."

You poor man, yours is a sad, sad case. Why don't you study Efficiency yourself, and learn how not to buy things you don't want? Efficiency is defense as well as offense. We advise you to join a temperance society, and take the pledge to say "No" to financial dissipation.

But the salesman you refer to is *not* efficient. He is not even a salesman—merely an itinerant peddler. A good salesman looks for "repeat" orders, based on the satisfaction of the customer. In creating dissatisfaction, your alleged salesman violates the first principle of real salesmanship.

The next time a huckster violently assails you, read to him the gist of the foregoing paragraph, then ask him whether he is a salesman or a peddler. This should give you time to catch your breath, and extricate yourself.

201. Mr. R. S. B., Pennsylvania. "I have read your article on 'The Orderly Life' in The Independent of September 27, in which you suggest a standard system which will enable a person to get full control of his nerves in a half hour after rising in the morning; also a standard breakfast menu with the least amount of food. Kindly advise me further."

You might obtain exercises for nerve control from Alois P. Swoboda, Aeolian Hall, Forty-second street, New York; or Paul von Boeckmann, 110 West Fortieth street, New York; or Robert Duncan, United States Express Building, New York. No set rule for any meal can be given here. Personal study and experiment is required, based on conditions of health, age, work, taste and temperament. In general, a standardized breakfast might specify one to three of such dishes as the following: Poached or soft-boiled eggs; toast well done; wheat or corn flakes; a wholesome hot drink; baked apple, stewed fruit or orange marmalade. The ideal breakfast is the smallest amount of easily digested, properly combined food that will "stay in the stomach" during the morning's work. I know of many people who have reduced their breakfast to a hot drink or a glass of fruit juice, and they declare both health and work much improved.

The Market Place

THE BETHLEHEM DIVIDEND

At last the common stock of the Bethlehem Steel Company has a dividend. The directors voted, on the 20th, to pay \$30 a share, or 30 per cent, out of the earnings of last year, and also to increase the wages of 10,000 workmen by 10 per cent. But this dividend is to be paid in quarterly instalments hereafter, and the fourth payment will be made on January 3, 1917. The most sensational advances in the group of war order stocks on the New York Exchange last year were those which marked the rise of these Bethlehem Steel common shares from 46 in January to 600 on October 22. In the preceding year the price had fallen to 29½, and sales were made a few years ago at 8. Samuel Untermyer bought 15,000 shares at less than 20, because, he said, he had confidence in Charles M. Schwab, the company's president. Of these shares, 8800 were standing, on September 27 of last year, in the names of his sons, and the new dividend exceeds the purchase price by 50 per cent. It is understood that Mr. Schwab holds about one-third of the entire issue of 150,000 shares.

While the price was rising, last year, there was no promise of a dividend. Mr. Schwab said that it was the policy of the company to use a large part of its earnings for additions and improvements. It is said that \$12,000,000 was expended in this way last year. But it was known that the company was making great profits on extensive contracts for ammunition and guns, procured by Mr. Schwab himself in London, and buyers of shares were confident that eventually there would be a distribution among the stockholders. The first of these contracts was obtained about two months after the beginning of the war. After rising to 600, the price of shares declined. During the week which preceded announcement of the dividend it advanced from 415 to 479, but on sales of only 2500 shares.

Those who were confidently looking for a dividend expected a larger one, and therefore the market price declined again after the news had come, falling from 485 to 460. But there was recovery, and on the 21st there were sales at 484.

Several other companies holding profitable war contracts have declared special dividends or increased their former dividend rates. A special dividend of 28½ per cent gave nearly \$18,000,000 to stockholders

Weis Solid Oak Letter File

As GOOD As Ever—At a BETTER Price

No changes in the construction, workmanship or finish.
Capacity 20,000 letters or equivalent of Catalogs, Tariffs, etc. Filed on edge, classified between guide cards for quick and easy finding.

Columbus, Ohio

of the Du Pont Powder Company. The General Motors Company, whose stock advanced in 1915 from 82 to 558 and is now about 480, declared a special cash dividend of \$50 a share and has made a regular 20 per cent rate. Dividends have been resumed by the Cast Iron Pipe Company; the American Brass Company gives 3½ per cent extra; the American Window Glass Company 7 per cent; the E. W. Bliss Company 11¼ per cent, and the Reo Motor Company a stock dividend of 100 per cent. Among the extra allowances announced last week were 16 per cent by the National Screw and Tack Company, and a stock dividend of 50 per cent by the Standard Oil Company of California.

THE STOCK MARKET

For some time past the war order stocks have lacked the support in the share market that was given to them last year, and the tendency of a majority of them has been downward. This was seen on the New York Stock Exchange last week until Friday, when there was an upward reaction. This movement also affected railroad shares, which had suffered some loss, altho they exhibited firmness. Copper mining shares had also declined a little, altho the price of copper is very high, under pressure of great demand from Europe and from our own manufacturers.

Our stock market has felt the pressure of continuous selling of American securities by foreign holders. The arrivals of such securities by steamship during the last two months are estimated to have been from \$10,000,000 to \$15,000,000 a week. This European liquidation has not seriously affected first-class bonds, the prices of which are several points higher than they were when the Stock Exchange reopened, fourteen months ago, and are not far from the highest prices in 1914, before the war. Investment by our own people has been opposed to the sales from abroad.

An exception in the war order group has been United States Industrial Alcohol, which advanced from 15 to 131 last year and from 136 to 169 last week. The stock has never had a dividend. There is a demand for alcohol in the manufacture of powder, and it is said that the company's output for more than a year to come has been sold.

United States Steel shares declined from 86 to 83½, with recovery to 84. The quarterly meeting was near at hand, and some expected that the dividend would be restored, because the recent quarter's net earnings might exceed \$50,000,000. They rose from \$12,500,000 in the first quarter of last year to \$28,000,000 in the second and \$38,700,000 in the third. Steel prices were still rising, last week, and mills, full of work, were refusing orders.

The following dividends are announced:
Federal Sugar Refining Company, preferred, quarterly, 1½ per cent, payable January 31.
Pacific Gas and Electric Company, quarterly, first preferred and original preferred, \$1.50 per share, payable February 15.

Are You Hitting at Nothing?

His
Letter
→

Herbert P. Mee, Material Accountant of the Southern Pacific Railroad at Los Angeles, California, aimed at nothing and hit it—until—but let him tell his story himself.

"Like most people, I was a drifter, admiring success, weakly wishing for better things to come, with no conception of what those better things were or how to proceed to get them.

"I aimed at nothing and hit it.
"I performed each task that presented itself, did it fairly well and then lay back awaiting the next task, using the spare time to build castles in Spain.

Course in Personal Efficiency

started me to thinking. This I have never ceased to do since. If the Course had done nothing else for me than this, it was well worth the price paid. But it did more.

"As an immediate benefit, I have an increased capacity for work which my superiors were not slow to recognize, so that for the most part I am relieved of my old duties and assigned to much more important work.

"Young people who wish to get ahead, but don't know the why, the how or the way, can get the information very cheaply through this Course.

"Old people, given over to pessimism, loss of interest, and with apparently weakened vitality and enthusiasm will get the jolt of their life reading the Course through but once."

Is it skill you want? Efficiency taught the U. S. Navy to shoot 1200 times as well today as at Santiago. Is it money? Efficiency brought a great western railroad a million and a half in one year. Is it Economy? A California state official saved \$2700 on one job after he had his third lesson of this course. Is it Education? A prominent man of Louisville, Ky., got his first big step that way from the first lesson of this course.

Harrington Emerson acquired in practical work with many corporations of many kinds the knowledge and experience that enabled him to write this course. He is still the president of an Efficiency Company directing efficiency work in many corporations. In his work he had to teach and train many young men, some of whom today hold highly paid positions. He has thought efficiency for forty years; he has taught it for thirty years; during twenty years he slowly collected the data for this course. You can learn from the lessons of this course how you can save an hour, two hours, a dollar, two dollars out of each day and how you can make the day a better day at the same time. You can study this course and make yourself efficient in your own life in 15 minutes a day and for little more than one dollar a lesson.

FREE—This Book

14 Chapters—In Colors—Illustrated

Send for this book. It contains the answer to the ever-present question of "Where is the money coming from?" Some of the chapters:

What is Efficiency? For whom is Efficiency? How you are taught Efficiency. Are you ear-minded or eye-minded? Find out what you are actually doing with your time. Most failures are due to guess work. You use only half your power. To what do some men owe their success? Health culture. Personal finances. Mr. Emerson's message to you.

There is no standing still in life. If you're not going forward, you are going backward. If Efficiency doesn't grow on you, inefficiency will. This course will send you forward to your goal—it will put you on the shortest, quickest, easiest road to success. Send the coupon for information now—today. It costs you nothing and may be the biggest thing you ever did in your life.

Pocono Manor

OPEN ALL THE YEAR

(Pocono Summit Station, D. L. & W. R. R.)

That belated vacation,—take it among
the hills and streams at Pocono Manor.

That short Fall or Winter rest,—try a
fortnight in retreat, on that 800-acre tract,
with the "Quakers at the Manor," com-
fort without ostentation. Golf, tennis
and garage; no bar or dancing.

J. W. HURLEY, Manager

REMARKABLE REMARKS

AUGUST RODIN—Sorrow ripens the soul.
W. H. TAFT—Call me anything but
Colonel.

HENRY HOLT—American literature is go-
ing to the dogs.

WOODROW WILSON—My reputation will
take care of itself.

JOSEPH H. CHOATE—For Heaven's sake
let Congress do something.

SENATOR CHAMBERLAIN—Now let us
bring Great Britain to book.

ELLA WHEELER WILCOX—Abraham Lin-
coln had spiritualistic leanings.

KING CONSTANTINE—I am no more Pro-
German than President Wilson.

MARGARET WILSON—There can be no
such thing as non-partizan views.

DR. J. B. QUACKENBOS—The surest cure
for the drink habit is hypnotism.

PROF. EMILY G. BALCH—After the war
women will be a drug on the market.

JOHN KENDRICK BANGS—Will George
the Sixth be better known as Lloyd
George?

PROF. J. W. SEARSON—Few of the better
class periodicals are sold in a purely col-
lege town.

CONGRESSMAN LONDON—I promise the
House at some future time to be a great
deal better.

WILLIAM J. BRYAN—American citizens
should not be permitted to travel on bellig-
erent ships.

GERTRUDE ATHERTON—Germany is es-
sentially a plebeian race and as such is
grossly carnal.

CARDINAL GIBBONS—I would be sorry to
see an immense standing army organized
in this country.

DON MARQUIS—Always try to have a
grandparent about the place for the baby
to cut his teeth on.

JANE ADDAMS—This war began in
secret diplomacy. It will end in secret con-
ferences by diplomatists.

JUDGE JOHN STELK—I have been mar-
ried fifteen years and have learned to keep
quiet on women's wear.

ED. HOWE—There is something unnat-
ural about any one who has spent all his
life as a student or teacher.

HELEN KELLER—Be not dumb driven
slaves in the army of destruction, be heroes
in the army of reconstruction.

HETTY GREEN—I don't believe in Wom-
an Suffrage and I haven't any respect for
women who dabble in such trash.

JOHN GALSWORTHY—Doping soldiers
with ether, rum or other spirits before the
attack has been largely resorted to.

THEODORE ROOSEVELT—If we have war
you'll see that young fighting officers of
the army want to be in my command.

ENVER PASHA, TURKISH MINISTER OF
WAR—I am thankful to the English and
French for the Dardanelles expedition.

BILLY SUNDAY—Some people are so
tight that if you asked them to sing "Old
Hundred," they would sing "Ninety and
Nine."

PROF. GEORGE P. BAKER—No greater
material for a drama can be found than
in the twenty-second Chapter of the book
of Genesis.

WILLIAM ALLEN WHITE—There she
stands—this Kansas of ours—a robust,
hard working, wholesome old girl, in her
middle fifties.

CONGRESSMAN SHERWOOD—Instead of
increasing our standing army, already cost-
ing the taxpayers \$100,000,000 a year, I
favor reducing it one-half to 50,000 men.

Insurance

Conducted by

W. E. UNDERWOOD

FOR THE AVERAGE MAN

What is the best thing in life insurance for the average man? In effect, this is the question propounded by readers hundreds of times a year. Define the average man. He would be in early middle age—not beyond 45. He would be a wage-earner, say from \$15 a week to \$2,000 a year. He would have family responsibilities heavy enough to absorb nearly all his income. Now, what is the answer to the question? The most serviceable form of life insurance for that man is the one commonly called the Ordinary Life plan, because it affords him the greatest amount of protection under a full reserve policy for the smallest amount of premium. To make it complete the annual dividends should be left with the company to increase the amount payable at death. If in the course of twenty or thirty years the need for the protection has ceased, the policy may be surrendered for its cash value; or it may be continued to accumulate additional reserves which, later, can be converted into an annuity in old age. Helpless old age is worse than death.

J. R. H., Columbia City, Ind.—The twenty-year endowment policy alluded to is probably non-participating at \$42.25 per \$1,000, a figure slightly higher than the same policy in the Travelers, Metropolitan and other old companies. The company you mention is sound and well managed. As the coupon policy grants more protection for the money and has endowment features I regard it as better than the endowment.

C. E. C., Boulder, Colo.—Until I see the annual financial report of December 31 last, I cannot form a judgment of the Southern Surety. That company was merged with the Southwestern Surety of Denison, Oklahoma, several months ago. In 1914 the business of the Southern yielded fair results, but during the four years previous to that time its underwriting was very unprofitable.

Mrs. J. L. L., Harvey, N. D.—The Brotherhood of American Yeomen is a fraternal order writing life insurance on the assessment plan. It accumulates a reserve, but, as the latter is not scientifically calculated, it is more than probable that there will be trouble when the membership ages. I cannot recommend it. The National Casualty is eleven years old as a stock company. Most of its business is on the "industrial" plan. The company is of average merit.

H. Z. B., Berkeley, Calif.—The only information I have on the Wabash American Fire Insurance Company dates back to the middle of last year and is to the effect that a number of reputable business men of Wabash, Ind., are engaged in organizing it with a capital of \$200,000 and a like amount of surplus. This indicates a sale price for the stock of not less than two for one. The fire insurance business is perilous for small new companies. I should regard an investment in their stocks as injudicious.

The Qualifications of a Competent Trustee

INTEGRITY, responsibility, good judgment regarding investments, knowledge of the law respecting trusteeship, executive ability—and all of these sustained without interruption—are necessary under modern conditions before a trustee can be considered wholly competent.

No individual can possess all of these essential qualifications. He may have integrity, responsibility, good judgment, knowledge and executive ability, yet he lacks the continuous existence which assures that uninterrupted management so necessary to the welfare of an estate.

The Bankers Trust Company possesses all of the essential qualifications of a competent trustee, including assured existence throughout generations of beneficiaries. The Company will afford complete protection to your estate, if appointed executor and trustee under your will.

A fact not generally understood is that the highly specialized and competent service rendered by this Company costs no more than the uncertain service of an individual trustee.

The officers of the Company will be glad to confer with you, or to send you information in regard to this very important matter or in regard to any trust or banking matters you may have in mind.

Bankers Trust Company's Building

BANKERS TRUST COMPANY

16 Wall Street

New York

Resources over \$250,000,000

1916

ATLANTIC MUTUAL INSURANCE CO.

ATLANTIC BUILDING, 51 WALL STREET, NEW YORK

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries.

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....	\$27,964,578,109.00
Received premiums thereon to the extent of.....	287,324,890.00
Paid losses during that period.....	143,820,874.00
Issued certificates of profits to dealers.....	90,801,110.00
Of which there have been redeemed.....	83,841,450.00
Leaving outstanding at present time.....	6,989,660.00
Interest paid on certificates amounts to.....	22,000,000.00
On December 31, 1914, the assets of the company amounted to.....	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

G. STANTON FLOYD-JONES, Sec.

A Number of Things by Edwin E. Slosson

THERE seems now some prospect that all parties may get together upon the Ezekiel platform next election. Roosevelt, Wilson and Bryan, tho holding opinions on the question of preparedness which, without exaggeration, might be called antagonistic, have nevertheless recently expressed their approval of the view of the matter given by Ezekiel in Chapter xxxiii, verses 2 to 6, of his well known, tho too little read, work on political economy and international relations:

Son of man, speak to the children of thy people, and say unto them, When I bring the sword upon a land, if the people of the land take a man of their coasts, and set him for their watchman;

If when he seeth the sword come upon the land, he blow the trumpet, and warn the people;

Then whosoever heareth the sound of the trumpet, and taketh not warning; if the sword come, and take him away, his blood shall be upon his own head.

He heard the sound of the trumpet, and took not warning; his blood shall be upon him. But he that taketh warning shall deliver his soul.

But if the watchman see the sword come, and blow not the trumpet, and the people be not warned; if the sword come, and take any person from among them, he is taken away in his iniquity; but his blood will I require at the watchman's hand.

First, Mr. Roosevelt quoted this passage with approval in the *Metropolitan Magazine* for August. Next by a curious coincidence or a natural post incidence, Mr. Wilson put it into a published letter as his own view. Then Mr. Bryan, not to be left behind in any moral movement, added his endorsement to the passage, but called attention to the point that the people were not to take up the sword until the enemy hove in sight.

And then *The New Republic*, representing a more radical viewpoint than any of those named above, spoke up for Ezekiel commending especially:

Son of man, prophesy against the shepherds of Israel, prophesy, and say unto them, Thus saith the Lord God unto the shepherds; Woe be to the shepherds of Israel that do feed themselves; Should not the shepherds feed the flocks?

Ye eat the fat, and ye clothe you with the wool, ye kill them that are fed: but ye feed not the flock.

The diseased have ye not strengthened, neither have ye healed that which was sick, neither have ye bound up that which was broken, neither have ye brought again that which was driven away, neither have ye sought that which was lost; but with force and with cruelty have ye ruled them. And they have scattered, because there is no shepherd: and they became meat to

all the beasts of the field, when they were scattered.

My sheep wandered thru all the mountains, and upon every high hill: yea, my flock was scattered upon all the face of the earth, and none did search or seek after them.

This surprising unanimity of diverse minds suggests that the campaign of 1916 might be simplified by all parties adopting the book of Ezekiel as a platform, tho each of course would be free to pick from it such passages as it chose to emphasize and ignore the rest.

Certainly it would be hard to find a document more timely, more comprehensive or more outspoken in its denunciation of current abuses in our political, financial and social system. In fact, its language would probably have to be toned down a bit to avoid interference by the postal authorities and police. For instance, a soap-box orator in New Jersey would be apt to get into trouble with the authorities if he uttered such revolutionary sentiments as "Exalt him that is low and abase him that is high (xxi, 27). I will overturn, overturn, overturn." The Society of Moral and Social Prophylaxis, while it would heartily approve of Ezekiel's stand on this question, would hardly venture to discuss it so frankly. In fact, even the socialists would be shocked at some of the things he says about the luxury of the capitalist class and the oppression of the poor.

It must be confessed that Ezekiel is an extremist and altogether too radical in some of his reforms. Nobody but the Mennonites and Dukhobors could approve of his absolute condemnation of taking interest on money loans, and even they would hesitate to make capital punishment the penalty for the crime, as he does. For, mind you, when he says "he that hath not given forth upon usury neither taken any increase" (xviii, 8), he means not merely those wicked people who get twelve per cent on their investments, but those of us who are content with four per cent in the savings bank. Blessed are they who have their money in the New Haven & Hartford, for they are living in obedience to the Bible.

But, as I say, such objectionable passages can be eliminated or quietly ignored in the ordinary way. All platforms as well as all creeds contain some things which have to be subordinated at times. Ezekiel contains so much that each one of us can approve that we can afford to overlook, such passages as we do not quite understand or do not wish to. The militarists can quote vi, 25, "They shall seek peace and there shall be none," or xi, 8, "Ye have feared the sword and I will bring the sword upon you, saith the Lord God." The pacifists can retort with other passages from the same chapter: "Ye shall fall by the sword . . . for ye have not walked in my statutes . . . but done after the manner of the heathen that are round about you." The opposition to La Follette on account of the seamen's act is voiced in:

All that handle the oar, the mariners, and all the pilots of the sea, shall come down from their ships, they shall stand upon the land, and shall cause their voice

to be heard against thee and shall cry bitterly.

The impression produced by our policy in the Philippines is referred to in: "All the inhabitants of the isles shall be astonished at thee." The immigration question is touched upon in many passages, such as "I will take you from among the heathen and gather you out of all countries," and:

As they gather silver and brass and iron and lead and tin into the midst of the furnace to blow the fire upon it, to melt it; so will I gather you in mine anger and in my fury and I will leave you there and melt you.

Ezekiel would be the first political platform to give proper attention to the problems of the great West. The Bible is a product of the arid region and only those who have lived in the arid region can appreciate either its symbolism or its doctrine. Ezekiel understood as our eastern politicians do not, the importance of irrigation to national prosperity. Comparing the Assyrian to a cedar of Lebanon he says:

The waters made him great, the deep set him up on high with her rivers running round about his plants, and sent her little rivers unto all the trees of the field.

On forest conservation Ezekiel comes out strong: "So they shall take no wood out of the field, neither cut down any out of the forests."

The question of the open range, which has cost this country millions of dollars and many lives, is yet unsettled and no party has dared tackle it. But Ezekiel points out the only way of stopping the cattle and sheep wars that are ruining our public lands:

Behold, I judge between cattle and cattle; between the rams and the he goats. Seemeth it a small thing unto you to have eaten up the good pasture, but ye must tread down with your feet the residue of your pastures? and to have drunk of the deep waters, but ye must foul the residue with your feet?

It does "seem a small thing" to the statesmen at Washington but not to the people of the West.

I fail to find in Ezekiel any reference to the tariff, the short ballot, woman suffrage and some other questions of the day, but doubtless a more thorough student or one familiar with the Hebrew could do so. I am not familiar enough with feminine fashions of the day to know what effect the following clause in the platform would have upon its changes in the suffrage states:

Wo to the women that sew pillows to all armholes and make kerchiefs on the head of every stature to hunt souls.

Of course Mr. Wilson could not run upon a platform which contained, xlv, 22, "Neither shall they take for their wives a widow."

It is expected that every platform should contain some spread-eagleism, but here again Ezekiel is adequate, for his "riddle" in Chapter xvii would be easily guessed by any true American. I have space to quote only the opening:

A great eagle with great wings, long-winged, full of feathers, which had divers colors, came unto Lebanon, and took the highest branch of the cedar; he cropped off the top of his young twigs and carried it into a land of traffic; he set it in a city of merchants.

A N O P E N F I R E

These logs with drama and with dreams
are rife,
For all their golden Summers and green
Springs
Thru leaf and root they suck'd the forest's
life,
Drank in its secret, deep, essential things,
Its midwood moods, its mystic runes,
Its breathing bushes stirred of faery
wings,
Its August nights and April noons:
The garnered fervors of forgotten Junes
Flare forth again and waste away;
And in the sap that leaps and sings
We hear again the chant the cricket
flings
Across the hawthorn-scented dusks of May.
—From *Dreams and Dust*, by Don Mar-
quis, Harpers.

T H E W E S T

Out where the handclasp's a little stronger,
Out where the smile dwells a little longer,
That's where the West begins,
Out where the sun is a little brighter,
Where the snows that fall are a trifle
whiter,
Where the bonds of home are a wee bit
tighter,
That's where the West begins.
Out where the skies are a trifle bluer,
Out where friendship's a little truer,
That's where the West begins.
Out where a fresher breeze is blowing,
Where there's laughter in every streamlet
flowing,
Where there's more of reaping and less of
sowing,
That's where the West begins,
Out where the world is in the making,
Where fewer hearts in despair are aching,
That's where the West begins.
Where there's more of singing and less of
sighing,
Where there's more of giving and less of
buying,
And a man makes friends without half
trying—
That's where the West begins.
—From the *American Bar Association
Journal*.

REMARKABLE REMARKS

JOHN KENDRICK BANGS—War is shell.
JEROME K. JEROME—"Never again" is
fools' talk.

GUGLIELMO MARCONI—The Zeppelins
are of no military value.

THE CROWN PRINCE OF BAVARIA—Every
day the English push decreases.

JACOB H. SCHIFF—Wars will never
cease as long as customs houses exist.

JOSEPH H. CHOATE—This is the best
year I have ever known for raising money.

HARRY KEMP, POET—The Government
should institute honeymoon colonies.

YUAN SHI-KAI—My patriotism is not
a whit less than any other man's.

GEN. LEONARD WOOD—The volunteer
system has absolutely failed us in every
war.

SENATOR JOHN SHARP WILLIAMS—The
gentlest woman when aroused is a fiendish
thing.

WINIFRED S. STONER—My children
are taught that a cow is a cow and not a
"moo-moo."

THEODORE ROOSEVELT—The poltroon and
professional pacifist are out of place in a
democracy.

ELLA WHEELER WILCOX—Methinks
there is no greater work in life than mak-
ing beauty.

J. D. ROCKEFELLER, JR.—Combinations
of capital are sometimes conducted in an
unworthy manner.

FLORENZ ZIEGFELD, JR.—Of the fifty
girls who marry from my chorus each year
thirty have dimples.

THE INFANTA EULALIA—King Haakon
is the only ruler in Europe at present se-
cure in his people's affections.

WOODROW WILSON—I don't know any-
thing about what is going to happen when
the war is over and neither do you.

PREMIER OKUMA—There will be no more
free space left on the earth after about
300 years for human beings to settle.

ED. HOWE—Sometimes I wonder that
the people do not form a great mob and
burn Washington, D. C.

BOOTH TARKINGTON—Seventeen needs
only some paper lanterns, a fiddle, and a
pretty girl—and Versailles is all there.

CONGRESSMAN LONDON—There was a
time when the saloon was the only univer-
sity and inspiration of the Democratic
party.

VICE-CONSUL BARRETT—There were ex-
ported from Shanghai during the past
three months of last year 410,760 dozen
Chinese eggs.

CORNELIUS VANDERBILT—The holding of
New York City for ransom would pay
many times over the cost of any war
against us.

ANSON PHELPS STOKES—The permanent
defeat of American jingoism would be a
surer guarantee of peace than the victory
of Preparedness.

CONGRESSMAN CYCLONE DAVIS—This
week I pulled off a silken muffler that cost
me \$1.50 and put on a 15 cent collar and
became a national sensation.

SENATOR NORRIS—This elaborate plan
for preparedness will not only make many
millionaires, but it will make billionaires
of many present millionaires.

SENATOR CUMMINGS—Somewhere be-
tween the armed camp of William of Ger-
many and the open dove-cote of William of
Nebraska there must be an honorable abid-
ing place for a great nation which is pre-
pared to head the world toward peace.

HENRY JAMES—Strange withal some of
the turns of the whirling of time; the
priceless structure came down to the sound
of lamentation, not to say of execration,
and of the gnashing of teeth, and went up
again before cold and disbelieving, quite
despairing eyes; in spite of which history
appears to have decided once more to dic-
tate it and give a new consecration.

The Gorham Triumvirate

STERLING SILVERWARE
SILVER PLATED WARE
GOLDWARE

In this age of specialization, few people can do three things well. The Gorham Triumvirate, however, are branches of the same tree. The parent stem is Artifice in Precious Metals. Gorham Sterling Silverware flourished first. Next came Gorham Plated Ware. Third, came Gorham Goldware.

Born in the same soil, nurtured by the same experience, sunned by the same art, tended by the same hands, each in its particular field attests and sustains the life-long leadership of Gorham for integrity of manufacture and originality of design.

Gorham Sterling Silverware - a Name and an Art which are inseparable and interchangeable terms!

Gorham Plated Ware - recently shown by U.S. Government assay to lead for the thickness of its silver plating.

Gorham Goldware - simply a richer medium in which to express and exploit the fertility of Gorham design.

NUMBER 3505

A GREAT AND COURAGEOUS APPOINTMENT

PRESIDENT WILSON has done a great and courageous thing in sending to the Senate the nomination of Louis D. Brandeis, of Massachusetts, to be a member of the Supreme Court.

It is a great thing, because Mr. Brandeis is ideally equipt in learning, statesmanship and character to discharge the functions of that exalted office.

It is a courageous thing because Mr. Brandeis has incurred powerful enemies while defending the people's

rights, and a political storm is bound to brew at a time when the President needs every atom of support he can get from both friend and foe.

Let the Senate not hesitate to confirm the appointment of this able great-hearted and just Jew. He will add strength to the court, especially when those momentous questions of social justice come before it that from now on seem destined to challenge with increasing insistence its august arbitrament.

WHAT SHALL WE DO ABOUT ENGLAND?

THE question of the British blockade of Germany—which is not a blockade—is a puzzling one. It puzzles the British Government, it puzzles the German Government, it puzzles the American Government. No wonder it puzzles the rest of us. The question seems to be, When is a blockade not a blockade? With the further complication, When it isn't, can it behave as if it were?

The House of Commons, following the counsel of Sir Edward Grey, has refused to declare a formal blockade of German ports. But the actual difference that such an action would make in the operations of British naval vessels against shipments of goods from the United States seems negligible. England could hardly do more under a formal blockade than it is actually doing under the famous Orders in Council. So the proposal to change the form without increasing the substance does not seem to be as important as it has been represented to be.

What are the merits of the British endeavor to stifle trade with Germany? Let us look at both sides of the case.

The British plan, which has been in operation for nearly a year, is to prevent any goods whatever from reaching Germany from the outside world, and equally to prevent any German goods from going to the outside world. This plan is carried out not only by stopping all ships bound into and out of German ports, and taking possession of their cargoes, but also by stopping upon the seas all shipments of goods thru neutral countries believed to have originated in Germany or to be destined to Germany.

Let us make the plan concrete. If a ship from New York carrying any kind of a cargo whatever enters the English Channel bound for a German port, it is captured by a British vessel, taken into port, and its cargo seized. Similarly, if a ship were destined for a Dutch, a Danish, a Swedish or a Norwegian port, it would be halted and taken into port. If then, upon investigation, the British authorities had reason to believe that the goods in the ship's cargo were destined for Germany, they would be seized just as tho they were actually going to a German port.

The same procedure is followed in the case of the cargo of a ship bound to New York either from a German port or from the port of a neutral country adjacent to Germany.

In one respect this is like the usual blockade; in one respect it is unlike it. If England had established a formal blockade, its procedure in regard to ships actually bound into or out of German ports would be perfectly regular. Tho even then, in order to make the procedure exactly in order, England would be obliged to establish an efficient blockade in the Baltic, to prevent intercourse between Germany and Scandinavia, for a blockade to be binding must apply equally to all neutral countries.

This procedure is unlike the usual blockade in that England assumes the right to stop shipments to and from neutral countries which it believes to be intended for Germany, or to have originated in Germany. This involves an extension of the doctrines of "continuous voyage" maintained by the United States during the Civil War. But this extension is in direct contradiction of the interpretation of this doctrine made by the United States Supreme Court in the much-quoted "Matamoras" cases.

Great Britain naturally denies the validity of the "Matamoras" decision, for it is the time-honored custom of belligerents to interpret the matter of neutral rights to suit their own purposes. In this denial the British have a good deal of reason upon their side, tho it would take more space than is now available to discuss the matter in all its bearings.

Great Britain, however, has definitely refused to declare a formal blockade. What, then, is the British case? It has two branches.

England has claimed and exercised the right to cut off food shipments to Germany because in January last the German Government issued a decree confiscating all the grain and flour in the empire. These articles thereupon, according to the British view, became legitimate subjects of seizure by the British navy, since conditional contraband, which includes foodstuffs by the

law of nations, is seizable when destined for the government or the armed forces of the enemy. It matters nothing, say the British, that Germany promptly altered its decree so that imported foodstuffs were exempted from confiscation, for, as a matter of fact, this pretended exemption was not made in good faith nor actually carried out. It is further urged that under the conditions of modern warfare, in a country like Germany, which put an entire people under arms, it is impossible to maintain the distinction between food intended for the armed forces of a nation and food intended for its civil population. Under such conditions foodstuffs tend by the very logic of events to assume the status of absolute contraband. So much, then, for the British right to cut off food supplies from Germany.

As to other goods, the matter stands on a different basis. The British order in council decreeing the stoppage of all goods going into or coming out from Germany was adopted in retaliation for the famous German war zone proclamation of February, 1915. This proclamation, as it has been interpreted by the subsequent actual practise of German submarines, was a deliberate violation of the rules of international law and the British had no alternative save that of opposing it by any means in their power. They resorted to retaliation or reprisal, under the recognized procedure of nations, best described in the opinion of Sir W. Scott in the Santa Cruz case quoted with approval by Wheaton in his "Elements of International Law." Nations at war have the right to rely upon receiving reciprocal justice. What if this reliance should be disappointed? "Redress must then be sought from retaliation, which, in the disputes of independent states, is not to be considered as vindictive retaliation, but as the just and equal measure of civil retribution. This will be their ultimate security, and it is a security sufficient to warrant the trust."

The only difficulty with accepting this British justification of its program of stifling German trade is that Germany contends that its war zone decree was in fact a measure of reprisal for previous illegal acts of the enemy, especially for the determination of Great Britain to starve the German people.

The whole matter is as puzzling as it can be. Diplomats, experts, international lawyers find it hard to get the matter straight in their own minds. It is no wonder that the American people have not found the way to apportion the right and wrong with unerring judgment.

One thing, however, is clear. The majority of the American people will not view with an equal mind the act of cutting off the outside supplies of a nation and the act of killing non-combatant men, women and children in cold blood. Murder is murder, while blockade, however irregular and however unjustified in its severity, is quite another thing.

What, in the face of such a puzzling situation, should the United States do? Three courses are open to us:

We could do nothing. But that, unless we are prepared definitely to throw in our lot with the Allies, would be supinely to accept a view of the respective rights of belligerents and neutrals that is by no means established in international law and that cavalierly subjects neutral property rights to the arbitrary will of the dominant maritime power.

We could resent the British program with a definite-

ness and a peremptoriness that might find its logical outcome in participation in the war on the side of the Central Powers. But in the present temper of the American people it is inconceivable that the United States should go to war for a mere depredation upon property rights. It would be fantastic if the United States were to be satisfied with a money payment for American lives wantonly taken upon the sea and appeal to the arbitration of war on behalf of American property. In addition, the predominant sentiment of the people of the United States is so clearly in favor of the Allied cause that a junction with the enemies of that cause is unthinkable.

We can protest strongly and with weighty logic against the invasion by Great Britain of the rights of American shippers upon the high seas, we can hold England to a strict accountability for every damage done to American property rights thru the arbitrary acts of its naval forces, and when the war is over we can press for the satisfaction of our demands and claims in a court of the nations.

From the puzzling situation in which our country finds itself because of the unusual conditions of the war upon the sea, there is no thoroly good way out. The third alternative which we have considered seems to have fewer disadvantages and to be on the whole in better accord with the spirit and convictions of the American people than any other.

THE PANAMA CONGRESS

WHAT is called the Congress on Christian Work in Latin America holds this month a ten days' session in Panama and will then continue in a series of sectional meetings in the principal cities of South America and in Cuba and Porto Rico. It was first entitled the Latin-America Missionary Conference, and under this name, which fairly gave its purpose, great preparations were made for it by a strong committee of twenty or more missionary societies engaged in the work from the Rio Grande to Patagonia; but opposition from Catholic and High Church Episcopalian sources led to the change of the title, dropping the word "Missionary," but the thing remains the same, for a missionary conference it is, whatever it may be called. It will be attended and conducted by delegates and missionaries of all Protestant missionary societies at work in the Catholic countries of America.

Those who are responsible for this Congress wish to make it clear that it is not intended as an attack on the Roman Catholic Church. They show that there is room for evangelical work among the millions of Latin America who have no religion whatever. They tell us, and doubtless truly, that the bulk of the intelligent and educated people of those countries are not believers in Christianity as they know it. This is true of the forty thousand young men in the universities of South America. In nearly every one of its countries the ecclesiastical authorities regard themselves as persecuted by the government. The condition religiously is worse than it is in any country in Europe and the mass of ignorance is appalling. While the rich are traveled and educated, there is not one country in which half the people can read and write.

Modern missions mean education as well as religion,

and there is deplorable need for both in Latin America. South America is really the great undiscovered country. There is room for all the Christian work which both Protestants and Catholics can do. We rejoice when in our predominantly Protestant States or in Protestant Scotland Catholics do active mission work. The field is the world, and the purest truth will win in the end, and it is to be hoped that the zeal of the thousand delegates who will visit Panama and then spread over all Latin America will spur the older church to better work.

There is need of rivalry in doing good. We give all welcome to Christians of whatever name who are casting out the devils of ignorance, superstition, and immorality; and even if they do not follow with us, we say with the Master, Forbid them not.

JOURNALISM IN THE TRENCHES

THO this be a machine-made war the frolic spirit of the soldier cannot be altogether extinguished, but manifests itself in new forms. One of the most interesting of these is the appearance of a novel kind of journalism, the leaflets published, or, rather, prepared, by the men at the front. The curio collectors are already after sample copies of these very limited editions. The Bibliothèque Nationale of Paris has specimens of more than sixty different "periodicals" of this kind, and a bibliography of them has been published, *Tous les Journaux du Front*, by Pierre Albin.

Many of them are merely handwritten or typewritten broadsheets, in purple ink, appearing wherever a group of irrepressible writers and artists happen to find themselves together. The gelatine pad or mimeograph gives a better chance for pictorial embellishment and strange typography than the printing press, so there is great variety and not a little artistic skill. In contents they run largely to verse, personalities and local "gags," often unintelligible to one not familiar with the soldier slang of that particular corps, and not always suitable for translation. Those who know the comic papers of the boulevards may imagine what they would become when translated to the trenches. But among the editors and contributors appear the names of academicians and others well known in art and letters, and probably more than one piece of permanent literature will be found in these ephemerides.

Their names alone are interesting as characteristic of their spirit. *La Woëvre joyeuse* and *Le Sourire de de l'Argonne* show that even those who have stood the brunt of the German attack on the eastern front in the Woëvre and Argonne forests may still be joyful and smile. *A mon Sac* (My Knapsack), *La Fusillade*, *Le Troglodyte*, *Le Cri de Guerre* (The War-Cry), *Le Clarion territorial*, *L'Indiscret*, *Le Marcheur du 88^e* (The Hiker of the 88th), *L'Imberbe grognard* (The Grumbling Tenderfoot); so the list runs. The *Periscope* is such a good name that some permanent periodical is likely to adopt it. The *Autobus* refers not so much to the commissary conveyance as to the tough meat which it brings. For *Poilu*, French slang for an experienced soldier, we have by rare good luck an English equivalent in our "roughneck." There are half a dozen *Poilus* coming from the front; such as *Le Poilu grognard* (The Grumbling Roughneck), *Le Terrible poilu-torial*, and *Le Canard poilu* (The Roughneck Hoax), *Le Poilu enchainé*,

the last from Clemenceau's journal, which used to be *L'Homme libre* (Free Man) until the censor suppress it and since has appeared as *L'Homme enchainé* (The Manacled Man).

THE COLLEGES IN CONGRESS

IN England the leading universities are represented directly in Parliament by members elected by the alumni. In the United States we have no such system, but, nevertheless, our colleges—and our astonishingly large number of them—get represented in Congress. By the 380 members of the present Senate and House who report collegiate education, 173 different institutions are named. No college would have more than two if they were equally distributed, but they are not. The University of Michigan, with twenty-seven of its graduates in Congress, still holds the Washington pennant which it wrested from Yale some years ago. The University of Virginia, as we should expect under a Democratic régime, follows next with twenty. Then come Harvard 19, Yale 13, Wisconsin 10, Alabama 7, Mississippi 7, Missouri 7, Minnesota 6, Iowa 6 and Georgia 6. The fact that of the eleven institutions which have more than five representatives in Congress, all but two are state universities, shows what an important factor in political life these institutions have become. It is equally interesting to observe that such large and important universities as Columbia, Pennsylvania, Cornell and Princeton have only three of their men in Congress and Johns Hopkins and Stanford none at all. Twenty-eight per cent of the members mention no institution of higher education and presumably attended none.

CONSCRIPTION AND EUGENICS

A MAJOR part of the discussion which has been going on in England over conscription, and which, less strenuously, is developing in this country, has been a thrashing over of considerations not new and not relatively significant, certainly not fundamental. The emphasis of the immediately expedient is doubtless one of the inevitable shortcomings of popular government. Human beings are prone to put off the evil day, in thought as in action; and they therefore rarely get beyond the urgent, which they mistakenly identify with the vital or the profound.

The nearest approach that has hitherto been made to a more searching examination of the relative demerits of conscription and a volunteer system, has been offered by those who have insisted upon the democratic quality of the universal service plan. It treats all citizens alike; it eliminates from the beginning the possibility of such charges of injustice as were freely made when the national Government in our Civil War resorted to the draft, and poor men said that they and their sons were without escape, while the rich man and his sons could pay for substitutes. That the superb solidarity of France at the present hour, contrasting dramatically with the factional struggle in Great Britain, is largely a product of the fundamental equality and justice of the universal service system, is contended by not a few thoughtful students of the problem.

Yet more fundamental, and going deeper down into the scientific realities of the whole matter, is a consid-

eration which has almost been overlooked, but which has just now been brought to public attention with startling clearness by President Charles Alexander Richmond of Union College, in connection with the proposed policy of offering military instruction to college students. In the Civil War the small undergraduate body of Union College students sent one hundred and eighty-one men into the army. If the United States were now to be attacked by a foreign power and our young college men should be as patriotic as they were half a century ago, at least seventy-five per cent of them would instantly offer their services. At the present moment over nine thousand Oxford men and more than ten thousand Cambridge men are actively in service under the British colors. More than ten per cent of those who have gone forth from these universities since the war began already have fallen.

Leaving out of account, for the moment, the question whether college and university men include a higher percentage of superior ability than can be found in other social groups, it is not denied that on the whole they include a far higher percentage of highly trained men. Not speaking of the so-called literary professions, they include the physicists and chemists, the civil, mechanical and electrical engineers, the biologists, the surgeons and sanitarians, upon whose intellectual power and skill the whole structure of our material civilization depends.

If, now, to the college and university men we add the volunteers who can certainly be counted upon to step forward promptly from other social groups—business and professional men, farmers, and skilled mechanics,—it is beyond doubt that they collectively represent the relatively high moral qualities, the relatively high intelligence, the relatively high physique, of a nation's population. And these are the men that are cheerfully sent forth to the initial slaughter, to bear the brunt of the fighting while strategists and corps commanders are experimentally learning their job, making the tragical mistakes that mark the earlier stages of every war. Meanwhile, the rejected for physical unfitness, the slackers, the unskilled in vast numbers, are safe at home. If at any time during the progress of a serious war twenty-five per cent of the unskilled workers of the population should volunteer, the fact would be hailed as an extraordinary manifestation of profound patriotism. What a showing! Seventy-five per cent of the selected intellectuals, twenty-five per cent of the unskilled! This is the bed-rock meaning of a volunteer system, as over against universal military service, which makes its demand upon all grades of ability, upon all social ranks and classes, impartially. The idea of conscription is so repugnant to the Anglo-Saxon mind that it is only in such vital emergencies as our Civil War or the Great War in Europe that the United States and Great Britain resort to it. But this serious defect of the volunteer system must be frankly recognized and, if possible, obviated.

Surely in this day of awakened scientific intelligence, when even great bodies of our citizens who make no claim to technical knowledge or judgment are beginning to understand the true meaning of the eugenics problem, it would be unpardonable to decide upon our future policy in military matters without full recognition and weighing of the considerations which Dr. Richmond has thrust upon our attention.

A CONTAGIOUS SOCIAL DISEASE

THE recent lynching in Georgia of five men, who were taken from jail and killed with much the same evidence of deliberation and cold-blooded purpose that marked the Leo Frank case, gives point to the diagnosis by an important Southern organization of lynching as "a contagious social disease."

The movement to put an end to lynching comes from the right source. It comes from the leading universities of the Southern states. The University Commission on Southern Race Questions has been holding its sessions at Durham, North Carolina, and it has issued an address on the subject of lynching, directed primarily to the college men of the South. The commission consists of eleven college professors representing as many Southern states.

It is true that lynching is not confined to the Southern states, nor is it wholly a race evil. Whites lynch whites and negroes lynch negroes, but this only proves it to be a contagious social disease and the danger is in the contagiousness. The address does not attempt to convince any one that lynching is a crime. The colleges to which it speaks know it well enough, but it is lukewarmness and timidity on the part of educated "good citizens" which makes it spread.

One of the bad features of lynching, says this address, is that it quickly becomes a habit and like all bad habits deepens and widens rapidly. Formerly lynchings were mainly incited by rape and murder, but the habit has spread until now such outrages are committed for much less serious crimes, and even those are lynched who have been falsely accused and finally proved innocent.

We have received again from Tuskegee Institute the record of the lynchings which during the past year have disgraced the country. During the year just closed there have been sixty-nine. Of those lynched fifty-five were negroes and fourteen whites. Last year we were pleased to note a diminution of lynchings, but this year six more negroes and eleven more whites were put to death by mobs than in 1914, showing that this evil recourse to lawless violence manifests less discrimination of race as time goes on.

Three women were among the victims last year. In four cases it was later proved that the persons lynched were innocent. Georgia maintains its bad preëminence, as more than one-fourth of the lynchings occurred in that state. Of the sixty-nine lynchings only fifteen persons were charged with offenses against women. Three men, all white, were charged with stealing hogs, and two white men for disregarding warnings of night-riders. Obviously lynching cannot maintain even the poor justification that it is the revolt of outraged masculine chivalry in defense of womankind.

These Southern scholars ask whether there is not sufficient legal intelligence and machinery to take care of every case of crime committed. Why fall back on the methods of the jungle?

This protest is properly addressed to the educated men of the South. They have wide vision. They know the contagiousness of the disease. They have the power if they will only exercise it to put a stop to the evil which more than any other disgraces the country, and particularly the South. We look to the colleges and the universities of the South to regenerate public sentiment and remove a stain on the whole nation.

THE STORY OF THE WEEK

The President's Speeches

President Wilson began at New York, on the 27th, his series of public addresses relating to plans for national defense. They were suggested in part by the condition of the defense program in Congress, where action upon it has been delayed and the Administration's projects for new taxes have encountered formidable opposition. Before leaving Washington, Mr. Wilson urged the chairmen of committees to work for progress with respect to all the pending and proposed legislation. In his first address, in New York, at the dinner of the Railway Business Men's Association, he said that the question of national defense had been clouded by passion and prejudice. Partizan feeling should be excluded and in dealing with it all should draw together, like the peoples of the nations now at war. He paid a tribute of respect and obligation to Congressman Mann, the Republican leader in the House, who had forgotten party lines in his recent speech for the defense plans. The passion of our people was for peace, and he had sought to maintain peace against very great and sometimes very unfair odds. Americans would not seek a contest or cravenly avoid one. They would fight for the vindication of their honor and character, for liberty and their free institutions. We must maintain our own sovereignty, and we had become the champions of free government thruout the western hemisphere. We must stand as the strong brother of others. If we should intervene with arms in Mexico, the other countries south of us would look across the water and not to us.

We must be ready to defend the things we love. This country would never endure militarism, the preparation of a great machine whose only use would be for war, but we should develop a system of industrial and vocational education under Federal guidance, and to this might well be added training in the use of arms, camp sanitation and military discipline, to make men serviceable for national defense. Such an educational system could not be made in a short time. Training should be given to a sufficient body of citizens without delay. He admired and respected the National Guard. Congress should do more for it. But it was under the control of the states, and the President could call upon it only in case of actual invasion. There should be a citizens' reserve of at least half a million trained men, immediately available in time of necessity.

Mr. Wilson also made an address at a meeting of the Moving Picture Board

of Trade, and another before 700 clergymen at the Clerical Conference of the Federation of Churches. In the course of the latter speech he said that we believed in peace, but also in justice and righteousness and liberty, and we could not have peace without these. From Cardinal Farley there came to this meeting a message in which he warmly commended the President and promised the support of the Catholic Church for all the efforts he should make to restore peace.

In the Middle West Two days later, the President spoke in Pittsburgh. Back of our army, he said, should be a trained reserve of half a million men accustomed to handle arms and to live in camps. This would not point to militarism. He was confident that men would volunteer to join such a force (here he had in mind the proposed Continental Army) and he had no anxiety about the action Congress would take. The world was on fire and sparks were liable to drop anywhere. There were dangers due to our lack of a merchant marine and our dependence upon others for ocean transportation. New conditions made it absolutely necessary that this country should prepare itself, not for war or for anything like aggression, but for adequate national defense. "When you know that there are combustible materials everywhere in the life of the world and in your own

national life, and that the sky is full of floating sparks from a conflagration, are you going to sit down and say it will be time enough when the fire begins, to do something about it?" He was asked to keep the country out of the war, and to maintain the country's honor. The time might come when he could not do both. It was his duty to counsel his fellow-citizens that preparation for national defense could no longer be postponed.

In an address at Cleveland he said it had not been easy at Washington to avoid the entanglements which seemed to beset the Government. One side or the other had repeatedly urged us to protest or intervene with our moral influence, if not with force. He regretted that this was a political campaign year, and he urged all to forget politics when considering national defense. There were not enough coast defenses, the navy should be enlarged, and the army should be supplemented by the trained reserve, ready to go out at the call of the Government upon the shortest possible notice. "Let me tell you very solemnly that you cannot afford to postpone this thing. I do not know what a single day may bring forth." He was not thinking of some particular danger, but he knew that we were treading daily amid the most intricate dangers, not of our own making and not under our control. "No man in the United States knows what a single week or a single day or a single hour may bring forth."

Mr. Bryan, who says he intends to remain in Florida until the end of February, has published a statement about the President's tour. The people have heard, he says, from the manufacturers of munitions, the big corporations that want a large army to overawe their employees, and the army and navy experts who magnify their calling, and should now hear Mr. Wilson.

Philippine Independence It is expected at Washington that the pending bill concerning the Philippine Islands will soon be passed in the Senate, where it has been the subject of debate. Much interest was shown in an amendment offered by Senator Clarke. This in its original form provided that independence should be granted to the Filipinos in not less than two years. It was afterward so modified that the proposed grant is to be made in not less than two years nor more than four years. Reports in Washington say that the change was suggested by President Wilson, who pointed out that successful negotiations with the great Powers for a maintenance of independent Filipino sovereignty (negotiations required by the bill and the amendment) might be prevented or delayed by the war.

After the amendment had been in the Senate for two or three days, Mr.

© O. F. Browning

PRESIDENT WILSON, PREPARATIONIST
The hearty smile was in evidence when the President began his preparedness campaign with a speech in New York

Hitchcock, chairman of the committee having charge of the subject, reported a substitute bill which virtually repeats the amendment's provisions as to two years and four years, but allows delay beyond the expiration of four years, if conditions, in the opinion of the President, call for it. Independence, having been granted, is to be guaranteed for five years by the United States. The bill as it stands has the approval of Manuel Quezon, the resident Philippine Commissioner, and the Philippine Assembly passed a resolution last week asking Congress to make it a law.

In the course of the debate Mr. Borah, Progressive Republican, supported the Clarke amendment. While half a century might elapse, he said, before the people were ready for self-government, it was advisable that our control should be given up as soon as practicable. "If we stay it must be for the benefit of the Filipinos themselves, and not for any material benefit for the United States." The bill's preamble virtually told the Filipinos they were

prepared for independence and promised it to them. Not to keep the promise within a few years would cause discontent and disturbance. Mr. Sutherland, Republican, predicted that a Republican President succeeding Mr. Wilson would decline to grant independence because the people needed education for another generation to qualify them for self-government. This delay, if the pending provisions as to time should be enacted, would probably cause insurrection and bloodshed.

Tests for Immigrants A favorable report has been ordered by the House Immigration Committee on the Burnett Immigration bill, which provides for a literacy test that has excited much opposition in the past and caused the bill to be vetoed by two Presidents. This provision is, in brief, that no alien over sixteen years of age who cannot read English or some other language shall be admitted. There had been hearings on the bill before the committee. Among those

who spoke in favor of the test were Mr. Fitzpatrick, vice-president of the Railway Trainmen's Union, and Frank Morrison, secretary of the Federation of Labor. They asserted that those excluded by the test would, if admitted, work for low wages and tend to prevent maintenance of good standards of living. This was the opinion expressed by Mr. Burnett, author of the bill and chairman of the committee. John H. Kimball, representing the Farmer's National Grange, supported the test. Those whom it would exclude, he said, could not be induced to work on the farms.

Louis Marshall, of New York, a lawyer, opposed the test, saying it was unjust and un-American. His foreign-born father was a railroad track-walker, and the father of Mr. Fitzpatrick (the latter was formerly a railroad section hand) was also foreign-born. "Mr. Fitzpatrick," said Mr. Marshall, "would close the door that was left open for his father, and I would leave it open for the others. Are we to bar these people for the protection of the old Americans of our generation?"

The committee practically agreed some time ago that there should be a paragraph distinctly excluding "Hindus and all persons of the Mongolian or yellow race and the Malay or brown race." Final action on this was deferred to await the result of a conference with the Secretary of State, because of its relation to Japan. As reported, however, the bill excludes Hindus, in response to the demands of Pacific Coast Representatives, and also excludes all Asiatics, altho really the Japanese are excepted on account of a provision that the bill shall not apply to a country with which we have immigration treaties or agreements. The head tax is increased from \$4 to \$8. At the beginning of the hearings the bill exempted Canadians, Cubans and Mexicans from the literacy test, but afterward this exemption was stricken out.

GETTING THE BEST OUT OF WINTER IN QUEBEC

For the Supreme Court The President's nomination of Louis D. Brandeis, of Boston, to be an associate justice of the Supreme Court, filling the vacancy caused by the death of Justice Joseph R. Lamar, of Georgia, was unexpected, because Mr. Brandeis had not been mentioned in connection with the office. It has been the subject of much comment, owing mainly to the prominence of Mr. Brandeis in recent years as an advocate of advanced social legislation, as counsel for workingmen and women in contests over legislation relating to work hours and wages, as counsel in the Ballinger conservation inquiry and in proceedings before the Interstate Commerce Commission concerning railroad rates, as the successful promoter of legislation for savings bank insurance, as an adviser concerning legislation against Trusts, and as a leader of the Zionist movement. He is the first Jew to be named for the Supreme Court.

At first it was reported that there might be a majority in the Senate

against confirmation. One newspaper found only forty-six favorable votes, or three less than the number required, but another counted fifty-one. Later reports point to confirmation when the vote is taken, altho there will be some delay, as the Judiciary Committee, it is said, will make an inquiry. Party lines will not be strictly drawn. Several Democrats, it is understood, will vote against Mr. Brandeis, while a larger number of Republicans will support him.

The New Taxes

It is expected now that the additional revenue needed for the expenditures of the defense program will not be procured by the special taxes which President Wilson has suggested, but will be obtained by higher income tax rates, with notable increases for large incomes. Many Democrats protested against the proposed new taxes on gasoline, automobiles, iron, steel and bank checks. Mr. Kitchin, chairman of the Ways and Means Committee and floor leader of the Democratic majority, says it will be "impossible to pass any revenue bill that does not place all appropriations for the increase of the army and the navy on the income tax," and that the income tax exemption limit "will not be lowered." He adds that all the stamp taxes of the present war revenue act must be repealed. Speaker Clark goes further and gives notice that he will oppose the re-enactment of any part of this law. Mr. Kitchin also says that "undoubtedly there will be a tax on war munitions." A bill introduced in the Senate provides for a tax of 2 cents a pound on high explosives and one of 10 per cent on "implements of war." It is well known that Mr. Kitchin opposes the defense plans.

President Wilson, in letters to him, recommends that a permanent non-partizan tariff commission be created, and the committee will probably report a bill for one, with provisions relating to the "dumping" of foreign goods on our market at low prices after the war. The committee will be empowered to investigate as to rates and the working of the law, and to report to Congress. Mr. Wilson has changed his mind about such a commission, he says, because conditions have changed, but his views about the protective policy have not been modified.

It appears that the Carranza Mexico forces are doing what they can in accordance with his promises concerning the punishment of those who have killed Americans in northern Mexico, but the pursuit of Villa has not been marked by earnestness and vigor. It was reported last week that he was on the Babricora ranch (which is owned by the Hearst estate) with 1000 men, and that he was laying up a supply of provisions by killing 250 cattle a day. There were also reports that safe deposit vaults in our cities held several million dollars which he had placed in them. Before leaving Chihuahua City he looted the shops there. To a party of mining officers and workmen going to mines not

far from Santa Ysobel, where Watson and his eighteen associates were murdered, Carranza, last week, gave a military escort. The two Mexicans who killed James B. Akers, the American ranchman, while he was looking for stolen cattle not far from Juarez, were publicly put to death last week in that city. They admitted their guilt, and died cursing Americans. Francisco Perez, who had been associated with them and was also accused of killing Akers, was captured by an American customs officer on the Texas side of the boundary and taken to jail in Isleta. Because he attempted to kill his captors, he was shot to death. As about half of the inhabitants of Isleta are Mexicans, this affair caused resentment there.

Near Brownsville, two of our soldiers swam across the river and were made prisoners by the Mexican troops. The two men asserted that they had crost in response to invitations from the Mexicans. Three American lieuten-

ants, at the head of a small party of soldiers, crost to rescue the prisoners. They were not successful, and four of the soldiers were drowned while attempting to return. The lieutenants are under arrest for crossing the boundary, and the two prisoners have been released.

Carranza's Minister of War has prepared an elaborate plan for compulsory military service, affecting all able-bodied men between the ages of twenty-one and forty-five. His Governor in Sonora has ordered the confiscation of the large landed estates there owned by wealthy supporters of Diaz or Huerta, intending to distribute the land among the common people.

The Conquest of Albania The Austrian army is sweeping down the Adriatic coast from Cattaro without encountering any serious resistance and at this rate it will not be long before Albania is practically in their hands. The Italians were

Paul Thompson

THE WAR AMONG THE PEAKS

depended upon to defend Albania with the aid of the Serbian soldiers there, since they have always regarded Albania as within their sphere of influence and they were already in possession of its chief harbors, Durazzo and Avlona. General Giovanni Ameglio, who had charge of the Italian conquest of Libya, is in command of the Italian army in Albania, which includes some of the veterans of his African campaign. He was said to have at his disposal 175,000 Italian troops besides the remnants of the Serbian army which retreated into Albania, perhaps a hundred thousand more. Then there was also an Albanian force of unknown number under Essad Pasha, who might be expected to defend Scutari against the Austrians as stoutly as he did against the Montenegrins three years ago. All these together with such Montenegrins as refused to surrender to the Austrians would certainly have been able to hold the Albanian mountains against the invaders for some time, especially since Italy has command of the Adriatic and would supply the armies from the coast while the Austrians and Bulgars must come a long distance overland without railroads or even highways back of their line.

It is no wonder then that England and France were shocked to hear that Italy was withdrawing her troops from Durazzo as rapidly as possible and had apparently no intention of trying to hold any part of Albania except the port of Avlona. The munitions and provisions which had been stored at Durazzo for the campaign are being taken back to Italy; not to Avlona as might have been expected.

By the Rivers of Babylon The British forces on the Tigris and Euphrates are in a very critical situation. A heavy and long continued rainstorm, unusual in this region, has raised the Tigris four feet

WHERE THE BRITISH ARE BESIEGED

General Townshend's expedition, having failed to reach Bagdad, fell back to Kut-el-Amara, where it was enveloped by a large Turkish force. The relief expedition has been checked twenty-three miles down the Tigris River

and flooded the low banks on each side where the English and Indian soldiers are encamped. The level and barren plain affords no natural protection and elaborate entrenchments like those in Belgium are impossible.

Last week we said that the relief expedition under General Aylmer had arrived at Essain, within six miles of the beleaguered force under General Townshend at Kut-el-Amara. This was the statement made to Parliament by Austen Chamberlain, Secretary of State for India, but it seems that he was muddled in his geography, for a few days later it was acknowledged that a mistake had been made in the location of Aylmer's army, which was

twenty-three miles away instead of six. Apparently the relieving army has been held in check by strong force of Turks near Sheik Said. The Turkish War Office reports that the British have been driven back several miles with a loss of three thousand. If this is true it puts off indefinitely the rescue of General Townshend's army, which is encircled at Kut-el-Amara and surrounded by the enemy; and since the force, variously surmised to number between ten and thirty thousand men, is altogether cut off from the base of supplies at the mouth of the Tigris, it cannot be expected to hold out very long unless it gets food and ammunition. The Turks report the capture of a thousand of the camels used in bringing up supplies.

Perhaps the pressure upon the British along the Tigris may be relieved by the necessity of diverting Turkish troops to the Caucasian frontier where the Russians have taken the offensive. The Grand Duke Nicholas was placed in command of the Caucasus when he was superseded by the Czar as head of the Russian armies in Europe after the loss of Poland and Galicia. His winter campaign in this new field opens out most promisingly by a westward drive that has brought him within gun-shot of Erzerum. The Turks, dislodged by a sudden attack from the position they have held for the past year in the mountains near the border, were driven back toward Erzerum by the Cossacks who took four thousand prisoners as well. According to the Russian account the Turks were completely routed and abandoned tents, guns and ammunition in enormous quantities. Erzerum is the strongest fortified city in eastern Turkey and has formerly stood long sieges by the Russians. Modern artillery may have made it more vulnerable.

A HUGE SHOVEL CLEARING THE CHANNEL AT PANAMA

The Austrian Advance

Altho King Nicholas of Montenegro fled to France without concluding the peace negotiations which he had initiated, the Austrians found in Montenegro two members of the Montenegrin cabinet, General Becèr and Major Lampar, with whom their delegates, Field Marshal von Höfer and Major Schuppich, arranged the terms of surrender. The conditions imposed do not appear to be onerous. All arms are to be given up except those of the Montenegrins, who are to assist in policing the country. The people are to lend all possible assistance to the Austro-Hungarian forces by furnishing them food and water, means of transportation and housing, but they will not be required to enter the army of their conquerors. The 2900 Austro-Hungarians taken by the Montenegrins were released.

After having occupied Cetinje, the capital, and Antivari and Dulcigno, the sole seaports of Montenegro, the Austrian forces crossed over the southern border into Albania and entered Scutari without opposition. Scutari, with its 30,000 inhabitants, is the most important town of northern Albania and occupies a position of great strategic strength on the steep hills at the foot of the lake of the same name. Its sieges have been famous in history. In the fifteenth century Scutari stood out against the Turks for eight months and in the twentieth against the Montenegrins for six months. But Essad Pasha, who had held it in the latter case, thought it more prudent this time to retreat southward toward Avlona and join forces with the Italians there.

So the Austrians moved on down to the coast and took possession of the port of San Giovanni di Medua, where

the Allies had stored hundreds of tons of food and munitions for the use of the Montenegrins. Now the Austrian vanguard is reported to have reached Kroya, only twenty-four miles from the port of Durazzo, which Prince William of Wied made his capital while he was nominal ruler of Albania. He is now reported to be at Prizrend, just over the border in conquered Serbia, waiting to reenter in triumph the capital from which he fled.

The tribesmen of this part of Albania are mostly Catholics and have been sedulously cultivated by the Austrians for many years. They hate the Serbs and Montenegrins worse than they do the Turks and many of the refugees from these two conquered kingdoms have been murdered by the Albanians.

South of Avlona or Valona Greek influence predominates. This part of Albania was occupied by the Greeks in the Balkan war of 1912, but they were forced to give it up by the combined efforts of Italy and Austria. But the Greeks have never given up their ambition to annex this territory, as is proved by the recent admission to the Greek Chamber of sixteen deputies from the Epirus, altho this is nominally a part of Albania.

British Conscription

The session of the British Parliament which opened on November 11, 1914, and closed on January 27, 1916, has broke more precedents than any other in history. Money in unparalleled amount has been appropriated in lump sums for the use of the Government without restrictions or criticism. The largest volunteer army the world has ever seen has been organized and finally compulsory military service has been

introduced for the first time since Cromwell.

This last measure was carried thru the House of Commons on its third reading by a majority of more than ten to one, an astonishing triumph for the Government considering the heated opposition which the proposal at first aroused. The act makes liable to conscription the unmarried men of military age in Great Britain (not Ireland) with the exception of those who are needed in essential industries like the munitions plants, or who are the sole support of parents or who, like the Quakers, have conscientious scruples against bearing arms. When it was perceived that the Government was determined to resort to conscription many of the single men who had declined to volunteer under the enlistment scheme of Lord Derby were moved to come forward and the reopening of the recruiting offices brought out 114,000 more within a few weeks. Even under the new law the British army will consist of 93 per cent of volunteers.

While the bill was pending in Parliament a conference of trade unionists was called at Bristol to decide upon the attitude of labor in regard to it. The conference declared itself, by a vote of 1,746,000 to 219,000 of the members represented, emphatically opposed to the adoption of conscription in any form "as it is against the spirit of British democracy and full of danger to the liberties of the people." The conference specifically opposed the pending conscription bill but voted against agitating for its repeal. The three members of the Labor party now in the coalition ministry were authorized to remain. In view of the support given by the labor conference to the Government it is believed that there is no dan-

By arrangement with the London Sphere. © N. Y. H.

THE NEW BATTLEFIELD OF THE GREAT WAR

Albania is now being invaded from all sides by hostile or alien armies. The Bulgars from Serbia on the east have penetrated as far as Elbasan, the Greeks have occupied the southern provinces, and the Italians have occupied the ports of Avlona and Durazzo on the western coast. The Austrians, having conquered Montenegro, are overrunning the country from the north. They have already taken Scutari and San Giovanni di Medua

THE GREAT WAR

January 24—Austrians occupy Scutari, Albania. Conscription bill passes Commons by 383 to 36.

January 25—Germans shell Nieuport Cathedral, Belgium. Austrians attack Italian lines northwest of Görz.

January 26—Germans gain trenches at Neuville-St. Vaast, Artois. Russians renew efforts to reach Czernovitz, Bukovina.

January 27—Parliament prorogued till February 15. Russians attacking Erzerum, Turkey.

January 28—Austrians take Medua, Albania. Allies occupy Greek fort in Salonica harbor.

January 29—Germans attack French lines south of the Somme River. British relief expedition held up on the Tigris.

January 30—Zeppelins kill twenty-three persons in Paris. Germans gain two miles of trenches on Somme.

ger of the extreme anti-militarists carrying out their plans for a strike which would tie up the coal mines, railroads and shipping.

Two other bills, almost equally momentous, were passed last week. One of them is intended to root out all German capital and influence in British industries and commerce by empowering the Board of Trade to discontinue any businesses, either within Great Britain or abroad, judged to be inimical to the interests of the Allies or in favor of their enemies. The other bill authorizes the employment of unskilled labor in the less difficult tasks of the manufacture of war supplies. Hitherto the union rules have prevented this and the production of munitions has been seriously retarded on this account.

The War in the Air In the first year of the war aeroplanes were used almost entirely for scouting purposes, and the defense against them was entrusted to guns on the ground. Since then, however, the aeroplanes have been developed into veritable fighting machines which have duels with one another and raid distant parts of the enemy's country. The Serbian and Montenegrin soldiers, painfully toiling thru the Albanian mountains toward the sea and safety, were pursued by Austrian aeroplanes sailing easily overhead. The swamps which protect Dvinsk and Riga are past over by the aviator as readily as dry land.

But the greatest activity is manifested on the western front. Nineteen air battles in a single day were reported from France and Belgium. When a couple of German aeroplanes bombarded Nancy by night, the French retaliated at once by sending a squadron of twenty-four machines, which dropt 130 bombs on the railroad station and barracks and then returned in safety except for one aviator who was obliged to descend near Metz. A Zeppelin night raid on Paris caused the destruction of several tenements and the death of twenty-three persons, mostly women and children. The airship passed over

the city at a height of 14,000 feet in a fog.

The supremacy of the air which the British and French have hitherto held is now seriously threatened by the new and more powerful machines which the Germans have introduced. Most prominent among these is the Fokker monoplane, which is equipt with two rotary engines of 150 horse power. The Fokker can travel at a speed of over a hundred miles an hour and can turn and mount with surprizing quickness. The machine gun is mounted so as to shoot forward thru the propeller; the small number of bullets which hit the propeller blades are harmlessly deflected. The Fokker attacks like a hawk by rising above its enemy and then striking head down toward it, firing as it dives. By a slight spiral motion in the descent the stream of bullets envelopes the opposing aeroplane in a cone of fire.

New German Drive That sector of the line in front of Lens where the French and British attempted to break thru last summer is again the scene of activity. This time it is the Germans who have taken the offensive. They struck at the position near Neuville-St. Vaast, on the road from Arras to Lens, where the French occupy the old German trenches of Valkyrie, Odin and Nietzsche. By running tunnels toward the French lines seven mines were planted within twenty yards of the first trenches. When these were exploded immense craters were formed eighty feet wide and thirty feet deep. The scene that

followed is described by a *Times* correspondent.

Before the smoke was cleared away the Germans charged, wearing masks to protect themselves against the gas fumes. They occupied the craters and flowed over the rims upon the trenches beyond. A French counter-attack repulsed them, except at a few points where the trenches were practically destroyed.

Then came a terrible battle in the craters. Men reeled as they grappled down the steep sides and fought, stamping on the heaps of dead and dying.

One Breton sergeant killed three Bavarians with a beak-shaped broken pick. He was then stabbed through the throat by a young German, who in turn was killed by a grenade. The artillerymen were unable to use their quick-fire guns lest they shoot their own men.

As each side alternately gained the mastery and tried to surmount the edges of the craters, they were beaten back by the terrific cannonade. Finally the struggle ceased from mutual exhaustion. Except where the Germans clung desperately to the ruins of the French trenches, honors were even. Most of the craters were divided by a barrier of sandbags, across which came an occasional grenade.

According to the Berlin report the Germans gained over 1800 yards of trenches and captured 237 men and nine machine guns. This gives them possession of Hill 140 and Hill 70, taken by the French and British in September.

Twelve miles south of this on the Somme the Germans have started a new offensive which seems to have taken the French by surprise. One of their outposts here, the village of Frise, was stormed and 1287 unwounded prisoners were captured as well as thirteen machine guns and four mine-throwers. The Germans claim an advance on a front of two miles.

Allies' Day, when the street was filled with booths and an open-handed crowd that swelled the funds for war relief

JUST THE MAN FOR JUDGE

BY HAMILTON HOLT

IN The Independent for July 27, 1914, appears an article entitled "Up From Aristocracy." I especially liked the title, partly, no doubt, because it was my invention and not the author's, but largely because it seemed exactly to characterize the career of the one sketched.

Our readers, by referring back to that article, will learn of a man who was born in Louisville, Kentucky, in 1856 of Jewish parents lately emigrated from Prague, who received most of his schooling in Germany, who was graduated at the head of his class in the Harvard Law School, at twenty, and who ever since has practised law and served the public.

This man has now risen to the very height of his profession, and is perhaps today the most admired and the most hated practitioner at the bar in America. He is an authority on corporation law. His knowledge of industrial relations is probably unsurpassed by any man in the country. He is an efficiency expert. He is a religious leader. And, above all, he is in his intellectual prime.

Among his achievements—and many more could be cited—are the introduction of industrial insurance into the savings banks of Massachusetts, the adoption of the doctrine of the preferential union shop in the garment industry of New York City which is a solution of the open versus closed shop controversy, the introduction in Boston of profit-sharing between corporations and consumers, the establishment of an eight-hour law for women factory workers first in Oregon, then in Illinois, the battle with Ballinger, the victory over the New Haven Railroad, and the recent argument for a minimum wage law before the Supreme Court.

Thus the public knows Louis D. Brandeis, who was nominated last week by President Wilson as a member of the Supreme Court of the United States. Everybody—friend and foe alike—concedes his extraordinary legal attainments, his intimate knowledge of the great economic and social problems confronting the American people, and his energy, resourcefulness, experience and capacity.

What some are not certain of is whether he has the judicial temperament and whether there is any truth in the charges against his sincerity, whether, in fact, it is himself or the public that he serves.

In respect to these two queries perhaps my testimony may be not without value.

In the summer of 1910 a great

strike took place in the garment trade of New York City. Mr. Brandeis was called in to settle it, and, largely owing to his conciliatory efforts, the strike was called off and an agreement made by the Manufacturers' Association and the union, by which their mutual enterprise should be carried on in the future without strike or lockout. This agreement, known as the "Peace Protocol," is in my judgment the farthest step yet taken in the United States toward the goal of industrial peace. Under the protocol there is established, among other novel devices, a board of arbitration to which all disputes must eventually come if appealed. This board consists of three members—one appointed by the manufacturers, one by the union, and one—the chairman—by both. From the beginning Mr. Brandeis has been chairman of the board and I have been one of his two associates.

In the past five years the board has been called together frequently, our sessions have been protracted, lasting usually two or three days at a stretch.

It is the custom of the judges between the sessions to take luncheon together and discuss the case as it proceeds. And if sessions are held at night, as is not infrequently the case, we dine together as well. Then, after the hearing is over, we retire for final deliberation, which often takes several hours or even days. As the board in every instance has come to a unanimous decision, it is evident that in many instances much discussion was required to fuse opinions.

I mention these details merely to show that if ever a man had an opportunity to see another man's mind work and to judge his intellectual caliber, I had that opportunity in the case of Mr. Brandeis.

I therefore say—and I weigh my words—that Mr. Brandeis' mind is the clearest, the keenest and the justest I have ever known. His unerring sense of justice and ability to get at the truth quickly have been a never failing source of wonder.

He is at his very best when delivering an oral judgment. Time and again I have sat amazed at hearing him, fresh from our judicial conference and without having taken even a second aside to collect and arrange his thoughts, begin in polished, modulated and measured voice and continue for half an hour or more without hesitation or reiteration in delivering the opinion of the court. The case may have involved the wages of over 100,000 workers

or the yearly profits of the whole industry. It may have required the utmost precision of thought and balance of language so as not to give unnecessary offense to either side or to offer loopholes out of which the lawyers could subsequently wriggle. And yet when we came to read it scarcely a comma had to be changed.

I am therefore in a position to say positively that Mr. Brandeis is not the type of man that his enemies declare. For in the perplexing cases that have come before us—cases that involve pretty nearly all the human passions, good and bad—a man with an insincere mind would have been sure to betray himself sooner or later. If ever, then, I have met an honest man, it is Louis Brandeis. I would as soon trust him as my own father.

In conclusion let me recall an hour we spent together before the great fire in the Harvard Club not many months ago when he told me something of the story of his life. He started his career, it seems, having only the ambition to be an honored member of his profession and to become prosperous. He was a thorough aristocrat, something of an art critic and esthete, and he found little difficulty in entering the charmed circle of the Back Bay elect. Indeed, he became a sort of darling of the rich. But the change came—it was the reading of Henry D. Lloyd's "Wealth Against Commonwealth," and he resolved from that time on to rise from aristocracy to democracy. He then arranged his work so as to give up half his time to public service. So long as he confined his activities to serving as counsel for charities or as mediator in industrial disputes, he received practically unanimous praise from Boston's "best citizens." But when he began to attack privilege in high places and to show up corporate mismanagement, then praise turned to blame and friends to foes.

I shall not soon forget how his dark eyes wistfully rested on the embers, as he concluded, without a shred of bitterness: "And now, if my wife had social ambitions, or if I wanted to join a club, or if I needed to borrow money at the bank, or if I should run for office, they would get me. Fortunately, we don't care for society; I am already a member of the clubs I like, I seem to be able to earn more money than I need, and I shall never seek public office."

Will "they" now prevent his confirmation to the Supreme Court of the United States?

GOVERNMENT OF THE PEOPLE, BY THE PEOPLE, FOR THE PEOPLE

BY WILLIAM ALLEN WHITE

It is unfortunate that prophecy, as yet, is rather an inexact science. And the chief losers by reason of the inexactitude of the science of prophecy are those brave spirits who go pioneering. If the pioneers of any generation of our modern times—pioneers in any field of human activity—could only see how well the following generations have come up to the outposts set by the pioneers, instead of being rather sadly dubious at the end of their day's work, the pioneers would be so cocky there would be no living with them.

Consider the political reformers of the generation of the late eighties and early nineties in the last century—the men and women leading the reform movements of twenty-five years ago: George William Curtis, E. L. Godkin, Carl Schurz, Susan B. Anthony, John P. St. John, James B. Weaver, Henry George. From the politics of their day—at least from the vastly impractical politics of their day, the politics that held the offices, administered government, crowded legislative halls, and ran the courts—these reformers of the last generation were outcasts. Popularly these men and women striving for the common good were esteemed as mugwumps or cranks. But in the sanhedrin of officialdom they were lumped as cranks, yet today the work of the hands of the mugwumps and cranks of the last generation is an enduring edifice in our government. Who remembers, or what does it matter, what Blocks-of-five Dudley stood for, what Gorman stood for, what

With this article by one of America's sturdiest veterans of the daily press, The Independent inaugurates its series on "The Next Generation in American Life," presenting the hopes and expectations of some of the wisest men and women in America. Mr. White, as everybody knows, is the owner and editor of the Emporia Daily and Weekly Gazette, author of "A Certain Rich Man" and "The Old Order Changeth" and other books, and long an interpreter of American life.—THE EDITOR.

Philetus Sawyer stood for, what Clarkson advocated, what Alger maintained, what David B. Hill, or Croker and Kelly, or Quay and Dave Martin contended for? Or what banner any of those blind dreamers carried to glorious but inconsequential victory in the days of the Force bill and the McKinley tariff and the Dependent Pension bill? Only this is important—that the winners lost, and the losers won.

OUR HERITAGE FROM THE MUGWUMPS

THE issues and institutions vital in our politics today, the ideals and aspirations most vigorous today do not hark back to the men and parties dominant twenty-five years ago; but rather our political tendencies find their ancestors in the humble and unadvertised meetings of the Civil Service Association, the Ballot Reform League, the Prohibition Phalanx, the Populist platform, and the Equal Suffrage Society. The secret ballot, corrupt practices acts, publicity for campaign contributions, the direct primary, the so-called "short ballot," the nonpartizan nomination, the initiative and referendum, the recall—what a procession of political changes have sal-

lied forth from the old protest of the mugwump against the partizan domination of politics! The party henchman laughed and lost; the mugwump smiled and won!

DREAMS COME TRUE

THE saloon banished from half the people of America and from more than half of the geographical area of the land; a majority in Congress against the saloon, the courts against it, the churches all militantly against it, and a body of public opinion so strongly against the saloon that time-serving politicians of both parties are afraid of their former ally—this and woman suffrage in twelve states, more or less restricted woman suffrage in half a dozen others—that is the dream come true of the long-haired men and short-haired women of the palmy days of Belva Lockwood. But these changes—representing not the completed work of those who saw definite visions of righteousness a generation ago, but representing instead only certain tendencies of American public opinion that have not been checked as yet, mark only the changes in our political life.

Contemporary changes in our social and economic life are manifest as plainly as our political evolution is manifest. Strongest among the social and economic changes that have risen during the quarter of a century last past, is that which may be called the federalization of industry. The railroad commission, a national arbitration law, the industrial commission, the Pure Food law, the Reserve Banking act, the postal savings bank, and the parcels post have brought or are bringing under Federal control or government ownerships the whole industrial system of the country. Moreover the

differences between Federal control and government ownership—at least according to those coming newly under control—are hardly worth discussing. The Civil War did not so drastically revolutionize economic America as the acts of Congress during the last fifteen years have changed it.

Nor has the economic revolution stopt with the Federal Government. State after state is going thru a parallel revolution. As the people have secured for their use the secret ballot, the primary, party campaign publicity, in something like a score of states the initiative and referendum, and in half a score the recall and the headless ballot, they have in less than a decade changed the attitude of the state to the citizen. Compulsory education is now almost universal; child labor is being rapidly abolished. The eight-hour day for women, with sanitary shop conditions, is found in the more civilized of the commonwealths and is coming into the other states as fast as legislatures can enact the laws.

THIS MUCH HAVE WE DONE

THE most radical legislatures we have ever had have been in session during these most recent dark days of reaction in several of our states. Twenty-six states have working-men's compensation laws, breaking down the old common law defenses of capital against labor in personal injury cases. Twenty states have adopted mothers' pension laws. The minimum wage for women is only a few laps behind the mothers' pension law in our American legislatures. Eight hours is the standard day's work on state and city contract work in so many states that labor unions have no trouble in establishing the eight-hour standard day in most of the continuous industries that are unionized. State bank guarantee laws have been approved by the United States Supreme Court, and state insurance is slowly coming into American life. State labor bureaus, acting as employment agencies, are vaguely feeling out the great unexplored problem of chronic or seasonal unemployment.

The state government in America is readily becoming socialistic. And the Federal Government already has become so strongly paternalistic that dear old General Weaver twenty years ago on the hustings running for President—whether as a Greenbacker or a Populist or what not—asked for nothing so radical as the order that exists today in Washington. And Eugene Debs languishing in an Illinois county jail after the strike of '94 could not have hoped in his most sanguine moments that a

bloody revolution would have turned things over so completely as they are turning in the states today.

A NEW SPIRIT IN CONTROL

NOW these changes in our political institutions, and in our social and economic status, are merely laws and administrative acts. The real changes that have come into our life, the changes upon which these laws and executive orders have been founded, are much subtler, but vastly stronger than their legal and institutional expressions. It is hard to put this impalpable spirit of the times into the confines of definition. Yet these who feel its power, feel something ruthless, something terrible in the new attitude of America toward them. Former Senator Elihu Root, speaking before the Union League Club of Philadelphia, March 23, 1915, said:

I recall how, eighteen years ago, I came here upon a telegram to meet him (McKinley), and that led to reflections, not upon the specific differences between President McKinley and his administration, between the legislation or the policies of that time and this, but to reflection upon what, in the retrospect, can be seen to have been a great nation-wide movement along the path of the nation's unconscious purpose. When we elected McKinley in 1896, and again in 1900, it was the business men of the United States who controlled the election . . . how great has been the change. The scepter has passed from the business man. The distinguishing characteristic of recent years has been the conduct of the government of the country by men who have but little concern with the business of the country, by men who distrust the man of business, who suspect the man of business.

Now former Senator Root, in the course of his Union League address, put his finger upon the change that has come into our government, and he pointed out the meaning of the change to American business. But he does not seem to have diagnosed intelligently the cause of the change. Yet in that cause will be found the only basis for prophecy about changes imminent in the coming quarter of a century.

JUSTICE FIRST, PROSPERITY SECOND

THE difference between the men in office now in city, in state and in Federal government, and those men in office twenty years ago, in those rather narrow but controlling areas of our politics where there are actually marked differences, lies not in matters of honesty, not in matters of capacity, not in matters of party faith. The real difference is found in their philosophy of life. The political leaders of majorities in the eighties and nineties of the last century believed in business for itself, that prosperity was an end of itself. To-

day our governments, city, state and national, are more or less under the control of men who all profess, and who in the main believe, that justice is more important than prosperity. And the politicians are only taking their cue from the people. A sense of justice—with here a back-set, and there a reaction—is growing steadily and overwhelmingly in the American heart.

Upon the awakened sense of justice in the hearts of the people prophecy may be safely based. For only a war with its brutalizing influences can stop the awakening of the popular mind.

During twenty years this movement toward justice and away from materialism in politics resistlessly has been gaining strength. The movement has been blind at times; foolish often, frequently (and properly) defeated. But always it has broken the dams of defeat. The movement has appeared dominant in one great party, then in the other and back again in the first party; thus it was a "barbaric yawp" in the Democratic party under Mr. Bryan's leadership in the late nineties; then after Bryan's defeat in 1904, in his own party, the movement appeared under the leadership of stronger, clearer sighted men in the Republican party, men like Senator LaFollette and former President Roosevelt. The "Insurgent" protest directed against the reactionary shock of the Taft administration was the feeling of justice as opposed to the desire for mere prosperity, moving strongly in the American people. The spirit of the people had its voice in the terrific punishment in November, 1912, that fell upon the conservative group then and now controlling the Republican party. The election of President Wilson was a by-product of that punishment. His response, even in a small measure, and under the handicap of a stupid party, to the spirit of the times is the basis of his personal strength before the people.

The feeling for justice first and prosperity afterward in our politics is as strong as ever among the American people. There has been no serious check in the movement; yet it does stand confused. It is unsure of its leadership. It is uncertain how best to proceed. And the confusion and uncertainty of course mean the reaction of the moment, but not a change of conviction. The issues of a war may rise above the issues of humanity. But only a war will prevent the forces that have been dominating politics for ten years—the forces that took the scepter from Mr. Root's good Union League Club

friends—from reassembling and moving forward with intelligence and power.

Naturally, the leaders of reaction may win elections. It is not difficult to fool the people before an election, but after an election, when a public servant begins to perform, then he must be unequivocal; then the power that he seemed to have, fails him. For in the face of public wrath the reactionary quails. Often when he has the gun he dares not shoot. Political "buck ager" often is the salvation of the Republic. For no matter how grounded in reaction a majority may appear, no matter how brave its leaders may seem, the backward step is not taken! Conservatives who toil their heads off for victory at the polls often find their victory empty. For when it comes to elections, the people are tolerant; but in judging action, the people are ruthless; they will "suffer not the old kings under any name."

A MIDDLE-CLASS EXPERIMENT

NOW then, in order to see where we are going, it is necessary to see in what direction we have gone for twenty-five years; to ask, not for a list of the laws we have past, but for a glimpse at the kind of institutions we are building. The federalization of industry under the Interstate Commerce Commission, under the new commerce board, under the various new cabinet officers and bureaus at Washington—what does it all mean? And the enlargement of the powers of the states over local intra-state corporations and enterprises; the broadening of the powers of the state in its control over the citizen; from the child hygiene bureau to the licensing of undertakers—does this also mean what the federalization of industry means? Are not both guns pointing at the same target? And is not the aim of all our recent legislation and of "the great nation-wide movement along the path of the nation's unconscious purpose" a readjustment of our economic order to avoid its wreck? Looking back at the whole movement, one finds evidence to warrant the conclusion that "the nation's unconscious purpose" is a middle-class try at mending the present capitalistic profit system, by reducing and equalizing profits, under strong social control, to prevent the wreck of the whole profit system by the rise of socialism.

We are a middle-class people. We have a strong feeling for justice. This sense of justice has turned its attention to economic problems in this generation. And the middle class masses seem to have reached the

conviction that many who reap large profits—brokers and middlemen, venders of intangible property of various sorts—are operating in a market made by our common civilization; and that these brokers, venders and middlemen are not using exceptional trading skill, nor rare vision in their business on the one hand, while on the other hand they are taking exorbitant profits, profits that are due only to men who have unusual skill and rare vision. "So," says the middle class oracle of justice, "down come unearned profits—and we shall share them."

"We shall share them in taxes—inheritance taxes, income taxes, land taxes—that shall build public institutions, roads, and schools; provide public hygiene; buy books and pictures; make parks and playgrounds; pay for bands and orchestras. And we shall share the unearned profits of today by cutting these profits down tomorrow, thru workingmen's compensation acts, mothers' pension acts, improved shop conditions, shorter hours, insurance against unemployment, and old age. At any rate," says the middle class oracle of justice, "unearned profits must come down, and we shall share them."

Reform is defined by the late Professor Sumner as "A conferring with B, as to what C should do for D." Of course the obvious answer to that jibe, is that in a complex civilization, the affairs of C and D may easily be of vastly more consequence to A and B than to C and D. As slaveholder and slave, the C and D of seventy years ago justified the final conference between A and B at Appomatox. Indeed C and D have no rights in this world which A and B are bound to respect, if those rights interfere with the progress of the race, with what is seen in a small way by Mr. Root as "the Nation's unconscious purpose"—the folkways, founded on folk-justice, well considered and well tried.

In this "great nation-wide movement" we are considering and trying things; considering what profits are just; trying to find out what wealth is equitably held for private uses.

The adoption of the amendment to the Federal Constitution providing for the direct election of United States Senators took great power from the holders of centralized wealth. By legislative action—state and Federal—half a score of other strong political weapons had been taken from the hands of organized wealth before the Federal Constitutional amendment came. "I say that scepter has passed," repeats Mr.

Root, and in the next paragraph of his speech asks his embattled friends in the Union League: "Now what is going to be done about it?"

OUR RADICAL SUPREME COURT

HIS question is belated. It already has been done. It was done with the passage of the income tax amendment. Those two amendments to the constitution of the United States—the one stripping great power from the organized wealth-holding minority—the other legalizing what Mr. Jerome once called "the moral yearnings of rural communities," make Mr. Root's question futile. The decisions of our Supreme Court during the past fifteen years in cases hinging upon public welfare—as, for instance, the hours and service of women and children, the state bank guarantee laws, powers of the Federal commissions and a multitude of cases wherein the people have sought to improve life and inexorably reduce unearned profits—have been almost uniformly with the public conscience, and rather consistently out of sympathy with the viewpoint of Mr. Root's friends of the Union League. Compared with varying tempers of congresses and of presidents in a decade and a half, our Supreme Court, judged by its decisions, well may be deemed the most unflinchingly radical branch of our government.

So the brakes against reaction are firmly set. The constitution has been amended; the Supreme Court decisions have been rendered. A return to those good old days "when we elected McKinley in 1896 and again in 1900," and when "the business of the United States controlled the election," seems to be, on the whole, a forlorn hope.

WHAT WILL COME OF IT?

SO now let's to our prophecies with a will! First of all, let's eliminate the millenium. In its place, suppose we substitute for the world of the coming generation a rather hard cruel world. But from its hardship and cruelty, let's subtract at least as many hardships and cruelties as our fathers took away for us during the generation that is all but past. Housing for the poor must improve; the economic status of the poor must be better than it is today. For a better status must follow when capital, not labor, bears the expenses of trade-accidents and diseases; when the state, by increasing taxes, pensions the unsupported mother holding her brood together under a home influence; when the child is schooled well into its teens and the mother who works, works at a living wage

for only a short day, and when the father works on an eight-hour shift. These things will help a little; but not much. A sturdier, keener, more independent, less contented laboring class will make more intelligent demands on all the Josiah Bouderbys of all the Coketowns of that blessed day. Labor will demand more "golden spoons," more "turtle soup and venison," more "carriages and six"—and will come slightly nearer getting these baubles than Mr. Bouderbys could have dreamed labor would come. But still we shall have a hard and cruel world. We still shall have "many inventions," material and legal, over which to struggle for just control; even as today we are struggling to bring justice out of the world of steam and electricity.

THE second article in this series, COUNTRY LIVING IN THE NEXT GENERATION, by Liberty H. Bailey, author of "The Country Life Movement," will be published in the issue of March 6.

It is a long and tedious, yet always for the man of faith, a joyful job—this business of saving his country. For always, just as he gets his Indians whipped, or his Boston tea party over, or his immortal Declaration written, or his Constitution adopted, or his bill of rights accepted, or his slaves freed, or his Union cemented, or his specie payments resumed, or his railroads con-

trolled, or his social and industrial justice in the hearts of the people, and his country all baled up tightly in its perfection—bang! comes a new calamity (and a very real one it always is), hitting the precious country between the aurora borealis and the Gatun dam, breaking the bales and leaving a man's-sized job for the youth of the next "jocund day" that "stands tiptoe on the misty mountain-tops."

And you, oh youth, who shall see the vision, who shall follow it thru long marches, and hard bivouacs, over the hill that rises black beyond the trenches of today, we, who only hear old bugles call, who only dream old dreams, we who are about to die—salute you!

Emporia, Kansas

THE BEST THING IN OUR TOWN

IF any one doubted the existence of community spirit and local patriotism in the United States he would be reassured by the answers we received when in our issue of October 4 we asked our readers, "What is the best thing in your town?" Not only has every city and village in the country some institution, object or person of its own which it regards with a proper pride, but its citizens know how to tell about it in a way to make all other towns envious of the distinction. When the replies began to come in we selected a large drawer to put them in until they could be looked over. But that was soon too full to shut so we commandeered our biggest waste basket, then another and finally as you see they were both full prest down, heaped up and running over. When we came to count them there were nearly a thousand.

But there was not one too many. The object of the contest, as we may now confess, was not so much to get one article worth \$100 and several others worth \$25, as it was to get an idea of what our readers considered the most valuable features of community life. For this purpose the many which get no prize are, one and all, as valuable as the prize winners.

From every state we received contributions and from Hawaii, Porto Rico, Canada, Panama and Brazil, besides. Ohio and Pennsylvania with seventy each tied for first place in this competitive

display of local spirit. Iowa comes next with sixty-three, then New York with fifty-two, California with forty-four, and Michigan with forty-three.

In determining the prize-winners all of the manuscripts were read and sorted and sifted until we got them down to four, which were of so nearly equal interest, that it was hard to choose between them. By the application of the preferential ballot system by five members of the editorial staff the first prize was awarded to D. R. Piper, of La Grange, Missouri, for a eulogy of his town paper which we shall soon print. The other prizes go to William O. Stevens, of Annapolis, Maryland; E. W. Beimfohr, of Aberdeen, Washington, and James C. Alvord, of Littleton, Massachusetts. Mr. Stevens writes of "The Oasis." What the oasis and what the desert we leave our readers to puzzle over for the present. Mr. Beimfohr tells of a "Coöperative Merchants' Delivery" and Mr. Alvord of "A Glori-

fied Millpond." These will be published in the near future.

In variety of topic and distribution of locality these four are representative of the whole. It so happens that the prize winners are all men, tho we received twice as many replies from women as from men. But since we made the selection without regard to this we are sure that the most fervid feminist among the disappointed contributors would not wish us to change our choice on that account.

But as we said before the most interesting feature of this contest is the number and diversity of replies received. We had no idea that there were so many different things which could make a town famous or that there were so many interesting things to be found in places we never heard of. It makes us long to start out on a tramping tour to see these thousand towns and others which perhaps have equal reason to be proud of themselves if they did but

know it. How many different topics are brought forward we cannot say until our arithmetician has completed the classification of our census returns. Then we shall publish the full report with extracts from as many of the letters as we can find space for. It will constitute a unique exhibit of the ideals and achievements of American towns and will, as we hope, set all other towns not represented to thinking how they can make life better worth living.

AT THE EDUCATION COUNTER

A pupil in a department store continuation class making a sale to the teacher while the rest of the class criticizes

THE CASH GIRL'S ALMA MATER

BY CAROLINE SLATER

MORE than 40,000 children in Greater New York leave school every year to go to work. Between the ages of fourteen and sixteen they are required by law to combine school work with their wage earning. Before that "no wages" is the law; after that "no studies" is the general rule—or has been until recently, when the organization of continuation classes in department stores, in hotels, and in factories has given the boy or girl who must earn a living, but who wants more education, a chance to get it.

The continuation classes are held during the daytime in schoolrooms provided by the employer, who also pays all the expenses of equipment and teaching. They are under the jurisdiction of the Board of Education. In general their curriculum follows that of the ordinary grammar school, wisely adapted to the interests and ambitions of the boy or girl with a job.

The course of study for department stores is arranged to cover the common branches—arithmetic, English, spelling, geography, penmanship, and hygiene.

Arithmetic takes up concrete problems involving materials, and subjects used in the business—measuring lengths in yards with tape and yardstick; computing fractions of a dollar; making change; practising with actual sales-checks, bills, receipts, business forms and letters. Geography includes the study of New York and its environs, with special reference to distributing centers and parcel post zones.

In spelling, the words are selected

from the store's catalog and from the geographical directory used in the shipping department, and the drill is thoro. Penmanship aims first of all at legibility. Simple composition work, social and business letter writing, discussions of subjects vital to the business and personal life of the pupil, and technical oral lessons in textiles and salesmanship make up the course in English. Every effort is made to develop ease and correctness in impromptu talking.

In all the class work emphasis is laid on the development of the "store spirit," a feeling of coöperation among the workers and of loyalty to the work and the employer. The traditional thrill of pride in Harvard or Smith is no more impelling than the loyalty of these pupils to the Wanamaker school or to the Looking Forward Club. They have their songs and their cheers and they form their alumni organizations to carry on the good work when they graduate.

Continuation classes were established primarily for the benefit of the juniors, but a large part of the older workers are potentially juniors in their lack of knowledge of the English language, American customs, laws of the country; and ordinances of the city. Consequently classes have been organized to meet their demand for learning English.

The men who come into these classes are chiefly night-workers, bakers, porters, night watchmen, and moving picture men, who find the day a convenient time to study. Many of the women receive here their first lessons in reading and writing. The mothers, having chil-

dren in school, are themselves ambitious to learn, realizing that if they fail to keep up, they lose caste in the eyes of their family.

The progress made by some of these pupils is marvelous. One man in this country only four weeks, and in the class only three weeks, was able to give a twenty minute address in his own words.

This new impulse toward practical education is felt everywhere. The training nowadays must be of the sort that can be put on and worn to business.

Results thus far show what? One distinct effect is the almost entire elimination of the annoying tendency on the part of the worker who has just accepted a position to look for a change as soon as the edge of interest is dulled. Altho there have been some dismissals and removals, not one member of the classes has resigned from the business house thru discontent or for any other voluntary reason. There has been, on the contrary, a marked increase in steadfastness, in holding and continuing in a job for which definite training has been provided.

A second tangible result of this work, closer coöperation with the firm, has been secured thru the teacher's giving a careful personal study of the individual workers under her supervision. Progress is noted and special cases are reported to the employer. From a class of fifteen messenger girls at McCreery's last year, thirteen have been "raised" to more responsible work, or to office positions, with increased wages.

New York City

THE WORLD OVER

New Plants and Seeds

Five hundred and thirty different plants were imported and listed in the three spring months of 1915 by our Government Office of Foreign Seed and Plant Introduction, which searches the whole world for plants and seeds that can be transplanted to this country and made useful here.

Among them were a melocoton from South and Central America, an edible fruit of the melon variety, so fragrant that it is used for perfuming clothing; a honey-carob from Spain; a Manchurian wild pear, which will grow in spite of intense cold; a red currant from the Altai Mountains; a large-fruited variety of Chinese haw of great hardiness, and a yellow potato from the Andes.

Our agricultural explorers are conducting their search particularly in the remoter regions of the earth. Probably few of their discoveries will be of direct usefulness, but many of them are valuable for experiments in hybridization and may give an entirely new characteristic to some of our familiar varieties.

As yet there has been no organized plan to exchange the information gained with other countries. An international bureau which would file all the data collected and answer inquiries or suggest experiments might well find a wide field of permanent usefulness.

Another "Safety First" Device

A new electric automobile horn switch has just been invented by W. P. Seng, of Chicago. On account of the method of construction and operation this switch has been termed "The Safety First Switch." Its principal feature is embodied in the fact that without removing either of the hands from the wheel, as is the general practice of automobile drivers, the operator may sound the warning signal. It takes a simple pressure of one of the fingers against any part of the ring to "trip" this switch and the chauffeur loses no time in feeling around for the button before he sounds the horn.

The value of this feature will be realized by the person who has ever done any driving in congested traffic of cities, in mountain climbing, and in fact anywhere where both hands are needed upon the wheel. The exact benefit derived from the use of this device is shown by the fact that over seventy per cent of the controlling power is lost the instant one hand leaves the wheel.

This device is operated by the same dry cell that runs the horn. Instead of

FIRST AID TO THE CHAUFFEUR

A horn that can be sounded from any part of the wheel

being run to some other point of the machine, the wires are run from the battery and the horn up the steering post, both wires in one covering, but separately insulated. One wire is fastened to the "wheel" section, while the other is connected to the "spokes." A simple pressure forces the rim contact point against the contact point on the spoke and in this way a connection is made and the electrical circuit is completed. Just as soon as this takes place the horn sounds.

The advantage of this signal wheel over the electric button is due to the fact that the button is located at one particular point and cannot be reached except at that point, while this device may be "tripped" from any side of the wheel.

Mercenary Music

A dry-cleaning establishment in Cincinnati, employing some 300 persons, has come to the conclusion that if these people hear music at frequent intervals while they work it will not only make them happier, more contented workers, but that they will do more work than if they were without the music.

So, following this theory, the enterprising firm has installed thruout the big establishment enough phono-

graphs to keep lively music playing almost all day long. It is like one big entertainment.

This new use of the phonograph is a pleasant way of saying "speed up." The lively music does it. There are no lagging moments, and no one gets a drowsy feeling over the work. There are many lively dance records and popular songs. The workers hum and sing, and the speed of the music puts the speed into their work.

The manager of the firm says that music-while-they-work is an idea that prevails in South American factories. Nearly every South American establishment has its musicians to play for its employees during business hours. The phonograph is the Yankee version of the idea and it has been found to work as well in North America as the factory musician in South America.

The phonograph has been found capable of solving better than any shop foreman or superintendent the problem of promoting voluntary "speeding up" among employees.

Saved! A Dialect

In many of the Yorkshire districts of England the dialect, which has long been famous for its richness and variety, is fast dying out. Philologists, after giving much serious consideration to the problem of preserving as full and accurate records as possible, have finally hit upon the dictaphone as a solution.

On a recent visit to the Keighley Museum, Prof. F. W. Moorman, of Leeds University, used a dictaphone to "take down" several specimens of the Yorkshire dialect in its purest form. Among them were the "shepherd's numerals," dictated by one Tattersall Wilkinson, of Roggersham, who recalled their use in his boyhood days when the old Celtic superstition prevailed among the farmers that the sheep must always be counted by these numerals and that ill luck would surely follow the use of the common one, two, three, four.

The Growth of Our Universities

The universities of the United States have grown so rapidly in recent years that few people keep track of them. The statistics of attendance as annually published in *Science* always contain some surprises for every one, altho the order of the leading institutions does not alter much from year to year. The registration figures up to November 1, 1915, are given in the accompanying diagram. These include students of all sorts enrolled for regular work, including

Paul Thompson

RAGTIME

Lively music makes the laundry work easier, and quicker, too

HE BELONGS IN THE AFRICAN JUNGLE

the summer session. Omitting the summer session the leading universities of the list are Columbia (7042), Pennsylvania (6655), California (5977), New York (5853), Michigan (5821), Illinois (5511), Harvard (5435).

THE SIZE OF AMERICAN UNIVERSITIES

Columbia	11,888
California	10,555
Chicago	7,968
Pennsylvania	7,404
Wisconsin	6,810
Michigan	6,684
New York	6,656
Harvard	6,351
Cornell	6,351
Illinois	6,150
Ohio State	5,451
Minnesota	5,376
Northwestern	4,408
Syracuse	4,012
Missouri	3,868
Texas	3,572
Pittsburgh	3,569
Nebraska	3,356
Yale	3,303
Iowa	3,138
Kansas	2,806
Cincinnati	2,524
Indiana	2,347
Tulane	2,160
Stanford	2,061
Western Reserve	1,825
Princeton	1,615
Johns Hopkins	1,586
Washington	1,254
Virginia	1,008

The greatest gain during the past year has been in California (2375), which is in large part due to the number of teachers who were drawn to the Pacific coast by the combined attractions of the summer session, the exposi-

tion and the conventions. Other considerable gains are those of Pennsylvania (900), Minnesota (892), Chicago (837) and Columbia (594). Four institutions, Tulane, Washington University, Harvard and Princeton report a decrease in total attendance.

In college undergraduates California leads with 1294 women and 2023 men, followed by Harvard with 2516 men and 653 women (Radcliffe).

Introducing the Okapi

Much has been written about the okapi, discovered in the wilds of Africa, and first reported by Sir Harry Johnston, of England, in 1903. The okapi looks somewhat like an antelope and is considered one of the rarest animals in the world. It has seldom been seen by a white man.

Herbert Lang, who recently returned from Africa, after spending six years in the jungle, had the good fortune to secure a baby okapi alive. The explorer took a picture of the young okapi in the forest of Ituri, which is here-with reproduced for the first time. It was one of the principal objects of Mr. Lang's expedition in the Congo, to secure specimens of the prized okapi for the American Museum, and the members of the exploration party returned with enough to form a striking habitat group.

A stampede of okapis in the Ituri forest led to the capture of this young one, by the native hunters, who are noted for tracking these animals in the dense woodland of the interior.

The habitat group of okapis will prove of unusual interest, and doubtless will attract widespread attention when placed on view at the American Museum in New York City. Brussels also has an okapi group in one of the institutions of that city.

The Shadow of the Snowflake

Comparatively few people have really looked at snow. For to do this carefully and scientifically requires a compound microscope and certain favorable weather conditions.

According to Professor Huxley more than a thousand differing snow crystals have been described. Every one of these various crystals has six sides or angles.

Wilson A. Bentley, of Jericho, Vermont, has specialized on snow crystals for some years, and by means of microphotography has been able to visualize the beautiful forms of snow crystallography. Some photographs of the recent work in this field by Mr. Bent-

ley show a crystal like a conventionalized flower. Another of the new Bentley group of snow crystals shows a triple form of crystallization that is broken by a second triple manifestation of the crystalline formation. Such combinations lend themselves admirably to design forms and might easily be adapted to textile and decorative use in many fields.

A State Prison Honor System

For several years the idea has been growing that the criminal should be treated not like a brute but as a man, to be reformed, not simply punished for his crime. One of the most successful applications of this idea has been made by Warden Edmund M. Allen, at the State Prison of Illinois, located at Joliet.

The Legislature of Illinois recently put its stamp of approval on two of his reform plans. A bill was past by the Legislature giving convicts sentenced to a life term a chance to be paroled after spending twenty years in prison.

The other bill concerned the warden's "road camp" scheme, by which prisoners are privileged to work at the building of roads, with no restrictions except that they shall not leave the camp, and that they shall not partake of intoxicating liquors. This privilege of road building has previously been accorded only to those convicts who have less than five years of their term yet to serve. Now the State Legislature has past a bill which will extend the privilege to other prisoners.

At the Illinois State Prison at Joliet, 2200 fertile acres, purchased by the State a few years ago, are being worked profitably, both to the state treasury and to the character of the prisoners. Last year, when work on the honor farm began, about sixty convicts were housed and employed there. This season for some months there have been 136 men living in the farmhouses and doing the work of the farm.

Under the direction of the farm superintendent, 2100 acres have been put into crops. Many of the houses and outbuildings have been repaired and rebuilt, by prison labor. Two hundred acres were laid out this year and planted as a truck garden. The vegetables raised here are supplied to the inmates of the penitentiary. A start has been made also in the direction of stocking the farm with milch cows.

The results of this experiment, as regards the men themselves, who have been thus trusted, are very satisfying.

This honor farm is still considered an experiment, but it looks like a long step forward.

IF WE WERE EUROPE

BY PRESTON W. SLOSSON

IN 1914-15, after more than a century of disastrous wars and unstable periods of peace, America was swept from end to end by the conflagration of a general war, and the folly of a generation which had failed to federate the Disunited States into a single republic became apparent to the world. The Governor of Arkansas had been assassinated by a cowboy from the little peasant community of Central Texas, which had but recently won its independence from the Mexican Empire. Central Texas offered to submit the case in all its bearings to the Supreme Court (a well-meant unofficial institution quite devoid of power to enforce its decisions). But behind the murdered man lay the power of the Confederation of South Central States and of its ally, the Confederation of North Central States, and their answer was a declaration of war.

These two rich, populous, heavily armed and centrally located nations filling the Mississippi Valley had by their aggressive policies frightened and leagued against them most of the other nations on the continent. Hence, the war in Texas once begun, it proved impossible to localize it. The western half of the American continent, united under the autocratic rule of Governor Nicholas Romanoff and his machine, could not tolerate the new move on the part of the Central States, and so mobilized the western army to overawe them. Governor William Hohenzollern, of the North Central States, replied by a declaration of war against the Western Empire and its ally, the Southeastern Republic. The latter nation, with a three years' term for military service for all its able-bodied men, an excellent railroad system, and an unequalled series of forts in the Appalachians, was regarded by the Central States as their most dangerous foe. The general staff of the North Central States did not dare risk a prolonged campaign in the difficult Appalachian country, so the Central armies kept to the level plains north of the Ohio River. In so doing they violated the neutrality of two tiny independent nations formed of counties in southern Ohio and made inevitable the hostile intervention of the United Kingdom of New England, New York and New Jersey. This nation had long feared and hated the Central States, but its temper was pacific and it was much distracted by internal problems, notably the question of home rule for the state of Maine. This new ally brought with it all the advantages of

its excellent harbors on the Atlantic seaboard, its densely settled industrial population, its vast overseas empire (including the Philippines, Hawaii, the West Indies, the Panama Canal, and many parts of Latin-America), and, above all, its unrivaled fleet. The only formal ally of the Central States (the nation of Louississippi) deserted them and joined the coalition against them.

But after the initial diplomatic failure the Central States did very well. To be sure, the great fleets of the coalition succeeded in establishing an absolute blockade both on the Great Lakes and in the Gulf of Mexico. But the Mexican Empire threw in its lot with the Central States, the naval expedition to the Rio Grande proved a failure, and such of the petty Texan states as were not already involved in the war began to cool toward the coalition and one joined the Central States. The armies of the latter drove out the invading hordes of the Western Empire, overran the rich grain states of Kansas and Nebraska, maintained their hold in the east by throwing up trenches along the Ohio River, utilized the coal, iron and oil regions of Ohio, West Virginia and the Pittsburgh district, and at last effected a junction with the Mexican Empire.

And none can tell what the end may be or when it will be. Airship raids compel New York to darken the "great white way" every night. Innocent Ohio, whose only fault was its geographical position, is starving and dependent on the bounty of Europe. Merchant ships have been

torpedoed in Chesapeake Bay and off the New England coasts. The war in the Eastern States has developed into a hideous contest of endurance waged with shrapnel, poison gas, and squirts of burning oil. The plains of Kansas, torn by invasion and counter-invasion, are no longer able to support their own population, and are far from the aid of Europe. We hear with hardly a pause of wonder the news of the extermination of more than half a million people across the Mexican border. Chicago and Wisconsin universities are devoting the talents of their scientists and scholars to prove that the people of the Mississippi Valley are the only civilized folk in the world, and Harvard and Yale to prove that they are Huns and barbarians. Multimillionaires are gladly surrendering half their income to the extortionate tax gatherer. The Independent is suppress for printing news not approved by the censor. Our only imports from Europe are munitions and our only exports are money. American soil is drenched with the blood of millions of young men, sectional hatred is intensifying, and every part of the continent is struggling under a load of debt that will spell bankruptcy in another year or two of war. No one, however, dares suggest that the present system of the "balance of power among the states" should be replaced by some form of federal organization which might reconcile the autonomy of the state with the peace of the nation. That, of course, would be Utopian!

A DON QUIXOTE OF THE BATON

BY JAMES HUNEKER

AUTHOR OF "IVORY, APES AND PEACOCKS"

I N the twilight atmosphere of the orchestra at the Metropolitan Opera House, an atmosphere of smothered fire and gloom, stood a tall, thin figure, thin to meagerness, whose long, delicate hands played upon an invisible instrument which sang and thundered; a river which became a cataract of jewelled sounds at the relentless call of those outstretched fingers of the left hand and the electric wand in the right. It was Artur Bodanzky conducting a Wagner music-drama, and when I caught sight of his profile, a mere silhouette in the dimmed light, I thought of the Knight of the Rueful Visage, of Don Quixote, the idealist and dreamer of La Mancha. Clap a helmet and a pair of moustachios on him and he would need no armor to complete the illusion. Doré might have drawn him. He has lofty ideals. And with his baton he too, tilts at windmills? Are not Wagner's singers windmills? Alert, vivacious are his movements, and his orchestral army responds to every gesture. The simile of the river is not a fanciful one; a stream of tones, caressing, liquid and euphonious, flows beneath this magician from Vienna. Yet how melancholy is that mobile face of his when in repose. The sharply modeled features, firm, thin lips, indicative of self-control, are contradicted by the large black-brown eyes with dancing golden flecks in them, and the broad, sloping forehead, the emotional front of the musician born. Add to these a bold, jutting nose, the rudder of the face, as George Meredith would say. Perhaps the expression I noted may be the result of a racial crisis; in the veins of Bodanzky are mixed bloods: Austrian, Hungarian and Eastern. His name is Slavic-Bohemian, tho his origin is partly Magyar. He was born in Vienna, and is still under forty; a youthful age for one to have achieved such a reputation as a Wagner conductor.

But if Artur Bodanzky may seem, because of his physique and bearing, a typical Don Quixote, he is far from such by temperament. He may look like a pessimist, but he is the re-

verse. He is as fiery as a Hungarian and as elastic in his moods as a Viennese. He is as gay as a boy at times. It is his delight to conduct Italian operas, to lead Mozart and—Johann Strauss. He conducted "The Bat" in Vienna and Paris. A Don Quixote of the boulevard and the Prater! He

sitive and plastic. Under Arturo Toscanini it was so, and now under this "Viennese Toscanini" it is still sensitive and plastic; these qualities are marked in the art of Bodanzky. His men were his friends from the first moment he lifted his baton.

He made his début here with Wagner's "Twilight of the Gods," and nobly stood the tremendous test. And a test it was for a new conductor to interpret the eloquent message of that epical work. There were few slips, the cast was not impeccable—how could it have been, as the great Wagner singers of yester-year have vanished!—but the hero of the evening was the conductor. For the first time in a blue moon we heard the singers. The sympathetic musician at the helm did not drown them with the turbulent waves of the score. There was power, potential and express. There was poetry. And there was a rhythmic vitality that swept us along on the wings of the mighty song of Wagner's. Naturally, comparisons

ARTUR BODANZKY

has officiated in Petrograd and London. In Vienna, after a thoro musical training at the Imperial Conservatory, and violin with Grün, he graduated from operetta to the Opera House under the famous composer and conductor, the late Gustav Mahler. Bodanzky then received the appointment at Prague as conductor of opera and symphony. In 1910 he went to Mannheim as director of an important operatic post, and he now controls the German forces at our Metropolitan Opera House. His musical pedigree is sound, his personality a strong, yet ingratiating one; and I may add, few conductors have so quickly won their way. Orchestral players are susceptible beings. Like high-bred and well-drilled steeds they respond to the slightest pressure of the bridle. Whip them and they rebel, or run away. They immediately know their rider and instinctively obey him. But by the same token they may refuse to budge if a leader lacking in magnetism or in authority, attempts to guide them. The orchestra at our opera is an admirable organization. Successive generations of conductors have made it both sen-

were made; without comparisons, invidious or otherwise, there would be no musical criticism. Judicious cuts appreciably shortened the performance. The emotional surge was unmistakable. A sagacious intellect controlled the work; cerebral as well as temperamental. Now, I am no believer in such an impossible thing as an "authorized version" of Wagner. I have heard all the Wagner conductors from the Pope of the Wagnerian Church, Hans Richter, to son Siegfried Wagner, weakest of acolytes at the holy altar. And no two were alike. (No two grains of sand are alike, say scientists.) There were giants in the old days, and there are among the younger conductors of today several suffering with the growing pains of genius. But not many. We shall never see again a Seidl or a Levi; yet we have Nikisch—the senior of the three Arthurs—and Weingartner, R. Strauss, Mengelberg, Toscanini, Muck, Bodanzky (for he belongs to this inner brotherhood of the baton); as we once had Von Bülow, Mottl, Sucher, Von Schuch, Mahler. There are as good fish in the sea as ever came out of it,

“Cadillac—Standard of the World” —a phrase or a fact?

IS THE Cadillac, in fact, the Standard of the World?

Is it the one car which is accepted as a pattern of excellence and efficiency? Look back over the past twelve years and ask yourself what other car has wielded so wide an influence over the industry.

Ask yourself if motor cars, as a whole, are not better cars today because of Cadillac progressiveness and Cadillac initiative.

You recall that the first Cadillac was also the first practical, enduring motor car. You remember the period in which the Cadillac inaugurated the thorough standardization of parts.

You remember that the Cadillac accomplished also the first production in large quantities of a really high grade car at a moderate price.

The introduction by the Cadillac of electric starting and lighting is still fresh in your memory.

And you know finally, that the Cadillac as a climax to its other constructive contributions to the industry, brought forth the high-speed, high-efficiency V-type engine.

Around the world that V-type multi-cylinder engine is admittedly at the zenith of design and of efficiency.

And the Cadillac has pushed the process of perfecting the V-type engine to the highest point yet attained.

Upon its first appearance, the Cadillac Eight received the unique tribute of a larger purchase on the part of other makers than any other car has probably ever known.

Its scientific design and superb workmanship compelled their most intense admiration—its performance was pronounced nothing short of marvelous.

If the Cadillac had not been the standard of the world before, the V-type multi-cylinder Cadillac would have made it so.

It has become the standard of the world in smoothness and in swift acceleration, in flexibility and in hill climbing power.

It is the world's standard in its incomparable roadability, its luxury, its ease of operation and control, and in absence of fatigue after long journeys.

These characteristics, added to its world-wide reputation for dependable and enduring service, have furnished for the industry, *new inspirations—new incentives—new goals for ambitions.*

Is not the Cadillac deserving of the title it has so long and so honorably held?

Is not the Cadillac, in fact, the Standard of the World?

Styles and Prices

Standard Seven passenger car, Five passenger Salon and Roadster, \$2080. Three passenger Victoria, \$2400. Four passenger Coupe, \$2800. Five passenger Brougham, \$2950. Seven passenger Limousine, \$3450. Berlin, \$3600.

\$2 a Box

MONEY BACK

Specializing on this box makes possible this offer of 3 DURO Shirts sent post-paid on receipt of \$2. Handsome silk tie included for name and address of 5 friends. Money back if not pleased. The biggest selling and most famous box of shirts in the World. Advertised in 50 leading magazines. Guaranteed not to shrink, fade or rip in six months wear, or new shirts free. Made of white percale with neat stripes of blue, black, and lavender. One of each color of same size. Coat style, cuffs attached, laundered and fashionable. Sizes 14 to 17. Sleeve 33. Tie is stylish wide-end four-in-hand of navy blue silk poplin. A good box for the money and well worth a trial. Order to-day. Highest bank references. Catalog of Shirts of all kinds, Neckwear, Hosiery, Handkerchiefs, Underwear, Pajamas and Nightshirts. Room 94, Goodell & Company, 158 E. 34th St., New York. The largest mail order shirt house in the World.

and we should not lose sight of the fact that conductors come and conductors go, but Wagner lasts forever—at least, lasts till the abbreviated eternity we call fame ends. This man reads a scene slower, the other man takes it faster, yet what do these variations spell? Bodanzky differs from his predecessors, Hertz and Toscanini; nevertheless in the chiefest matter he is on the side of the angels. He is a versatile, brilliant and subtle conductor, and it is a bold dissenter who takes exception to his broad musical conception, tho one may demur here and there as to details.

When I first heard the delightful "Rose Cavalier" of Richard Strauss, conducted by the composer at Stuttgart in 1912, I missed the champagne in that sparkling score, compounded as it is of Wagner and Johann Strauss—Weimar and Vienna. But I tasted it to the full when Bodanzky decanted the magic musical bottle for us. His early training in light opera told. His touch was feathery light, the music bubbled over the edge of the "mystic abyss" of the orchestra, and we left the Metropolitan elated. Nor were the finer nuances missing. Bodanzky is a master of nuances. His orchestra is ever transparent. It vibrates. It glows. But it always reveals the musical structure. One can hear the inner voices, while the larger tonal balance and ensemble are in evidence. For the singers the conductor has a peculiar care; every entrance is signalled, every variation in tempo or rhythm indicated. "Parsifal," for example, lost something of that droning, psalm-singing quality which makes this sacrosanct religious festival play such a bore to genuine musical people. It was conducted as if it had red blood in it, which, in spots, it has, and the second act was as exotic and sensuous as it should be. I admired the "Tristan and Isolde" interpretation because of its fine blending of imagination and emotion. The orchestra moved like a richly-wrought, richly-colored tapestry. The climaxes were stirring, the mystic ecstasy present, and the love episodes intense.

Artur Bodanzky is never nervous during a performance; afterward he is sometimes unstrung, for he dispenses an incredible amount of energy, and he becomes discouraged over such trifles as a false entrance by a singer or a player, or because of the vagaries of the electric switch. At the first "Tristan" the light failed at his desk during a crucial moment. It made no difference in his conducting—he could conduct the entire work without score—but it annoyed him, and later I saw his features grow melancholy as his eyes stared at imaginary windmills—the Wagner singers—and he straightway became the dreamer of dreams, who waved long, thin hands across a river of multicolored music; a veritable Don Quixote of the baton.

The New Books

NEW POETRY

Six poets, who are all working along the same lines, have published *Some Imagist Poets*, an anthology, for which each individual has selected a certain number of his, or her, own poems with no restriction other than that none of them should have appeared before in book form. In an introduction the poets explain to the public what the new school which they represent aims to do. This is: "to create new rhythms as the expression of new moods"; "to allow absolute freedom in the choice of subject"; to present images, particular images, definite, clear and vivid. Vivid is the word which best characterizes the poems in this anthology. You may like this poetry, or you may detest it; but you can not escape it. It impresses you whether you will or not. Richard Aldington's "Round Pond," H. D.'s "Sea Iris," F. S. Flint's "Lunch," D. H. Lawrence's "A Woman and Her Dead Husband" recur persistently to one's mind after they have been once read. Or take these lines from Amy Lowell's Letter:

"I am tired, Beloved, of chafing my heart
Against the want of you;
Of squeezing it into little inkdrops,
And posting it."

Or John Gould Fletcher's struggle against the hard, unyielding city:

"Yet I revolt: I bend, I twist myself,

Anything to be soft and woolly,
Anything to escape."

A better example of Mr. Fletcher's work, however, is contained in the swift, intense, infinitely varied impressions in *Irradiations*, and the wet, salt, windy music of *Sand and Spray*.

These writers of *vers libre* are doing for poetry what the futurists are doing for art. They are revolting against a monotonous, slavish following of tradition. They are taking poetry on a spree; but it is only a one night spree, and he will come back in the morning refreshed and rejuvenated.

Some Imagist Poets. An Anthology. Houghton, Mifflin. 75 cents. *Irradiations: Sand and Spray*, by John Gould Fletcher. Houghton, Mifflin. 75 cents.

PREPAREDNESS

The three addresses contained in General Wood's little volume, *The Military Obligation of Citizenship*, were delivered, one at Princeton, one at Monmouth, and one at St. Paul's school. From three somewhat different standpoints he stresses the points that we are not equipped for defense; we should be; the citizen has a military duty; the army a civil duty. President Hibben introduces the collection. General Wood in turn introduces Frederick L. Huide-

DOES WINTER CURTAIL YOUR EXERCISE?

ASK your doctor how to safeguard your health during this period of physical inactivity. He will tell you to rid yourself of constipation.

You can't cure constipation and auto-intoxication by dosing yourself with laxatives and cathartics, which frequently aggravate the condition they are meant to cure.

The use of **Nujol** is a far safer and more effective means of keeping yourself free from constipation. **Nujol** is not a drug nor a bowel stimulant. It helps to restore the *normal* activity of the lower bowel by facilitating the action of the intestinal muscles.

Most druggists carry **Nujol**, which is sold only in pint bottles packed in cartons bearing the **Nujol** trademark. If your druggist does not carry **Nujol**, accept no substitute. We will send a pint bottle prepaid to any point in the United States on receipt of 75c.—money order or stamps.

Write for booklet, "The Rational Treatment of Constipation."

**Is Sewer Gas Leaking Into Your Bathroom?
You Don't Know**

Sewer gas, for all its potential danger, is odorless.

The connection of the average closet is sealed with putty. In time putty dries out, shrinks and crumbles and the joint is not tight. In most homes this means a sewer gas leak direct from the sewer main. To avoid this, see that the closet you buy is equipped with the Donovan Safety Flange. Your plumber knows this flange and will explain it.

It's a tell-tale device that exposes a leak instantly.

A quarter turn or a half turn given to a conveniently located screw, tightens the joint and stops every possibility of a leak of sewer gas.

Write for a free, informing booklet, "The Dangers of Sewer Gas and How to Avoid Them."

koper, who is probably our greatest tactical writer since General Upton. Mr. Huidekoper has written an elaborate history of *The Military Unpreparedness of the United States*. It is an octavo of about seven hundred pages and it traces from the standpoint of the military expert or board of strategy every important military movement of each of our wars save the minor Indian outbreaks. Generous citations from contemporary and later authorities of the first rank enforce the judgments expressed. One is breathless and baffled by the multitude of examples shown here of delay, bad judgment, careless neglect, rejection of advice and refusal to profit by sad experience. We note a few instances, of scores, of the sort that caused the continual prayers of Washington for real preparation and discipline. His repeated warnings have not been disputed and his principles are sound today. But the errors he fought have created protest and appeal from his day to ours. They even caused Jefferson's conversion to seeking disciplined soldiers as against militia and hasty armies of bounty bought men. Such instances are the fluke by which Louisburg was taken; Arnold's doleful disaster at Quebec due to foolish enlistment methods; Jackson's lack of equipment to pursue and extend his victory at New Orleans; the mad tho successful operation of Scott in leaving his base for Mexico City, where Santa Anna, having six times his force, could have overwhelmed him had Santa Anna been half alive to his chance. Then came the Civil War with its Antietam and even Gettysburg when Lee was allowed to get away; the Spanish War, where the Cuban expedition might have been annihilated on landing, by a regiment with Mausers; and the Philippine War which was marred by long delays and where finally the bounty method of getting volunteers, a pitfall censured by all authorities, was proposed.

Delay, waste of money and of men, lack of disciplined men and of coördination, meager and unfit equipment and imperfect campaign plans—these are noted on nearly every page of the book. High credit is often given to courage and resource and skill. But the volume cites chapter and verse to prove its charge that the nation has in military matters trifled with its own life. From the history our author draws his lessons and tells in sufficient detail what in his judgment our land forces should be, how organized and how governed and trained. He would have 250,000 regular army, and reserves, together numbering in seven years 670,000 men, this result to be reached by enforced intensive drill from six weeks in the first year to two weeks in the last, of all capable men within service age, thus taking a leaf from the Swiss system and another from the Australian. He cordially approves the volunteer summer camps.

Military education in the schools and colleges has been widely advocated and vigorously opposed. A bird's-eye view

of Orthodox or Agnostic are equally touched and stirred by Swedenborg's profound interpretation of

THE HOLY BIBLE

Swedenborg's interpretation of the Holy Word is simple, reasonable and cogent. Knowledge of his devout teachings is necessary to a new and more beautiful understanding of the Word of God.

Whether you freely accept his claim: "It has been granted me to associate with angels and to talk with them as man with man" or whether you frankly challenge that "it was permitted me to see what is in the heavens and what is in the hells"—you must in either case find his philosophy strikingly lucid, his presentation of the relations of the "Now" and "Then" wonderfully appealing.

Wherever his voice reaches—a new, more intimate, a gladdening understanding of the Bible's teachings must grow. It is the function of this Society, liberally endowed, to make his works accessible to every one.

SPEAKERS, CLUB WOMEN

Debaters, Writers—We gather material on your special subjects. Expert service. Authors' Research Bureau, 500 Fifth Avenue, New York.

of this burning topic will be found in the Debaters Handbook on *Military Training*, which arrays extracts from the utterances of leading educators and editors, of military authorities and peace advocates.

The ABC of National Defense, a reprint of already published articles by J. W. Muller, is for the layman, since it goes, in the fashion of the Chautauqua text book, to the root of the subject without technicality, likening an army to a fighting man, with aeroplanes and scouts for eyes, the infantry for the hard body, artillery for fists, cavalry for quick footing, and so on. The illustration is clumsy and incomplete, yet good, in that it emphasizes all that the author says on efficient and prompt coördination. "The army that needs time is already half defeated. Time is the one thing that a capable enemy does not mean to give his opponent."

Dr. George H. Maxwell, in *Our National Defense*, has developed a theory of conservation applicable to peace as well as to war, one that should go far to preserve the first and prevent the second. He calls for "a reserve of enlisted men under civil control, doing the work of peace in time of peace and ready for the work of war in time of war." It would be a "National Construction Reserve, organized primarily to fight nature's forces instead of to fight the people of another nation." The reserves should be Homecrofters, owning their homes and living rural lives with a practical school system and with work under enlistment for five years. Irrigation and forestry, fruit culture and poultry culture and marketing along with military drill, all under experts, would occupy this citizen soldiery. This might be called an attempt to fit the Swiss system to our needs.

Statistics showing the number of years in which the leading nations have engaged in wars during the past odd three centuries show that there has been large decrease in the time spent in war. These figures, hopeful as they might seem, relate to time only, not to causes, severity or extent. Yet the authors of *Is War Diminishing?* raise some puzzling but illuminating questions on causes and purposes.

Sixty-six important war documents on *The Protection of Neutral Rights at Sea* have been collected by Professor W. R. Shepherd; they include the pertinent articles in the Declaration of London, Orders in Council and the diplomatic notes between our country and the countries at war as to neutral rights generally and as to such notable cases as the "Lusitania," "Dacia," and "William P. Frye."

It is a collection serviceable to prevent the loose talking and writing on so delicate and technical a subject. The introduction outlines the whole situation and urges the United States to call a Congress of Neutrals to unite in defining and claiming their rights. In view of that, the pamphlet would have been more useful had it contained

To the fine soul in search of expression, the Steinway comes with an untold wealth of treasure. Responsive as the wind harp to the wind, its wonderful mechanism has an almost human understanding of every mood. In the Steinway's tonal range each note of the human voice finds its perfect complement, sustaining it with sympathetic sweetness and flawless purity. In craftsmanship, the Steinway is as near perfection as human skill can make it. And here is a fact for your consideration: you can buy a Steinway, with all its superior worth, at a moderate price and on convenient terms.

DISMEMBERED POLAND

The Second Partition of Poland, by Dr. Robert Howard Lord, of Harvard University, is an admirably careful unwinding of the most tortuous and intricate tangle of intrigue in the entire eighteenth century. This second partition which sealed the fate of the Polish commonwealth showed all the powers of Europe at their worst; Russia, pursuing the tactics lately copied in the partition of Persia, choosing the moment of attempted national regeneration to strike the death blow; Prussia deceiving the unhappy country by promises of aid till the last, when she treacherously turned on her ally and joined Russia to dismember her; Austria, France and Great Britain pretending infinite sympathy, but secretly consenting to all that was done, and, last of all, Poland herself "an anarchy tempered by civil war." The author bases his study largely upon personal research in the Russian archives.

The Second Partition of Poland, by Robert Howard Lord. Harvard University Press. \$2.25.

THE CHURCH'S BUSINESS

Christian people are just awaking to their responsibilities and opportunities in the matter of recreational activities. The old ascetic attitude of self-repression in religion is being replaced by the joyous duty and privilege of self-expression. Sports and games are no longer regarded as concessions to evil tho uncontrollable desires, but rather as a divinely appointed means of cultivating a vigorous body, a nimble mind and a cheery, robust character. In Mr. Henry Atkinson's new book on *The Church and the People's Play*, he points out the causes which have operated in earlier times to create on the part of Christian leaders a feeling of suspicion, aloofness and opposition in regard to sports, amusements and recreation in general. In the most progressive sections of the Christian church a change in theological conceptions has removed the occasion for such opposition and placed upon the conscience of the church the task of leadership and reconstruction in the people's play. The utilization of these universal and sacred social instincts opens great opportunities for the moral development of the individual and the purification of the social life. The author of this valuable book does not advise that the church in every case should carry on the work of organizing and developing the play life of the community, but rather that this should become a subject of Christian interest as a part of

For Swollen Veins

Absorbine Jr.

THE ANTISEPTIC LINIMENT

That Absorbine, Jr., would relieve Varicose Veins was discovered by an old gentleman who had suffered with swollen veins for nearly fifty years. He had made many unsuccessful efforts to get relief and finally tried Absorbine, Jr., knowing its value in reducing swellings, aches, pains and soreness.

Absorbine, Jr., relieved him, and after he had applied it regularly for a few weeks he told us that his legs were as smooth as when he was a boy and all the pain and soreness had ceased.

Thousands have since used this antiseptic liniment for this purpose with remarkably good results.

Absorbine, Jr., is made of oils and extracts from pure herbs and when rubbed upon the skin is quickly taken up by the pores; the blood circulation in surrounding parts is thereby stimulated and healing helped.

\$99.00 Make Your Own Electric LIGHT FOR 5¢ A DAY

With this self starting, electric lighting plant you can have electric lights in your farm home, country estate, church, general store, summer cottage, club, or plantation at 5c or less per day. Compact, simple—wife can operate it, use electric irons, washers, cleaners as well as plenty of lamps day or night. Get lights three minutes after uncrating. Write your needs for lights in detail in a letter, NOT A POSTAL CARD to the GRAY MOTOR CO., 219 Gray Motor Bldg., Detroit, Mich.

FACTS arguments, briefs for debates. Outlines, literary, historical, scientific and other material for club papers, orations, speeches and lectures. BUREAU OF RESEARCH, 318 E. 5th St., New Albany, Ind.

man's normal life. If other agencies, however, fail to provide proper and wholesome recreation it is the duty of the church to fill the gap. Mr. Atkinson would include not only the sports and games approved by the Y. M. C. A., but theatricals, card games and dancing. All these activities should be carried on under proper supervision and the best moral leadership. What will the church do in response to this high call to service in a field which has always been neglected and often spurned as incompatible with its ideals? Many Christians will evade the responsibility on the plea that this is not the proper sphere of religion. But already in isolated cases much is being done, and those who are moved by the new impulses in religion and are in touch with the life and needs of the common people will heed this call to service.

The Church and the People's Play, by Henry A. Atkinson. Boston: Pilgrim Press. \$1.25.

EDUCATION FOR COUNTRY LIFE

Very systematic and full of pertinent information is *Means and Methods of Agricultural Education* by Albert H. Leake, another prize essay in the Hart, Schaffner and Marx series. The problem of increasing farm products to keep pace with the growth of population is dependent upon having plenty of farmers, and upon having the farmers efficient producers. Both factors are closely related to education; the school must not only teach people how to do their work, but also how to conduct their lives, their community as well as their personal affairs. Mr. Leake would put into the educational program all the latest devices for making life more attractive in rural districts. The needed reforms and reorganization in rural education are well presented, and the example of Denmark is pointed out to show that practical results may really be attained.

Means and Methods of Agricultural Education, by A. T. Leake. Houghton, Mifflin. \$2.

THE SHIFTING SCIENCE

From the "time of the Physiocrats" to the present day the science of economics has undergone quite as radical changes as has the industrial life of society; and *A History of Economic Doctrines* by Charles Gide and Charles Rist is a worthy footnote to a history of the industrial and intellectual revolutions of the past hundred and fifty years. Professor Gide's texts in economics have been almost as well known in this country as those of any English or American author, and they owe their popularity as much to his scientific and scholarly treatment of the subject as to his lively and human method of presentation. Too much of our economic doctrine is colored by political association and class interest; a study of history is the best countervailing influence one can have. Individualist and socialist, banker and syndicalist, could all profit from getting this wider outlook. The translation is excellent. Unfortunately the well selected references are not as serviceable as they might be if the translator and editors had taken

Resinol Soap

a friend to tender skins

If lack of proper care should result in painful and unsightly chapping, a little Resinol Ointment will generally afford complete relief.

Resinol Soap is not artificially colored, its rich brown being entirely due to the Resinol medication it contains. Sold by all druggists and dealers in toilet goods. For a trial size cake, with a sample box of Resinol Ointment, free, write to Dept. 8-E, Resinol, Baltimore, Md.

Resinol Shaving Stick also contains the Resinol medication so that it soothes and refreshes the face, while supplying a rich, creamy, non-drying lather. The best druggists carry it.

the trouble to introduce English translations in place of the many foreign titles, since such editions are available for the most valuable sources.

A History of Economic Doctrines, by Charles Gide and Charles Rist. Boston: Heath. \$3.

THE SUBLIME PORTE

Sir Edwin Pears resided forty two years in Constantinople, employed as advocate in the consular courts and correspondent for British papers. During this time he has witnessed three revolutions, three Sultans deposed, the establishment of the Young Turk Party and has known most of the great public men connected with the Near East. In *Forty Years in Constantinople* he gives, in autobiographical fashion, an account of all the principal events in which he was interested, and of the Turkish statesmen and British and other ambassadors with whom he was in intimate relation.

Constantinople is the center of international intrigue, and European nations send to the Porte their ablest diplomats. An account of the doings of these forty years cannot fail to be intensely interesting and instructive. The author of this work speaks frankly, unveils many secrets of state, and explains many facts that have puzzled historians, such as, for example, the reason why the Russians did not occupy Constantinople after the Russo-Turkish war. The American reader will be especially interested in the admiration expressed for the work of Robert College; for the succession of American ministers and ambassadors; and especially for the indefatigable labors of Ambassador Morgenthau for the protection of Christians. One will gain from the volume a fresh sense of the atrocities inflicted by the Turks in the succession of Bulgarian and Armenian massacres.

Forty Years in Constantinople, the Recollections of Sir Edward Pears, 1873-1915. Appleton. \$5.

OPERAS

The new edition of J. W. MacSpadden's excellent handbook of *Opera Synopses* has added twenty-four numbers to its old list, being those given in America in the past four years and some of the novelties of this season.

Crowell. \$1.

FERDINAND AND ISABELLA

Isabel of Castile and the Making of the Spanish Nation, by Irene L. Plunkett, is an interesting study of the disputed character of the Spanish Queen and of the reign that saw the Inquisition, the expulsion of the Jews, and the discoveries of Columbus.

Putnam. \$2.50.

FOR ALL MEN

Mrs. Katrina Trask allows the imperative necessity of social and economic betterment, but finds the world's greatest need in an inward solvent of spiritual and moral power. *The Mighty and the Lowly* are as one in this realm where the life and work of Jesus were consummated, and neither the rich nor poor may claim Him as their special champion.

Macmillan. \$1.

BLINDNESS

The parts of *Hitting the Dark Trail*, the touching story of Clarence Hawkes's courageous life that will be most enlightening to us with eyes, are the analysis of his mental suffering in the first years after the loss of his sight, the chapter on the psychology of sightlessness and the description of how he watches a baseball

Summer Blooming Bulbs

There are wonderful results to be secured both in garden effects and for household cut flowers with Gladioli, Cannas, Dahlias, Montbretias, etc., and at such a small outlay of time and money! Just try an assortment of our imported-to-order bulbs this year. By planting in proper combinations and intervals you can have an abundance of beautiful flowers steadily from spring till frost, and with practically no trouble at all.

Our Plan Saves You Half

This is our plan. You tell us what bulbs you wish. We order them for you directly from the growers in Holland, where the best bulbs come from. Long experience and frequent visits to Holland and personal acquaintance with the growers enable us to buy each kind from the best specialist in that variety, and as your bulbs are packed by the grower and then forwarded to you as soon as they reach this country, you get much better bulbs and at much less than they would cost you if passed through the usual middlemen. Thousands of customers buy their bulbs through us every year and they can tell you. You need not pay for your bulbs until after delivery, nor take them if not satisfactory. (References required from new customers.) But remember—

You Must Order Now— Not Later Than March 1st

Our prices and the quality of bulbs secured depend upon buying direct from the growers for April and May delivery. These are just a few of the prices our plan secures you:

	Dozen	100
Gladioli America, 1st sized bulbs	\$.25	\$1.40
Gladioli XXX Mixture, finest offered	.30	2.00
Choicest Named Dahlias	1.00	6.00
Choicest Large Flowered Cannas	.85	5.50

For prices on other items and on smaller quantities, send today for our Import Price List. It is Free, write for it now.

Seeds We have a limited quantity of specially selected, pedigreed seeds representing choice varieties of everything grown in Mr. Elliott's private garden, that this year, for the first time, are offered for sale, and at no advance in prices. These are highest grade seeds produced. Write for list and prices of flower and vegetable seeds at once.

Elliott Nursery Co. 369 Fourth Ave.

game, all of which will leave the reader with a better understanding of the piteousness and the possibilities of those who do not see.

Holt. \$1.

U. S. SHIPS AND SAILORS

The new addition of J. R. Spears's *Story of the American Marine* is prefaced by an essay on the conditions in merchant shipping brought about by the present war conditions.

Macmillan. \$1.50.

BEATING A HABIT

The dedication and introduction of *Peg Along*, by G. L. Walton, author of "Why Worry," have a disarming humor that makes one quite sure the book is written with commonsense. It deals with the breaking of bad habits and the forming of better.

Philadelphia: Lippincott. \$1.

AS TO BABIES

If the young mother fails in her business of caring for her charges, it will not be for lack of counsel. One of the best guides we have seen is *Your Baby*, by Dr. E. B. Lowry, which is clear, concise and common-sensible.

Chicago: Forbes. \$1.

FOLK MELODIES

William Fisher Ames has edited *Sixty Irish Songs*. New words are set to some forty, but the music, arranged for the high voice, is all ancient. There is an introductory essay on Irish music.

Ditson. Cloth \$2.50. Paper \$1.50.

WHO'S WHO IN OLD STORIES

William S. Walsh has completed his former handbook of characters in modern fiction by *Heroes and Heroines of Fiction, Classical, Medieval, Legendary*, a cyclopedia on the same lines, with critical and explanatory notes and quotations.

Lippincott. \$3.

EVERYMAN'S

The recent volumes added to the invaluable Everyman's Library bring its numbers to 732. It is good to see Mrs. Ewing and George MacDonald among the issues for young folks. Dostoeffsky and Gogol are among the translations and more of Froude's *Short Studies* are included.

Dutton. Cloth 35 cents. Leather 70 cents.

HANDBOOK OF THE BIBLE

Professor Ismar J. Peritz's substantial volume on *Old Testament History* is a practical book that was much needed in biblical study. The author takes full account of historical and literary criticisms and contemporary sources outside the Hebrew records. He has produced the most valuable and readable handbook on the subject, and has adapted it to class use.

Abingdon Press. \$1.50.

THE SIGNIFICANCE OF BEHAVIOR

If the reader will skip the first two pages and the last chapter he will find in *The Freudian Wish*, by Prof. E. R. Holt of Harvard, a very comprehensible account of the new theories which purport to explain our dreams, our jokes, our slips of the tongue, and our finger tricks. The author minimizes the more repulsive features of the Viennese speculations and develops the ethical implications.

Holt. \$1.25.

WALLS, FLOORS AND FURNITURE

Good Taste in Home Furnishing, by M. A. and H. B. See, is a carefully thought out guide. It deals less than is common in such works, with varied schemes of furnishing and more with the fundamentals that underlie all good decoration, explaining the theories of color, of line, and of furniture form, so that the housekeeper may work out her own scheme, and not go far wrong.

Lane. \$1.25.

PLEASANT VERSE

Grace Hazard Conklin has chosen a peculiarly descriptive title for her collection of verse, *Afternoons of April*. Tho lacking distinction, the poems are full of charm,

"If Victor Hugo had lived in America 'Les Miserables' would have been a book like this."

THE ABYSS

By Nathan Kussy

With the publication of this novel a new Jewish author is introduced, a man whose work is of such outstanding character that his place in American literature is henceforth assured.

"The Abyss" is the story of a Jewish lad in the underworld, of how Mulberry Bend caught him and taught him the hard philosophy of the streets and of how he struggled again and again to free himself.

Intensely interesting in the development of its plot, the book is perhaps more remarkable for its accurate and vivid portrayal of types. Mingled with beggars, criminals and outcasts, there are characters of real fineness and spiritual beauty—all faithfully drawn against the pain and magnificence of the city.

Ready March 8. \$1.50

New and Forthcoming Novels

THE RUDDER

By Mary S. Watts

Author of "Nathan Burke," etc.

Mrs. Watts' new novel introduces a woman as the principal character; an intelligent, well-bred, socially well-placed young woman who touches life in many places. The story is unfailingly interesting, told with that same charm of manner that has always been found in its author's writing.

Ready March 15

THE SHEPHERD OF THE NORTH

By Richard Aumerle Maher

An intensely dramatic novel with a most ingenious plot in which a big-brained, big-hearted American Bishop is the hero.

Ready March 22. \$1.35

THE LITTLE LADY OF THE BIG HOUSE

By Jack London

The story of a woman whose life is shaped by a great love. Jack London has done few finer things than this account of Paula Forrest's life and the problem she was forced to face when she met Evan Graham.

Ready April 5. \$1.50

THOSE ABOUT TRENCH

By Edwin Herbert Lewis

A novel of ideas, saturated with the spirit of modern science, intensely alive and packed with many strange adventures. Dr. Trench and those about him are the most interesting people that have appeared in fiction for many a day.

Ready Feb. 16. \$1.35

CAM CLARKE

By John H. Walsh

The story of a real, live boy, his companions and their escapades, told with rare sense of humor and understanding. The heartiness of the West, good spirits, a brisk movement of plot, and a score of interesting and appealing people, these are all here.

Ready Feb. 23. \$1.35

I POSE

By Stella Benson

"As the mature work of an experienced author, it would have been a remarkable achievement; being 'the first book of a new writer,' it is an astonishing performance." — *Daily Graphic* (London).

"A clever book." — *N. Y. Tribune*.

\$1.25

May Sinclair's New Novel

THE BELFRY

By the Author of "The Three Sisters," "The Divine Fire," etc.

In this brilliant and swiftly moving story, May Sinclair pictures a group of curiously assorted characters with a lifelikeness that is almost uncanny. It is hard to resist the impression that Tasker Jevons, the struggling, triumphant, lovable, impudent, little Cockney, half genius and half bounder, is a real person. No less human and convincing is the adorable Viola Thesiger, perhaps the most complex and the most attractive of Miss Sinclair's heroines. The story comes close to the present time and finds its climax in the scenes of the great war.

Ready Feb. 9. \$1.35

THE MACMILLAN COMPANY, Publishers, NEW YORK

LITTLE TRAVELS

The Independent invites inquiries from its readers pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. sweet with the breath of gardens, bright with the glinting wings of scarlet tanagers. The subjects range from Rheims Cathedral—1914 to A Breath of Mint, but the workmanship, tho exquisite, has a certain sameness. The mint arouses emotions too similar to those stirred by the cathedral.

Houghton, Mifflin. 75 cents.

HISTORY OF PAINTING

A good short guide to the development of that art is *Masterpieces of Painting*, by Louise Rogers Jewett, of Holyoke. There are chapters on mural decoration, on tempera, on oils, and on the ideals of the different schools and periods with a helpful bibliography.

Boston: Badger. \$1.

ARTHURIAN ENGLAND

What a relief it is to escape from this prosy, scientific world and its sophisticated fiction and slip back into the Greenwood that the author of "The Broad Highway," Jeffery Farnol, has again unrolled enticingly in *Beltane the Smith!* Romance, love, adventure, told in the fascinating style of Old England, fill the 500 pages that recount the quest of Beltane for Lady Helen.

Boston: Little, Brown. \$1.50.

A CHILD'S BIBLE

William Canton has succeeded where many have failed in telling *The Bible Story, Old and New Testament*, so that children may understand its teachings and at the same time appreciate its beauty and reverence its power. A simple map of the Holy Land and eighteen particularly good illustrations in color increase the value of the book, which deserves first rank among those stories that every child should know.

Doran. \$2.

ASPECTS OF ART

The function and meaning of each of the four great types of art: sculpture, painting, music and poetry, and their relations to one another, are set forth by Edward Howard Griggs with his usual skill and facility in *The Philosophy of Art*. His interpretations and applications to life are everywhere enlivened and made impressive by his quotations and illustrations from a wide range of literature and history.

Huebsch. \$1.50.

TO THE MIDDLE CLASS

Whether you mean well and have your doubts, or whether you are quite confident that Providence must carry all the responsibility for prevailing social and economic conditions, you should read Seymour Deming's little book, *A Message to the Middle Class*. It may disturb your complacency, it may challenge your Americanism, it may clear up some uncertainties, it may strengthen your resolution. It will take but an hour or two, and is worth while.

Boston: Small, Maynard. 75 cents.

A PHYSICIAN'S VIEWS ON EUGENICS

From a wide experience as physician, as instructor and as social investigator, and from wide reading, Dr. Frederick A. Rhodes writes *The Next Generation*. The discussions of crime, vice, heredity, charity, immigration, insanity and other social problems show an acquaintance with actual conditions as well as with "authorities." The personal touch and the direct simplicity of the style adapt the book to the needs of the ordinary reader.

Boston: Badger. \$1.50.

THE SPIRIT OF RUSSIA

Stephen Graham's new work on Russia, *Mary and Martha*, is more than a study of Russian life and thought, it is a comparison of Eastern and Western Christianity, and as such takes in a visit to the Coptic monastery in the Sahara and a discussion of many matters far from Russia itself. Loving the Russians, he yet does not gloss over characteristics unpleasant and more, to western eyes, so that one feels this an uncommonly true picture of this Slavic people, of their strength and their weakness.

Macmillan. \$2.

United we stand for a whole lot.—*Columbia State.*

We have seen many a skating-beginner this season temporarily lose his amateur standing.—*New York Tribune.*

Looks as if England realizes that if she avoids a draft she will lose her grip.—*Philadelphia North American.*

It begins to look as tho the ultimate fate of little nations is to be fed by the United States.—*Washington Post.*

"Let's go out to Central Park and look at the animals."
"I can't—I've got to study my zoology."
—*The Masses.*

The principal mistake Greece made, like Belgium and Poland, seems to have been in her selection of a place on the map.—*Kansas City Star.*

"Seven U. S. Troopers Captured by Mexican Bandit Raiders."—Headline.
A serious depletion of our available forces.—*New York Tribune.*

Spain is placing \$20,000,000 munition-contracts in this country. She knows something about the effectiveness of American guns.—*Philadelphia North American.*

By reversing all the protests that Great Britain made to the United States during the Civil War it is possible to obtain a fairly correct notion of contemporary British theory of international law.—*New York World.*

"Pop Merlin," Earl S. discovers, "was the original War-lord. But look ye, all barons,"—it is from "Morte d'Arthur" I, 4—"be before King Uther to-morn, and God and I shall make him to speak."—*New York Tribune.*

"What is an amateur?" is still one of the raging queries of the hour. But, in spite of all the recent discussion, we haven't changed the answer we evolved four years ago, viz., "Any one who can get away with it."—*New York Tribune.*

This is the famous Wilson Limerick which is making the rounds:
As a beauty I am not a star,
There are others more handsome by far;
But my face, I don't mind it,
For I am behind it—
The people in front get the jar.—Woodrow Wilson, *Bruno's Weekly.*

Three times had King Canute ordered the waves to recede.
And three times had the waves paid no attention whatever to his commands.
"The only thing to be done in a case like this," said the King, "is to break off diplomatic relations with Father Neptune."
And it was so ordered.—*New York World.*

One bit of humor came to the soldiers from home when the pages of a copy of the *London Chronicle* were eagerly unfolded in the trenches. There the headline stood:

KING GEORGE SHAKES HANDS WITH V. C.

GALLANT FEAT THAT COST A LEG.
—*New York Globe.*

Senator Gallinger—Of jewelry Germany is a great producer, and Germany cannot send any kind of jewelry out into the markets of the world today, so that for the time being New Jersey is finding a market for jewelry, but it will not last.

Senator Martine, of New Jersey—I if there were no prosperity in this country, the people of this country would not be able to buy jewelry.

Senator Gallinger—I think they probably could afford to buy the kind of jewelry made in New Jersey under any circumstances. (Laughter on the floor and in the galleries.)—*Congressional Record.*

MARK ANTONY DELIVERING THE ORATION OVER CAESAR

CAESAR'S name has stood through all the ages as the embodiment of imperial power. His untimely end after reaching the pinnacle of earthly glory is one of the great tragedies of history. The greatest tragedy in all human history is now being enacted on the battle fields of Europe. All the underlying causes of this conflict, the racial antipathies, the commercial rivalries, the sting of past defeats, the vaulting ambitions for world Empire may be discerned from the pages of history. The one great history of every Empire, Kingdom, Principality and Power from the beginning of civilization to the present, is

Ridpath's History of the World

Dr. Ridpath is universally recognized as America's greatest historian.

Other men have written histories of one nation or period; Gibbon of Rome, Macaulay of England, Guizot of France, but it remained for Dr. Ridpath to write a history of the entire World from the earliest civilization down to the present. We offer the remaining sets of the last edition, brand new, down to date, beautifully bound in half morocco.

At a Great Sacrifice in Price

We will name our special low price and easy terms of payment only in direct letters. A coupon for your convenience is printed on the lower corner of this advertisement.

Tear off the coupon, write your name and address plainly and mail now. Our plan of sale enables us to ship direct from factory to customer on approval and guarantee satisfaction. We employ no agents, nor do we sell through book stores, so there is no agents' commission to pay. Mail the coupon now before you forget it. The sample pages are free.

46 Page Booklet Free

We will mail you 46 free sample pages without obligation on your part to buy. These will give you some idea of the splendid illustrations and the wonderfully beautiful style in which the work is written. You can purchase this great work at the lowest price ever offered and pay for it in small sums monthly if you prefer.

Six Thousand Years of History

Ridpath takes you back to the dawn of history long before the Pyramids of Egypt were built; down through the romantic troubled times of Chaldea's grandeur and Assyria's magnificence; of Babylon's wealth and luxury; of Greek and Roman splendor; of Mohammedan culture and refinement; to the dawn of yesterday. He covers every race, every nation, every time and holds you spellbound by his wonderful eloquence. Mail the coupon.

A REVIEW OF FINANCE AND TRADE

THE INVESTOR'S SERVICE

The Independent is now offering a Service for Investors in which personal attention will be given to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves.

BABY BONDS FOR SMALL SAVINGS

WE have been called a nation of spenders. That this is not far from true is demonstrated from a compilation of savings bank depositors of various countries showing that Switzerland headed the list with 554 depositors to the thousand of population, while the United States had only ninety-nine. This compilation is not of very recent date, but it proves that up to a comparatively short time ago, saving was not one of our popular virtues.

Since the war broke out, however, savings banks and postal savings agencies have reported enormously increasing deposits with the result that a steady demand has been produced for high grade investments and a consequential increase in bond prices in spite of continued liquidation from abroad.

Everybody has money to invest in something—automobiles, sealskin coats, diamonds, and, of course, the war stocks. During the boom, young men and women employees in New York did not center their attention on the sporting page or the women's page of a newspaper, but on the financial section, where they looked eagerly for the latest news on Bethlehem, Crucible, Submarine, etc. But the war stocks have had their day, much to the sorrow of many people who bought at the top and are either expecting advances which do not come or sold at a loss.

The investment of the future for the small investor lies in the sound bond of small denomination—\$100 and \$500. In France and Holland, widely known as countries where the working people are exceedingly thrifty, bonds of this class have been sold for years. When bonds of American railroads could only be purchased in this country in denominations of \$1000 or more, they were available in France in pieces of 100 francs (normally \$20) and every peasant had his wad of *rentes* or our railroad bonds of some sort stowed away in a corner of his cottage. That is why we hear so much about the thrift of the French.

Almost everybody one meets today has at least a hundred dollars lying idle or in the savings bank drawing interest at from 3½% to 4%. We do not wish to minimize the usefulness

of the savings bank, but many of these people do not know that they can invest so small an amount as \$100 in a coupon bond of a government, municipality, railroad, industrial or public service corporation. They feel that bonds are investments for men of wealth and therefore are content to carry their hoard with them or place it in a savings bank. It is surprising how many people have never heard of \$100 and \$500 bonds in spite of the great publicity given them by specialists. Those people who want their money to earn more than four per cent should be told that it can be done with almost as much safety as tho the funds were entrusted to a bank.

For instance, there can be purchased in \$100 pieces the joint five per cent bonds of Great Britain and France due 1920 at about \$95.50; or, if preference is in local securities, New York City 4½s of 1962 can be bought at 106⅞, Chicago Harbor Construction 4s of 1917 at 96, Vancouver 4½s of 1923 at 93¼, etc. Among the railroad bonds we have Baltimore & Ohio Convertible Mortgage 4½s due 1933, legal investments for savings banks in New York, Connecticut and Massachusetts, selling at 98½. These bonds are secured on the entire system and are followed by over \$210,000,000 dividend-paying stocks. Southern Pacific Company-San Francisco Terminal 4s due 1950, selling at 85, are secured by a first mortgage on the extensive terminals of the Southern Pacific at San Francisco; these bonds are legal for Connecticut savings banks. Other "legal" issues include Chicago, Burlington and Quincy-Denver Extension 4s due 1922, at 99, and Chicago, Milwaukee & St. Paul General and Refunding Convertible 5s, due 2014, at 109. A carefully diversified list has been compiled for the benefit of the reader, showing prices and return on each issue.

Many young people who have money to invest find more satisfaction in buying a \$100 bond every little while than

†\$500 Pieces.

n-Legal investment for New York savings banks.

c-Legal for Connecticut.

m-Legal for Massachusetts.

in placing that sum in the savings bank. The hundred dollar bond has been the foundation of many a modest fortune; it does not require very much of a sacrifice for a moderately salaried young man or woman to set aside enough each week to provide for a purchase of a few \$100 bonds yearly. It is quite easy to save ten dollars a month, once one gets started, for eight or ten months, and then purchase a well secured bond with the proceeds.

This method can be continued for years until five or ten \$100 bonds have been acquired when in many cases they may be exchanged for a \$500 or \$1000 piece. Ten dollars a month for five years means a fund of \$600, not including interest. This plan of saving starts the non-investor on the road to economic independence in the best manner known, provided investments are selected with care, with more attention to safety of principal than high yield.

Bonds may be purchased on the "partial payment" plan, as are books or furniture, and the investor must never forget that until the bond is paid for in full, he is not actually its owner or even in possession of it as in the case of books. So unless he deals with an investment firm of recognized standing, he is very likely to find himself called upon to furnish more margin to his investment in case of a sharp decline in the market; unless, of course, his margin is large enough to protect his banker. In all cases, whether buying \$1000 bonds or \$100 ones, the selection of the banker is an all-important step.

There are several reputable firms which specialize in bonds of small denominations and sell them for cash or on the partial payment plan. This usually involves a payment of 10% or 20% of the face value of the investment and \$5 per month until the entire purchase price has been paid. A minimum commission of \$6 per \$100 is charged, but this includes interest, taxes, etc. As interest is received on the bond it is either sent to the owner or credited to his account. Between the cash and the partial payment plan, preference should be given to the cash plan as in that case the bond is held by the owner.

In conclusion, there are several points which the investor should bear in mind, viz:—

- 1—Select a conservative banker.
- 2—Buy bonds that yield under 5½% except in extraordinary cases.
- 3—Buy only mortgage bonds having a large equity in stock or bonds.
- 4—Ask for a description of the bond and read it.
- 5—Do not purchase any more bonds than you can pay for.
- 6—Never become frightened if the market value of your bonds drops five points. Ask your banker's advice when this happens.
- 7—If you have money to invest do not wait for a "bear market." You are losing interest meanwhile.
- 8—Do not buy securities of mining companies, construction companies, munitions concerns, etc., unless you have other means to rely upon. If you buy such securities, remember the risk.
- 9—Read all the literature on securities that is available.

RESERVELESS LIFE INSURANCE

A heavy proportion of my mail from correspondents contains inquiries relating to insurances carried in assessment, coöperative, or fraternal associations and orders. Most of the inquiries have their origin in an attained or a growing conviction that their premium payments have increased unreasonably, or are about to do so. Some of my correspondents inform me that they have met every demand made in these rate advances, that they are now 65, 70 and 75 years old and that the assessments called exceed their ability to pay.

To be just, no one is censurable for these conditions, unless we may condemn people wholesale for what they do not know and cannot learn except at first hand thru bitter experience. The promoters of life insurance schemes which are devoid of the reserve element are the most sanguine lot of people I ever knew in any business. They can all "figger"; they are so adept in the art of plausibility as to successfully deceive themselves. They, innocently and unwittingly, have hundreds of thousands of victims in this country whom they "convinced." These victims have spent millions of dollars on so-called life insurance; they are from twenty to forty years older than they were when they commenced; and they possess not one dollar's worth of equity of any character for their money.

What is saddest of all, the vast majority of them are physically impaired, or too old to secure old line insurance. I have before me now a letter from a man 72, who holds a \$500 certificate in an association on which he paid last year in monthly instalments \$59. And the rate is steadily advancing—of course. Twenty years ago that man could have bought \$2000 of real life insurance for \$98 a year which now would have been worth \$1304 in fully paid-up insurance or \$1038 in cash. But he carried the association policy more than thirty years. At age 42 a policy for \$3000 life insurance would have cost \$99, and been worth today in paid-up, \$1770; or \$1218 in cash.

Some of the assessment associations and fraternal orders have, as far as their limitations would permit, reformed their mathematics; and on the newer business are accumulating a reserve, so-called. Very few of them, if any, are providing for an adequate reserve. This is a stop-gap only; the sole effect is to defer the evil day.

Paradoxically, the lucky persons in

Romeike's Press Clippings

are used nowadays by every modern up-to-date business man; they bring you in constant touch with all public and private wants, and supply you with news bearing upon any line of business. We read for our subscribers all the important papers published in the United States and abroad. If you have never used press clippings, drop us a postal and we will show how they can be of advantage to you. Write for booklet and terms.

ROMEIKE, INC. 106-110 Seventh Ave., New York City

Pocono Manor

OPEN ALL THE YEAR

(Pocono Summit Station, D. L. & W. R. R.)

That belated vacation,—take it among the hills and streams at Pocono Manor. That short Fall or Winter rest,—try a fortnight in retreat, on that 800-acre tract, with the "Quakers at the Manor," comfort without ostentation. Golf, tennis and garage; no bar or dancing.

J. W. HURLEY, Manager

an unscientifically constructed life insurance scheme are those who die early, for they have secured the proverbial something for nothing. Those who stayed, paid and grew old, are victims for whom there is no relief.

A. Y. D., Asheville, N. C.—The Penn Mutual is a sound, well managed life insurance company, providing excellent service for its policyholders.

R. P. A., Mocksville, N. C.—On the principle that a going concern, however weak, is better than one which has failed and for the further reason that your father is too old to secure other insurance, I would advise him to accept the offer made by the Order of Puritans. On January 1, 1915, the assets of the latter were \$158,169, and the liabilities \$29,186.

E. S., Twin Falls, Idaho.—Take your insurance in an old line company, preferably one which maintains what is called a full reserve. There are so many it would be impossible to list them here. Write to your State Insurance Department at Boise City for a pamphlet listing them and giving their statistics. The United States Casualty is first class in every way.

B. T., Onawa, Iowa.—You do not state how long you have been carrying the endowment policy. However your age and circumstances warrant the maintenance of that policy. If you desire to protect the indebtedness mentioned against your death, add \$1,500 or \$2,000 ordinary life insurance in the same company. You will doubtless live to reap wider benefits from it as the years pass.

F. W. C., Denver, Colo.—A number of stock life insurance companies (barring the small dividends paid stockholders) operate on a purely mutual basis. The argument against them lies not so much in the fact that the business yields an income to the owners of the capital stock, as that the company is controlled by them. In a few instances this control has been injurious to the interests of policyholders.

N. F. D., Chicago, Ill.—The company is financially solvent, but not strong. It is one of the small and young institutions which possess no distinctive merits and which have to pay large commissions to secure business. To be entirely candid, I am of the opinion that the balance of chance is against the company's lasting to the maturity of your policy. But it may. If there is any doubt respecting the assured's physical condition, he should not give up the policy until after he has passed a satisfactory examination and secured a policy from another company. Nothing is to be gained by using the loan value of a life insurance policy as payment in reduction of a mortgage on the home. In the event of death the result would be the same. But that mortgage should be protected by life insurance of the first grade.

J. A., Lafayette, La.—A résumé of the financial condition of the Pan-American Life Insurance Company as of December 31, 1914 (later figures unavailable), shows total assets of \$2,416,370. Liabilities total \$1,775,460 and include capital stock, \$1,000,000 and policy reserve, \$747,976. The net surplus is \$640,910. The premium income was \$532,120; total income, \$685,960. As nearly as my facilities permit I find the management expenses to be \$265,819, which seems to be about 39 per cent of the income. The company made gains on its assumptions for interest, mortality and lapses aggregating \$138,824, while its actual expenses exceeded its "loading" by \$108,365. I know of no way of appraising the book value of the stock. In 1912 the new business written was \$4,522,000, bringing the total in force to \$8,425,000; in 1913, new business, \$6,223,000, with a total in force at end of year of \$12,624,000; in 1914, new business written \$5,681,000, with \$15,670,000 in force at end of year. The company seems to be conducted with good business judgment and its first years indicate a successful future.

Pres. Importers and Traders Nat. Bank

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a second interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

THE Next Issue of The Independent will be a Shakespeare Number. It will contain a double-page reproduction on fine paper of Leopold Flameng's etching of the famous Chandos portrait of Shakespeare, and also the first of the series of Eight Articles which are the basis of The Independent's Shakespeare Contest for American Schools. Concerning this Contest many expressions of approval have been received from men high in position and influence in the educational world. A few of these expressions are printed below. The author of the series is Frederick Houk Law, Ph.D., Lecturer in English in New York University, and Head of the Department of English in the Stuyvesant High School, New York City. His close study of Shakespeare and the Elizabethan period, and his practical experience as lecturer and teacher, have enabled him to write a highly interesting and instructive series of articles equally suitable for schools, for clubs and for private reading.

HON. PHILANDER P. CLAXTON, Superintendent of Education of the United States: "I sincerely hope that The Independent's Shakespeare Contest and the medal offered in connection with it may serve to increase interest in the celebration of the tercentenary of the death of the great dramatist. Anything that may be done this year for the purpose of emphasizing this anniversary and of promoting the study of Shakespeare in the schools of the United States should be encouraged."

C. P. CARY, State Superintendent of Public Instruction, Wisconsin: "We are making brief announcement in our Educational News Bulletin of The Independent's Shakespeare Contest for American Schools. This will bring the contest to the attention of most of the prominent school people in the state of Wisconsin and may do something to encourage entry in the contest."

J. Y. JOYNER, State Superintendent of Public Instruction, North Carolina: "Believing that it will stimulate the study of Shakespeare in the schools, I approve most heartily of The Independent's Shakespeare Contest for American Schools."

H. A. DAVEE, Superintendent of Public Instruction, Montana: "I am very glad to endorse The Independent's Shakespeare Contest for American Schools. I hope no less than one hundred Montana schools will take part in this contest."

C. O. CASE, State Superintendent of Public Instruction, Arizona: "In reply to your favor of recent date I wish to commend your efforts toward stimulating an interest in the Great Bard, William Shakespeare. Your plan of holding contests in the schools meets with my approval and I shall be glad to cooperate with you in any way that I can."

HON. JOHN H. FINLEY, Commissioner of Education for the State of New York: "I heartily applaud your effort to interest the teachers and students in the schools of the state in the reading of Shakespeare, and I hope that you will find yourself under the compulsion of awarding a thousand medals. But I wish, when all this is done, that there might be a rating of all the first papers in the various schools receiving the medals, and the bestowal of another medal for the best essay written in the state."

PAYSON SMITH, State Superintendent of Public Schools, Maine: "I can heartily commend the Shakespeare Contest for American Schools inaugurated by The Independent."

M. L. BRITTAIN, State Superintendent of Schools, Georgia: "In reply to your letter of recent date I take pleasure in commending your Shakespeare Contest for American Schools."

HOWARD A. GASS, State Superintendent of Public Instruction, Missouri: "A person cannot claim to be well educated without a more or less thorough knowledge of Shakespeare. I approve of any movement that will lead to a greater familiarity with Shakespeare and his works. It seems to me that a Shakespeare contest would be one of the most satisfactory ways of arousing the interest of teachers in the study of the greatest English author."

R. C. STEARNES, State Superintendent of Public Instruction, Virginia: "I thank you very much for your letter of January 6, calling my attention to the Shakespeare Contest for American Schools inaugurated by The Independent. This seems to me to be a very happy thought on the part of the management of The Independent, and I hope the result will be a renewed and greater interest in the study of the works of the great English dramatist by our high school pupils."

The Independent Offers a Shakespeare Anniversary Medal

for the best essay from any school in the United States on the life and works of William Shakespeare. Any American school, private or public, elementary or secondary, may take part in the contest, but the medal cannot be awarded unless ten pupils at least compete from that school. Each competitor must complete an original essay of from 500 to 2500 words and hand it in to the judges by May 5. In case of elementary schools the school authorities shall select three judges from among the faculty, pupils or outsiders (including no contestants). In case of secondary schools the contestants themselves may get together and select any three judges they may choose except a contestant. The contest is open free to all schools and a subscription to The Independent is not obligatory. If 1000 schools take part in this contest, 1000 medals will be awarded. Your school does not have to compete with any other school.

Feb. 7, 1916

THE INDEPENDENT SHAKESPEARE CONTEST DEPARTMENT, 119 West 40th Street, New York:
We wish to enter The Independent Shakespeare Contest for American Schools. Please send full details.

THE CANADIAN OVERSEAS

England, to a Canadian soldier fresh-
ly arrived from Canada, is like a new
pair of boots on a school boy; he is
proud of the boots but uncomfortable.
The Canadian Tommy, to the apprecia-
tive eyes of England, is like a miracle,
a geyser, or a water spout, or a river
in flood; something to be admired,
treated with infinite kindness and re-
spect yet somehow dangerous, liable to
do unexpected things or smash sacred
conventions. Having seen England
in its worst season the Canadian soldier
calls the English "sir" and damns their
climate. He takes off his hat in the pres-
ence of the great monuments and he
fumes at the mud. He likes their beer
and he works himself into a rage over
the drizzle of rain. Rain in his boots, in
his great coat, on his hat. If they would
let him fight, how he would fight! But
they won't, so he schemes to get leave
or prays for a Zepp raid to liven things
up, and if he is very, very temperamen-
tal, writes home a grouchy letter. On
leave his spirits improve. On London
leave he is elated. He hires taxis and
buys refreshment like any other gentle-
man, tips commissionaires, and takes
rooms "with bath" so long as his funds
hold out. He is abashed only when he is
"broke." He is subservient only in let-
ter, not in spirit. He delights and as-
tounds the grave people of England
every day of their lives. And all uncon-
sciously. . . . Money! Phst! That
for it, says the Canadian Tommy
after sending his wife's share home.
Decorum! Eh? Spell it!

Subservience!—What? He romps like
an Airedale and looks as solemnly inno-
cent and hurt as a three-year-old when
he is caught at it. Discipline? General
Alderson told me in France that you
could tell a Canadian by the smart cut
of his salute! But in England he salutes
only up till seven o'clock. After seven
on leave he does not see you, and if you
are a wise officer you don't see him
either.—Edmonton Journal.

REMARKABLE REMARKS

GEN. LEONARD WOOD—We are menaced
on all sides.

SENATOR JAMES HAMILTON LEWIS—
What is preparedness?

SECRETARY REDFIELD—Economy is not
the absence of spending.

WINIFRED BLACK—To most women now-
adays love is a side issue.

AMBASSADOR CHINDA—How little is
known here in America of Japan.

LAURA JEAN LIBBEY—Positively do not
allow kisses if you desire to wed.

PREMIER OKUMA—The average Japanese
has lost the dignity of human stature.

OTIS SKINNER—Your real New Yorker
goes to the theatre, but from a sense of
duty.

ED. HOWE—Plenty of boarding houses
are pleasanter places of residence than
plenty of homes.

JAMES SEXTON, OF THE DOCK WORKERS'
UNION—If Germany wins, nothing else on
God's earth matters.

WALT MASON—All girls should marry
when they can. There's naught more use-
ful than a man.

SENATOR JOHN SHARP WILLIAMS—The
Confederate soldier was the most quixotic
human being in the world.

BERTRAM GOODHUE, ARCHITECT—You
can't get comfort and beauty in a house
that costs \$6000 or \$7000.

THEODORE ROOSEVELT—There can be no
greater waste of time than to debate about
non-debatable things.

CHARLES RANN KENNEDY—I wrote my
"The Terrible Meek" by direct inspiration
from Heaven

LOUIS D. BRANDEIS—What we must do
in America is not to attack our judges, but
to educate them.

EMPEROR WILLIAM—All hostile assaults
will break to pieces upon the power of a
clean conscience.

JANE ADDAMS—This war began in se-
cret diplomacy. It will end in secret con-
ferences by diplomatists.

NORMAN HAPGOOD—I do not pretend to
guess exactly what rôle religion will play
in the future.

WOODROW WILSON—There ought never
to be another presidential nominating con-
vention.

BILLY SUNDAY—The Holy Spirit don't
want to take a bath of beer and swim
around in booze. Not on your tintype.

SIR WILLIAM OSLER—Up to fifteen a
boy can be appealed to thru his stomach
and then thru his heart, but not thru his
head.

HENRY HOLT—The Government carries
the *Police Gazette* at a cent a pound and
charges eight times as much to carry a
spelling book or a Bible.

SENATOR HOLLIS—We should abandon
foolish talk about there being any "quar-
rel" between President Wilson and Mr.
Bryan.

THOMAS EWING, COMMISSIONER OF PAT-
ENTS—The new rules, while elaborate and
technical, make for brevity, simplification,
speed and efficiency.

BISHOP LAWRENCE OF MASSACHUSETTS
—I personally would as lief have this coun-
try overtun by every nation of the earth
as to have it under the bondage of mili-
tarism.

GEORGE BRIGHAM—Fricky Hancock took
his bass fiddle to the Gander Creek bottoms
yesterday and played several selections
under hickory trees, but had little success,
as the hickory nuts are nearly all gone.

HENRY J. PIERCE—Were it not for the
discovery of processes whereby it is now
possible, with the aid of electric energy, to
obtain supplies of fixt nitrogen from the
atmosphere, the perpetuation of the human
race would be endangered.

Have You a Boy Problem?

The best boy ever born is a serious problem. The brighter the boy the greater the problem. And you can't solve it by arithmetic, algebra or geometry. It is largely a question of food, hygiene and exercise. The food problem is easily solved with

Shredded Wheat

the most perfect ration ever devised for growing boys and girls. It contains in proper proportion all the elements for building muscle, bone and brain and in their most digestible form. The crispness of the shreds encourages thorough chewing which develops sound teeth and healthy gums.

For breakfast heat one or more Biscuits in the oven to restore crispness; pour hot or cold milk over them adding a little cream. Salt or sweeten to suit the taste. A warm, nourishing meal to study on, to play on, to grow on.

Made only by

The Shredded Wheat Company, Niagara Falls, N. Y.

VOLUME 85

FEBRUARY 14, 1916

NUMBER 3506

THREE HUNDRED YEARS AFTER

WILLIAM SHAKESPEARE, of Stratford on Avon, died three hundred years ago next April. During the next three months millions of school children in the whole English speaking world will study his life, his writings, and his influence. There will be plays and pageants, lectures and readings, essays and books, meetings and dinners, all in memory of Shakespeare.

Why?

Every one must find out the reason for himself. Nobody can tell him why Shakespeare is worth while. All that the professor of literature can do for us is to say: "Here is good poetry. Read it." They have been, all of them, saying this about Shakespeare's works for the last three hundred years, but because this is a busy world and we are apt to forget the best things in it, advantage is taken of this anniversary to remind us of Shakespeare and what we may get from him if we would.

We celebrate this memorial not for the benefit of Shakespeare's memory, but for our own memory. He does not need to be remembered, but we need to remember him. Not because he died three hundred years ago but because he still lives. His bones lie buried in the chancel of the Stratford church underneath a slab which calls down a curse on whoever shall disturb them. But nobody needs to disturb them. Nor does anybody need to dig up his private life.

How Shakespeare looked and lived and what he ate and wore are not important. For in his person and habits Shakespeare was very much like other men of his time. Wherein he differed was in what he wrote and this we have today. Among those who lived in London in 1600 there were doubtless many who were taller and handsomer than he and who wore finer clothes, but there was nobody who wrote such good poetry. By grubbing over the musty piles of legal documents in the London vaults scholars may unearth another signature of Shakespeare's, but that would merely serve to show perhaps another way of spelling his name. They are not going to discover another "Hamlet" there.

It is fortunate on the whole that we do not know so much about Shakespeare's life and personality as we do, for instance, about Queen Elizabeth, for then we might make the mistake of thinking that we knew Shakespeare when we had read his biography. But since all that is actually known about Shakespeare's life can be put in half a dozen pages, there is nothing to distract our attention from his dramas. "The play's the thing."

A poet's influence is to be measured in three dimensions:

Length—How long is he remembered?

Breadth—How widely is he read?

Depth—How deeply is he felt?

It is when Shakespeare is thus estimated by cubic measurement that his greatness can be appreciated. With faults that any schoolboy may detect, he combined merits that no author can surpass. "Next to God," said Alexander Dumas, "Shakespeare has created most." He has filled the world for us with fictitious personages more real than most of the living. He calls them from all ages and countries, Greeks, Romans, Moors, Italians, Danes, Englishmen. He interests us in all classes and degrees of intelligence: Jack Cade and Caesar, Hamlet and Caliban, Portia and Audrey. They are not types but human beings, the heroes with failings, and the villains with virtues. Comedy and tragedy are mingled together as they are in real life.

Shakespeare lived close to his times. He was a successful theatrical manager with all that that implies. He was quick to adapt his themes to changes of taste in people or patron. He gave the public what it wanted, and by so doing he came nearer giving what the public wants today than any other dramatist of his time. He put in something to catch the ears of the groundlings of the Globe Theater and something to hold the attention of the philosophers of the twentieth century.

It may be, our reader, that you have not got as much out of Shakespeare as you might. If so this year is a good time to find out what it is and to get it. If you are "tired of hearing of Shakespeare" it means that you do not know him well enough yet. So we advise you, however well read you may be, to take the time to go thru the eight articles on Shakespeare's life and work which we begin to publish in this issue.

Why is it that some familiarity with Shakespeare's writings is regarded in every country as an essential part of education? The Germans, who are now angrily repudiating most things English, lay claim to Shakespeare on the ground that they study him more and play him oftener than his countrymen. The plans which have for years been in preparation for a great national celebration of the Shakespeare Tercentenary in England will have to be abandoned on account of the war. It devolves then upon us Americans, as majority stockholders in the English language, to show that we are not behind in our appreciation of the greatest poet of that language.

THE PRESIDENT'S PREPAREDNESS TOUR

OPINIONS will differ as to what effect the President's tour will have on the furtherance of his preparedness program. But of this we may be certain: The throngs that came within the spell of his personality have been undeniably moved, and all, whether those who were privileged to hear him or those who have been obliged to read his speeches the next day in cold type, have been imprest anew with the dignity, the responsibility, the moderation and the rectitude of the man. Woodrow Wilson knows how to make a speech. He has something to say, and he says it as befits the Chief Magistrate of a great and free people.

What is then the burden of the President's plea? He repeatedly denies that there is any special war cloud on the horizon. "There is no sudden crisis," he said at Milwaukee. "Nothing new has happened. I am not on this errand because of any unexpected situation."

"I believe in peace. I love peace," he said in Pittsburgh. "I am ready at any time," he declared at New York, "to use every power that is in me to prevent such a catastrophe as war coming upon this country."

There can be no doubt that these are sincere statements. The American people could not have a more tried and true friend of peace at the White House in these dark hours.

The President, however, calls for a large increase of our army and navy. "We have not," he said in Chicago, "enough men in the army now for times of peace." "Such coast defenses as we have," he said at Cleveland, "are both strong and ample, but we have not got enough coast defenses in enough places." "What I am for," he said in New York, "is a body of at least half a million trained citizens who will serve under conditions of danger as an immediately available National Reserve."

The President avers that the navy ranks fourth instead of second on paper. This is so if tonnage is the measurement, tho we remember that the naval officers who testified before the House Committee on Naval Affairs last spring declared that our navy ranked third in fighting power, being a trifle behind Germany and a little ahead of France. But whether it be third or fourth our navy is a competent one. "I do believe," said the President at Cleveland, "that from the standpoint of efficiency our navy is among the finest in the world and second to none." Nevertheless he declared at St. Louis "that our navy ought, in my judgment, to be incomparably the greatest navy in the world." This is an astounding statement and must be a rhetorical exaggeration. We cannot conceive that the President would have the United States embark on a program to outdistance Great Britain, which insists upon maintaining a navy equal to any two other powers.

Now what arguments did the President marshal to convince the people that it is necessary to increase our annual military expenditures by over \$100,000,000 a year. We have searched his speeches thoroly and are able to discover only three.

These are:

First. To maintain the honor of the United States.

Second. To maintain the Monroe Doctrine.

Third. To be ready in case we are forced into the war.

1. "You have laid upon me," said the President at Chicago, "the double obligation of maintaining the honor

of the United States and maintaining the peace of the United States. Is it not conceivable that the two might become incompatible?" "You have bidden me," he said in Milwaukee, "see that nothing stains the honor of the United States, and that is matter not within my control. That depends on what others do."

This is a somewhat indefinite argument. A nation's honor, like a man's honor, is, after all, in its own keeping. No one can dishonor another. All honor's wounds are self-inflicted, as Mr. Carnegie has well said. Nevertheless, we are living in an age with no international court to which the nations are *compelled* to take their affairs of honor. Hence each nation is now the sole guardian of its honor. The question, then, is whether our honor and vital interests are more likely to be violated now than a year ago, before the President changed his mind on the preparedness issue. There is much argument to be made on both sides of this question. The President has submitted nothing concrete to prove his point.

2. The President touched upon the Monroe Doctrine in both his New York and Chicago speeches. At Chicago he said: "We are not asking ourselves, Shall we be prepared to defend our own shores and our own homes? Is that all that we stand for? To keep the door securely shut against enemies? Certainly not. What about the great principles we have stood for, for the liberty of government and national independence in the whole Western Hemisphere?" In New York he referred to our "obligation to stand as the strong brother of all those in this hemisphere who will maintain the same principles and follow the same ideals of liberty [as the United States]."

What America has to fear, if she has to fear anything, are indirect, roundabout flank movements upon her regnant position in the Western Hemisphere."

What "flank movements" the President contemplates "on our regnant position in the Western Hemisphere" he does not state. We cannot ourselves surmise what they may be. Suffice it to say that never since the Monroe Doctrine was promulgated has it been questioned by any nation on earth. The United States, moreover, is better prepared to defend it today than it has ever been in its history, while the South American nations would probably come now almost unitedly to our support, as they might not have done in the past. Moreover, if the Monroe Doctrine was seriously threatened, the British fleet would almost certainly come to its defense. England has nearly as much at stake in maintaining the New World free from the curse of European politics as we have. On the whole, it looks as tho the Monroe Doctrine is in the "most regnant position" it has ever occupied during its entire existence.

3. The President fears that we may be drawn into the present war. No man's opinion in the United States is entitled to greater weight on this question than his. "I cannot tell," he said in New York, "what the international relations will be tomorrow. America does not control the circumstances of the world." At Cleveland he said: "The dangers are infinite and constant. The world is on fire and there is tinder everywhere." At Chicago he said: "No man can completely say whether we will be drawn into the struggle or not." At Milwaukee he said: "The thoughts of men who are engaged in this struggle

are concentrated upon the struggle itself, and there is daily and hourly danger that they will feel themselves constrained to do things which are absolutely inconsistent with the rights of the United States." At Des Moines he said: "Do you want the situation to be such that all the President can do is to write messages, to utter words of protest?"

But the only speech where the President specified what some of the belligerents "might feel constrained to do" was in the one delivered at St. Louis. "One reckless commander of a submarine," he remarked, "choosing to put his private interpretation upon what his government wishes him to do, might set the world on fire. . . . There are cargoes of cotton on the high seas, cargoes of wheat on the seas, there are cargoes of manufactured articles on the seas, and every one of these cargoes may be the point of ignition."

The United States might have to fight to save American life. It ought never to fight simply to avenge lives already taken. Nor should the United States fight simply to save property. American lives have been taken by belligerents in this war. But in each instance the offending nation has offered reparation and has expressed itself as willing to give guarantees that similar acts would not recur. There is no evidence that these protestations are insincere. When the "Alabama" was fitted out in England as a privateer for the Confederacy and was committing her depredations on Northern commerce, President Lincoln did not immediately declare war on England, but notified her that at a suitable time he would demand reparation. After the Civil War was over and passions had cooled the matter was taken to arbitration, and, altho England declared the question affected her honor, damages were duly awarded the United States.

The President is right therefore in holding that we are more in danger of having our citizens killed and our property and other rights under international law invaded than before the war. But if the President takes the course he has unswervingly maintained hitherto we are more than likely to find that there will be no deliberate assaults on our honor, and all other questions that cannot be settled during the heat of hostilities can well be postponed till the war is over and the nations are ready to consider more equitably the rights of neutrals.

The President may be right in his demands. In order that there may be no misunderstanding let us repeat, as we have frequently said before, that The Independent is on the whole in favor of his military program as suggested in his message to Congress. It is moderate and in no sense a militaristic departure. But the President's speech-making tour has not thrown sufficient light upon the question of special and immediate need for such an increase of naval and military strength as he desires. The country is entitled to know before taking his advice.

FIFTY YEARS OF Y. W. C. A.

IN February, 1866, in Boston an inconspicuous organization for the welfare of working-girls was founded. In February, 1916—after fifty years of growing usefulness, working always toward its early ideal, "not a charity, not a creed, not a club, but a comradeship based on the democracy of a common faith"—the Young Women's Christian Association of America is

planning to celebrate its anniversary by a great jubilee, a month long and a nation wide.

Reminiscences and prophecies are both in order; the achievements of the Y. W. C. A. in the past offer a broad basis of hope for the future. But the organization is planning to make the most of its opportunities to remind the people of the United States during its anniversary celebration of all that it is doing and hopes to do.

Pageants showing the various steps in its history and suggesting its future plans are being given in nearly every city of the United States. Probably the most spectacular of these is the one in New York City, where over a thousand girls are to take part in a dramatic presentation of "Girls of Yesterday and Today."

In connection with these anniversary celebrations the campaign for a half million endowment fund for the Y. W. C. A. all over the country is being carried along vigorously. Contributions have already come in in large quantities and the prospect of a satisfactory total at the end of the month seems to justify the theory that the people are glad to pay for an institution that has proved adequate to meet their needs.

The growth of the Y. W. C. A. has kept pace with the revolution of woman's work in the world, which is just another way of saying that its progress has been swift as well as sure. Its international relationships have grown and strengthened. The scope of its work has come to include all classes of women and girls, and to offer them nearly every kind of advice or training. Fifty year's good work well done! May the next fifty be equally successful!

INDEPENDENCE OR SELF-GOVERNMENT

THE Democrats in Congress are resolved to set a definite date for our abandonment of the Filipinos. The Senate has passed the Philippine Government bill with an amendment directing the President to give the islands independence in four years unless when the four years have passed he thinks Congress ought to take another year to reconsider the matter.

This provision is better than the vague preamble which was urged last year, promising independence some time. For it brings two questions uncompromisingly before the people of the United States: What is our duty to the Philippines? Can we discharge that duty by going away and leaving them now?

On this question The Independent has perfectly clear convictions. When the United States took over the Philippines from Spain it assumed complete responsibility for their future. It became then our appointed task to protect the islands from outside aggression, to promote their industrial and commercial welfare, to educate the people of the islands, and to prepare them for self-government.

What profit and advantage this country could get from the islands was, from the point of view of right and duty, a purely secondary consideration. Our own action in accepting the islands from Spain imposed on us the solemn duty of putting their interests first in every action we took in relation to them.

How can the United States best discharge that duty? The Democratic party evidently believes it can be best done by making the islands independent forthwith. From

this view The Independent—in spite of its name and the earnest convictions that the name symbolizes—strongly dissents.

The proponents of immediate independence are in confusion of mind over two things—independence and self-government.

Self-government is the inalienable right of every civilized people. As soon as a people are fitted for self-government, they are entitled to it as a matter of fundamental justice. The existence of autocracy is always wrong; the fact of democracy is always right.

But democracy and independence are not synonymous; they are not even inseparable. Without self-government a people that is fit for it is oppressed; without independence they may be as free from oppression as any people on the earth.

The peoples of Canada and Australia have self-government without independence. The peoples of Hayti and Mexico have independence without self-government. Which are the happier?

The American Revolution had its origin in the intense conviction of the inhabitants of the Colonies that they must have self-government. It became the War for Independence only because it was impossible to get self-government without independence.

It is self-government that we owe to the Filipinos. We must see that they have it just as fast as they are fitted for it, or be false to our trust. But we cannot be sure that they will get it best and most quickly by being made independent. Indeed the chances are all the other way.

The majority of the people of the Philippines are not yet fit for self-government. A people thus largely unfit is the ripe prey of selfish aggression from without and selfish exploitation from within.

The duty of the United States is plain. It is to bend its best energies to the task of fitting the Filipinos for self-government; to extend the measure of their control over the affairs of the islands just as rapidly as they are fitted to exercise it; and to leave the question of independence until that future time when the Filipinos shall be in fact a self-governing people, and as such competent to decide intelligently and wisely the question of their own future.

The Democratic proposal, speciously attractive in appearance, is in reality a plan for spurning this duty and violating the trust we assumed when we took over the islands from Spain.

THE NON-JEWISH SABBATH

IT has been a debated question among scholars whether the Sabbath was a purely Jewish institution or whether it was known also to the surrounding nations. There is no evidence of an Egyptian Sabbath, for the Egyptians had a week of ten days; nor have we any proof of a Phœnician Sabbath and the evidence of a Babylonian Sabbath has been meagre; but in a volume just published by the Yale University Press Professor A. T. Clay has made important addition to the proof that in Babylonia a seventh day of worship was recognized.

Up to this time there had only two inscriptions been found which could be interpreted as referring to the Sabbath. One of these was a list of words which were defined and it read *um nuh libbishabattum*, which was at

first translated, "The day of the rest of the heart is the Sabbath." But this translation must be explained, for by the "rest of the heart" is meant the appeasement of the gods and by *shabbattum* is meant the full moon, that is, the time of the full moon is the time for appeasing the gods. There appears to be here no mention of the Sabbath, altho the passage may be of value in a discussion of the origin of the word Sabbath. The other inscription would seem more definitely to refer to a seventh day. It is a list of the days of the month with the duties of each, and on the 7th, 14th, 19th, 21st, and 28th certain acts were forbidden. It is thus translated by Professor Clay:

An evil day. The shepherd of great peoples shall not eat flesh cooked over coals of an oven; he shall not change the garment of his body; he shall not put on clean (clothes); a sacrifice he shall not offer; the king shall not ride in his chariot; he shall not speak as a king; the diviner shall not give a decision in a secret place; the physician shall not lay his hands upon the sick; it is not suitable to pronounce a curse. At night the king shall bring his gift before Marduk and Ishtar; he shall offer a sacrifice. The lifting up his hands is pleasing to the god.

It will be seen that this "evil day" is like the Jewish Sabbath a day of taboo, a day on which certain things were forbidden. The king was not even to sacrifice, but when the day was over he could sacrifice. This seems to imply that the day was supposed to begin in the evening, and it was at the evening that the new moon would first be seen, indicating that the day and month had begun. No explanation is given why the 19th day was included, but the other days clearly indicate the recognition of a seven-day week except that the weeks begin with the new moon, and as the month has a little over twenty-nine days, one week has eight days. This "evil day" Sabbath rests on the four quarters of the moon.

We now come to Professor Clay's new evidence. In the Yale collection Professor Clay has found a group of twenty-three tablets containing a report of monthly receipts of sheep intended for temple service at Erech, a very ancient city in southern Babylonia. They are dated from the fifth year of Cyrus, 534 B. C., to the sixth year of Cambyses, 523 B. C. inclusive. The tablets are all of the same nature, and after stating that the sheep have been received for sacrifice, a report is made in four columns for each day. Now the important thing is that a note is added to the record for the 7th, 14th, 21st and 28th days stating that an additional sacrifice of a lamb was offered on that day. Here is a definite recognition of a special religious observance celebrated at the temple on those days. The evidence is indubitable that four days which we may call Sabbaths were observed each lunar month seven days apart, and this evidence is of great value for religious history.

To be sure, these tablets come from a comparatively late period, towards the end of the Jewish Babylonian captivity; but taken with the other evidence it is clear that no Jewish influence is here to be discovered. And the Babylonian Sabbath was of very little account as compared with that of the Hebrews. It did not enter into the daily life of the people. We have thousands of contract tablets all dated and they prove conclusively that there was no interference with ordinary business and work. This discovery is of much importance, but much more needs to be learned as to the origin of the observance of the Sabbath, a point on which the text of the Fourth Commandment in Deuteronomy gives a different reason from that in Exodus.

THE STORY OF THE WEEK

The Arrival of the "Appam" The steamer "Appam" of the Elder Dempster Line, bound from Africa to England, had not been heard from for more than two weeks and had been given up as lost when to the amazement of everybody she appeared at Norfolk, Virginia, in charge of a German prize crew. She had left Dakar on the Senegal coast and had passed the Canary Islands on her northward voyage when on January 15 she was overhauled by a German raider. The strange vessel looked like a disreputable tramp, but as she came close to the "Appam" she hoisted the German flag and at the same moment the sides of her fore-castle fell away, disclosing a battery of six-inch guns. A shot from a small gun fired across the bow and another across the stern of the "Appam" brought about her prompt surrender. A prize crew of twenty-two in command of Lieutenant Hans Berg took charge of her and the crews of other captured vessels were put aboard. All of the naval and military men on the "Appam," about fifty in number, were transferred to the raider. So also was the 36,000 pounds of gold bullion carried by the "Appam."

On the following day the raider fell in with the Australian freighter "Clan MacTavish," carrying 10,000 tons of meat to England. Altho she carried only small guns and her crew was Hindu, the "MacTavish" showed fight and only after losing fifteen men did she surrender. Four of her wounded crew were taken on the "Appam" which then set sail for America.

On February 2 she arrived at Newport News flying a German naval flag and giving the name of "His Majesty's Ship Buffalo." There were on board 452 persons, comprising 116 of the passengers and 155 of the crew of the "Appam," 138 seamen from the other vessels captured, twenty German civilians who were being taken to England for internment and the prize crew. The German civilians assisted the prize crew in keeping guard and the crew of the "Appam" did the work. All arms and possible weapons even to penknives were taken away from the English and they were put on parole not to mutiny. There was some talk among them of overpowering their guards or seizing Captain Berg, as he went about freely, but the plan was abandoned on account of the danger to the women and the probability that the ship would be blown up. Explosives had been placed in various parts of the ship and wires run so that they could be fired by an electric key from the bridge in case the vessel was in danger of being captured.

All the passengers agree that the Germans treated them with courtesy and kindness and did all that they could to make them comfortable. Food ran very short toward the end of the voyage across the Atlantic, but the Germans

THE GREAT WAR

January 31—Zeppelins bombard England, killing fifty-nine. Food riots in Lisbon.

February 1—British steamer "Appam" brought to Norfolk as a German prize. Turkish heir-apparent commits suicide.

February 2—French blow up German tunnels in Argonne. Russians advance north and south of Erzerum.

February 3—Germans attack British near Loos. Stürmer succeeds Goremykin as Russian premier.

February 4—Austrians within fourteen miles of Durazzo, Albania. British relief expedition held up on Tigris.

February 5—Germans bombard allied fortifications north of Salonica. Germans abandon African Kamerun.

February 6—England refuses Americans permission to send food to Polish sufferers. Austrians and Bulgars join forces at Elbasan, Albania.

shared the same fare as their captives. The steward continued to print menu cards even when they got down to little but bread and rice.

The Mysterious Raider

What the vessel was which captured the "Appam" and where she hailed from is still a mystery. According to Lieutenant Berg she was the "Möwe" (Seagull) and this name was on some of the caps of the prize crew, but the only "Möwe" known was a small surveying vessel which was reported sunk by the British when they bombarded Dar-es-Salaam in German East Africa early in the war. This German sea-rover is reported to be a swift vessel of some 6000 tons and is supposed by some to be the German fruit steamer "Ponga" converted into a disguised cruiser. Lieutenant Count Dohna, of the German navy, is in command.

Carter in New York Evening Sun

'HERE, UNCLE SAM, SAVE THIS FOR ME'

If she was fitted out in a German port she must have made her way unsuspected thru the British fleet which guards the mouth of the North Sea. She seemed, at any rate, to have no difficulty in eluding the British cruisers which are patrolling the American coast outside the three mile limit for the express purpose of catching German vessels. She could hear them talking together by wireless and since they did not use a code she was able to find their position and dodge them.

It is disconcerting to the British Government to find that in spite of their vigilance there is one and perhaps more German cruisers at sea and infesting the route around Africa, which liners have been taking of late to escape the submarines in the Mediterranean. It appears that the "Möwe" or whatever she is picked up seven British vessels within a week between the Canaries and Madeira. Her first prize was the steamer "Farringford," carrying 5000 tons of copper ore. This she sank, on January 10. The same day she encountered the "Corbridge," with 600 tons of coal. She was taken along as a collier. Next the "Möwe" captured and sank the Admiralty transport "Dromonby," with 6000 tons of coal, the "Author," with 8000 tons of general cargo, the Admiralty "Trader," with 6000 tons of sugar, then the "Ariadne," with 5000 tons of wheat. The crews of all these with their effects were carefully transferred to the "Appam" and so sent to the United States. The frozen beef and mutton on the "MacTavish" was used to provision the "Möwe."

The "Appam" Case

The proper disposal of the "Appam" is one of the most perplexing questions which has been brought before our Government in the present war. Is she a prize or a German cruiser? What are the rights and status of her passengers, who include British officials, gunners and seamen, American citizens, East Indians and Germans who were prisoners of the British when the "Appam" was captured?

Lieutenant Berg, on the assumption that he was in command of a German naval vessel, paid an official call upon the commandant of Fort Monroe as soon as he had cast anchor off Old Point Comfort. Then he went with the German Vice Consul to the Collector of the port of Norfolk and asked permission to purchase food and to send the four wounded men to the hospital.

All of those on board except the German prize crew and those who served as such on the "Appam" were released by orders from Washington after two days of lively discussion between the British and German embassies and our Government. Among the passengers thus released the most distinguished are Sir Edward Merewether, Governor of Sierra Leone, and Lady Merewether, Lieutenant Frederick James, Secretary

Mann, Underwood & Underwood

ENGLISH CAPTIVES TAKEN ON THE HIGH SEAS

Passengers on the "Appam," brought into port at Norfolk, Virginia, by a German prize crew from the "Möwe," which had seized her after sinking five other English vessels. All were released within a few days

Administrator of Nigeria; F. C. Fuller, Commissioner-General of Ashanti, and the captains of the six captured vessels.

This action of our Government implies that the "Appam" is to be regarded as a prize of war, instead of an auxiliary cruiser, but the question of her disposition remains to be settled and may form the subject of long controversy or litigation with either the German or British Governments. The British will doubtless contend that according to Article 21 of the Hague Convention of 1907 a prize brought into a neutral port must be ordered to leave at once and if the order is not obeyed the ship is to be released and turned over to her original owners and the prize crew interned during the rest of the war. In this case, of course, the "Appam" leaving Hampton Roads would at once fall into the hands of the British cruisers waiting outside and would be captured or sunk. But Great Britain has refused to consider herself bound by the Hague Convention since it was not signed by two of the belligerents, Serbia and Turkey. Moreover, neither the United States nor Great Britain subscribed to Article 21.

It is thought likely that the American Government will base its ruling not on the Hague Convention but on the treaty between the United States and Prussia concluded in 1799 and modified in 1828. According to this a prize ship may come and go freely.

More Zeppelin Raids The most serious of the air attacks on England took place on Monday night, January 31. A squadron of six or seven Zeppelins passed over the midland counties and dropt over 300 explosive and incendiary bombs. Most of these fell harmlessly in the fields and canals. Those that exploded in the towns destroyed scores of working-class homes, but, according to the English reports, doing no harm to the munition works or military buildings. The counties mentioned as suffering from the visitation are Norfolk, Lincolnshire, Staffordshire, Suffolk, Leicestershire and Derbyshire. The casualties reported amount to 160, of which fifty-nine were killed and 101 wounded. These comprize eighty-six men, sixty-eight women and eight children.

The Zeppelins passed over some places twice or hovered for several

hours over a particular spot, trying with their searchlights to discover where they were. Upon one farmhouse which they apparently mistook for an important building they wasted thirty bombs with no other result than the maiming of some sheep and the killing of a lot of sparrows.

Fourteen towns are said to have been attacked, but their names are concealed by the censor. At one place a Congregational chapel was struck, where a religious service was being conducted by a woman. A bomb falling close to the building killed her and two women in the audience. At another point a family consisting of an elderly couple, their married daughter, her husband and their children were sitting around the fire when a bomb exploded in the garden path outside the door and they were all torn to pieces. Hardly had their bodies been removed from the ruins of their home when the Zeppelin came back and dropt two more bombs in the vicinity.

The Germans justify the raid on the ground that it was a blow struck at the heart of industrial England, the center of the munition manufacture, and they claim that the Zeppelins went as far as Liverpool on the western coast and demolished factories and docks. The German War Office denies the statement recently made in Parliament that the Allies held the supremacy of the air. In proof of the contrary they assert that from October to February they lost fifteen aeoplanes on the western front while the Allies lost at least sixty-three.

Altho the British anti-aircraft guns fired upon the aerial fleet whenever they could sight them, none of the Zeppelins were brought down on the land. A British trawler, however, reports having sighted a wrecked Zeppelin floating in the North Sea. The Germans who were on the platform of the airship begged for rescue, but the British skipper refused to take any of them on board; for he said he could not trust the Germans, and since they numbered more than twenty and his crew only nine he left them in the water and went away to report to the authorities.

Lord Rosebery's demand for reprisals on Germany is echoed generally from the British press and pulpit. But the *Manchester Guardian* on one side and the German Socialist pa-

per *Vorwärts* on the other argue that airship raids are futile for military puposes and serve only to exasperate the enemy and stir them to fiercer resistance. The coroner's jury, which held the inquest on the thirteen Zeppelin victims in Staffordshire, returned a verdict of "wilful murder against the Kaiser and the Crown Prince as being accessories to and after the facts of the death."

Paris was visited by a Zeppelin on the night of January 29. It flew at a height of over two miles and was concealed from view by the fog. Thirty aeroplanes took to the air in search of it, but it escaped safely and returned to Paris on the following evening. Fourteen men, nine women and one baby were killed and twenty-nine other persons injured. The bombs mostly fell in the tenement district. In one of the demolished houses a Zouave, who had returned from the front on a furlough, was seated at the table telling war stories to his family group assembled to welcome him, his wife and daughter, his father-in-law, and his sister with her two little boys. The bomb, which tore off the front of the house, killed all seven of them instantly.

The Zeppelin attacks on Paris are stated by the Germans to be in reprisal for the bombardment of Freiburg and other German unfortified towns by the French aeroplanes.

The War in Asia There are three distinct but interrelated campaigns in the region between the Caucasian mountains and the Persian Gulf. On the north the Russians are fighting the Turks about Erzerum. On the south the British are trying to advance up the Tigris River. On the east the Russians are invading Persia from the Caspian Sea.

In the first campaign the Russians are progressing famously, if we may credit the Petrograd reports, which are, indeed, but faintly contradicted from Constantinople. They claim that the Turks were driven back from the Caucasian border with such slaughter and confusion that they failed even to rally behind the line of fortifications which had been prepared for the defense of Erzerum and which extend for more than a dozen miles to the north of that city. It is rumored that the Turks have evacuated Erzerum. This, however, is

too incredible to be accepted without confirmation, for Erzerum occupies a strong and easily defensible position among the mountains and should be capable of standing a long siege. In 1878 an English officer who happened to be in the city at the time it was attacked assumed command and held it against the Russians till the end of the war. The Turks are renowned for stubborn resistance when besieged and their defense of Gallipoli shows that they have not lost their former ability. The Russians launched their first attack at Erzerum a year ago last October, so the Turks and their German allies have had abundant time to put the city in a state of defense. If then Erzerum surrenders shortly it will mean a very complete collapse of Ottoman courage. It is much more probable that the Russians will be content with investing the city and then pass on as they did in the case of Przemyśl in their Galician campaign. The reports of their advance to the north and the south of Erzerum indicate that this is what they are doing.

Of the British on the Tigris we hear little, but General Townshend's force at Kut-el-Amara is still holding out and General Aylmer's relief expedition is reported to be making progress up the rivers. The "rivers of Babylon" came to the aid of the English in their distress. The flooding of the Tigris filled the Turkish entrenchments at Kut and drove out their defenders. When the British came to examine the works they found twenty-two rows of immensely deep trenches with miles of communicating trenches.

In Persia the Russians have taken Sultanabad, but this is southeast of Hamadan, whereas they must go southwest if they are to give any aid to the English on the Tigris. Their advance in this direction appears to be barred by a force of Persian tribesmen, said to number 16,000, under German officers, between them and Kermanshah.

Prince Yussuf Izzedin, the heir apparent to the Turkish throne, is reported to have committed suicide. Rumor has it that he was assassinated or forced to kill himself by Enver Pasha, the virtual ruler of Turkey, against whom the Prince was conspiring.

The President's Speeches

President Wilson returned to Washington on the 4th, believing that he had been successful in arousing public sentiment for the support of the Administration's defense plans. He had made ten speeches in large public halls, and as many short addresses from the platform of his train. His reception in those parts of the Middle West where there are many German-Americans, and in places where the defense program was said to be regarded with hostility, had been enthusiastic. On the 31st, in Milwaukee, he said the danger of any division of domestic sentiment on account of race affiliations had been exaggerated. He knew that when the test should come every man's heart would be for America first. But there were dangers which we could not control. Our vital interests might be touched to the quick at any moment. He was determined to keep out of the war, if possible, but the time might come when it would be impossible to preserve both peace and honor. He repeated his arguments in favor of creating a trained reserve of volunteers, men who would not be mere targets, but would know something about arms, discipline and camp sanitation. The impulse behind the movement for preparation had not come from the manufacturers of arms and ammunition. He had urged Congress to provide for a Government armor plate factory and for plants at which munitions could be made. The Government could take care of itself. This was not a money-making agitation. He was not a dupe. "I am not so innocent as I look," said he. The navy had not been neglected, but it had been built slowly. It was of fine quality, a splendid navy, but it was lacking in quantity. The proposed five years' program would make it adequate for defense.

In Chicago he said that no one could tell whether the United States would be drawn into the war or not. We were continually called upon to assert and uphold the international law standards of times of peace, and had been cruelly misjudged abroad, where many held that we remained neutral merely to make money. It was a terrible thing to

have the honor of the United States placed in one's keeping. We might have to assert the principles of right and humanity. What force was available? He was confident that Congress would approve the defense plans. If they should fail, "I may have to suffer the mortification and you the disappointment of having the combination of peace with honor proved impossible."

In Iowa, Kansas and Missouri Addressing a great audience in Des Moines, the President said some were preaching war and asserting it was the duty of the United States to seek entanglements abroad and deliberately to enter the war. Others were preaching peace at any price and in any circumstances. There was a price which was too high for peace, and that price was the loss of self-respect. He had found it an anxious and difficult task to keep out of the war. There was no danger arising in our own country, but the danger lay in what other nations might do. Was the President to do nothing but write messages? Was he to do nothing when our vital interests and honor were attacked by violations of international law? Was there to be peace at the expense of honor? There should be men behind the President so trained that they would not be sacrificed. As for the profits of manufacturers, the Government plants which he had suggested would be enough to control prices.

At Topeka he said there was no new or special crisis, but the situation was critical every day. There was combustible material in this country, and at Washington they were trying to cover up the exposed tinder. He was asking not for a great armament, but for a slight increase of the regular army, which was not large enough now to patrol the Mexican border. The force was not to be used for aggression or invasion. But if this country should be invaded, what would Kansas do? It might be necessary to vindicate the rights of American citizens on the seas and in foreign trade. Only on a most solemn occasion would he make such an appeal. The final test of the validity and strength of American ideals had come.

WELCOMING THE PRESIDENT ON HIS PREPAREDNESS PILGRIMAGE

Great crowds greeted him and heard him enthusiastically wherever he went on his Middle Western tour. This is the way Waukegan, Illinois, turned out to see and hear him

The rest of the world must be made to realize just what America stands for.

There were 18,000 people in his audience at Kansas City. "I may have to ask," said he, "who stands back of me. Where is the force?" Editorial sneers at his "notes" in papers that opposed preparation did not show the real temper of the people. He pointed out again the need of a trained reserve of volunteers. Our great sweep of coast called for an adequate navy, but ours was fourth in size. At St. Louis he said he had found no indifference in the Middle West. No other navy had to cover so great a coast area for defense and ours ought to be incomparably the greatest navy in the world.

Philippine Independence By a vote of more than two to one the Senate last week passed the Philippine bill, with the Clarke amendment, which provides that the islands shall be made independent in not less than two nor more than four years, altho the President is permitted, if in his judgment it is expedient and proper, at the end of four years to delay independence during one session of our Congress. This makes the final date not later than March 4, 1921, but the action may be taken before the end of 1918. The vote was 52 to 24. All the Democrats present were counted in the affirmative, and with them six Republicans—Senators Borah, of Idaho; Clapp, of Minnesota; Kenyon, of Iowa; La Follette, of Wisconsin; Norris, of Nebraska, and Works, of California. Two days earlier the Clarke amendment had been adopted by a tie vote of 41 to 41, the Vice-President breaking the tie.

All provisions requiring the President to negotiate with other nations for the neutrality of the islands, and another binding the United States to guarantee their independence for five years if neutrality agreements should

not be obtained, were excluded from the bill by a vote of 53 to 31. The retention of naval and coaling stations for our use was made permissive, instead of mandatory, but a motion to exclude all reference to such stations was lost by a large majority.

Many amendments designed to modify the Clarke amendment were proposed. Mr. Hitchcock, chairman of the committee, offered one providing for some additional delay and conditioning independence upon the adoption of a Filipino constitution. This was rejected. Another rejected amendment was Mr. Cummins's providing for an American commission to work with the Filipinos for a constitution, the adoption of which should precede independence. It is said that the bill, as passed, has the support of President Wilson. It now goes to the House, where it was passed in the preceding Congress, but with no date for independence, altho ultimate independence was promised in the preamble. The Philippine Assembly and Commission passed last week a bill for the purchase of the Manila railroad by the payment of \$4,000,000.

Treaties Favorably Reported

The treaties with Colombia and Nicaragua, which have been awaiting action for two years, are soon to be considered by the Senate. Favorable reports on both of them have been ordered by the Senate Committee on Foreign Relations. It will be recalled that the treaty with Colombia provided for the payment of \$25,000,000 by the United States, with an expression of regret that anything had occurred to disturb the relations between the two countries. Some in the Senate held that \$25,000,000 was too much; others objected to the provision that Colombia's war vessels and merchant ships in the coastwise trade should not be required to pay tolls for

passing thru the Panama Canal, and some complained that the expression of regret was equivalent to an apology and an admission that we had done wrong in connection with the secession of Panama. Before the favorable report was ordered, the sum to be paid was reduced to \$15,000,000, and the expression of regret was made a mutual one, in the following words:

The Governments of the United States and the Republic of Colombia, in their own names and in the names of their respective peoples, wishing to put at rest all controversies and differences between them arising out of the events from which the present situation on the Isthmus of Panama resulted, express sincere regret that anything should have occurred to interrupt or to mar the relations of cordial friendship that had so long subsisted between the two countries.

The vote in committee was 8 to 7, all the Republicans opposing a favorable report, while all the Democrats, except Mr. Clarke, of Arkansas, were for it. A motion made by Mr. Borah, for open discussion of the report in the Senate, is pending. Predictions are made that the two-thirds required for ratification cannot be obtained, as nearly all of the Republicans and several Democrats are in opposition. The Minister from Colombia has publicly expressed his disapproval of the changes made by the committee.

The treaty with Nicaragua was reported by a vote of 10 to 3. It provides that we shall pay \$3,000,000, receiving in return the exclusive right to make a canal on the Nicaragua route, three small islands, and a naval base in the Bay of Fonseca. Salvador and Honduras have objected to such a use of the bay, which touches their coasts. Probably the committee will soon order a favorable report on the treaty with Hayti, under which we are already exercising the powers of a financial protectorate in that country. There is said to be no serious opposition.

The Situation in Mexico

Villa, with a few followers, has thus far defied the Carranza bands that have been pursuing him. At the beginning of last week there were reports that he had been surrounded. Two days later it became known that he had destroyed railroad bridges between Juarez and Chihuahua City, intercepted a train, robbed the passengers and killed one of them. This was General Oruelas, formerly for two or three years in command of the Villa garrison at Juarez. Not long ago he accepted amnesty from Carranza, and he was on his way to join Carranza's army in the south. Having taken him from the train, Villa denounced him as a traitor, and put him to death with his own hand. On the following day it was said that Villa was approaching the boundary at Ojinaga, with several mules carrying stolen gold and silver bullion. The American troops were watching for him, and had been instructed to put him under arrest. But instead of trying to cross the line, he attacked the Carranza garrison at Montezuma, 100 miles south of Juarez. It is said that General Argumedo, another rebel who was successful recently

in the vicinity of Torreon, has been defeated and made a prisoner. But on the east coast, in the oil district, between Tuxpam and Tampico, the Carranza forces have suffered reverses, and the oil camps have been looted. Bandits are in possession of the country between Vera Cruz and the capital, and brigandage prevails thruout southern Mexico. The people are fleeing to the towns for safety.

Carranza's Minister of Justice explains that the acquisition of real estate by foreigners has been forbidden because Mexican owners, being in distress, are driven to sell at very low prices, and also for the reason that speculators have been using the country's depreciated currency to their disadvantage in making purchases. Carranza desires to keep the land in Mexican hands. It is understood that bankers in New York are not willing to make loans to the Carranza Government, which is sorely in need of money, unless they receive both from Carranza and from our Government assurances which neither is expected to give. Some have suggested such a financial protectorate as has been established in Santo Domingo. There is in Mexico a movement for woman suffrage, originating in Yucatan, where a Woman's Congress was recently held. In the Mexican capital a thousand clerks employed in the retail stores are on strike for a wage increase of twenty-five per cent, to be paid in gold.

The Canadian Capitol Burned

A fire, which originated in an explosion, destroyed a large part of the Canadian Parliament Building at Ottawa on the night of the 3d inst. The House of Commons was in session when the fire started in the reading room, and there were many persons in the great building, one of the finest examples of Gothic architecture, which was erected at a cost of \$6,000,000. The Speaker's wife, Mme. Sevigny, escaped with her children by

Underwood & Underwood

WHEN THE MOUNTAIN STRIKES AT THE RAILROAD

An avalanche hurled two cars of a Great Northern train from the track near Corea Station, Washington, in the Cascade Mountains, on January 22. This steel day coach was carried seventy feet down the mountain side

leaping from a window into a life net, but two of her guests, Mme. Bray and Mme. Morin, of Quebec, lost their lives. Other victims were the assistant clerk of the House of Commons; B. B. Law, a member from Nova Scotia; a policeman and two employees. Martin Burrell, Minister of Agriculture, was severely burned. The legislators had great difficulty in reaching places of safety, as the rooms and corridors were quickly filled with smoke. Sir Robert Borden, the premier, was rescued by the Minister of Public Works. Firemen saved the Library of Parliament and the two wings in which were ministerial offices, but the main part of the structure, containing the House and Senate chambers, was almost wholly destroyed.

Fire Chief Graham, of Ottawa, says that the fire was the work of an in-

cendiary. The initial explosion burst open the doors of the reading room. Hand extinguishers that were used only added fuel to the flames, for they had been filled with gasoline, probably by those who caused the fire. In the following two days there were explosions and fires in four neighboring factories where munitions or clothing for soldiers are made. One factory was destroyed. Soldiers on guard drove away with rifle shots a man who, it is believed, was planning to wreck the great Victoria bridge at Montreal. One man arrested because it was thought that he started the fire in the Parliament Building has been released, his innocence having been shown. It is asserted that warning was given to an officer of our Government three weeks ago that attempts to destroy the Parliament Building, two or three other prominent buildings and several Canadian munition factories, would soon be made.

Woman Suffrage in Manitoba

By a unanimous vote the legislature of Manitoba, Canada,

has passed an act giving women the right to vote. Only one member, Joseph Hamelin, Conservative, even spoke against the measure and his argument that "votes for women might cause domestic troubles at election time" did not prevent his voting for it. As soon as the royal assent is given the women of Manitoba will have the right to vote at all except Federal elections, and to sit in the legislature.

The fight for suffrage in Canada is being carried on by women of all classes thru their various societies and organizations. Most of their work has been a direct appeal to the legislators—a method similar to that being used by the suffragists at Washington now—and there has been little or no popular agitation thru a general campaign.

CANADA'S PARLIAMENT BUILDING IN FLAMES

Fire destroyed the Dominion Parliament Building in Ottawa on February 3 and 4, causing a loss of seven lives and about five million dollars. All Canada suspects a German plot, but incendiarism had not been proved

FROM STATE TO STATE

DELAWARE: Citizens interested in the civic welfare of Wilmington, working in concert with the United States Bureau of Education, have inaugurated a movement to make Wilmington an English-speaking city. The large number of foreigners attracted to that city and vicinity by the great munition plants and by the enlarged operations of its many other industrial institutions has well-nigh overwhelmed the English-speaking population. But it is believed that the day and evening schools which are being opened for the study of English will soon bring about the desired change, since the foreigners generally are eager, and therefore quick, to learn the language of the country.

DISTRICT OF COLUMBIA: The committee appointed by Congress to investigate the relations between the Federal Government and the District of Columbia has just presented a unanimous report. The half-and-half plan is to be abolished; a fair system of taxation of residents is to be devised; the proceeds of this taxation are to be covered into a special fund to be applied to the expenses of the District; any supplementary needs are to be met by Congressional appropriation from the Federal Treasury. There seems to be a general conviction that the report will be adopted, thereby eliminating one great source of delay in Congress and providing a system of government for the city far better adapted to its needs. The half-and-half plan was a source of endless bickerings, and gave occasion for any amount of petty politics. It will now rest with Congress alone to make the city a truly National Capital.

ILLINOIS: After four and a half years of careful investigation, costing upward of \$500,000, a committee of the Chicago Association of Commerce has reported that it is utterly impractical to electrify the steam railroad terminals in that city. Technically it could be done, but financially it is out of the question. The investigation was probably the most exhaustive ever made in this country for a similar purpose, which was to ascertain how far the pollution of the air was due to railroad locomotives and what it would cost to electrify the terminals. The committee finds that electrification would subtract only 1,291,282 tons of coal from the total of 21,208,886 now consumed annually in the city and that the cost of the change would probably be nearly \$275,000,000. Dean Goss, of the college of engineering of the University of Illinois, signs the report as chief engineer.

INDIANA: The committee appointed by Governor Ralston some time ago to study the problem of mental defectiveness in Indiana, has done its preliminary organization work and is now beginning a survey of mental defectives in the state. The Rev. Francis H. Gavisk, chair-

man of the committee, says: "As a state we do not know our problem and have not been able to solve it intelligently. We need a program that will be accepted by those among us who are informed and that can be presented by us to the people as a practicable plan for the next fifty years. We realize that the mentally disturbed are sick persons and should not be incarcerated in jails and poor asylums. We shall strive to agree on what can be done to prevent insanity, how knowledge as to prevention can be diffused and what is best to be done with the problem of the feeble minded."

KENTUCKY: The fiction, so pleasing to humorists, that Kentucky is the home and headquarters of the moonshiner is officially denied by Internal Revenue Commissioner Osborn's recent report, which gives that distinction to Georgia. In the last year a total of 3832 illicit distilleries were seized by revenue agents. Of these seizures 1212 were in Georgia, 786 in North Carolina, 530 in Alabama, 402 in Virginia, 320 in Tennessee and 232 in Kentucky, leaving only 350 for all the rest of the United States and territories. As an indication either that moonshining is increasing or that revenue officers are becoming more active, the fact may be cited that as against the 3832 seizures in 1915 there were only 2677 in 1914.

MARYLAND: After three years of investigation the vice commission appointed by Governor Goldsborough in January, 1913, has made its report. The most striking feature of the altogether distressing report is an allegation that there are several institutions in Baltimore which traffic in new-born babes, eighty or ninety per cent of whom die soon after birth. The commission avers that no less than 5000 of these babies have been buried since 1886 in a certain plot of ground approximately fifty-five feet square. Now the Baltimore Grand Jury is demanding from the commission all books and papers on which it bases its report, but it is said members of the commission have declared they will go to jail before giving up the names and dates which they omitted from their report.

MICHIGAN: Official Michigan, led by State Veterinarian Dunphy, with the approval of Governor Ferris, is making a bitter fight on the United States Department of Agriculture. In his latest annual report to Congress Secretary Houston placed the blame for the recent nation-wide spread of foot-and-mouth disease on the Michigan state officials in charge of live stock sanitation. Dr. Dunphy now comes back with an open letter, approved by Governor Ferris, in which he asserts that after the Michigan authorities reported several cases as showing symptoms of this disease, the Federal authorities investigated the

cases and declared them to be another and non-contagious disease. The letter concludes with the assertion that had not the Department of Agriculture made this error the foot-and-mouth disease might easily have been confined to one county in Michigan and one in Indiana.

OHIO: At the recent convention of the Ohio National Guard in Cincinnati a movement was begun toward the establishment of a state constabulary in Ohio similar to that of Pennsylvania. Colonel Charles Hake, of the First Regiment, and other leaders urged this as the only means of allaying the antagonism of organized labor to the militia. They would have the National Guard removed from the possibility of service as strike-breakers, since such service results in ill feeling on the part of labor unionists and keeps many desirable men from cooperating with the state militia.

RHODE ISLAND: The City Plan Commission of Providence has proposed a new eighty-foot highway along the water front from the city's center to South Providence, with many attractive improvements between this boulevard and the harbor, such as the regrading of a large territory and the establishment of spacious playgrounds. Since much of the space to the east of the proposed highway is waste land, it is argued that its reclamation would be an investment instead of an expense. The total cost of the improvement is estimated at \$1,258,900, but it is claimed that enlarged valuation of adjoining properties and the greatly increased assessable value of the improved territory would much more than offset this.

SOUTH CAROLINA: One of the most noticeable effects of the European war so far as this state is concerned is the large increase in production of sulphuric acid by the many fertilizer plants located here. While the sale of fertilizers has fallen off considerably, this loss has been far more than offset by the sales of sulphuric acid to the munition plants. Another feature of this business is the revival of trade in American sulphur. For many years those fertilizer plants which manufacture their own acid have been using iron pyrites from Spain, but the difficulty of procuring this material has turned them to purchasing cake sulphur from the western Gulf states, where it is now produced in abundance by a new process.

SOUTH DAKOTA: The Attorney General of this state has decided to appeal from the recent decision of Judge James D. Elliott, of the United States District Court, which declared the South Dakota "blue sky" law unconstitutional. The case was instituted by William and Harry Morley, father and son, who were arrested at Parker, in this state, on a charge of selling stock of a Sioux Falls stockyard com-

pany without having first secured authority to do so from the state officers. Similar laws in other states have been declared unconstitutional, but this is the first case to be appealed to the United States Supreme Court.

TEXAS: Experts and sight-seers from all parts of the country are thronging to the White Point gas field, seven miles from Corpus Christi, to see what is described as the most wonderful gas well in the world. This well was "brought in" on the last day of 1915, when gas gushed from it with such force that its roar could be heard for fifteen miles. Within the next few days it had been visited by hundreds of experts, and all agreed that it was the greatest "gasser" ever known. At last accounts all attempts to control it had failed. Heavy casing set in 2500-feet of cement with a 5000-pound valve at the top proved insufficient and resulted in an explosion which caused the earth to cave in for a hundred feet around the well. Indeed, with gas, water and rocks bursting from it, the basin has become practically the crater of a small but very active volcano.

VIRGINIA: Friends of higher education for women in this state believe that this year they are going to win the battle which has been repeatedly lost in the General Assembly. A bill, approved by the rector and board of visitors of the University of Virginia, and practically approved by Governor Stuart in a message to the General Assembly, has been introduced in the House of Delegates, where seventeen leading members stand as sponsors for it. The bill provides for the establishment "near the University of Virginia of a co-ordinate college for women, which shall be affiliated with the university and form an integral part thereof," but in which there shall be no co-education of the sexes in the collegiate, master of arts, law, engineering and medical departments.

WASHINGTON: These are busy days for officers charged with the duty of enforcing the new prohibition law. It is said that very little of the large quantity of liquor which was known to be in the state just before this law went into effect has been shipped away. In Seattle, which is now one of the largest "dry" cities in the world, it is estimated that in the last two weeks of open selling not less than \$1,000,000 worth of strong drink was bought and hidden away in private houses. A large number of saloons throughout the state continue to do business, pretending to sell only soft drinks, tho strongly suspected of hardening them for known customers. Yet the law must be to a considerable extent effective, since hospitals everywhere are said to be filled with patients suffering from the sudden stoppage of their liquor supplies.

CONFESSIONS OF A PEACE PILGRIM

BY HELEN RING ROBINSON

SOME of the members of the Henry Ford Peace Expedition that sailed to Europe last December believed the "miracle" might happen. I was one of them. The miracle—that somehow, thru God's providence, we might hasten the establishment of a righteous peace for blood-soaked Europe. There might be only one chance in a million, but with a world aflame I was even willing to gamble on miracles.

Moreover, there were those documents in the keeping of Mme. Rosika Schwimmer! Documents duly authenticated, we were assured, which showed that the belligerents were all eagerly awaiting the "miracle," too. And the fact that most of us on the Peace Ship were people of no importance could count as nothing against the expedition, whose strength must lie in the compelling power of a big, unselfish, courageous idea—not on "Who's Who in America."

But the "miracle" did not happen.

MME. SCHWIMMER, a brilliant Hungarian woman, was from the beginning of the adventure to its close the controlling force of the expedition. By the time we reached Norway every member of the party who was not absorbed into her remarkable personality realized that this was a heavy handicap.

Mme. Schwimmer was on fire with zeal for the success of the expedition. But the very fact of her race, in a certain sense the fact of her sex, also, with the years of her life set against a background of suspicion and intrigue and autocracy, made her peculiarly unfitted for the leadership of some 170 Americans, many of them given to large language on the subject of "democracy."

And yet, as her devotees would indignantly protest, if ever a daring soul questioned the infallibility of her leadership or her right to dictate the very thoughts of the Peace Pilgrims, "there never would have been a Henry Ford Peace Expedition if it had not been for Rosika Schwimmer."

That is quite true.

So much the finer, then, would have been her renunciation if she had been great enough to renounce. If, after formulating the big idea, after enlisting Henry Ford for the adventure, by the force of her vibrant earnestness, after placing her knowledge and her documents at the disposal of the expedition, she had shown the still greater devotion of effacing herself from it, who knows but the "miracle" might have waited on the renunciation?

The first woman senator in the United States is already known to the readers of The Independent thru the story of her experiences in the State Senate of Colorado, published in The Independent of April 20, 1914. Mrs. Robinson also wrote a strong plea for industrial peace among the Colorado miners, which appeared in The Independent for May 11, 1914.—THE EDITOR.

AS these are my confessions, I am willing to admit that I do not carry my pacifism to the point of belligerency. But a super-pacifist is different. It was the super-pacifists who gave the Peace Pilgrims the "third degree" on a stormy December night in mid-ocean.

There were, of course, some self-seekers and grafters in the expedition. It could hardly be otherwise with a company of nearly two hundred Americans, gathered together in great haste, to travel what was, after all, a rainbow route—with a multimillionaire and unlimited pots of gold at the end of it.

Most of the Peace Pilgrims, however, were devoted lovers of humanity, so moved by the horrors of the war which is making a desert of civ-

ilization that they had left their homes and their business, had endured inconvenience and ridicule and financial loss, had dared the wintry gales of the North Atlantic and the perils of mine-strewn waters to follow a vision of peace and good will.

It would seem that they could read their titles clear to honorable standing on the Peace Ship.

But some of the self-elected elect among the super-pacifists thought otherwise. They believed the time had come for a sifting of souls.

Somebody-Or-Other appointed a committee and this committee, in collaboration with Mme. Schwimmer, prepared a platform with three planks. The first two planks dealt, in placid, platonic terms, with world peace and international disarmament. Then came the third plank, better known as the "third degree" which pledged the unyielding opposition of all members of the Ford Peace Expedition to any increase whatever, under any circumstances whatever, of the naval or military forces of the United States, and called upon all good Americans everywhere to oppose the recommendations of President Wilson's message on preparedness, lately delivered to Congress.

Now only one member of the company, Mr. S. S. McClure, had read the President's message. There were some, therefore, who felt incompetent to pass judgment upon it. There were others who thought themselves unequal to fixing the policy of America amid whatever flux of circumstances in a war-tossed world. There were those whose indignation at the manner of presenting the platform left them little concern with its matter.

"If we must sign such a document in order to be welcome guests at this 'house party,' surely, in common courtesy, a copy of it should have been sent us with the invitation," protested one of these, a woman from the West who had sacrificed much to join the expedition.

But there was no escaping the "third degree." The platform committee were determined. There could be no discussion. No comma in the document could be altered. The oracle had spoken. The tripod was unshaken. Only those who were willing to sign the platform could remain "full members" of the Henry Ford Peace Expedition. The souls of the expedition must be sifted.

They were.

It is an interesting fact that the name of every self-seeker in the party is written large after that fa-

WELL, DAVID DID IT

mous platform, with the names, I gladly grant, of many sincere and earnest men and women who believed in the declaration and lost sight of the other issues involved.

It was about this time that, for all my knack of hoping, I lost hope of the "miracle."

But my belief in the good to be accomplished by the expedition never faded. And even assuming, as I am willing to, that the "Unofficial Neutral Conference" which we left behind us may accomplish little or nothing, the results of the expedition justify that belief.

It is unfortunate that our Eastern press has created so different and so false an impression. But here again I blame the incompetency of the Peace Party administration for much of the cynicism of the newspaper people attached to the expedition.

Most of the newspaper men and women came with open minds. That was their business. Some of them thrilled to the same hope that inspired Henry Ford. One of them, the representative of a great news-gathering agency, a hater of war and injustice, an incurable idealist, told me on the first day of our outward journey that he also believed in the possibility of the "miracle." Yet before we reached Christiania his wireless reports bit like acid, and others of the press people grew increasingly antagonistic.

Much of this was mere contagiousness. But for some of it Mme. Schwimmer and her subordinates were plainly responsible. Newspaper men mistrust the oracle and the tripod. And even a reporter is human, after all. You rarely melt him to tenderness and praise by calling him a liar and a brute—even if he is one.

Doubtless it is all very different in Hungary.

THERE are "war millionaires" in Norway as in America, twenty-five newly made ones in the small city of Bergen alone. Perhaps that was one reason why, when we reached the capital of Norway, we found the press not apathetic but hostile. Moreover our expedition had been tagged as "pro-German"—and Christiania sympathizes with the Allies.

Yet in Christiania, from the beginning of our stay there, the big idea of the Peace Ship justified itself.

Bartholomew in the Minneapolis Daily News

ON THE PEACE SHIP

Remember that this "big idea" was not the "miracle" of which a few of us mild-minded voyagers dreamed. While Jenkin Lloyd Jones was swathing the idea in metaphors and things like that, Henry Ford stripped it of all its trappings and observed casually, "It pays to advertise."

To advertise, to mobilize the forces of peace as the forces of war have been advertised for ten thousand years—that was the true purpose of the Henry Ford Peace Expedition.

Ours was the first great peace advertising expedition in history. And the peace we advertised was not a mere negation, a cessation of strife. It was a deep, abiding constructive force. It was the soul of an individual, the soul of a nation. We advertised that the soul of America was peace. And Norway answered that her soul was peace also. The science and the scholarship of Norway as represented in the famous organization rather ineptly styled "The Student Body" welcomed us and joined in our campaign. The ministerial alliance arranged a great mass meeting for us. The Social Democrats arranged another. And when we left Norway a representative group of men and women accompanied us as members of the party.

In Stockholm the story was repeated with emphasis. The waves of war are breaking very close to those Scandinavian countries, cruel waves and high. And only war was talked of when we reached Stockholm; when we left the city a week later everyone was talking peace.

The orators of our party feared our mission might prove fruitless in Denmark, for that little nation, in the grip of a monstrous fear, passed some months ago a law forbidding all public meetings to discuss public questions. Yet a score of private receptions and club meetings gave ample opportunity for explaining the purposes of the expedition, while at a banquet given by *The Politiken*, the greatest newspaper of all Scandinavia, the speakers were assured an audience of a million readers.

The last stopping place before the disbanding of our party was at The Hague.

Now The Hague is a little blasé about peace, tho she thinks she invented it. Yet it was in that city I had my most inspiring experience.

I was riding with two other members of the expedition in an open taxi. Our car stopped for a moment just as a middle aged Hollander, an artizan, plainly, was passing. He looked at us, then stopped, and lifting his hat said just two words. "America! Peace!" while his voice had a tone and his eyes had a light as if he were before a shrine.

WE had all, no doubt, fallen far short of what we meant, we Peace Pilgrims who had left our own country with the gibes of newspaper paragraphists ringing in our ears. But for all our failures we had at least done this for our native land:

People had reproached us with being a buzzard nation when first we landed. They accused us of feeding too noisily on war profits.

From the beginning we had told them another story, of the millions on millions of plain Americans like ourselves who shared in Europe's agony and ardently longed for peace.

They had listened to us. Sometimes we could feel that our words carried conviction. And here was a man who had learned the truth—that the real soul of America is peace.

I recalled how various militant Americans, including a former President of the United States, had been distressed last December lest our expedition should make America appear ridiculous. I am glad to record now how the expedition helped to make the name of the United States once more respectable.

S. S. Rotterdam

LOWER CALIFORNIA

WHY WE NEED IT AND IT NEEDS US

BY EDWIN E. SLOSSON

ONE of the important questions coming before the present Congress is that of the rectification of our Mexican frontier. Two bills have been introduced, one providing for the purchase of Lower California and the other for the purchase of that strip of it which bars us from the Gulf of California. It is an exceptionally favorable time to secure these much needed accessions of our territory, now when the presidency of Mexico is held by a man who owes his position to American support and when the Powers whose ambitions such action would thwart are occupied elsewhere. Lower California is of little value to Mexico, the population is sparse, less than one to the square mile, and its resources are undeveloped. The money we would pay for it would be very welcome to Mexico, now impoverished by five years of anarchy.

The need for at least a rectification of the boundary line will be apparent to any one by a glance at a map of the territorial expansion of our country. He will see that the line between Mexico and the United States, established by the treaty of Guadalupe Hidalgo in 1848, starts out along the southern side of New Mexico, the thirty-two-degree parallel, as tho it were going straight west to the Gulf, but as it approaches Arizona it seems to change its mind suddenly and turns north to the Gila River, which brings it out on the Colorado River some seventy miles above the head of the Gulf.

While puzzling over the erratic course of this boundary line he will see that an attempt was made later to rectify it by what is marked on the map as the "Gadsden Purchase, 1853." Here a line starts straight westward, about forty miles south of the former line, but it, too, gets somehow switched off the track and makes a dive to the north instead of going on to the Gulf of California.

The impression one gets from the map is that both boundary lines were intended to be drawn straight west to the Gulf,

but were intentionally deviated just enough to miss it. This impression is historically correct. The map reveals two unfortunate episodes in American diplomacy. Whenever the physicist sees a line like these, which starts out straight in one direction and suddenly turns off at an angle he knows that the change of direction is due to the conflict of two forces. Now the conflict in this case is that between the North and the South which culminated a little later in the Civil War, the desire of the Southerners for more territory, the determination of the Northerners to prevent their getting any. Somehow between the two the nation got cheated out of the territory it thought it was buying.

Exactly how it happened is a mystery that historians have never been able to clear up. According to Mexican tradition the Yankees for all their shrewdness were outwitted; the commissioners, with their heads muddled by mescal, were fooled with false maps. We know at least that the treaty of Guadalupe Hidalgo was negotiated by a man, N. P. Trist, who had been recalled and disavowed four months before. How creditable a representative of the United States

he was will be understood from what President Polk says of him in his diary:

A very base man. . . . An impudent and unqualified scoundrel. . . . Destitute of honor or principle. . . . He admits he is acting without authority and in violation of a positive order recalling him. . . . If there is any legal provision for his punishment he ought to be severely handled.

No wonder the President was disappointed at Trist's bargain with Mexico. The instructions given to Trist stated that it was of the "utmost importance" to get Lower as well as Upper California and New Mexico. If he could not induce the Mexicans to cede Lower California he was to insist upon the thirty-two-degree line and the land lying south of the Gila River. He was authorized to offer up to \$20,000,000 for Upper California and New Mexico, \$5,000,000 more for Lower California and \$5,000,000 more for the right of way across the Isthmus of Tehuantepec. The treaty Trist signed at Guadalupe Hidalgo gave us only half of the Gila and no access to the Gulf. Lower California was left out. So was Tehuantepec, for the Mexican commissioners stated that they had just sold out the Isthmian rights to Eng-

lish capitalists, whence it comes that it is a British and not an American railroad which rivals the Panama Canal at Tehuantepec.

As might have been expected the Mexican President was surprised, relieved and pleased and the Mexican people "in a great state of exultation" over so favorable a treaty granted to a defeated nation. What our President thought about it may be inferred from what he said about Trist. Nevertheless he recommended it to the Senate, for he knew that he would be lucky even to get so much in the face of the opposition of New England. As it was the treaty would have been lost if there had been three more votes cast against it.

Daniel Webster, who led the opposition, said:

I hope it will be remembered, in all future time, that on this question of the accession of these new

AN ERRATIC BOUNDARY

When Western school children study geography they wonder why our southwestern boundary runs so as to give to Mexico the mouth of the Colorado River, and the more they find out why the less they like it. In 1848 and 1853 the American Government tried to purchase land which would give us access to the Gulf of California and both times it was foiled—not by Mexico but by the jealousy of the Northeastern States. Now another effort is being made and we shall see what comes of it

territories of almost boundless extent, I voted against them and against the treaty which contained them.

Webster need not have worried. He is remembered all right—and with execration by the millions who live in the “almost boundless” territories which he would have consigned to Mexican rule forever. The school children of Texas, Oklahoma, Kansas, Wyoming, Colorado, Arizona, New Mexico, Utah and California as they learn history come to regard Webster as the New Yorkers do Benedict Arnold.

When it was realized that the treaty of Guadalupe Hidalgo cut us off from the Gulf of California and prevented us from running a railroad on the southern side of the Gila River an effort was made to rectify the blunder by buying another strip of Mexican territory. General Gadsden found President Santa Anna willing to sell, and he arranged for the purchase of 39,000,000 acres in Chihuahua and Sonora for \$20,000,000, the new line to run along parallel thirty-one degrees to the Gulf of California. But the Senate apparently did not consider the land worth fifty cents an acre so the price and the area acquired were both cut down by half and again the boundary line was run so as to shut us off from the Gulf.

That did not matter much when the country was unsettled, but now there are 250,000 acres of farms and homes on the American side of the

boundary and twice as much more of American land which might be brought under irrigation if we were not debarred from the control of the river on the southern side of the imaginary line which forms the boundary. As it is the people of the Imperial Valley, one of the most prosperous parts of California, are dependent upon the good will and efficiency of the Mexican Government and their farms and homes may be swept away unless the United States obtains the mouth of the Colorado River.

The acquisition of the whole of *Baja California* is a matter of greater importance and greater urgency. It is needed both for its agricultural and mineral value and as a protection to our western coast and the Panama Canal. The peninsula extends southward about seven hundred miles. It is therefore as long as Italy, tho only half as wide.

That the control of the peninsula of Lower California is necessary for national safety is evidenced by the Lodge resolution of 1912, which extends or interprets the Monroe doctrine to prohibit the acquisition by a foreign power of any harbor which “might threaten the communications or safety of the United States.” This was past by the Senate at the time when it was supposed that Japan was trying to acquire Magdalena Bay in Lower California. That the significance of this action was well understood by the Germans is shown by

the discussion of the *Magdalena-Bay-Fall* in Dr. Kraus's comprehensive work on *Die Monroedoktrin in ihren Beziehungen zur amerikanischen Diplomatie und zum Völkerrecht*. Back in the nineties the Kaiser tried to purchase from Mexico two of the harbors of Lower California “for his own personal use,” but Secretary Hay was on the watch for him and put a stop to it.

During the present war Turtle Bay in Lower California has been used as a coaling station by Japan and Great Britain. Mexico was in no condition to prevent the violation of its neutrality and our Government was under the circumstances not disposed to interfere. The warships may be there yet for aught we know.

These three incidents of many simply illustrate the difficulties which arise inevitably from the present situation. So long as Mexico holds the peninsula there is danger that we may be involved in trouble over it either with Mexico or some other power. The best kind of preparedness is the exercise of foresight in the removal of the causes of possible quarrels. A few million dollars spent in the purchase of Lower California would be better insurance against war than a billion spent on army and navy. The severance of the Californias in 1848 has been injurious to *Alta California* and ruinous to *Baja California* and their reunion now would be of benefit to both.

THE CHARGE

BY GERTRUDE HUNTINGTON MCGIFFERT

Dread thunderbolts of Thought! Truth's bugle calls!
Lo! upon echoing worlds of dull contentment falls
The blare and shock of battle! Everywhere
The dust of doomed faiths and grim despair
Of frenzied cults—the wrath and gore
Of War!

On—on over ditches of mangled dead Truth thundered.

Hell's torches of scorn flamed high then blackened.
Creation wondered

At trampled traditions and reeling creeds.

Sin whined and hissed beneath the charging
steeds—

Beneath the grinding chariot wheels that cut
Their murderous ruthless rut

Thru the weakness and woes and hates of blinded
men.

And then

Upon God's chosen pinnacle Truth hurled

Her ensign to the world—

“Hope, Beauty, Love.”

It fluttered—a whirlwind—far above

The huddling, sickening carnage. Circles of glory
flashed

Thru toil's barbaric gloom. Sin's rafters crashed

As stricken ignorance passed. Eternity

Leaned down to see.

Hells kneeled. The strongholds of the ages rocked.

A silence fell. Not a universe sneered, not a star
mocked.

And then, triumphant, Truth again

Flung out her ensign before men.

They felt the stir beyond their ken and lifting
curious eyes

Felt a breathlessness of spirit—a dim surprise—

And as a sleeping child

They dreamed of Truth—and smiled.

M. William Shak-speare:

EIGHT PAPERS BY FREDERICK HOUK LAW
IN OBSERVANCE OF THE THREE HUNDREDTH
ANNIVERSARY OF SHAKESPEARE'S DEATH

Shakespeare the Man

THREE hundred years ago this April William Shakespeare died in his native Stratford-on-Avon, whither he had retired after a successful dramatic career in London. His plays bring us into personal touch with the man, and from all sources together we know more concerning him than concerning most of his contemporaries.

A man of remarkable energy, he wrote thirty-seven plays and several poems in about twenty-two years, writing about two new plays a year besides revising old plays, acting, and directing his company.

Born in Stratford about April 23, 1564, he certainly spent a vigorous boyhood, for his plays show high spirit, love of the countryside, and a daredevil zest for fun. If his father, John Shakespeare, the glover or agricultural dealer and once Bailiff of Stratford, sent him to the Stratford school Shakespeare probably sympathized little with its Latin teaching. His education was to be by experience. When his father's fortunes declined he may have become a butcher's apprentice, a lawyer's clerk, or a country school teacher. At nineteen he married Anne Hathaway, and about four years later, possibly because he and some wild companions shot deer in Sir Thomas Lucy's estate at Charlecote, he left home and went up to London to seek fortune, going perhaps with the actors known as "Leicester's Men," who were in Stratford in 1587.

In London, living at first as horseholder or call-boy, he became a reviser of old plays, then a full-fledged dramatic writer, and a shareholder in the Blackfriars and Globe theaters. His company won royal approval and brought him such sums that he bought property in Stratford and became "William Shakespeare, Gentleman."

His energetic career drawing to a close, he spent five or six quiet years in beautiful Stratford and there died April 23, 1616. His life story is one of well-applied practical energy—a vigorous, productive, highly successful life.

It is not difficult to estimate the mind and character of this greatest of English writers, for his plays unite with tradition to tell us much.

His quickness of wit, for example, is evident to all who read "As You Like It" and similar comedies; and Thomas Fuller, telling in 1662 of wit-combats between Shakespeare and Ben Jonson, says Shakespeare "could turn with all tides, tack about, and take advantage of all winds, by the quickness of his wit and invention."

Shakespeare was surely a man among men. His Prince Hal in "Henry IV" skylarks with Falstaff and yet rises to greatness, and his Henry V jests with soldiers and never loses royalty. Traditions of his early life show a happy-hearted, lively companion. John Aubrey, writing in 1680, says Shakespeare was a mimic and fun-maker, and Nicholas Rowe, in 1709, says he was "A good-natur'd man, of great sweetness in his manners and a most agreeable companion."

His vocabulary of fifteen thousand words and the wide scope of his plays show an open eye, an attentive ear, and a wide and varied reading. He shows his belief in the school of the world in "Love's Labour Lost," where he says:

"Small have continual plodders ever won,
Save base authority from others' books."

And again in "The Two Gentlemen of Verona," saying:

"He cannot be a perfect man,
Not being tried and tutor'd in the world:
Experience is by industry achiev'd
And perfected by the swift course of time."

Legends of deer-stealing and other escapades, his early marriage and romantic departure for London,

and stories of gay meeting with Ben Jonson, Burbage, and Davenant, fellow-dramatists, testify to a romantic temperament. He may have traveled over much of England, and perhaps in Italy and other lands.

That Shakespeare was a lover of music seems certain from Lorenzo's speech in "The Merchant of Venice":

"The man that hath no music in himself,
Nor is not moved with concord of sweet sounds,
Is fit for treasons, stratagems and spoils.
Let no such man be trusted."

In play after play he makes room for exquisite songs, rollicking as in "As You Like It":

"In the springtime, the only pretty ring time,
When birds do sing, hey ding a ding, ding:
Sweet lovers love the spring";

sweet lullabies as in "A Midsummer Night's Dream":

"Philomel, with melody,
Sing now your sweet lullaby:
Lulla, lulla, lullaby; lulla, lulla, lullaby.
Never harm,
Nor spell nor charm,
Come our lovely lady nigh;
So good-night, with lullaby";

and sometimes sad songs, as in "Cymbeline":

"Golden lads and lassies must,
As chimney-sweepers, come to dust."

Shakespeare loved the music and beauty of language, making his characters express themselves in wonderful poetry, as in "Romeo and Juliet":

"What envious streaks
Do lace the severing clouds in yonder east:
Night's candles are burnt out, and jocund day
Stands tip-toe on the misty mountain tops."

Always a lover of the picturesque, he made his scenes marvelously suggestive. What pictures arise when we think of the balcony scene in "Romeo and Juliet!" of the sleep-walking scene in "Macbeth"! and of the grave-digging scene in "Hamlet"! What a picture when we think of Othello telling his story to the listening and enraptured Desde-

mona! When we think of Lear in the madness of the tempest!

Himself a father, Shakespeare's heart went to childhood. The kindly-pathetic figure of Prince Arthur in "King John"; Lady Macduff's heroic little son in "Macbeth," and the boyish Princes in "Richard III" show loving and sympathetic touches. Constance's lament for Arthur in "King John" may be Shakespeare's own sorrow at the death of Hamnet, his twelve-year-old son:

"Grief fills the room up of my absent child,
Lies in his bed, walks up and down with me,
Puts on his pretty looks, repeats his words,
Remembers me of all his gracious parts,
Stuffs out his vacant garments with his form. . . .
My life, my joy, my food, my all the world!"

Stratford-on-Avon is a place of green fields, limpid streams, flowers and country peace. Shakespeare could not have courted Anne Hathaway without walking a mile along sweet country ways, nor have gone to Charlecote without noting the beauty of the landscape. He loved his country home so much that he returned to it from the gay London life and made it the home of his prosperity. In most of his plays he extols the loveliness of such natural beauty as that around Stratford. It may be a real experience lovingly remembered when he says in "A Midsummer Night's Dream":

"I know a bank where the wild thyme blows,
Where oxlips and the nodding violet grows;
Quite over-canopied with luscious woodbine,
With sweet musk-roses, and with eglantine."

It is a lover of the outdoor world who speaks in "Twelfth Night" of

"The sweet south
That breathes upon a bank of violets,
Stealing, and giving odour."

It is a lover of the country who speaks in "The Two Gentlemen of Verona" of the brook that

"Makes sweet music with the enamell'd stones,
Giving a gentle kiss to every sedge."

It is one who himself had rejoiced in the coming of the flowers, who sings in "Love's Labour's Lost" of the time

"When daisies pied and violets blue
And lady-smocks all silver white
And cuckoo-buds of yellow hue
Do paint the meadows with delight."

England has never had a more patriotic poet than Shakespeare. In many of his plays he speaks lovingly and proudly of England. In "King John," for example, he says:

"This England never did, nor never shall,

Lie at the proud foot of a conqueror,
But when it first did help to wound itself."

There is more passionate patriotism in "Richard II" where he calls England:

"This royal throne of kings, this scepter'd isle,
This earth of majesty, this seat of Mars,
This other Eden, demi-paradise;
This fortress built by Nature for herself
This blessed plot, this earth, this realm,
this England, . . .
This land of such dear souls, this dear, dear land!"

Like Lincoln, Shakespeare could never resist the impulse of the humorous. An inveterate punster, he plays upon words at all times, and in "Romeo and Juliet" makes Mercutio die with a jest. He was so fond of humor of the rougher sort, as in "The Comedy of Errors" and "The Merry Wives of Windsor," that we feel sure he must have taken part in many a wild prank. Sometimes his humor is farcical; sometimes, as in his romantic plays, it is quiet and delicate; sometimes, as in "Macbeth" and "Hamlet," it exists side by side with the tragic. His nature was not narrow but had room for both laughter and tears.

If Shakespeare had not been a man of deeply sympathetic heart he could not have written plays that "purge by pity and fear." He is thinking of the humble in "Henry VI" when he says:

"Thus are poor servitors,
When others sleep upon their quiet beds,
Constrain'd to watch in darkness, rain and cold."

On the other hand, it is the very sympathy with which he has treated his great characters like Macbeth and Othello that makes their tragedies so appealing.

We believe that he must have had a rugged and lovable manhood. His active and successful career; his contrast in "Henry IV" between Hotspur, the rough man of action, and the gentleman "perfumed like a milliner"; and the soul-dignity that he gave to characters like Richard III

and Macbeth because he made them so preëminently men of action, make us think that his own manhood was stalwart. Certainly Ben Jonson, his chief rival, called him the

"Soul of the age!
The applause, delight, the wonder of our stage!"

and said: "I loved the man, and do honor his memory (on this side idolatry) as much as any." And Ben Jonson was not the man to love a weakling.

In an age when the drama had much license Shakespeare wrote without the extreme coarseness that characterized many of his contemporaries. Without ever writing for moral effect he so centered his plays around truth that all his work is intensely moral. Behind the joy-in-life of the comedies, and behind the truths of the tragedies we feel an intense nature that saw

"Some soul of goodness in things evil,
Would men observingly distil it out."

In fact, his plays show such an understanding of the laws of life that we call Shakespeare a philosopher. All his plays proclaim a man who meditated on life and its mysteries. He is an idealist, saying:

"What is man,
If his chief good, his market of his time,
Be but to sleep and feed?"

He looks upon the transitoriness of life and says:

"We are such stuff as dreams are made on."

He sees that nothing purely physical is eternal:

"The cloud-capt towers, the gorgeous palaces,
The solemn temples, the great globe itself,
Yea, all which it inherit, shall dissolve,
And like this insubstantial pageant faded
Leave not a wrack behind!"

He does not pretend to know

"What dreams may come
When we have shuffled off this mortal coil,"

And yet the heart of all his philosophy, the sum and substance of all his plays is that life is beautiful and noble, and only the highest manhood can lead to the greatest happiness:

"Give me that man
That is not passion's slave, and I will wear him
In my heart's core, ay, in my heart of hearts."

On the whole, we know a great deal concerning Shakespeare and his inner life. The result is that, in spite of certain faults characteristic of his age, we may say of him as Antony said of Brutus:

"His life was gentle, and the elements
So mix'd in him that Nature might stand up
And say to all the world 'This was a man!'"

AT THE THEATER IN SHAKESPEARE'S DAY—"HENRY IV" AT THE GLOBE

Around the unroofed yard (the "pit"), square or roughly circular, where common folk stood, ran galleries for those who could afford them. The stage, with a curtained recess and a gallery at the back, thrust itself far into the pit and on this open platform most of the action took place. It was "smart" to have a seat on the rush-strewn stage. The use of tobacco, newly introduced from America, had already become fashionable

THE MARQUIS AND MARCHIONESS OF ABERDEEN AND TEMAIR

They are visiting this country in the interest of the Women's National Health Association of Ireland, of which Lady Aberdeen is president. Lord Aberdeen has been Lord Lieutenant of Ireland and Governor-General of Canada. Lady Aberdeen is president of the International Council of Women

WHAT YOUNG IRELAND NEEDS

THE MISSION OF THE MARQUIS AND MARCHIONESS OF ABERDEEN

TWO hundred little girls, with hair-ribbons of blue or green or white or yellow, each squad after its kind, every one from alien stock, happy to the last pair of flying feet, danced a Highland Fling and an Irish Lilt and a Nigarapolska and raced with an absurd and beautiful intensity of endeavor thru all sorts of relay games in the big covered playground of an East Side school in New York City the other day. When they had finished, a slender man, gray-bearded, his cheeks furrowed in a kindly fashion, unmistakably Scotch, rose and thanked them. Then he introduced his wife. Her face—with the fresh color of a young girl—broke into reminiscent smiles as she told how the sight of a similar exhibition three years ago had delighted her so much that, going home to Dublin, she borrowed a teacher from Public School 188, taught the same sort of play-exercise to the school children there, and had all young Dublin dancing thru the hard winter of the great strike, dancing in the schools and playgrounds and streets, up the stairs and down, she said, and thus adding a needed bit of cheer to the hard-pressed city. On this new visit to the city she had asked that the white-bloused youngsters might go thru their drill again so that her husband, too, could see school folk-dancing as it should be done.

For it happens that Sir John Campbell Gordon, Marquis of Aberdeen and Temair, formerly Governor-General of Canada and lately Lord Lieutenant of Ireland, and the Marchioness of Aberdeen, president of the International Council of Women, have no interest greater than their devotion to child welfare and the health of Ireland. And never were two people more completely one in their enthusiasm for a single cause.

Lady Aberdeen is president of the Women's National Health Association, which is working along many lines for the betterment of Irish life. It centers in Dublin, but serves the whole island. It commands the

support and seeks the welfare of Protestant and Catholic alike. It carries on full two dozen kinds—two bakers' dozens, indeed—of work for the benefit of women and children. Beginning with visiting nurses and health lectures for expectant mothers, babies' clubs and milk stations, it helps the youngsters to grow up healthy and good-natured by providing playgrounds and school gardens, folk dancing, cheap meals, dental clinics, and boot clubs, and then branches out into the wider field of public health, with sanatoriums and preventoriums, health lectures and pamphlets, a health legislation committee, a caravan that carries hygiene-help thru the country lanes, traveling exhibits. Due largely to its anti-tuberculosis campaign, on which special emphasis has been thrown, the deaths from consumption in Ireland are 2500 per year fewer now than when it opened fire in 1907.

Into the midst of all this burst the war.

"It was like a blow from a sledgehammer," Lord Aberdeen says. "It threatens the very existence of the work."

He speaks with nervous vigor,

throwing out his hands and stressing heavily the words that count.

"That was the reason we came to America, to save this noble enterprise. If an orphanage stood on the mountain-side and you saw an avalanche approaching it, you know what you would do. There is no other country that can do it. And your sympathies are quickened by the war."

There is no money on the other side for such philanthropies today. War economies and war taxation—Lord Aberdeen tells of one landowner, for instance, whose taxes have been increased by \$40,000 this year—have dried up the sources of income. Not only do the times bring new necessities, which the Association is meeting by distress workrooms, clothing and comforts depots, and nursing classes, but projects begun before the war cannot be finished and must be abandoned at a loss unless help comes quickly.

"The child welfare work is everything now," says Lady Aberdeen. "We must build for the future. And it is particularly necessary for the women of the world to be organized and unified now so that they will be ready for their work of moral reconstruction after the war."

After the two hundred little girls had finished their dancing and had received thru Lady Aberdeen greetings from Dublin children—Irish youngsters who were doing Irish folk-dancing because immigrant children in New York showed them the way—their leader, a dark-haired girl with all the moral frenzy of the college cheer-leader, called for a cheer for the children of Dublin. The cordial response, ringing stridently thru the big paved courtyard, was deafeningly convincing.

Lord and Lady Aberdeen will carry back to Dublin the vociferous love of Public School 188, but they will take also other evidence, no less hearty and somewhat more substantial, that folks on this side of the water have a friendly interest in those children of Dublin.

The City of the Future

BY MAYO FESLER

Secretary of the Civic League of Cleveland, Ohio

A city, sanitary, convenient, substantial; where the houses of the rich and the poor are alike comfortable and beautiful; where the streets are clean and the sky line is clear as country air; where the architectural excellence of its buildings adds beauty and dignity to its streets; where parks and playgrounds are within the reach of every child; where living is pleasant, toil honorable and recreation plentiful; where capital is respected but not worshipped; where commerce in goods is great but not greater than the interchange of ideas; where industry thrives and brings prosperity alike to employer and employed; where education and art have a place in every home; where worth and not wealth give standing to men; where the power of character lifts men to leadership; where interest in public affairs is a test of citizenship and devotion to the public weal is a badge of honor; where government is always honest and efficient, and the principles of democracy find their fullest and truest expression; where the people of all the earth can come and be blended into one community life; and where each generation will vie with the past to transmit to the next a city greater, better and more beautiful than the last.

OLD WINTER IN HIS HOME

BY HAROLD J. HOWLAND

WINTER is like trouble. There are two ways of meeting it. The one way is not to meet it at all, but quietly steal away. This plan has its merits. There is a peculiar satisfaction in loafing under laughing skies, basking in balmy airs, draining a "beaker full of the warm South"—when you know that your own proper home is vexed and tormented with the conscienceless vagaries of a climate that can never make up its mind for two minutes on end whether it is frigid or torrid, wet or dry. So you can easily do worse, when winter shrills its shrewish challenge in your ears, than to temper your valor with discretion and go South.

But there is a better way, if you are a robust soul, liking to meet trouble face to face and by defeating it make it your slave. If such you are, go North and conquer winter on its own chosen ground. It only needs a stout heart and a bold front to make the blustering giant give up his best and pour his treasures into your lap.

A night's ride from the shivering feverishness of the Great White Way will take you to his lair. There you will find a warm welcome; indeed that "warmest welcome" of the poet's inn with still a little added to it. If there is one thing better than an inn, it is the right kind of a club.

On a six hundred acre tract in the heart of the Adirondack Mountains stands a unique institution. In all your travels you will find nothing just like the Lake Placid Club. You may find many single things like parts of it; nothing quite like it in the "altogether."

Christmas week in the year of grace just passed found four hundred odd of us indulging at the Club in that sensible custom better known till recent years in Europe than with us busy Americans, a winter holiday.

The mercury in the thermometer swung thru a regular arc from ten below at night to ten above by day, with a single excursion to twenty below just as a sample and another to twenty above just to prove to us that we did not really like such heat. It was cold, but we were not. The long rambling clubhouse and the twenty-five cottages that were open—there are seventy-five scattered thru the Club's square mile of wooded grounds—were warm as toast. Nor were we cold outdoors. Eighteen hundred feet above the sea the air is pure and rare and dry. In air like that the cold comes as a tonic not a torment; it stimulates but does not stab. It snowed, too, how many days I cannot possibly remember. For snow up there is quite a different thing. It falls as naturally as sunshine in the South. In the city snow is an impertinence, a nuisance to be loathed and cleared away. In a suburb it is beauty while it falls, a bother when it has fallen, a menace as it thaws and slops away. But in the mountains it is logical, as welcome as the day, as harmless as the air itself, a constant beauty, an unobtrusive natural happening. There is always snow upon the ground, a foot, two feet,

TWO GO SKIJORING

who knows how many? At home we sweep or shovel our paths to get the snow away; up there we roll them with a huge wooden roller to pack it down. It is all so dif-

ferent; here Old Winter is at home.

At home we dress for looks, and shiver if the style demands. Up there we dress for warmth and comfort and efficiency, and do not shiver if we lose good looks thereby. We men, that is; for the feminine is just as eternal among the everlasting hills as down among the haunts of men. The styles are different from the home styles, it is true; but the style is there none the less. The fact that it is mixt with common sense does not detract a bit. That woman there, her skirt up to her knees, looks neither bold nor scant in modesty; just sensible—and *chic*. Those

two girls starting off on *ski*, in trig blue suits of coat and knickerbockers, strong boots, puttees and rakish cap administer no shock, unless it be a shock to find the unconventional

EVERYBODY SKIS

can seem so natural. Up there we dress for use first, and only then for charm; and find ourselves no losers either way.

Well, being dressed thus warm and sensibly, what shall we do this morning? Bright, snapping, white, and gold, the day allures us out, and who would stay indoors? What will you have? A little indolent, today, perhaps. Here is a cutter, or a double

sleigh, or even, if a party wants to go, a big wood sled stuffed warm with straw and rugs and furs. The roads lead off among the woods, thru avenues of stately forest trees, their rich green half hidden now by heavy feathery coats of driven snow. The roads are solitary. Not a sound but the cheerful chatter of the bells; no company but the looming hills, the marching trees, the river murmuring underneath the ice until a sudden rapid breaks the icy spell and lets it tumbling out. This is the sleigh ride in its perfectest estate. Some day we will take food and drive far off and build a fire, broil ham, make coffee, and enjoy a feast with appetites that have a razor edge given by this tingling air. But not today.

Now for a skate before dinner; we have still an hour to spare. The rink is close at hand, not ten steps from the clubhouse door. Warm within doors we change our boots for skate-shod ones and step upon the ice. The rink is popular already. In a central box a hockey match waxes fast and furious as the rival fortunes rise and fall. In another fenced off space eight men of weight and gravity—their weight perhaps explains why it is not hockey they are playing

GRAVE MEN CURL

MAYOR MITCHEL SNOWSHOES

at—are curling, sending the big gray granite “stones” sailing across the ice and “sooping” with their “besoms” craftily to speed them or retard them as they near their goal. In still another space the artist skaters, on the inner and the outer edge, with grape vines, figure threes

THE MOUNTAINS GROW HOARY

and eights, turns, jumps and pirouettes, exemplify, with more or less success, the fine art of skating. While round and round outside the boxes skate the rest of us who find just skating a joyous, exhilarating, red blooded sport.

What next? Luncheon of course; this splendid air permits no laggard appetite. But after that? Why not the *ski*—pronounce it *she* if you would

be correct. A quarter of a mile thru the sweet smelling woods we shuffle—we have yet to learn the free running stroke that takes the Finnish postman a good eight miles an hour on his rounds—to the quondam golf course. There we halt a moment, our senses captured by the sudden view. The course drops down before us to the valley and on its farther edge stand ranged the everlasting hills, Gothic—the Elephant its more descriptive name, Tahawus, or Marcy, the Adirondack's highest peak; Colden—or Avalanche—called so for the sharp angled scar upon its steepest side; and McIntyre, broad shouldered and immense. Purple and blue and violet their snowy sides refract the wintry light.

Our homage paid, we turn to *skiing*. Dozens of figures dot the slope below us, some sliding swiftly down, more toiling slowly up. It does not look so hard; it does look fun. We hesitate a moment on the brink, try to absorb the counsel of a volunteer friend, and take the plunge. We start, the motion quickens, down we go, knees bent, arms balancing, blood racing, nerves a-tingle. What sport this is; it's flying like the birds. Why have we never *skied* before? This is the sport for us. Must we ever stop?

Ah, now we know. What happened to those *ski*? Well, anyhow, the snow is soft; it did not hurt a bit to fall. But getting up's another story. How long the things are; how slippery the snow. But easy, crafty does it. Now for the climb. That's good hard work, but the prospect of another swoop, once we have reached the summit, lightens it. Well, here we are again; this time we'll keep the old things parallel, so they won't trip us up. All ready? Now we're off again; that's splendid. We've got it now. What speed! What thrilling rush! Let's top that little ridge and turn into that little gully there beyond. It's easy now. Why do those others fall; they haven't caught the knack. There, here's the ridge; now for the other side. Oof! Down again! Well, up again, wary and slow; we'll get it next time.

So goes the sport. Now a little encouragement, now dire disaster. But the result is always the same. Have we done well this time; it's so splendid we must do it again forthwith. Has ignominy caught us by the leg? Better luck—or better skill—next time; let's up and at it once again.

What? Time for supper? Impossible. Still we're hungry enough; but tomorrow bright and early will find us out again.

Skating and *skiing* are not the only sports. As we *ski* and *ski* and *ski* again, the warning cries, the triumphant shouts, and the giggling shrieks of the tobogganers drift across the snow. The slide begins on a structure high above the golf house roof and runs a mile down into the valley. Toboggans, Flexible Flyers and an occasional venturesome spirit on *ski* keep the pot a-boiling. Over by the lake another slide, built of great blocks of ice, provides a runway for the plunging bob-sleds that hurl their breathless crews across the lake a mile a minute gait. Snow shoeing is a less strenuous sport; but the tramps across the drifted fields and thru the sparkling woods fill the lungs with ozone, the muscles with delicious weariness and the mind with pleasant pictures of Nature in a tranquil mood. *Skijoring*, behind a

horse of mettle, combines the joys of speed, of horsemanship, of muscular control. The sports are endless, but alas the time is not. You cannot pursue them all, but each you try seems better, for the moment, than the rest.

But sport, splendid as it is, is not the whole. Better than all is the spirit of the Club, its atmosphere. For instance, children first is a maxim honored faithfully in the observance. They are welcomed, provided for, made much of; and the best of all is, they are not in the way. Which might suggest to a philosopher the thought that children only become a nuisance when we do not welcome them and try to make them happy.

The spirit of the Club is shown, too, in the celebrations that are held to mark the holiday season. One night during the week fifty of us pile into sleighs and ride over to the village church. There with fifty other of the villagers we don long Druid robes, horned helmets, breastplates and sheepskins and, armed with spears and torches, march to an open space beside the lake. There, while hundreds of other villagers and Club folk watch from above, we enact a pageant of “The First Christmas Tree,” after Van Dyke's beautiful story. It is a striking scene, a reverently acted play. We stand ankle deep in snow, the wind blows shrill and drives a young snow storm into our faces. But we do not care.

Another night we hunt the mistletoe with ancient rites, red torches, quaint costumes, mirth and merriment. It is a lark, but it is more than that. No one who has taken part in that symbolic march thru the winter woods will be likely to forget the story of the slaying of Baldur the Beautiful by the mistletoe arrow

sped by the jealous hate of Loki. These are some of the things that make the Club more than an inn and a visit to Old Winter under the Club's fostering direction an experience to be repeated.

BOTH SIDES

A DEBATE

LITERACY TEST FOR IMMIGRANTS

RESOLVED: That immigration into the United States should be further restricted by a literacy test.

THE Lodge literacy bill was the first attempt to restrict immigration on the ground of illiteracy. President Cleveland vetoed this bill in 1897 after it had been passed by both houses. Bills providing for the literacy test were vetoed by Presidents Taft and Wilson in 1912 and 1915. The House Immigration Committee has just reported favorably on the Burnett bill. This brief was prepared by R. S. Fulton.

AFFIRMATIVE

I. Further restriction of immigration is desirable.

A. There is little need for more unskilled labor.

1. About three million unemployed wage earners in this country now.

B. Army of unemployed wage earners due to displacement of older laborers by newer immigrants.

C. Restriction necessary for the protection of American unskilled laborers.

1. Americans cannot compete with unskilled immigrants. (a) Standard of living is lower for immigrants. (b) Immigrants are willing to work for less.

(1) In many industries they have lowered wages. (2) In some industries they have prevented wage increase. (c) Immigrants will work under poorer conditions.

2. Unskilled immigrants are hostile to labor organizations.

II. Illiterate immigrants are undesirable.

A. Industrially.

1. Ninety per cent of illiterate immigrants are unskilled.

2. Their ignorance makes them detrimental to American labor. (a) Willing to reduce wages. (b) Unable to comprehend instructions, they cause deterioration of working conditions. (1) Mining inspectors agree that employment of illiterate aliens is one cause of increase in mining accidents.

3. Few illiterate immigrants go on farms.

4. Illiterate immigrants not wanted on farms. (a) Land companies strongly oppose illiterate Southern and Eastern Europeans.

B. Socially undesirable.

1. They tend to congest the city slums. Forty out of every hundred in the Baltimore slums and fifty-nine out of every one hundred in the New York slums are illiterate foreigners.

2. They cannot understand health ordinances and sanitation.

3. They furnish a disproportionate share of the foreign born criminal, insane, and pauper class; eighteen per cent of foreign born insane; thirty per cent of foreign born paupers; forty two per cent of foreign born murderers.

4. Difficult to assimilate. (a) They come without any permanent interest in our country. (b) They have no common language. (c) Mentally unable to adopt our customs. (d) Majority of illiterate immigrant laborers are single or have left their wives at home.

C. Politically undesirable.

1. About forty per cent return home.

2. An easy prey to corruptionists.

3. They come to America without political experience.

4. They are slower in securing accurate information on political questions than those who can read.

III. The literacy test is the most feasible

method of dealing with the immigration problem.

A. It will reduce the number of illiterates.

1. Fifty per cent of the present immigrants are illiterate.

2. Admits only the necessary number. (a) A commission could fix a flexible test to be raised or lowered as the supply of needed unskilled labor exceeds or falls below the demand.

B. Promotes assimilation.

1. Lessens the difficulty of providing a common language. (a) Literate can more easily master a new tongue.

2. Makes adequate distribution of the immigrant less difficult. (a) Education fosters self-reliance.

3. Immigrant who attains literacy in order to enter the United States would probably become a citizen.

C. Admits a better quality of immigrants.

1. Literates have more good qualities than illiterates.

2. It would exclude the undesirable classes.

3. Struggle for an education would make the literate a better American.

4. Mental training an advantage.

D. A simple means of exclusion.

NEGATIVE

I. Further restriction of immigration is undesirable.

A. No oversupply of unskilled immigrant labor.

1. Immigrant labor comes in response to economic demand.

B. Immigration does not lower wages and cause unemployment.

1. No causal relation. The Twelfth United States Census Report shows wages relatively higher and unemployment less prevalent where immigrants are most numerous. (a) In such Northern states as Indiana, Kansas, and Missouri, where the foreigners are less than ten per cent of the population, there are from forty-seven to fifty per cent of the laborers unemployed at some time during the year. (b) Where sixty-five per cent of the laborers are foreign born, as in Massachusetts, Rhode Island, New York, and Connecticut, there are but forty per cent of the workers unemployed. (c) New York, Illinois and Massachusetts, having a large immigrant population, show a higher scale of wages.

2. The same report shows that in trades where immigrants are most numerous wages are above average and unemployment less.

3. Unemployment due to deeper causes than immigration. All trades suffer a seasonal shifting in activity.

C. Immigrant is a producer.

1. An economic factor in reducing the cost of living.

II. Illiterate immigrants not undesirable.

A. No causal relationship between illiteracy and undesirability.

1. No relation between illiteracy and pauperism. (a) Our laws require immigrants to have sufficient funds to maintain themselves until a position is obtained. (b) Statistics show pauperism no more prevalent among illiterates.

2. No relation between illiteracy and crime. (a) Opinion of Immigration Commission. (b) Comparative statistics show 87 per cent of criminals in jails and penitentiaries can read and write.

3. No relation between illiteracy and insanity. The Immigration Commission says our present laws adequate to exclude insane.

4. No relationship between illiteracy and strong character, healthy body, and honest intention. As ex-President Eliot says, inability to read is due to lack of opportunity.

B. Illiterate immigrants are sturdy farming class of Europe.

1. Literate immigrants come from cities of southeastern Europe.

C. Desirable characteristics as prevalent among the rural classes as in city.

III. Literacy test not the most feasible method of dealing with the problem.

A. The literacy test ignores the problem still unsolved.

1. Strikes at the social and political phase already provided for by laws.

2. Disregards laboring conditions. (a) Demand for labor fluctuates. (b) Class of immigrants desired varies.

B. Literacy not a test of immigrant's mental qualities.

1. Illiteracy represents the lack of educational facilities and bad government.

C. Additional industrial legislation will give us desirable Americans.

1. Present immigration laws provide for social and political status.

2. Present restrictions exclude undesirable aliens.

3. Evils of immigration due to industrial conditions. (a) An oversupply of laborers in a particular locality.

D. Literacy test will not solve problem of congestion.

1. No relation between congestion and literacy.

2. Tends to increase problem of congestion. (a) The literate immigrant prefers large cities.

E. Not practical in application.

1. Admits foreigners from cities and excludes those from country.

THE NEW BOOKS

THE NEW GENERATION

How to Know Your Child satisfies unusually well the exacting conditions of a really helpful book for mothers. There is also a good chapter for fathers. Miriam Finn Scott applies the case method to child training and shows concretely how the best of the so-called new systems, as the Montessori, is within the reach of the ordinary family. The entire work is a tribute to Dr. Dewey, whom the author seems to have first appreciated fully when she found the Tolstoy School in Moscow exemplifying the principles of America's leading educator.

The first edition of Dr. Berle's *The School in the Home* brought him 10,000 letters, many from as far away as Siam, Japan and Persia. The answer to them is this second edition and a second book, *Teaching in the Home*. His principles of "fertilization of the child mind" and "negotiable knowledge" are needed protests against the underestimates commonly placed upon the ability of children in learning, health and happiness. The best elements of the old, aristocratic education are restated for use in the modern, complex homes of democracy. There is an evident trace of inability on the part of the author to see the classic in the making.

The editor of the Childhood and Youth series recommends *Backward Children* for use by parent, teacher, medical inspector or clinician as a botanist would use a key in identifying and classifying flowers. Dean Holmes states very sensibly that "backwardness is not wholly or always bad and that it needs to be studied in each individual case to determine its exact nature." In this work as in those discussed above the most valuable part results from the use of the case method.

The Health Care of the Growing Child, by Louis A. Fischer, is a most valuable "first aid" for mothers and nurses in diet, emergencies, accidents, development of the body, gymnastics, and all kinds of diseases. Particularly good are the diagnoses of nutrition difficulties and the instructions concerning food with recipes and dietaries.

In order to determine the relation existing between moral and religious instruction and actual every-day conduct, 600 children of each sex were carefully studied for a period of five years. As a result in *Moral Education* a relationship is shown "scientifically" between deportment and scholarship and between deportment and religious training. An idea of the method is gained from the measurement of the latter in terms of church membership of parents and attendance upon Sunday School, etc., of the children, and the decision is that "the school is doing more than its part. The home is not handling its problem as well as it did fifteen years ago." It "no longer provides moral

FINDING THE RIGHT BOOK

The Independent is often asked for information as to books on particular topics. Doubtless many of our readers have needed such help at times, but have not realized our readiness to give it. We are glad to respond to the requests of subscribers for advice as to the purchase of books in general, and we are especially interested in advising reading clubs and debating societies where to look for material, whether published in book form or in periodicals. Just tell us exactly what you want, and don't demand that we prepare a brief to send by return post, or ask for "all the books on the War" or "Something on art."

training. Parents are no longer assuming their obligation," etc., etc.

How to Know Your Child, by M. F. Scott. Boston: Little, Brown. \$1.25. *The School in the Home and Teaching in the Home*, by A. A. Berle. Moffat, Yard. \$1.25 each. *Backward Children*, by Arthur Holmes. Indianapolis: Bobbs-Merrill. \$1. *The Health Care of the Growing Child*, by L. Fischer, M.D. Funk & Wagnalls. \$1.25. *Moral Education*, by William T. Whitney. Boston: Leroy Phillips.

RECENT WAR BOOKS

It is certainly not an exaggeration to pronounce Mrs. Wharton's *Fighting France* a profoundly impressive and dramatic picture of the rebirth of a nation. On every face she perceives the in-

AID FOR DEBATERS

How to organize a debating society, how to prepare a debate, where to find subjects, briefs, material, the answers to all these questions are to be found in the *Debaters' Manual*, compiled by Edith M. Phelps.

White Plains, N. Y.: Wilson. \$1.

Socialism, compiled by E. C. Robbins, should be one of the most useful of the Wilson Handbook Series. It is designed to give in small compass a general knowledge of the subject. The different branches are treated separately and there is a full bibliography.

White Plains, N. Y.: Wilson. \$1.

Another issue is on the *Prohibition of the Liquor Traffic*, prepared by Lamar L. Beman. It contains full briefs, many articles and extracts from articles, and a bibliography, dealing fairly with this live question.

White Plains, N. Y.: Wilson. \$1.

Tho as a rule we do not notice pamphlets in our book department, we must call the attention of our many debating readers to the very handy and sensible Bulletin No. 770 issued by the Extension Division of the University of Wisconsin.

Univ. of Wisconsin, Madison, Wis. 15 cents.

The University Debaters' Annual reports the more important of the intercollegiate debates. The greater proportion of these were on the increase of the Army and Navy. The Monroe Doctrine, the Minimum Wage, Single Tax are among the other topics argued.

White Plains, N. Y.: Wilson. \$1.80.

vincible flame of an heroic resolve, beneath each calmly steadfast countenance the determination to obliterate all personality in the united purpose of driving an invader from a sacred soil. At times she strikes, with apparent unconsciousness, a note which rings thru many pages, for example, when she was given the password of the night at Chalons—Jéna. To the French soldier that touch alone should make her book forever memorable, as recalling in the hour of darkest need the figure of the Great Commander who led the French armies to victory.

Mr. Long's *Colours of War* follows by way of contrast. In Berlin the supreme conflict brought no spiritual awakening. The long anticipated day dawned swiftly to reveal a nervous patriotism. The people sang, but Mr. Long found there was "no sporting war spirit." A glimpse of the Emperor delivering a public appeal suggests Pilate's distress vindication of himself. Mr. Long quotes the Emperor as saying: "They have thrust a sword into my hand." It is as if he were performing a symbolical ablution before the shedding of innocent blood. He gives us graphic Russian war scenes, and with clear insight analyzes the psychology of the Russian military spirit. Tho the Russian will fight doggedly, it is with little enthusiasm. Apparently within him is something which does not joy in indiscriminate slaughter. His thoughts turn backward to the soil he cherishes, while between officers and men there exist unique fraternal relations. Mr. Long's impartial reckoning of the strength of his country's enemy, his plea for truth and emphatic warning, set his book apart from others of the kind written by Englishmen.

In *Kings, Queens and Pawns*, Mrs. Rinehart writes in a chatty, interesting way of her "escape from England" to France, and her wanderings thereafter as a member of the American Red Cross. While vividly describing the many and varied places visited, and recounting exciting, pathetic and tragic incidents, she also gives timely advice to those moved to aid in the work of rescue and mercy. In this latter respect Mrs. Rinehart is to be congratulated in bringing forth from bewildering and often hopeless surroundings a clear view to strengthen her appeal.

Personally conducted trips of war correspondents begin to wear a curious resemblance on both sides of the fighting line. Mr. Powell, however, has been able to see a great deal more than way-side glimpses from an automobile dash, and the peep thru a leafy spy hole upon an enemy nowhere visible. In his *Vive la France* the chapter on the Battle of Champagne is most powerful, impressive and frightful writing of what scientific warfare has achieved. He fears disbelief, but it is a tribute to Mr. Powell's veracity to state that no human

Operator

Installer

Lineman

Clerk

The Picked Army of the Telephone

The whole telephone-using public is interested in the army of telephone employees—what kind of people are they, how are they selected and trained, how are they housed and equipped, and are they well paid and loyal.

Ten billion messages a year are handled by the organization of the Bell System, and the task is entrusted to an army of 160,000 loyal men and women.

No one of these messages can be put through by an individual employee. In every case there must be the complete telephone machine or system in working order, with every manager, engineer, clerk, operator, lineman and installer co-operating with one another and with the public.

The Bell System has attracted the brightest, most capable people for each branch of work. The training

is thorough and the worker must be specially fitted for his position.

Workrooms are healthful and attractive, every possible mechanical device being provided to promote efficiency, speed and comfort.

Good wages, an opportunity for advancement and prompt recognition of merit are the rule throughout the Bell System.

An ample reserve fund is set aside for pensions, accident and sick benefits and insurance for employees, both men and women. "Few if any industries," reports the Department of Commerce and Labor, "present so much or such widely distributed, intelligent care for the health and welfare of their women workers as is found among the telephone companies."

These are some of the reasons why Bell telephone service is the best in the world.

brain could conjure forth such a cataclysm of horror. If his partisanship for the Allies be pronounced, he is not thereby deterred from a frank criticism of the British military organization. He joins with the French officers in representing the superior attitude of their British comrades, asserts this is "not a sporting war," and that packs of hounds are entirely out of place. But it is with the finger of an otherwise admiring friend that he points to the vulnerable joints in British armor. Both from a military and civilian estimate, Mr. Powell's book should hold a permanent place in this "greatest war" literature.

Twenty years ago Mr. Kipling wrote soldier stories which gave him a wide popularity. It is with much the same distinctively Kiplingesque attitude he mingles with the officers and men of the French army. His little volume, *France at War*, therefore, will not disappoint those who still delight in his famous soldier models.

Military science is indebted to Mr. Talbot's *Aeroplanes and Dirigibles* for a well written and comprehensively informing book. While professional in tone, with no attempt made to "play up" unduly exciting incidents in the airman's career, such parts as the struggle of Count Zeppelin for success should interest every reader.

Previous to the publication of General Baden-Powell's *My Adventures as a Spy*, one confesses to a vague impression that a spy is no better than the term seems to imply—a despicable fellow who, when detected, is hardly worth praise or regret. General Powell, however, not only defends and classifies the spy, but gives us his psychology. The result is to kindle a better feeling for the villain—or hero—of devious ways, ready resource and ample courage. For one who is tired of life, General Powell recommends the trade of a spy as a bracing occupation.

Fighting France, by Edith Wharton. Scribner. \$1. *Colours of War*, by R. C. Long. Scribner. \$1.50. *Kings, Queens and Pawns*, by Mary Roberts Rinehart. Doran. \$1.50. *Vive la France*, by E. Alexander Powell. Scribner. \$1. *France at War*, by Rudyard Kipling. Doubleday, Page. 50 cents. *Aeroplanes and Dirigibles*, by F. A. Talbot. Dangerous Indigestion

Indigestion, Constipation and the more serious ills to which they lead are so common and cause so much needless pain and suffering that Dr. John Harvey Kellogg has written a book telling how to prevent and remedy such disorders. The greatest living authority on diet and digestion here gives you the results of his forty years' experience as Superintendent of the Battle Creek Sanitarium where he has studied and treated thousands of cases of indigestion and resulting ills. "Colon Hygiene" is a book of facts—not theories. Do you want to renew your energy and stamina, stop suffering from headaches and backaches, have clear eyes, a smooth, ruddy skin, and feel the exhilaration of real good health tingling thru your body? If so, send this coupon now for a free examination of this splendid book. Learn how easy it is to live life anew—to acquire the dominant personality that comes from good health—to become suffused with the joy of living. All this, and more, you may get from Dr. Kellogg's book of 400 pages, which the coupon will bring to you. This free examination offer is limited, so send the coupon now before it is withdrawn.

the book within five days at your expense.
(Write your name and address in the margin.)

matic force or literary polish in dialog, its blunt, slangy speech, so characteristic of American life, breaks harshly from the page. It is perhaps the nearest approach to the English high comedy and Sir Henry Arthur Jones that has yet been made on the American stage.

Doubleday, Page. 75 cents.

LIGHT ON THE DARK AGES

Medieval Italy, by H. B. Cotterill, covers more than a thousand years of Italian history in very condensed narrative. The book contains a great deal of interesting material on medieval coins and mosaics and the development of architecture.

Stokes. \$2.50.

INDIANS AND REGULARS

A Baby of the Frontier is a breathless story of the plains in the days of frontier army posts, roving bands of Cheyennes and Sioux, and heroic cavalry squads fighting against fearful odds. This is a familiar field to the author, Cyrus Townsend Brady, who narrates a well-unfolded tale with genuine enthusiasm and realism.

Revell. \$1.25.

HEBREW LEGEND AND HISTORY

A useful volume of the handy Lake English Classics is a collection of *Old Testament Narratives* edited by Charles Elbert Rhodes. Arranged in short stories, without chapter or verse, the book will be interesting to those who already know their Bible as a sacred book, as well as to those, and the college examinations say they are legion, who have to be introduced to it along with Chaucer and Ben Johnson.

Scott, Foresham. 40 cents.

A NEW COUNTERBLAST TO TOBACCO

Bruce Fink opens his essay on *Tobacco* by declaring it a physical poison and closes by denouncing it as a moral evil. Strictly speaking, the book disqualifies itself from consideration as a scientific treatise by its admission of hearsay evidence and exhibits of dubious evidential value. But Prof. Fink, after all is said, makes out a strong case concerning the effect of tobacco on boys and college men, and the waste of money entailed in its use.

Abingdon Press. 50 cents.

TROUT VS. BULLS AND BEARS

By whimsical tradition the real interest of the ordinary financier is not his office, but his cabin in the woods. *Wall Street and the Wilds* is, however, an autobiography which realizes this conceit. Anthony Weston Dimock, a powerful "operator" in his younger days, is one of the foremost exponents of the joy of cabin life, and his book will be intensely interesting both to the Wall Street men of today and to those who care more for fishing than for finance.

Outing Co. \$3.

LITTLE MOHAMMEDANS

Dr. S. M. Zwemer is an authority on life in Moslem lands. The photographs of pretty, merry children illustrating his *Children of the Moslem World* are a startling commentary on the text, reminding one that these might be, should be just like other children. We see the Mohammedan at his best in the efforts of Young Turks, in the courage and endurance of the Turkish soldier. The children of Persia, India, Egypt, Southern Africa are the other side of the picture.

Revell. \$2.

KIPLING

Uncommon and charming are the photographs illustrating Dr. Arley Munson's account of *Kipling's India*, while her text is warranted to send one back to the old stories even tho one agree with the conclusions of John Palmer's striking critical study *Rudyard Kipling*, in the *Writer's of the Day* series. As he puts it, the critic is "mainly concerned with looking for the inspired author under a mass of skilful journalism." The Simla and soldier tales are the latter; the stories of Kim, Puck of Pook's Hill and the Jungle are art.

Kipling's India, by Arley Munson. Doubleday, Page. \$1.50. *Rudyard Kipling*, by John Palmer. Holt. 50 cents.

New Imported Dress Cottons, Linens, etc. Spring and Summer, 1916.

HIGH-CLASS SALESMEN WANTED

The largest real estate concern in the world is planning a National advertising campaign to advertise their New York real estate as the best investment opportunity in the country. We control \$10,000,000 of property on subways projected, or now in operation, and are planning to take on a few high-class salesmen. Positively no applications considered from men who cannot maintain their own personal expense while demonstrating their ability, but to such as are able to fulfill the requirements, a liberal contract will be made similar to the one under which our representatives are making as high as \$25,000 a year, and none under \$3,000. Every assistance given to men capable of making good, in the shape of a liberal individual advertising appropriation, and personal help in getting started.

OLD MEN WHO LOOK YOUNG

DOCTORS will tell you that the secret of this hale old age is perfect elimination. It is constipation that is chiefly responsible for the tragedies of premature age which the pressure of modern life has made increasingly common.

Because of the evident dangers of the laxative habit, specialists in this country and abroad, following the lead of the famous English surgeon Sir William Arbuthnot Lane, have adopted the mineral oil treatment as a far safer, saner, and more scientific means of encouraging normal movements.

Nujol is the purest form of white mineral oil. It is not a drug nor a laxative, but acts in effect as a mild internal lubricant, facilitating the processes of evacuation and so helping to restore the bowels to normal tone.

Most druggists carry **Nujol**, which is sold only in pint bottles packed in cartons bearing the **Nujol** trademark. If your druggist does not carry **Nujol**, accept no substitute. We will send a pint bottle prepaid to any point in the United States on receipt of 75c—money order or stamps.

Write for booklet, "The Rational Treatment of Constipation."

PEBBLES

Voice—"Is this the Weather Bureau? How about a shower tonight?"

Prophet—"Don't ask me. If you need one, take it."—*Chaparral*.

"Put your car up for the winter?"

"No. I'd like to, but none of the pawn-brokers are willing to lend me any money on it."—*New York World*.

Prosecutor (to talesman): "Do you object to capital punishment?"

Talesman: "Wal, no. Not if it ain't too severe."—*Harpers*.

Willis—How did Christmas go off at your place?

Gillis—As usual. Christmas Eve we wrapped all the presents we gave and Christmas Day we rapped all the presents we received.—*Life*.

Jim—What is Bill doing now?

James—He's a post impressionist.

Jim—You're stringing me.

James—No; he's got a job with the Western Union branding numbers on the telegraph poles.—*Dartmouth Jack-o'-Lantern*.

There is a little railroad down in south Georgia bearing the impressive title of "L. K. & W." Just what the initials originally stood for no one recalls, and the road is known locally as the "Look, Kuss & Wait" and the "Lord Knows When."—*Harpers*.

"All Things Come to He Who Waits—and Hustles."—*Oral Hygiene*.

"Father Arrests Son Whom, He Says, Looted Home."—*Bronx Home News*.

Headline writers, too, seem to have a fear of losing their amateur standing.—*New York Tribune*.

Curate: "Mai deah children, in accordance with Scriptural behest, Ai want you to regard me as the shep-ard, and Ai shall look on you as mai sheep. Of course you all know what the shep-ard does to the sheep?"

Dear Kid: "Yes, please sir, 'e shears 'em."—*Sydney Bulletin*.

The Wells family, who resided in an interior city, had one of those maids of the invariably heavy hand. Not long ago the town experienced a slight shock of earthquake. Pictures were thrown down, furniture and crockery rattled about. During the tumult the mistress went to the head of the basement stairs and called out in a patient, forbearing tone:

"Well, Lizzie, what are you doing now?"—*Harpers*.

Two Englishmen crossing from Europe were both of a serious and conservative turn of mind. Altho they shared the same stateroom, had seats at the same table, and sat side by side in their deck chairs they did not speak to each other, for they had not been introduced.

On the last day, however, one of them decided to wave conventionality.

They were standing side by side on the rail and he ventured an introductory remark:

"Goin' over?"

"Yas," replied the other Englishman, "I rather thought I would."—*Everybody's*.

"Henry," a Jersey commuter's wife began, thoughtfully, "I've been thinking a lot about you lately."

"What's up?"

"Since we moved here to Jersey and you've gone back and forth every day to the city you have seen absolutely nothing of the children."

"I don't see how that can be helped," said Henry. "When I leave in the morning they are not up, and when I come back in the evening they're in bed."

"Yes," said the wife, "that is so, but you might at least send them a souvenir postcard now and then."—*New York Times*.

Independent Opinions

It is startling to open an envelope postmarked "Oklahoma City" and find in it an old and faded letter dated nearly fifty years ago and long before Oklahoma had been heard of. Mrs. K. S. Carlisle, of that city, had been looking over some old letters of her mother's and found one which she thinks—as do we—will interest The Independent readers of today.

WAR DEPARTMENT
Paymaster General's Office
Washington, Dec. 23d, 1868.

My Dear Sister:

I have just subscribed for The Independent, one of the finest weekly papers in the world, devoted to Religion, Politics, Literature and News, and have made you a present of it for one year from January 1st. It will be your New Year's gift from me. It is published in New York City, and the postage will be about twenty cents a year, payable at your post office quarterly in advance. I enclose you twenty-five cents to pay the postage on it, so it will be of no expense whatever to you. Mary takes The Independent and would not be without it.

Last night I attended the lecture of "Petroleum V. Nasby" (D. R. Locke, Editor "Toledo Blade") and was never more amused and interested. Nasby is one of the smartest men of the times. The enormous hall was packed full. General Grant and many other distinguished persons were present.

Tell Tully I would like to spend a few days with him hunting deer and turkey and prairie chickens.

Give my best respects. Write to us soon,
Your brother,

"HENDERSON"

In our editorial of November 29, "What Are You Fighting For?" we urged the belligerents to put into concrete terms what they considered necessary for their national safety, satisfaction and honor. Then we enumerated the terms of peace which had been mentioned in discussions of the question, such as indemnities, reduction of the enemies' armaments and territorial cessions. The Professor of Philosophy in Washington and Jefferson College thinks we laid too much stress on the territorial side of it:

No doubt the phrase so current in the discussions of diplomats of southern Europe—"the realization of our national aspirations"—refers usually to territorial expansion. No doubt territorial changes will come about as result of the conflict, but after all these will be in the nature of by-products of the sacrifices. Germany indeed sought more space as a necessity in view of her increasing population. England indeed laid her hand on certain undefendable outlying German territory. France fought to protect her own borders, else for her there would be scarcely ground for a fight at all. At the same time, to suppose that this superb demonstration of human emotions is caused by a desire on the part of any citizen of Europe for a strip of territory in Africa or Asia, not as his own but as a national possession, is to view the struggle as a business affair carried out for the realization of values too vague to believe in.

The real motives of the war are certain

Stop Eating Poisonous Food Combinations!

Noted Scientist Shows How Certain Combinations of Good Foods Are Responsible for Over 90% of All Sickness, While Others Produce Sparkling Health and Greatly Increased Efficiency

Twenty years ago Eugene Christian was at death's door. For years he had suffered the agonies of acute stomach and intestinal trouble. His doctors—among them the most noted specialists in the country—gave him up to die. He was educated for a doctor, but got no relief from his brother physicians, so as a last resort he commenced to study the food question in its relation to the human system, and as a result of what he learned he succeeded in *literally eating his way back to perfect health* without drugs or medicines of any kind—and in a remarkably short space of time.

Today Eugene Christian is a man 55 years young. He has more stamina, vitality and physical endurance than most youngsters in their 'teens. He literally radiates mental energy and physical power.

23,000 People Benefited

So remarkable was his recovery that Christian knew he had discovered a great truth which, fully developed, would result in a new science—the Science of Correct Eating.

Without special foods, drugs or medicines, he has up to this time *successfully* treated over 23,000 people for almost every kind of non-organic ailment known and has greatly increased the physical energy and mental power of as many more who were not suffering from specific troubles.

After his twenty years of study and practice Eugene Christian has come to the def-

inite conclusion that 90% of all sickness is due to wrong eating. He says we are poisoning ourselves through our ignorance of food values. Many good foods when eaten in combination with other good foods form a chemical reaction in the digestive tract and are converted into the most dangerous poisons, from whence come most ills. Many scientists have long recognized this, but until now all their efforts have been directed toward removing the poisons *after* they had formed, while Christian removed the *cause* by *preventing* the poisons from forming.

Little Lessons in Correct Eating

24 Pocket-Size Booklets in Leatherette Container

Send No Money—Only \$3.00 if You Keep Them

Christian's Course of 24 lessons is written expressly for the layman in easy-to-understand language. It does not, however, merely tell you *why* you should practice correct eating and what the results will be. It gives actual menus, curative as well as corrective, covering every condition of health and sickness from infancy to old age, and covering all occupations, climates and seasons. To follow these menus you do not have to upset your table—nor eat things you don't enjoy—in fact you will enjoy your meals as you never have before.

Vigorous Health— Increased Efficiency

It has been the almost invariable experience of those who follow Christian's simple suggestions that they enjoy a new type of health—a health so perfect that it can only be described as a kind of super-health. Christian's ideal of health is to be literally champing at the bit with vital physical energy and mental power—not once in a while—but every moment of the day and every day of the year from youth to deferred old age—and that is what he gives you through these little lessons. There can be no doubt of the increased personal efficiency that this will develop. The better you feel, the better work you can do. And greater material prosperity naturally follows.

No Money in Advance

The price of the Christian Course of 24 lessons—containing rules, methods and actual menus which are literally priceless—is only \$3.00. We will gladly send you the course without deposit for five days' free inspection. Merely mail the coupon or write a letter and the complete course will be mailed you at once, all charges prepaid. Then if you decide to keep the course, you can send the money. If not, mail the books back to us; no obligation will have been incurred. If the more than 300 pages contained in Christian's Course yield but one single suggestion that will bring you greater health, you will get many times the cost of the course back in personal benefit—yet hundreds write us that they find vital help on every page. Tear out and mail the coupon *now*, before you forget, as this announcement may not appear here again.

Corrective Eating Society, Inc.
42 Hunter Ave., Maywood, N. J.

Do You Know

- How poor food robs you of mental efficiency?
- What foods cause nervousness?
- What causes constipation and how to avoid it?
- What produces acid stomach?
- What is the great cause of indigestion, gas, and bloating?
- What makes your liver complain?
- How much starch does your system require?
- What happens when you overeat?
- What should be eaten together for digestive harmony?
- How to keep warm in winter and cool in summer?
- How foods establish health by removing causes of disease?
- What to eat and omit for all stomach and intestinal disorders?
- How many different things should you eat at each meal?
- What combinations of food are nutritious?
- How should vegetables be eaten?
- What causes fermentation?
- Why the appetite cannot be trusted as a guide to what to eat?
- Why some foods actually explode in your stomach?
- What foods build fat?
- When is water beneficial when is it injurious?

These are only a few of the many Health Building Questions answered.

Send me the Christian Course in correct eating. I will mail it back to you within five days or send me \$3.00.

WILLIAM SHAKESPEARE

has been dead these three hundred years, but this year of nineteen hundred sixteen bears witness in many ways to the persistence of his personality. Of the manifold tributes to his memory none is more fitting, none more important than the publication of the NEW HUDSON SHAKESPEARE.

It is an edition for the appreciative reader. The scholarly revision of the text, the brilliant introductions of Dr. Henry N. Hudson, the notes at the bottom of the text page, adequate but not officious, the handsome type and the beautiful binding all appeal to the reader who appreciates the best. The price, thirty cents per volume, is the lowest at which books of such distinction have ever been published.

An illustrated booklet with stamped gold cover containing a reproduction of the Droeshout portrait of Shakespeare will be sent postpaid to teachers, students, and other readers of The Independent on application to our nearest office.

GINN AND COMPANY

imponderables, making for power and security. Has Mr. Asquith not expressed the sentiment of the British people? Do they not know what they are fighting for? Germany just now has a multitude of counsellors, but there are many who do not advocate the retention of the conquered territories. In her own way she desires to crush the militarism of France and Russia and the sea power of England. Dimly the war seems to be resolving into a struggle for and against certain lingering traces of mediaevalism and an assertion of principles of societal independence.

EDWARD M. WEYER

Washington, Pennsylvania

Why is it that the latest super-dreadnaught of the United States, the "Nevada," is able to make only some twenty knots per hour, when the latest that Great Britain is building, the "Queen Mary," is required to make 34.4 knots per hour?

Is it not a fact that the two naval engagements in this war, thus far, have demonstrated two things regarding success: first, that it depends on speed, and, second, gun carrying power.

If, then, this is true, how can the United States be satisfied to meet these requirements with only a twenty-knot speed, at least twelve knots per hour below the requirements of other nations?

E. C. VOSE

Concord, New Hampshire

(1) When the "Nevada" was authorized, twenty-one knots per hour was the standard speed for battleships, and theoretically is so yet, but England has built and is building battleships of much higher speed—tho not thirty-four knots as our correspondent suggests. That speed is only proposed for battle-cruisers. Probably our battleships Nos. 43 and 44, not yet named, will be given much higher speed than that of the "Nevada."

(2) Every naval engagement depends on speed and gun power.

(3) The United States is not satisfied with twenty knots speed.

We are glad to hear again from an old correspondent, Mr. or Mrs. P. B. Publico, who used to write a great deal for the papers, but has not appeared often in print in recent years:

Why all this fuss with Austria and Germany over their submarine warfare? Why not apply the same principles followed here at home and let the various governments take out a license and pay a certain sum into the treasury in consideration of which we will shut our eyes and ears and lips and permit them to do anything they like with our men and women and children. That is what we are doing here and in every town where saloons are licensed. Certainly the number killed every day by these destructive forces which we legalize is immensely greater than will be killed by submarines during the whole course of the war. Such a solution of the problem confronting the State Department ought to be acceptable to the foreign governments and would be altogether in harmony with our policy in home affairs.

PRO BONO PUBLICO

From General Anderson we receive the following courteous criticism of our attitude on military training in the schools:

I regret to find that you disapprove of military training in High Schools. As I understand it, this method of training is not in the line of vocational instruction. It is not supposed by its advocates that the boys who are given this training should

become soldiers or officers of the army. The object sought is not a preparation for offensive war or conquest, which nobody favors, as far as I know; but for defensive war or security if unfortunately war should be forced upon us. It is only favored as the best and least expensive method of elementary military instruction.

It is opposed, as far as I can see, from a sentimental prejudice against what is termed militarism. Military organization is not an ism, like despotism, socialism, or any form of autocracy. It is only a method—a means to an end. It may be perverted to a bad end, but it is as often used against a bad ism. Has there ever been or can there ever be a dangerous militarism in this country? Who has ever proposed it or used it? It cannot exist without appropriation and that, of course, is under civil control. The Presidents of the country and the Secretary of War are always civilians.

T. M. ANDERSON

Vancouver, Washington

In an editorial of January 24 on the initiative shown by Germany in methods of warfare we ventured to suggest that the failure of the French and English to make first use of novel weapons like streams of fire and asphyxiating gases was due to moral scruples. This strikes fire as follows:

Moral Scruples? of England! What about her moral scruples of 1863? It has been shown that England in her yearning to see the Union destroyed violated every honorable obligation to our country. She knew that the cruisers "Alabama," "Shenandoah" and "Florida," built in her shipyards, went to sea and inflicted great injury on our commerce, and when she saw no other way out of the trouble she settled the "Alabama" claims as they were called by paying \$15,500,000 to be distributed among our citizens whose ships and property had been destroyed. But we need not go back to 1863. What about her *Moral Scruples?* when the British made seizure of the American ship "Wilhelmina," carrying a cargo of wheat to Germany. Here she violated international law for the sake of producing famine, not to the German soldier, but to his wife and children. And what about her *Moral Scruples?* when she made use of the American flag to protect her ships against submarines? Old England may be a great country, but in our estimation she does some very small things.

ADAM HIRN

Spenceville, Ohio

A Catholic priest writes in approval of the plan of the Audubon Society to convert all of the cemeteries of the country into sanctuaries for birds.

What a move for the better if birds were allowed to roam unmolested among the harmless dead. Visitors to the graveyard would be cheered by their singing, their chirping would replace the voices now stilled of those under the sod. May the press do its utmost to make this new move a reality. If New York succeeds in humanizing bird killers, other cities will attempt to do the same. Honor to New York for its proposed protection of God's songsters.

RAYMOND VERNIMONT

Denton, Texas

When you think as I think, then you think wisely. When you think the President should appoint a professional post office man, not a professional politician, to manage the New York post office, then you think as I think. When enough of us think wisely, then politicians will not choose Presidents. Then Presidents will not choose politicians.

FOR THE SHAKSPERE TERCENTENARY

FIFTY SHAKSPERE SONGS

Edited by CHARLES VINCENT, Mus. Doc.

ISSUED IN TWO EDITIONS, FOR HIGH VOICE, FOR LOW VOICE

The editor has arranged the material selected in a logical and interesting manner, dividing it into four parts, as follows:

Part I.—Songs mentioned by Shakspeare in his plays.

Part II.—Songs possibly sung in the original performances.

Part III.—Settings composed since Shakspeare's time to the middle of the nineteenth century.

Part IV.—Recent settings.

The examples chosen will be found not only historically interesting and illustrative of the various periods, but gems of song composition as well—songs which may be sung with delight.

The prefatory and descriptive matter is full and complete, embracing a review of Shakspeare's England, musically considered and a separate descriptive and historical note to each song in the volume. A fine portrait of the poet serves as frontispiece.

Note.—The Musicians Library is a series of 75 matchless volumes containing the masterpieces of Song and Piano Music, edited with authority, and engraved, printed and bound with surpassing excellence.

Bound in paper, cloth back, each, \$1.50 post-paid; in full cloth, gilt, each, \$2.50, post-paid

Booklets giving Portraits of Editor, Tables of Contents and particulars about the Easy Payment Plan sent free on request.

EFFICIENCY QUESTION BOX

CONDUCTED BY

EDWARD EARLE PURINTON

DIRECTOR OF THE

INDEPENDENT EFFICIENCY SERVICE

202. Mr. A. F. S., Wisconsin. "I wish information as to your Efficiency Course from a teaching point of view. My thought is to take up this subject in big corporation departments. I realize what a necessity it is getting to be, and wish to get into the field as soon as possible. Any information you may extend will be a great help to me."

You doubtless refer to the new book "Efficient Living," prepared with a special view to the teaching aims and values. We are in receipt of letters from numbers of high school teachers and college professors, declaring that "Efficient Living" has been used with marked results in class work and for individual students. Procure the book from The Independent, and study its possibilities for use in corporation departments. We suggest that you learn of the activities of the National Civic Federation, Metropolitan Tower, New York; also of the National Association of Corporation Schools, Irving place, New York.

203. Miss D. N., New York. "I am sixteen years old, and a high school senior. I would like to go to a school where I could get a practical training and earn some money right along with the regular work. I am not very strong, but would like to take up Domestic Science or a Business Course."

Your ambition is fine—would that every girl had it, and every girl's parents for her. Simmons College, Boston, and Teachers' College, New York, teach domestic science. If you are capable in stenography, you should find a market for your spare time as a visiting secretary in a large college town, among the professors, students and business men. Buy a good book on business letter-writing (several are advertised in *System Magazine*), and start now to become an expert correspondent. The American Schools Association, Times Building, New York, will furnish particulars of colleges where learning and earning go together. Also apply to the Y. W. C. A. secretary in every school that seems desirable, and submit your needs and ambitions, with a list of your qualifications.

204. An Efficiency Student, New York City. "Where are lectures given in or about the city on the question of Efficiency? Are the lectures at the West Side Y. M. C. A. visited by strangers, or is it necessary to be a member?"

The Secretary of the Efficiency Society, No. 41 Park Row, could probably answer your first query to your satisfaction. The lectures and classes regularly held at the Y. M. C. A. are for local students of the special course there given, tho not necessarily for members of the Y. M. C. A. Write to George F. Barber, c/o Educational Department, West Side Y. M. C. A., 318 West Fifty-seventh street, New York, and obtain full particulars.

205. Miss B. F., New York. "At seventeen I was obliged to leave school because of ill health. Now, at twenty-one, a certain handicap makes it impossible for me to return to college, or even to leave my home to take up any occupation. I dread inactivity, but can foresee no better future. As it is very unlikely that the obstruction can ever be removed, how can I become self-supporting at home, and how prepare for this?"

We refuse to believe that the obstruction can never be removed. Your case is one in ten thousand if, at your age, you should be incapacitated for life. You might be cheered by the work of the Shut-In Society, 62 East Thirty-fourth Street, New York. You could learn to knit or embroid-

(Pocono Summit Station, D. L. & W. R. R.)
That belated vacation,—take it among the hills and streams of Pocono Manor.

That short Fall or Winter rest,—try a fortnight in retreat, on that 800-acre tract, with the "Quakers at the Manor," comfort without ostentation. Golf, tennis and garage; no bar or dancing.

J. W. HURLEY, Manager.

er, make fine candy or home-cooked dishes, or take up designing or decorating. See announcements of Woman's Business Bureau, 37 East Twenty-eighth Street; Woman's Guild, 200 West Fifty-second Street; Woman's Work Magazine, 156 Fifth Avenue; Women's Exchange, 334 Madison Avenue; all of New York.

206. Mr. M. H. T., Iowa. "Have you any statistics showing the effects on efficiency in a business office of an eight-hour day and a half holiday a week? I am interested from the employer's standpoint."

Efficiency is generally increased by such a reduction in working hours, provided also the employees are taught scientific working methods. Consult back files of *System* magazine for information of value; also the National Civic Federation, Metropolitan Tower, New York; also the Business Bourse, 260 Broadway, New York; also the United States Department of Labor, Washington, D. C. Books on scientific management, as those of Taylor and Gilbreth, contain references of importance.

207. Mr. P. E. N., Connecticut. "Your articles in *The Independent* have been both a revelation and an inspiration to me. May I ask for some more personal advice? I am just beginning a three-year term in a theological seminary, with the ultimate object of going into missionary work in Turkey. Can you recommend a filing system suitable for ministers? I want to adopt some plan now that I can gradually build up while I am studying."

Congratulations on your idea. If you can learn business method while studying theology, you will be twice as effective in the missionary field. Various good filing systems are adapted to various purposes. Your choice depends on the material to be filed—whether clippings, memoranda, names and addresses, newspaper and magazine articles, etc. Write the following New York City concerns for details of their methods and appliances: Yawman and Erbe, 360 Broadway; Library Bureau, 316 Broadway; Weis Manufacturing Company, 75 John Street; Charles C. Dilts Company, 377 Broadway; Shaw-Walker Company, 60 Franklin Street; Meilink Manufacturing Company, 399 Broadway; Amberg File Company 75 Duane Street; Safe-Cabinet Sales Company, 15 East Twenty-sixth Street; Permanent Educational Exhibit Company, 70 Fifth Avenue.

208. A Reader in Missouri. "For a number of years I have held the position of church organist, and am considered by many an efficient organist. Yet sometimes I become so afflicted with fear that I actually tremble, and I feel pretty much like a shipwrecked sailor clinging to the top of a mast. I want to lack the nerve that many less competent organists possess. How can I overcome timidity and gain self-confidence?"

You are in good company—so great an orator as Beecher had trembling of the knees and fluttering of the heart before he got into his sermon far enough to forget himself. Nerve and merit have no relation to each other necessarily. We would suggest that you obtain a few such books as Horace Fletcher's "Forethought Minus Fearthought," Frank Channing Haddock's "Culture of Courage," and one or more of the inspirational works by Orison Swett Marden. A standard volume on mental suggestion or autosuggestion, would probably help you. A course in vigorous gymnastic training should set you up. Could you not arrange a group of potted palms or other large plants between you and the audience? Your timidity may lie chiefly in the consciousness of being seen. Your success is to be heard, and not seen.

209. Miss F. C. M., Massachusetts. "In my reading I often find articles that I wish to keep on file for my work as a teacher of English. Will you kindly suggest the best filing system?"

The frequency and method of use determines. A pocket envelope file, a scrap-book file, a topical card index file, a safe cabinet file, are among the good ones. Procure a copy of *System* Magazine, Chicago; then study the advertising pages for suggestions. Also note Question Box reply to Mr. P. E. N., Connecticut, No. 207.

Stop Typewriting The Old Way

Learn the New Way—At Home 80 to 100 Words a Minute Guaranteed

Every stenographer—everybody who uses a typewriter or who would use one if they knew how—should send in the coupon below or a post card or letter *now* for our wonderful new *free book* about this marvellous *New Way in Typewriting*.

This book, which we send free, describes the secret principles of a wonderful new method of acquiring skill on the typewriter—a new method that has completely revolutionized the typewriting situation. Based on *Gymnastic Finger Training away from the machine!* Already thousands of men and women who never exceeded 30 to 40 words a minute are typewriting 80 to 100 words *with half the effort* and with infinitely *greater accuracy* than ever before—have increased their salaries from \$10 and \$15 a week up to \$25, \$30 and even \$40 weekly.

Only 10 Lessons—Easy for Anyone

And the wonderful thing about the New Way in Typewriting is that you learn it at home in spare time, in only 10 lessons *and it is amazingly easy for anyone!* What's more, you begin to increase your speed from the *very first lesson* and without interfering with your present work.

In thousands of cases, the reason why people aren't earning more money is simply because they lack *speed* and *accuracy* on the typewriter. If you want to do as others—thousands of others have done—and earn \$25, \$30 or even \$40 weekly, our free book about the New Way in Typewriting will show you how.

Entirely New

Don't confuse this New Way in Typewriting with any system of the past. There has never been anything like it before. Special Gymnastic Finger Training Exercises bring results in *days* that ordinary methods will not produce in *months*. It is the greatest step in typewriting since the typewriter itself was invented—already its success has become nation-wide.

Among the thousands of operators who have taken up this system are hundreds of graduates of business colleges and special typewriting courses—many were so-called touch writers—yet there has been hardly a single one who hasn't *doubled* or *trebled* his or her speed

Read What They Say

"It is a genuine pleasure for me to recommend the Tulloss New Way. From 20 words a minute, inaccurate work, to a speed of 80 words a minute, accurate work, a salary increase that makes it now exactly double what it was when I began the study—this is the result obtained in my case from this most excellent course."—P. A. Nanslar, Oklahoma City, Okla.

Speed—Accuracy—Doubled Salary
"Am now Chief Clerk to the Dept. of Parks and Public Property. Salary is exactly double what it was when I took up the study of the New Way. I can only say if you desire to increase your ability and salary, you will make no mistake in taking this Course. The instruction is of the highest order."—Anna S. Carlson, 109 Hoerner St., Harrisburg, Pa.

and accuracy, and their salaries have been increased in proportion.

Sent to You on Trial

So overwhelming has been the success of this New Easy Way in Typewriting that we will send you the entire course on trial. We give you a positive Money-Back Bank Bond guaranteeing to bring you both expert speed and accuracy and to satisfy you with results or the Course will not cost you one cent. You are the judge. Your word decides it.

Right now we are making a special low price to new students in each locality to help advertise the New Way in Typewriting. If you are ambitious to get ahead, if you want to get more money in your pay envelope, write us *at once*.

Free—Amazing Book

We have prepared a book which tells all about the New Way in Typewriting, which is free to those interested. It is a big 48-page book, brimful of eye-opening ideas and valuable information. It explains how this unique new method will quickly make your fingers *strong and dextrous*, bring them under *perfect control*, make them extremely rapid in their movements—how in a few short weeks you can transform your typewriting and make it *easy, accurate and amazingly speedy*—all this and much more is told in detail. No instruction book ever written, no matter what its cost, ever told so plainly the real *WHY* and *HOW* of expert typewriting. By all means, mail the coupon or just a postal or letter *NOW*. With the book we will send our Special reduced price to new students in each locality. *Write today.*

Springfield, Ohio

Old "Touch" System Can't Compare with The New Way

Of all the stenographers who take up the old "touch" system in business schools less than 5% ever use it in actual work. This is because the old touch system is hard to learn, hard to maintain, and hard to use. The New Way is different, based upon an absolutely new idea as to the way to get speed. It brings results in *days* that the old touch system doesn't bring in *months*. Get our free book and see why. Mail coupon or postal *NOW!*

After Taking 3 Touch Courses

"I had worked through 3 systems of touch typewriting. However, my speed was low and the keyboard incompletely mastered. I then took up the study of the New Way and as a result I am now able to strike any letter or character blindfolded and without the slightest hesitation, and my speed has been brought up to 80 words per minute. — C. H. Emerick, DuBois, Pa. Salary exactly doubled.

From an Old "Touch" Writer

"When I enrolled for the New Way I had completed a typewriting course and was already a touch writer, but I averaged only about 40 to 45 words a minute—also made frequent errors. As to my present ability, I find by repeated actual tests that my speed from shorthand notes is from 85 to 90 words a minute; in copying typewritten or printed matter I can reach about 95 words a minute; on familiar matter as high as 110 to 112."—John H. Marquette, Smith's Falls, Ont.

These are but a few of the many testimonials on file.

The Market Place

OUR GREAT FOREIGN TRADE

Official figures concerning our foreign trade during the calendar year 1915 have now been published by the Government. They show that the extraordinary growth of exports continued to the very end, for the value of shipments in December, \$359,301,274, made a new high monthly record, with another new record for the excess of exports over imports. Our exports rose from \$2,114,257,000 in 1914 to \$3,550,915,000 last year, and it is noticeable that this increase of sixty-eight per cent was accompanied by only a very slight decrease of imports, for the total, \$1,778,655,000, was only about half of one per cent, or \$10,400,000, below the imports in 1914, and only three-quarters of one per cent, or \$14,000,000, less than those of 1913. An impression has prevailed that our receipts of goods from abroad have been much reduced by the war. It is corrected by these figures.

Not only the great and unprecedented volume of exports, but also the very large excess of exports over imports, especially command attention. This excess, so beneficial to the United States, was \$1,772,309,000 for the twelve months, with which may be compared \$325,000,000 in 1914, and an average of about \$450,000,000 for a series of years before the war. December's excess, \$187,459,000, surpassed that of October, which had been at the head of the list. It will be seen that December's favorable balance was at the rate of more than \$2,250,000,000 (instead of \$1,772,309,000) for a full year. While the official figures for January have not been published, it is known that the excess for twenty-eight days of the month, at ports doing ninety per cent of the export business, was \$164,500,000. The month's total, therefore, may have been \$190,000,000, or even \$195,000,000.

Shipments of arms and munitions are steadily increasing, as the gain in December over November was \$10,000,000. And on many large orders there have been no exports. This is true of those given to our manufacturers by the Canadian Car and Foundry Company, which has contracts with Russia for about \$150,000,000 worth of ammunition. As an example of war supply cargoes, that of the White Star liner "Adriatic," when she sailed from New York on January 12, may be cited. The steamship carried 18,000 tons of munitions, metals and

"I Now Hear Clearly"

You, Too, Can Hear!

Inasmuch as 200,000 users of the "ACOUSTICON" have had the same results from it as Mr. Garrett Brown, whose photo appears above, we feel perfectly safe in urging every deaf person, without a penny of expense, solely and entirely at our risk, to accept a thorough trial of the

1916 Acousticon

No Deposit **FREE** No Expense

All you need to do is to write saying that you are deaf and will try the "ACOUSTICON." The trial will not cost you one cent, for we even pay delivery charges.

WARNING! There is no good reason why every one should not make as liberal a trial offer as we do, so do not send money for any instrument for the deaf until you have tried it.

The "ACOUSTICON" has improvements and patented features which cannot be duplicated, so no matter what you have tried in the past, send for your free trial of the "ACOUSTICON" today and convince yourself—you alone to decide. Address

 Contest at once.

other products ultimately to be used in the war. This cargo's value was \$10,000,000, and the freight charges were nearly \$400,000.

Exports of food have been nearly equal in value to those of munitions. In December, from the port of New York alone, they amounted to \$34,500,000. Our shipments of breadstuffs, meat and dairy products have risen from \$330,000,000 in 1913, a year not affected by the war, to \$760,000,000 in 1915. The exports of last year included \$125,000,000 worth of horses and mules.

The gold movement should not be overlooked. In 1914 we were losing gold, exports having exceeded imports by \$165,228,000. Last year, on the contrary, gold was pouring in, and the net gain was \$420,528,000.

Owing to the war, our trade with South America has been growing. Our exports to that part of the world in October, for example, were twice as large as those of the corresponding month in 1914. But the balance is in South America's favor. For the ten months that ended with October the exports advanced from \$80,000,000 to \$116,000,000, and imports from \$193,000,000 to \$259,000,000. Many are asking whether this increased trade can be retained after the close of the war. For some time the European nations that have had, and still have, large interests in the South American countries may be unable to do anything there. Eventually, however, the retention of our enlarged trade will depend upon our interest in South American enterprises, our willingness to satisfy local preferences in goods, our acceptance of the prevailing credit practices, and the investment of our people's money in railways and other South American undertakings.

THE STOCK MARKET

It has been difficult at times in the last two or three weeks to account for the course of the stock market, because it has been at variance with the current news relating to industrial and transportation interests. The week ending on January 29 saw a general decline. Resumption of the dividend on Steel common shares, highly favorable reports of the Steel Corporation's net earnings, an increase of the St. Paul road's dividend rate from four to five per cent, a very satisfactory sale of four per cent bonds (at 103.27) by the state of New York, the rising price of copper, and good reports of railroad earnings, failed to stimulate the market, and there were net losses of from two to four points in railroad shares, with a downward movement in the industrials. The Steel Corporation's net earnings had advanced to \$51,232,788 in the year's last quarter, from \$12,457,000 in the first, \$27,950,000 in the second, and \$38,710,000 in the third. In the corresponding quarter of 1914 they had been only \$10,933,000. But the price of shares fell from 86 to 82 1/4.

The decline appears to have been due to apprehension excited by President Wilson's speeches, the movement for a

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY. By which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.33 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

general increase of railroad wages, the demand of the coal miners for higher pay, reports of a coming sharp disagreement with Germany concerning the "Lusitania," the continued selling of American securities by British holders in connection with the mobilization plan, and a withdrawal of "the public" from speculation in war order shares.

At the beginning of last week the decline continued, and on Monday there was a sharp break, with only slight recovery, Steel common shares going below 80. On the following day, however, prices advanced, and the upward movement was not checked until Friday. There were additional reports of good railroad earnings in December, those of the New Haven and Pennsylvania companies being notably encouraging. January's output of pig iron had been 3,188,344 tons, or almost equal to the record-breaking output of December. In January of last year only 1,601,000 tons were made. The price of copper had risen to 26 cents a pound, and the annual reports of several war order companies showed large profits. But on Friday prices fell again, owing partly to disquieting reports about our relations with Germany. The result of the five days' trading was slight net gains for nearly all the war order shares, with fractional changes for the railroad stocks. During the week there had been some increase of activity, for the daily average had risen to 755,000 shares. The course of the market in the immediate future promises to be determined by our international relations and the movement for higher wages. It may be affected by the plans for taxing munitions.

CANADA'S GRAIN

It has been well known that Canada's grain crops last year were exceptionally large, but official figures were lacking until a few days ago, when the Government published them. The great increases for wheat and oats are especially noticeable, the wheat yield rising from 161,280,000 bushels in 1914 to 376,303,600 in 1915, while the gain in the crop of oats was from 313,078,000 bushels to 520,103,000. The grain was of better quality than in the preceding year, and the value of the country's field crops rose from \$568,161,900 to about \$800,000,000.

Of course, the gains were made in the new northwestern provinces of Manitoba, Alberta and Saskatchewan, where the wheat crop was more than doubled, rising from 141,000,000 to 343,000,000 bushels, while the yield of oats advanced from 150,143,000 bushels to 384,840,000. The crop of barley there also was increased from 19,500,000 to 35,317,000 bushels.

The following dividends are announced:

Pacific Gas and Electric Company, first preferred and original preferred, quarterly, \$1.50 per share, payable February 15.

American Cotton Oil Company, common, quarterly, 1 per cent, payable March 1.

General Development Company, \$1.25 per share, payable March 1.

"A Train Load of Books" What Clarkson is Doing for the Book Buyer

IN several hundred thousand libraries in the homes of people in every walk of life—from the day laborer to the college professor and high government official, from the persons who buy a few books of popular fiction to the persons who pride themselves on having the complete works of all the standard authors in De Luxe Editions artistically printed and bound—almost every book was bought from me. WHY? Because, I have no agents and sell you just the books you want—all new—many at saving of from 50 to 90 per cent—you examine the books in your own home for five days before paying for them. If not satisfied, return at my expense—and owe me nothing.

Sample Prices:

Five Little Peppers and How They Grew. My price, 24c. Their Yesterdays. My price, 35c. Brady's Government Collection of Civil War Photographs. Publishers' price \$3.50. My price, \$1.45. Bookkeeping at a Glance. My price, 85c. People's New Census Atlas of the World. Publishers' price \$4.00. My price, 98c. The Arithmetic Help. Publishers' price, \$3.00. My price, 55c.

Here are De Luxe Editions, Morocco bound, complete works, many of them at less than 25 cents on the dollar. Hugo, Kipling, Poe, Eliot, Dickens, Thackeray, Scott and scores of others.

Get My Big, New Catalogue

My new catalogue, sent free for the asking, tells you how to save 50 to 90 per cent on thousands of books. It is a course in literature, giving nationalities, date of birth and death of authors, the author's life and standing in literature, etc. Hundreds of sets and thousands of single volumes listed. I sell more books direct to the booklover—the individual reader—the rich man who insists upon his dollar's worth—the man who watches his pennies—and sell them for less money than any other man in America. Every book new and fresh, and guaranteed to please you—you to be the judge. I do not quibble, and would rather have a book or set of books returned at my expense than to have a dissatisfied customer.

Insurance

Conducted by

W. E. UNDERWOOD

CONCENTRATION IN FIRE INSURANCE

There is a decided tendency in fire insurance toward concentration of resources and expansion of undertakings. Within the past two years several of the largest companies have made heavy additions to their capital funds. The Home increased its capital from \$3,000,000 to \$6,000,000. The Continental multiplied its \$2,000,000 by five, making it \$10,000,000. This company's stockholders also own the Fidelity-Phenix with assets of \$18,000,000 and the American Eagle, assets \$2,500,000. The Aetna increased its capital to \$5,000,000 several years ago. A number of companies are operating auxiliaries of respectable financial proportions; a greater number are running "feeders" known as underwriters' agencies. Within a year three millionaire companies of Philadelphia passed to the control of more powerful companies in this vicinity. The trend is toward concentration of interests controlling big capital.

H. H. S., Washington, D. C.—You are only postponing the day of reckoning in carrying the assessment insurance. Nine years ago you could have secured \$1000 in one of the leading mutual old line companies at about \$18 a year; your dividends since would have reduced that cost to about \$14; and your cash value now would be about \$65 or paid-up value \$175. Your Continental Casualty policy is all right.

A. B., Le Mars, Iowa—The Register Life of Davenport is a good company, with about \$1,500,000 assets and a small surplus. The Continental Life of Salt Lake City is controlled by reputable business men and is progressing satisfactorily. Its assets are about \$1,500,000. Most of its business, however, is on the deferred dividend plan, which I regard as disadvantageous to policyholders.

E. T. R., Argenta, Ark.—In my judgment, your company has in reasonable measure everything but a future. It may survive the competition it must face for years before winning a place. There is a surfeit of young small life companies in the South and West, and I can see nothing in store for most of them better than reinsurance in some stronger companies. A due proportion of them will fail.

L. P. N., Anaheim, Calif.—Life insurance companies generally will convert an ordinary life into a limited payment life policy for the same amount without re-examination of insured. Dividend distribution methods vary in details with different companies, but the results are not material. In mutual companies all savings go to policyholders. There are two kinds of stock companies: (1) Those in which stockholders' dividends are restricted to a specific percentage on the capital, all other surplus going to the policyholders; (2) those which distribute such surplus as they see fit among policyholders, dividends to stockholders being unrestricted as to amount. Of course such stock companies as transact a non-participating business pay no dividends to policyholders. The net cost of insurance in the Postal is not as low as it is in some of the leading mutual companies.

ATLANTIC MUTUAL INSURANCE CO.

ATLANTIC BUILDING, 51 WALL STREET, NEW YORK

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries.

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of \$27,904,578,100.00. Received premiums thereon to the extent of \$27,224,840.00. Paid losses during that period \$11,820,874.00. Issued certificates of profits to dealers \$20,800,116.00. Of which there have been redeemed \$8,811,170.00. Leaving outstanding at present time \$11,988,946.00. Interest paid on certificates amounts to \$1,100,000.00. On December 31, 1914, the assets of the company amounted to \$14,101,974.40.

The profits of the company revert to the assured and are distributed among the policyholders terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to the conditions of interest and shall be redeemed, in accordance with the charter.

CHAUTAUQUA HOME READING CIRCLES

At the famous Tuskegee Institute, Alabama, the literary club has adopted the Chautauqua Reading Course.

There is a Chautauqua Reading Circle of about twenty-five girls at Irving College, Mechanicsburg, Pennsylvania.

Monongahela, Pennsylvania, has four Chautauqua Circles, a Society of Hall in the Grove, and the Friday Conversational Club, which is also Chautauquan.

The Superintendent of Schools, Mr. Herbert Blair, is secretary of the new Chautauqua Reading Circle at Hibbing, Minnesota, composed chiefly of teachers.

Four hundred graduates of the Chautauqua Reading Circle attended the annual alumni banquet in the Hotel Athenaeum, Chautauqua. Every class from 1882 to 1915 was represented.

Winter residents from many states make up the Chautauqua Circle at St. Petersburg, Florida. This Meddie O. Hamilton Circle of over forty members is now in its third year of reading.

Among women's clubs which this year have adopted the Chautauqua Course for their literary departments are the Ebell Club of Long Beach, California, the Woman's Club of Albany, Georgia, and the Woman's Club of Paris, Tennessee.

Mrs. Ida B. Cole, Field Secretary of the Chautauqua Reading Circles, is lecturing and meeting circles in Florida during the month of February. Meddie O. Hamilton, field secretary, is similarly engaged in New York, Pennsylvania and New Jersey.

Each class of Chautauqua graduates has headquarters at Chautauqua. Three or four have separate class buildings which they own and maintain, but the majority share the Alumni Hall. Every class from 1887 to 1919 is represented by a trustee in the management of the building, where class banners and many class memorials are housed.

The Study Circle of the Woman's Club at Albany, Georgia, twenty-eight members, finished the four-year Chautauqua Course and graduated this year. Their report in the Albany Herald says that The Independent "with its liberal and interesting treatment of current topics, is one of the best features of this year's course. At every meeting, roll call is answered by current events and followed by general discussion, giving vital, human interest to the work."

The Lakewood, New York, Chautauqua Circle has been given charge of the High School Library and is using it as a public library, open to all residents free. The library room is used two evenings and one afternoon as a public reading room, some member of the Circle being responsible. Chautauqua graduates of Falconer, New York, have started a library in that town and are giving a series of lectures and entertainments to buy the needed books. The Circle at Parkhill, Ontario, has placed the Chautauqua books in the public library.

ABBOT ACADEMY

A School for Girls. ANDOVER, MASS. Founded 1828.
22 miles from Boston. General course with Household Science, College Preparation. Address MISS BERTHA BAILEY, Principal.

HARTFORD THEOLOGICAL SEMINARY

Scientific methods with practical training for the ministry. Large faculty and library.
Graduate fellowships, both foreign and resident. Open to college graduates of all churches.
Associated with Hartford School of Religious Pedagogy Training Sunday School and other lay workers.
Kennedy School of Missions, fitting for foreign service.
Address M. W. JACOBUS, Dean of Seminary Hartford, Conn.

LAW

Offers YOU Success

in business as well as politics today. Law-trained men earn \$3,000 to \$10,000 yearly. Opportunities Open. Big firms now put lawyers on their regular payrolls at large salaries. You can learn at home by mail in spare time by our simplified method. Course written in plain language by university professors. BECOME AN LL. B. We guarantee to coach graduates free on all subjects required in bar examination until successful. Complete course in Public Speaking by Dr. Fred'k B. Robinson, Professor of Public Speaking, College of City of New York, and big fourteen volume law library furnished FREE if you enroll now. Write at once for remarkable offer and book on law. Everything sent free.
LaSalle Extension University, Dept. 250-F Chicago, Ill.

LETTERING AND DESIGN

Invest your spare time. Learn card and sign writing, and lettering. Big growth of advertising makes constant demand for my graduates. I prove there is a big field. Earn a good salary or start in business. Earn while you learn. Cartoonists learn to letter. It will help you. Course self paying. Work easy, pleasant. I personally correct all lessons. Write for free booklet, testimonials, etc.
Rosing School of Lettering & Design, 1802 Union Bldg., Cleveland, O.

PHOTOPLAY WRITING FOR PROFIT

Our course of ten lessons teaches the technique of the filmplay and also shows you how to sell your scenarios. No special literary preparations necessary. Write for FREE book, valuable information and special Prize Offer.
Chicago Photo Playwright College, Box 278 WX-4 Chicago

THE SHAKESPEARE CONTEST

The Independent's Shakespeare Contest for American Schools is meeting with wonderful success. We have already received word from over two hundred English instructors to the effect that their schools will enter ten or more contestants. One school used more than two thousand copies of The Independent containing the first of the eight consecutive articles on the life and works of Shakespeare, even tho it is not obligatory to purchase The Independent to compete for a medal. We have published in previous issues of The Independent the hearty approval of Hon. Philander P. Claxton, Superintendent of Education of the United States, as well as nineteen endorsements from the following State Superintendents: Hon. John H. Finley, New York; C. P. Cary, Wisconsin; J. Y. Joyner, North Carolina; H. A. Davee, Montana; C. O. Case, Arizona; Payson Smith, Maine; M. L. Brittain, Georgia; Howard A. Gass, Missouri; R. C. Stearnes, Virginia; William F. Feagin, Wisconsin; George B. Cook, Arkansas; Edward Hyatt, California; W. N. Sheats, Florida; Edith K. O. Clark, Wyoming; W. H. Smith, Mississippi; Alvan N. White, New Mexico; R. H. Wilson, Oklahoma; E. J. Taylor, North Dakota; C. G. Schulz, Minnesota. We have since received the following endorsements of the contest:

FRANCIS G. BLAIR, Superintendent, Illinois: "I have your letter with enclosure relating to The Independent's Shakespeare Contest for American Schools. Your proposal to give a medal for the best essay from any school in the United States on the life and works of William Shakespeare is a worthy plan and cannot fail to stimulate a new study into the life and works of this incomparable writer."

A. M. DEYOE, Superintendent of Public Instruction, Iowa: "Your proposed Shakespearean Contest for American Schools meets with our hearty approval. It is our hope that such an interest may be created thru the medium of these contests that there will be an increased activity among our High School students, in the right attitude toward the great dramatist, by the intense study of his masterpieces. True it is that we do not have time to

read good things in literature—only the best should have our attention—and there is enough of that type to occupy the time and talent of any student. May the success of your plan be fully realized."

CHARLES A. GREATHOUSE, Superintendent, Indiana: "Your letter of January 5th enclosing an announcement of The Independent's Shakespeare Contest for American Schools has been received in this department. I desire to state that I am very much interested in this contest. Being a lover of Shakespeare's writings, I think it is well to interest the young people of this country in these valuable works."

BERNICE MCCOY, Superintendent of Public Instruction, Idaho: "It certainly gives me great pleasure to indorse The Independent's Shakespeare Contest and your effort to arouse an interest in the celebration of the tercentenary of the death of this great dramatist. It seems to be a psychological time for creating an interest in the study of Shakespeare in the schools of the United States, as well as in those other organizations having for their aim the education and improvement of the individual. I shall be most happy to co-operate with you to the end that an enthusiastic interest in Shakespeare may be aroused in this state."

V. O. GILBERT, State Superintendent, Kentucky: "I feel sure that The Independent's Shakespearean Contest and the medal offered in connection with it will serve to increase interest in the celebration of the tercentenary of the death of this great writer. I shall certainly encourage and promote the study of Shakespeare in the schools of Kentucky."

C. N. KENDALL, Commissioner of Education, New Jersey: "In this, the year of the three hundredth anniversary of the death of Shakespeare, there is sure to be a renewed public interest in his great contribution to the permanent literature of the world. I am glad to commend any movement to encourage the reading and study of this literature in the schools. I hope there may be a generous response to the plan of The Independent."

J. E. SWEARINGEN, State Superintendent of Education, South Carolina: "The plan of The Independent to celebrate the 300th anniversary of the death of Shakespeare deserves the support of teachers, students and lovers of English literature everywhere. Our boys and girls cannot learn too much about this great dramatist and his writings."

C. H. LUGG, Superintendent, South Dakota: "I note your plan for offering 'a Shakespeare Anniversary Medal' for the best essay from any school in the United States on the life and works of William Shakespeare. Your plan is deserving of hearty commendation, and I hope that many of our schools will avail themselves of this opportunity to arouse an interest in Shakespeare and his writings on the part of their pupils. You may use this statement in any way that you desire to further the success of your Anniversary Plan."

W. F. DOUGHTY, State Superintendent, Texas: "I hope that this contest and the medal offered in connection with it may serve to increase interest in Shakespeare and his great works. If I can be of any assistance to you in this matter I shall be glad for you to advise me further."

E. G. GOWANS, State Superintendent of Public Instruction, Utah: "I am very much interested in your contest and I am sure that it will be very valuable to those who may participate."

If you wish to enter your school in The Shakespeare Contest write for full details to Shakespeare Contest Department, The Independent, 119 West Fortieth Street, New York City.

"You've got to get more light"

"You say your labor costs are cutting too deeply into your profits; you've got to make your men more efficient. Without doubt, one factor that will help is to give them more daylight to work in; if they could *see* better, they would do more work, and spoilage too would be decreased."—"But I can't afford to build a new plant."—"You don't need to. You can increase daylight by giving a tile-like white finish to your ceilings and walls—a finish that will *reflect* light, instead of absorbing it. At the same time, you can make your plant far more sanitary."

This is what the best efficiency engineers are advising manufacturers every day. That is one reason why over 3000 of the biggest factories in the United States are already using Rice's Gloss Mill White. Rice's

U. S. GUTTA PERCHA PAINT CO.,

(Reg. U. S. Pat. Off.)

increases daylight 19% to 36%. It is the only oil paint giving a glossy, tile-like white finish, at no more expense than lead and oil paint.

RICE'S GLOSS MILL WHITE

*Awarded Gold Medal at the
San Francisco Exposition*

It is as clean as it is bright—can be washed like a piece of white china! *By the Rice Method it can be applied over old cold-water paint.* Rice's is made by a special process, discovered and owned exclusively by the makers. There is no substitute. Repeated tests have shown, without a single exception, that Rice's remains white longer than any other. Users are protected by the Rice Guarantee.

On Concrete Surfaces. On inside concrete, Rice's Granolith makes the best possible primer for a second coat of Rice's Gloss Mill White—giving a glossy, tile-like finish at no more expense than lead and oil paint. **Rice's Granolith.**

NUMBER 3507

THE SECOND BREAK IN THE CABINET

IT is exceedingly regrettable that Mr. Garrison has felt constrained to resign as Secretary of War. The country has felt, and with justice, that he was one of the strongest men in President Wilson's Cabinet. His departure takes away from the Administration a keen mind, a forceful personality, and a spirit marked by high devotion to the national good.

But the break was apparently inevitable. On two important subjects with which Congress is just now deeply engaged Mr. Garrison has definite and strong convictions. They are matters with which the Department of War is primarily concerned; the question of Philippine independence and of the national defense. He felt that on these subjects he did not see eye to eye with the President. For that reason he did not believe it right for him longer to retain his place in the circle of the President's immediate advisers.

On neither of these matters did Mr. Wilson directly disagree with the position which Mr. Garrison believed to be the only sound one. On each of them the President has an open mind.

The difference between the two men is best shown by extracts from the correspondence that has passed between them. On February 9, Secretary Garrison said in a letter to his chief:

Two matters within the jurisdiction of this department are now of immediate and pressing importance, and I am constrained to declare my position definitely and unmistakably thereon. I refer, of course, to the Philippine question and the matter of national defense.

You know my convictions with respect to each of them.

I consider the principle embodied in the Clarke amendment an abandonment of the duty of this nation and a breach of trust toward the Filipinos; so believing, I cannot accept it or acquiesce in its acceptance.

I consider the reliance upon the militia for national defense an unjustifiable imperilling of the nation's safety. It would not only be a sham in itself, but its enactment into law would prevent if not destroy the opportunity to procure measures of real, genuine national defense. I could not accept it or acquiesce in its acceptance.

The President in his reply wrote as follows:

First, that it is my own judgment that the action embodied in the Clarke amendment to the bill extending further self-government to the Philippines is useless at this time, but it would clearly be most inadvisable for me to take the position that I must dissent from that action, should both Houses of Congress concur in a bill embodying that amendment. That is a matter upon which I must of course withhold judgment until the point of action of the two Houses reaches me in definite form. What the final action of the Houses will be no one can at this time certainly forecast. I am now of course engaged in conference with Mr. Jones and others with regard to the probable action of the House of Representatives in this matter, and do not yet know what it is likely to be. The one obvious thing, it seems to me, is the necessity for calm and deliberate action on our part at this time, when matters of such gravity are to be determined, and not only calm and deliberate action, but action which takes into very serious consideration views differing from our own.

Second, as I have had occasion to say to you, I am not yet convinced that the measure of preparation for national

defense which we deem necessary can be obtained thru the instrumentality of the National Guard under Federal control and training, but I feel in duty bound to keep my mind open to conviction on that side and think it would be most unwise and most unfair to the Committee of the House, which has such a plan in mind, to say that it cannot be done. The bill in which it will be embodied has not yet been drawn, as I learned today from Mr. Hay. I should deem it a very serious mistake to shut the door against this attempt on the part of the committee in perfect good faith to meet the essentials of the program set forth in my message, but in a way of their own choosing.

It is apparent that the difference is not of that clean cut kind in which one man is convinced of the soundness of a proposed plan and the other man is equally certain of the soundness of a plan diametrically opposed to the first, while each is resolutely opposed to the other's plan. In such a condition there would be no question that the Cabinet officer thus differing with his chief should withdraw from the Cabinet. But in the present case the situation is different, and the logical course of action not quite so clear.

Mr. Garrison is convinced of the truth of two "fundamental principles," as he describes them in a later letter. The first is, that the United States ought not at this time to decree that the Philippines shall be given their independence in four years. The other is, that the military force upon which the United States is to rely as its second line of defense upon the land must be a national force and not an aggregation of state forces. He believes in them so strongly that unless the Administration is to adopt them as a definite part of its program he is unwilling longer to be a part of it.

On both of these principles President Wilson seems to be inclined to agree with Mr. Garrison. But he evidently does not consider them "fundamental." In any event he is unwilling at this time to use the prestige and influence of his position in the Government and in his party to force his associates in Congress to accept them as "fundamental."

The rupture seems largely explicable in terms of differences of mind and temperament. Given the personalities of the two men it was as inevitable as it is regrettable.

Mr. Garrison is justified in resigning because of what he feels to be a matter of principle. Mr. Wilson is right in keeping an open mind when dealing with a coördinate and equally sovereign branch of the Government. But if Mr. Garrison was a bit too hasty in leaving the ship when it was by no means certain he could not have steered into the harbor of his choice, so Mr. Wilson was a bit too indecisive in not perceiving that it is his duty to lead in the formulation and adoption of national policies. The President of the United States should make his influence felt on great questions during the process of legislation, and not merely by means of his power of approval or veto when the process is completed.

THE VALUE OF THE TROPICS

THE story of the struggle for the possession of Africa which is told on another page of this issue has its lesson for America just now when a certain faction in Congress is urging contraction instead of expansion as our national policy. Africa affords the striking illustration of the rise in the value of tropical real estate in recent years. England needs all her men to hold her lines in France and Flanders, in Egypt, Mesopotamia and Greece, yet she is preparing a new army for the conquest of German East Africa. But this same territory which she is now making such sacrifices to get was once offered to her by the Sultan of Zanzibar, and Mr. Gladstone declined the gift! He tried his best to keep England out of Egypt, but fate was fortunately too strong for him. In 1877 Gladstone said:

Our first site in Egypt, be it by larceny or be it by emption, will be the almost certain egg of a North African empire that will grow and grow . . . till we finally join hands across the equator with Natal and Cape Colony.

And this he dreaded! His foresight was better than his judgment. His scuttling policy led to the sacrifice of Gordon and Khartum in the north and to the Boer War in the south. The honor that might have been his has gone to Disraeli, who bought the majority stock in the Suez Canal, and Cecil Rhodes, who projected the Cape to Cairo railroad. What Gladstone threw away has had to be bought back with blood.

The same blindness to the possibilities of tropical colonies then prevailed in Germany. Bismarck when he took Alsace-Lorraine ironically recommended the French to seek compensation on the southern side of the Mediterranean. They did and now Algeria is a prosperous French province which is sending its men freely to the defense of the mother country against the Germans. Bismarck's successor as German Chancellor, General Caprivi, said: "No greater misfortune could befall us than to be presented with the whole of Africa." But now Germany is pouring out men and money by the million to get a part of what she then might easily have had. The British White Paper shows that in July, 1914, the German Government was willing to promise to leave Belgium and France intact if England would remain neutral, but was unwilling to agree to let their African possessions alone.

In the latter part of the nineteenth century, when it was realized that a country without the resources of the tropics to draw upon was permanently crippled, the Grand Scramble began. The seven Powers grabbed any territory they could lay their hands on, whatever it was or wherever it lay. Flags were raised over mission stations, stray islands and casual trading posts. Miasmatic swamps and barren deserts that had remained unpeopled since man had been on earth became prizes worth fighting for.

When the Grand Scramble was over in 1912—unless we call the present war a continuation of it—the map of Africa looked like another Europe. Here were the same names repeated, France, Great Britain, Italy, Belgium, Germany, Spain and Portugal, and in similar juxtaposition; a chance arrangement, a geographical crazy-quilt, in which no regard had been paid to commercial convenience, strategic boundaries, ethnic divisions, historic claims or mutual advantage. Less than four per cent of the continent remained independent; little Liberia, which was founded as a colony for American negroes

and which the United States has protected from conquest, and Abyssinia, where the aged Menelik, with a wisdom which is the sole evidence of his alleged descent from Solomon, maintained a quasi-independence by playing off one power against another and putting up a hard fight when he had to.

The present war will probably remake the map of Africa, but it will not unmake it. It will never again become a Dark Continent where the blank spaces on the map have to be filled up with pictures of elephants, giraffes and dog-headed men. Civilization moves onward somehow, and if one nation shirks the duty of carrying it forward, another takes it up and reaps the reward. Those who falter and draw back will fall behind—and deserve to. The work that Americans are doing for the regeneration of the Philippines is, we believe, as efficient and useful as that done by the British in Egypt, and better in many respects than that done by the French in Algeria and by the Germans in East Africa. It is certainly free from the cruelty and corruption of the administration of the Belgian Congo or the German Southwest Africa or the Portuguese possessions. We have, therefore, good reason for our belief that the United States is as competent as any other power to administer the affairs of the Philippines.

WHY NOT PERMANENT?

THE London *Spectator* is urging forward a popular movement under the slogan, "Down Glasses during the War." Its purpose is obviously what might be described as Temporary Total Abstinence.

The *Spectator* states the case for the reform with effectiveness: "We must fight the Germans with both hands and not with one hand grasping a glass of beer or spirits."

In the midst of one's admiration for the proposed self-denying ordinance, another thought persists in intruding. If a man needs two hands to fight with successfully, how can he get along effectively with fewer to work with? If a nation at war cannot spare a hand to hold the liquor glass, how can a people at peace?

Some one should move to amend the "Down Glasses" program by striking out the word "Temporary."

DISARMAMENT OR REPUDIATION

THE great world war is now half thru its second year, and it is necessary that financiers as well as statesmen should begin to think very seriously how long the expenditure of men and money can be carried on. "The courage never to submit or yield" may seem boundless, but the end must come. And what then?

President Van Hise, of the University of Wisconsin, sums up the national debts of Great Britain, France, and Germany at the end of 1915. That of Great Britain he estimates as \$10,419,000,000; that of France \$10,314,000,000, and that of Germany \$7,275,000,000; and the war has lasted only a year and a half.

We can hardly expect peace in less than a year, at which time these national debts will have amounted to half as much more. How will they ever be paid? How will even the interest be paid?

Of course it is assumed that the interest will be paid. At four per cent it would amount to \$400,000,000 a year for either Great Britain or France, and for Germany

to about \$300,000,000, and half as much more if the war continues another year. Meanwhile the people have been fearfully impoverished. The whole principal of these loans has been destroyed. Many millions of wealth-producers have been killed or disabled. Business has been disorganized. There will be poverty everywhere, and taxation will be intolerable.

Already the question is asked by far-seeing men: Will it be possible for these countries to pay even the interest on these enormous debts? Repudiation is a very evil word, but we cannot avoid thinking of it. Great Britain and France are very wealthy nations and they have great recuperative power, and yet there is a limit to what can be squeezed out of a people. Germany is also a rich nation and unlike Great Britain and France her national debt is almost wholly held by her own citizens. She could scale it down or reduce interest and other nations could not complain, while the debt of the allied nations is largely foreign, and can in no way be repudiated without national dishonor.

We have said nothing about the likelihood of billions of indemnity being imposed by the victors on the conquered. It seems to be assumed that indemnity will be demanded, and if so, while some burdens will be lightened, others will be made more intolerable. It is difficult to see how the fearful burden of taxation on all these nations, and on Austria and Italy as well, can be borne and these national obligations met except by a general concerted disarmament. The nations will not be able while paying for the old wars to add unlimited and interminable taxation to prepare for new wars, so we shall come to what all good citizens must desire as the one happy effect of this disastrous war, compulsory disarmament. But disarmament can hardly take place without an agreement of the nations to establish the international machinery for the doing of the international business that must be done and which is now done in the last analysis by the cruel and stupid resort to armaments. The nations must also feel that their integrity and vital interests are as fully conserved and guaranteed after the reduction of armaments as they were when each nation was the sole guardian of its liberty and sovereignty. The requirements can only be brought about by substituting for our present system of competitive armaments a system of collective armaments under a League to Enforce Peace. Then and then only will a plan be devised for the creation, adjudication and execution of international law and the universal limitation of armaments. This we may hope for and even expect whether with or without revolution.

ARMOR PLATE PATRIOTISM

LAST week the Senate Naval Committee reported out a bill authorizing the establishment of an armor plate factory to be owned and operated by the Government.

Senator Penrose said to the committee that the armor plate makers had told him that if the Government went into the business they would raise the price \$200 a ton, which would cost the United States about \$20,000,000 more if it bought armor for the contemplated five year building program.

The President of one of the companies also told the committee that if the Government manufactured armor

plate he would recommend to his board of directors that they go out of that branch of the steel business.

While the Government should never attempt to monopolize the production of war supplies, lest in times of emergency it could not manufacture fast enough, this action of the armor plate makers absolutely demonstrates the need of Government competition in the business to keep down prices.

If the manufacturers do not adopt a more patriotic spirit, the Government, as Senator Tillman suggests, will not hesitate to "seize their plants and operate them by the right of eminent domain."

Congress can hardly afford to ignore this exhibition of corporate greed and disloyalty. As an example of arrogance, naked and unashamed, its like is hard to match.

NO MILITARY TRAINING IN PUBLIC SCHOOLS

DO the advocates of military training in the public schools know what they are talking about? A few of them do; most of them evidently do not. The few who do will not dissent from a remark or two that we have to make to the many who do not.

A newspaper canvass of New York City parents of public school children shows a large majority in favor of military training in the schools. Statistically the showing is of little or no value. Data so collected always comes chiefly from persons on one side of the question raised. Persons on the other side do not in equal numbers take the trouble to reply. The interviews, in like manner, with which the vote is followed up, are prevailingly indorsements of the military training plan. There is no evidence here of conscious selection in support of a foregone conclusion, but a glance over the reasons offered discovers the intellectual unpreparedness of the prominent gentlemen who so readily vote with the recorded majority.

The precise betrayal of mental non-equipment is this: The advocates of military training in the schools obviously have never thought whether this plan fits into a larger plan of reliance on a volunteer army in time of danger, or fits into a wholly different larger plan to require universal military training, and, when the need arises, universal military service. It is evident on the face of their remarks that seventy-five or eighty per cent of the interviewed could not, without further "preparation," tell which scheme the proposed school training belongs with.

As a matter of logic, psychology, and experience, it belongs, of course, with the volunteer army scheme. A nation that exacts universal training and service, as Germany, France, Switzerland and Australia do, does not fool with drilling its school children. When the time comes it takes its young men in hand, in a businesslike way, and puts them thru a discipline that earlier years could not endure.

The military drilling of children is not the real thing, it never can be made the real thing. It is a characteristically American piece of hocus-pocus. Nevertheless, it could have a certain place in a nation which depends on a volunteer army. It can not prepare boys technically to be soldiers, but it can fill their heads with militaristic ideas. In the impressionable school years war has a look that can not be conjured up in the mind of the young man forced by the strong arm of the state to endure the

hardships of barracks and drill grounds and forced marches. School militarism has just one rational purpose, to wit, to prepare not bodies and minds, but impulses and emotions for military service.

When the American people has thought this thing thru, if it ever does, it will not vote eighty to twenty in favor of military training in the public schools. The compulsory training and service of all fit adults may or may not be militaristic. The compulsory military training of children in the public schools of the country is militarism or it is humbug.

WELDING THE HAMMER

DO you believe that children under fourteen years of age ought to work in factories or mills or canneries? Do you believe that boys and girls under sixteen ought to work more than eight hours a day or more than six days a week?

Of course you do not. But there are actually people who do. Some of them—men of prominence, too, in their communities—have appeared before congressional committees and argued against the Federal Child Labor bill. Perhaps the most cynical of the arguments which they had the effrontery to present was this:

A roll of cotton cloth made by child labor is just as long, just as wide, just as white, and just as good as if made by adults.

In spite of this and other equally attractive pleas the bill has passed the House by a tremendous majority. But the Senate is often a harder nut to crack. There is only one hammer infallibly heavy enough—public opinion. If you want to be sure that the cotton goods you wear, the canned goods you eat, the glassware on your table, the flowers on your hat, are not the product of the slavery of little children, make your own contribution to the welding of that hammer.

Write today to the United States Senators from your own state urging the passage of the Keating-Owen bill.

IRONING OUT THE YEAR

IN the good old days when our forefathers lived the simple life near to Nature's heart, one could tell what time of year it was by the looks of the dinner table. The four seasons and even the twelve months were marked by the appropriate products of field and orchard. In the spring radishes, peas, beans and corn followed one another in orderly procession, and in the fall tomatoes, squash, pumpkin and rutabagas brought the year to a fitting close.

Certain combinations of meats and vegetables which have come to seem as inevitable and eternal as the pre-established harmonies of Leibnitz owe their conjunction to the chance coincidence of their time of appearance. When the spring lambs reached table size the green peas came in and the mint was ready to sauce it. This triplex dish still figures on our menu cards, altho its seasonal significance has vanished.

The good old rule "Eat oysters when the month has an *r* in it and drink whisky when it has a *k* in it" has long ago lost its validity. Canned or cove oysters are independent of the season and whisky can either be obtained at all times or not at all depending upon what state you are in. Canning and cold storage have obliterated the climatic zones and reduced the months to a common denominator. Almost any kind of fruit or veg-

etable can now be had anywhere any day in a more or less palatable state by those who are willing to pay for it, and even the price curve is being leveled down thru-out the year. It is no longer the mark of a millionaire to eat strawberries in December or grapes in May. We can have a more varied diet than when we were restricted by the seasons; but it is questionable if we do.

With the culinary calendar have vanished most of the other characteristics of the year. The violets of spring are sold in the fall and the chrysanthemums of autumn appear in the spring. Summer roses bloom in midwinter and holly may be had in midsummer. There are few boys nowadays who can tell marble time from kite time or when top time comes in. Fireworks have been banished from the Fourth of July in many parts of the land, but appear in other parts at Christmas. Thanksgiving is no longer a harvest festival. Our fasts and feasts have all been smudged together into one dull common gray. All Fools' Day and All Saints' Day have disappeared. A man can be a fool or a saint on any of the 365 or 366 days. The attraction of gravitation tends to bring all things to a dead level of monotony.

THE NOSE OF THE CAMEL

ONE need no longer look to Germany to see what havoc may be wrought by a pernicious theory. Only open the *Poetry Journal*, and read the heart-breaking lines of Robert Carlton Brown to learn what thrusting cookery in among the Arts and Sciences has done not only to women, but to literature.

I know a nice, affectionate girl
Who goes about
Patting beefsteaks on the back,
Running her fingers fondly through the beards of oysters,
Holding hands for hours with breaded veal cutlets,
Rubbing noses with pork chops,
And having affairs with boiled onions.
Her emotional eyes light with amorous interest
In the presence of food;
They fill with great glistening tears
When the plates are taken out
And she sits despondent
Weeping gently into her coffee.

Now a pet theory, ready to play with as one sits decorously before a dull speaker, or recovers from the grippe, is an innocent comfort so long as one does not share it. But there is nothing more dangerous than generosity with a theory. The next fellow may take it in earnest, may even try to act on it, will surely repeat it, and then Pandora's box is open.

No one foresaw any danger to poetry, for instance, when Professor James took the public into his confidence as to what he had been thinking as he waited daily on Boston corners for the street cars. But the advertising value of Pragmatism was not missed by practical folk. They inscribed the word on their banniers and went on, more triumphant than ever, pushing the classics from the seats of learning, and setting in their places, carpentry, magazine verse, millinery and cooking. The saucepans won the day.

Mr. Brown shows us whither we are hurrying. We have been too bewildered to read the same message in the art galleries, but the few who know assure us that at last painters are truthfully depicting what is as it is. Shortly our plays will be constructed out of random conversations copied down for the playwright by a pocket phonograph, and we shall have symphonies built on themes sung by the wheels of the Chicago Limited.

THE STORY OF THE WEEK

Secretary Garrison Resigns

Lindley M. Garrison, Secretary of War, resigned on the 10th, and his resignation was immediately accepted by the President, who expressed warm appreciation of his services. The Secretary withdrew from the Cabinet because he was in disagreement with the President concerning the attitude of the Administration toward the proposed Continental Army reserve of 400,000 men, and the Senate's bill granting independence to the Filipinos in not less than two nor more than four years. Henry Breckenridge, Assistant Secretary, also resigned because he agreed with his chief, and his resignation was promptly accepted. Major General Scott, Chief of Staff, will be Secretary of War until Mr. Garrison's successor is appointed. Those most prominently mentioned in connection with the coming appointment are Secretary Lane, of the Interior Department; Secretary Houston, of the Department of Agriculture, and General Goethals. The letters which passed between Secretary Garrison and the President were promptly published. They fill three newspaper columns of fine print.

Beginning on January 12, the Secretary, in a long letter, argued in support of his plan for the Continental Army and urged Mr. Wilson to exert his influence for it in Congress, where it was in a critical condition. There could be, he said, no honest or worthy solution of the problem except one that should give national forces, under exclusive control of the national Government. Chairman Hay, of the House Military Committee, had openly rejected the Continental Army, turning from Federal volunteers to a project for federalizing the militia of the states. Acceptance of this plan would set back the whole cause of legitimate national defense and would be a betrayal of trust. Among members of the House there was very little knowledge of or intense interest in military affairs, and

THE GREAT WAR

February 7—Germans gain 800 yards of trenches west of Vimy. Germans retire from Kamerun into Spanish colony of Rio Muni.

February 8—German guns bombard Belfort, British repel Turks at Kut-el-Amara with heavy losses on both sides.

February 9—German sea planes raid coast of Kent. Russians gain dominant position near Czernovitz.

February 10—Premier Briand of France visits Italy. German Government issues warning that after March 1 armed merchantmen will be treated as warships.

February 11—Greek Chamber votes neutrality. Austrians encounter Italians ten miles from Durazzo.

February 12—French gain 300 yards near Butte de Mesnil, Champagne.

February 13—Germans renew attack on Dvinsk, Russia. Chinese rebels take Chung-king.

the proposed payment of Federal money to militia men and officers appealed to the personal and political interests of members. He urged the President to use his influence without delay. Writing again two days later he referred to Mr. Wilson's remark that he had been assured by Chairman Hay that the same end could be reached by utilizing the militia, and that he (the President) had said he would accept that plan if it would be effective. The Secretary insisted that there was no room for compromise, and offered to leave the Cabinet if this would serve the President's purpose.

The President's Reply

Mr. Wilson, replying on the 17th, said that while he believed the chief thing needed was a trained citizen reserve under Federal direction, he was not irrevocably committed to any one plan and was willing to consider all propositions. It would not be proper for him to say to Congress that it must take his plan or none. He did not share

the Secretary's opinion that members charged with the duty of dealing with military affairs were ignorant of them or of the nation's military necessities. On the contrary, he had found them well informed and actuated by a most intelligent appreciation of the grave responsibilities imposed upon them. If a bill by which the essential things could not be accomplished should come to him, he would veto it. He had told Mr. Hay that he would consider any plan that would give a national reserve under unmistakable national control.

Mr. Garrison, on February 9, said he was expected to make an address before the Chamber of Commerce on the following day. As to the Philippines, he regarded the Senate bill as an abandonment of the duty of this nation and a breach of trust toward the Filipinos, and he expressed again his disapproval of the militia project. If he was in disagreement with the President, he could not set forth his views in the address and remain the President's seeming representative. In reply, Mr. Wilson said he regarded the independence provision of the Philippine bill as unwise at this time, but must await the action of Congress. And it was his duty to keep his mind open about the militia, and not to try to shut the door against the committee's plans. The Secretary should express his own views without hesitation, but should draw very carefully the distinction between them and those of the Administration. Responding at once, Mr. Garrison resigned, saying: "It is evident that we hopelessly disagree upon what I conceive to be fundamental principles."

Effect in Congress The effect of the resignation in Congress appears to have been more support for the President and the defense plans, the Continental Army excepted. The House already has passed a bill appropriating \$600,000 for improvements that will make it possible to build battleships of the most powerful class at

THE INDEFATIGABLE SARAH BERNHARDT

"Les Cathedrales" is a dramatic poem in which six French and Flemish cathedrals tell their tragic story. Mme. Bernhardt, third from the left, is the Cathedral of Strasbourg, which has waited forty years for deliverance. Her passionate voice dominated the recent performance of the play in London, whither the great actress was determined to go in spite of her age and the amputation of her leg

the New York and Mare Island navy yards, and another providing for an increase of the number of midshipmen at the Annapolis school by 540. In the debate on these measures—which were passed without an opposition measured by recorded votes—many prominent members spoke for the preparedness policy. Speaker Clark earnestly supported projects for enlarging the navy and creating a military reserve. Mr. Mann, the Republican floor leader, urged the House to support the President's program. Mr. Wilson's commendation of the members of the Military Committee, in his letter to Secretary Garrison, was quite satisfactory to that committee, which sent him a resolution expressing appreciation of his confidence. There was a movement on the Democratic side for action that would possibly cause the retirement of Mr. Kitchin from the office of floor leader, with a suggestion that his place should be taken, as far as possible, by Speaker Clark. Mr. Kitchin opposes all the defense plans.

It was generally admitted that the project for a Continental Army was dead. It was opposed by every member of the House Committee. That committee, it is expected, will prepare a bill designed to make service in the militia so attractive that the number of enlisted men will be increased from 125,000 to 400,000. There may be provisions for dual service, or for enlistments subjecting the men to the call of the national Government without the restrictions now existing. The committee's aim will be to make the militia a Federal or national force, if this can be done. In the Senate, on the other hand, the tendency at present is in favor of creating a trained reserve by modifying requirements for the regular army—increasing the number of soldiers, and shortening the term to two years, or even to one, with the provision that the men so enlisting shall go into a reserve for four or six years.

The Question of the Submarine

The long and bitter controversy over the rights of merchant vessels and the regulation of submarines seems to have reached a highly critical stage. Our Government has come to the conclusion that the only way to hold the submarines to accountability for their attacks upon the merchant vessels of belligerents is to draw a strict line of demarkation between them and warships by prohibiting the armament of merchant vessels. Secretary Lansing has addressed a note to the Powers in the hope that some acceptable formula may be agreed upon by which the lives of non-combatants may be safeguarded without depriving the submarines of all power. The rules he proposes are quoted in another column.

The Secretary of State argues that the privilege of carrying guns hitherto accorded by international law to merchant vessels was not with the idea that they should offer resistance to a cruiser which overhauled them but merely for the purpose of defense against pirates and privateers. But the submarine too powerful in the offensive is so weak in the defensive that even a small caliber gun would suffice to sink it if it approached above water to warn and search the merchant vessel as international law requires. He continues:

Moreover, pirates and sea rovers have been swept from the main trade channels of the sea and privateering has been abolished. Consequently the placing of guns on merchantmen at the present date of submarine warfare can be explained only on the ground of a purpose to render merchantmen superior in force to submarines and to prevent warning and visit and search by them. Any armament, therefore, on a merchant vessel would seem to have the character of an offensive armament.

If a submarine is required to stop and search a merchant vessel on the high seas, and in case it is found that she is of an enemy character and that conditions necessitate her destruction and removal to a place of safety of persons on board, it would not seem just nor reasonable that the submarine should be compelled, while complying with these requirements, to ex-

pose itself to almost certain destruction by the guns on board the merchant vessel.

It would therefore appear to be a reasonable and reciprocally just arrangement if it could be agreed by the opposing belligerents that submarines should be caused to adhere strictly to the rules of international law in the matter of stopping and searching merchant vessels, determining their belligerent nationality and removing the crews and passengers to places of safety before sinking the vessels as prizes of war, and that merchant vessels of belligerent nationality should be prohibited from carrying any armament whatsoever.

It is anticipated that the British and French will regard this as a concession to the German point of view and will refuse to take the guns from their merchant vessels. If so our Government would be obliged to treat them as auxiliary cruisers and forbid them the use of our harbors except for brief and occasional visits. Probably also our Government would issue a warning to American citizens not to travel upon such armed merchantmen.

The German Submarine Note

The German Government has issued a memorandum announcing its intention in a short time

of treating the armed merchantmen of the enemy as warships, and neutral nations are warned not to entrust their persons or property to such vessels. In defense of this policy a list is given of nineteen cases in which British merchantmen have fired upon German submarines and in many cases sunk them. Pages of the secret book of instructions issued by the British Government to the captains and gunners of the merchant marine are reproduced by photography in the appendix. These show that the ship is expected to open fire on an enemy submarine approaching within 800 yards even when the submarine has not opened fire first. "Armaments should be concealed as far as possible" by a canvas cover in neutral ports. The "Drill Book for 12-Pounder Quick Firing Guns" found on British merchant

THE AMERICAN SUBMARINE RULES

Secretary Lansing in a note to the Powers dated January 18 suggests the following international code for the regulation of submarine warfare:

1. A non-combatant has a right to traverse the high seas in a merchant vessel entitled to fly a belligerent flag, to rely upon the observance of the rules of international law and principles of humanity, and if the vessel is approached by a naval vessel of another belligerent the merchant vessel of enemy nationality should not be attacked without being ordered to stop.

2. An enemy merchant vessel when ordered to do so by a belligerent submarine should immediately stop.

3. Such vessel should not be attacked after being ordered to stop unless it attempts to flee or to resist. In case it ceases to flee or resist the attack should be discontinued.

4. In the event that it is impossible to place a prize crew on board of an enemy merchant vessel, or to convoy it into port, the vessel may be sunk, provided the crew and passengers have been removed to a place of safety.

ships was issued by the Admiralty on May 7, 1915. The note calls attention to the facts that the British Ambassador at Washington had stated to the American Government on August 29, 1914, that British merchantmen were never armed for offensive purposes but purely for defense and that they, therefore, would never fire unless fired upon first. But on the other hand the British Government in its first Order in Council had ruled that any armed vessel was a warship.

The Pending Treaties

By the Senate Committee on Foreign Relations a report in favor of the pending treaty with Hayti has been ordered. The treaty with Nicaragua, which was reported favorably by a vote of 10 to 3, was considered last week in executive session, the question being Mr. Borah's motion for a discussion of the treaty in open session. Mr. Stone, chairman of the committee, opposed this motion in a speech two hours long. Others took part in the debate. The motion was lost by a vote of 19 to 42. But the treaty requires an appropriation of \$3,000,000, the sum to be paid to Nicaragua, and it will be the subject of debate in open session when the appropriation bill is taken up. In the secret session an addition was proposed which is designed to assure Central American republics that there is no disposition on the part of the United States to disregard their rights and sovereignty. It is said that the Colombian Minister, who does not like the pending treaty with his country, called upon Secretary Lansing and was told that President Wilson had not expressed approval of it. Before reporting this treaty (by a vote of 8 to 7) the committee amended it by reducing the sum to be paid from \$25,000,000 to \$15,000,000, and by making the expression of regret concerning the Panama incident a mutual one.

The treaty with Hayti provides for control of that country by our Government. There is to be a receiver of customs, appointed by Hayti's President on nomination by our President, and with this officer there will be a financial adviser, appointed in the same way. The constabulary, composed of native Haytians, is to be officered and organized by Americans. There are to be both urban and rural forces. Eventually the officers will be replaced by Haytians whose fitness has been shown by examinations. The constabulary is to have control of "arms and ammunition, military supplies and traffic therein throughout the country." Hayti agrees not to increase its public debt except by previous agreement with the President of the United States, or to contract any financial obligation unless the ordinary revenues, after the payment of current expenses, are sufficient to pay the interest and provide a sinking fund for final settlement. Hayti also agrees not to surrender any territory by sale, lease, or otherwise to any foreign government. Engineers are to be appointed, on our President's nomination, to have sanitation and public improvements in charge, and there is provision for inter-

SALONICA—WAITING

The French and British at Salonica, however, depend on far stronger defences than these crumbling walls. Their double line is so strong that General Castlenau remarked that it would be a pity if the Germans and Austrians did not attack it.

vention in a paragraph which says that "should the necessity occur, the United States will lend efficient aid for the preservation of Haytian independence and the maintenance of a government adequate for the protection of life, property and individual liberty." By agreement with Hayti, parts of this treaty are already in force.

The Plotters

In San Francisco seventy-six persons have been indicted for plotting to destroy property and to defraud the United States in the interest of Germany. There is a long list of offenses named in the formal accusations, and in these proceedings our Federal Government has for the first time attacked official representatives of Germany. Among those who must go to trial are Franz Bopp, the German Consul General; Baron von Shack, vice-Consul General; Baron von Brincken, military attaché of the consulate; Henry Kauffmann, chancellor of the consulate, and Maurice Hall, consul of Turkey. The long list also includes Dr. Reimer, said to be a German naval officer; Robert Capelle, agent of the North German Lloyd Steamship Company; Johannes von Koolbergen, who confessed that he had been hired to blow up railroad tunnels and bridges in Canada; Charles C. Crowley, a detective employed by Bopp; Captain Fred Jebsen, and several ship owners. A considerable number of the defendants are charged with having caused the destruction of cargoes of munitions in our Pacific ports and of powder factories in California and other states. Several are indicted for using false clearance papers in sending out the steamship "Sacramento" and three other ships with supplies for German warships. The indictments cover violations of our neutrality laws and the Sherman act.

Published facsimiles of checks and other papers taken from Captain von Papen, the recalled German military attaché, by the British authorities show

that while he was in Washington he paid \$700 to Werner Horn, on January 18, 1915. Two weeks later, on February 2, Horn attempted to blow up the international railroad bridge across the St. Croix River at Vanceboro, Maine. He is now in jail. It has been asserted by Von Papen's friends that the payment was made after Horn had been arrested for this crime.

In Canada, since the fire at the Parliament Buildings, the number of guards at all the bridges, public buildings and munition factories has been doubled. In Parliament attention has been directed to several Germans holding prominent places in the civil service, one of them being the confidential secretary of the Minister of Naval Affairs. Another, the superintendent of Government dredging, has been asked to resign. He refused and will be dismissed. Owing to attacks in the Ottawa press upon the New York Symphony Orchestra, of which Walter Damrosch is the head and which contains musicians of foreign birth, a concert which was to have been given there this week has been indefinitely postponed.

The Situation in Mexico

Carranza's forces have not been able to capture Villa or to prevent his followers from looting mines and ranches in the state of Chihuahua. Villa has only a few men with him, one of these being Colonel Lopez, who caused the murder of Watson and his companions at Santa Ysobel. But there are several hundred in small independent bands. Several of these are within thirty miles of Chihuahua City, where the Carranza garrison has been guilty of many excesses. These soldiers, whose pay is said to be only eight cents a day, have looted the shops and killed many civilians. One or two hundred miles south, parties of bandits who formerly were in Villa's army, have killed not less than 300 civilians in the last ten days. Nearly all of the victims were Mexicans. At Belleza, west of Parral,

BOSTON TO NEW ORLEANS

The City Council of Boston has voted to return to the city of New Orleans this Confederate flag, which was seized by General Benjamin F. Butler in the Civil War. Mayor Curley in front

they sacked the town, burned the houses and took twenty young women to the mountains. In another town an aged German physician was tortured to compel him to disclose the place where his money was hidden. His house was burned. In a village near this one, all the men were locked up in a building, the young women were captured, and then the building where the men were imprisoned was burned. An American ranchman, Guy Johnson, was attacked while he was making his way to the boundary. Before he gave up his life he killed five of his assailants. The bodies of the five have been found near his own.

In the state of Oaxaca, Zapata's men hold the capital, and several other towns are occupied by forces of the old Federal army. The Federals are bitter enemies of the Zapatistas, and both are foes of Carranza, who has sent troops to subdue them. These troops have taken possession of several towns. In Minititlau, by order of their commander, the parish Catholic priest was put to death for having associated with the rebels and conferred with them in his house. The Carranza Government's official statement was that this was "a severe but necessary lesson" which should "teach ministers of the Catholic Church not to meddle with matters foreign to their mission, or to disturb public order by their hypocritical and obstructionist labors."

It is expected that a general election will be held on July 3, and that Congress will assemble on September 16, to make a new constitution. At the request of our Government, Villa's brother, Hipolito, has been arrested in Havana and is held for extradition. At El Paso he has been indicted for sending men to wreck a train in Texas that was carrying Carranza soldiers to the relief of Agua Prieta, some months ago. The capital is still suffering from the typhus epidemic, and in Tampico hundreds are dying of smallpox. There is still no in-

dication that the Carranza Government will be able to negotiate a loan in New York.

Fighting in France There is a decided renewal of activity on the western front, but with no decisive results so far as can be learned. We are yet in the dark as to whether this portends a serious offensive on either side, and if so, in what quarter. So far as the operations have developed they seem to be merely intended to gain more defensible positions in readiness for a supreme effort in the spring. The battlefields are the same as last fall; namely, the hills that lie to the west of Lille in the Artois region and to the east of Rheims in the Champagne.

While the Germans were making their spectacular drive toward Paris in August, 1914, these hills were being entrenched for use in case the drive failed. When the French defeated them on the Marne early in September they retired as rapidly as possible to the positions which had been prepared for them and here they have so far successfully resisted all attempts to dislodge them. In the spring and fall the British and French made desperate efforts to break the line at these two points, but only gained a mile or two. But, altho these gains were insignificant and disappointing considering the terrible sacrifices made, yet they gave the Allies certain strategic advantages. On the Artois front the Germans were left with a precarious hold upon the last ridge which protects the lower and more level ground on which stand Lens and Lille. On the Champagne front a further advance of a couple of miles on the part of the French would put them in possession of the railroad which runs just behind the German lines. If, then, the Germans are forced out of these positions they may have to retire a considerable distance before finding as strong a line of defense as that they now hold. But a great setback at either of these points would involve the withdrawal from the apex of the triangle which the Germans have driven into the heart of France. That is why the Allies have kept pounding away at these two points on the two sides of the angle which has been pointed at Paris for the last year and a half.

The lay of the land in both battlefields is much the same, limestone bluffs or buttes, as they are called in France and our Western states. These are honeycombed with caves and quarries, the caverns in the Champagne region being used for the storage of the wine which takes its name from the district. The chalky rock is easily cut so that veritable labyrinths of trenches, tunnels and dugouts have been constructed. Never before has underground warfare been conducted on such a gigantic scale.

In the news of the week from the Artois sector we hear first that the Germans have gained over 800 yards of trenches on the hill near Vimy, about five miles southwest of Lens. The

French in following days succeeded in recovering the greater part of their lost positions. On the Navarin farm in the Champagne the French gained about 300 yards of German trenches and held them against the counter-attack. Here the French shells smashed the German tanks containing suffocating gases under pressure and the wind carried the fumes back over the German lines.

The only novelty in the week's news is that the Germans have trained their long-range guns upon Belfort, one of the strongest fortresses on the eastern frontier of France. From three to ten big shells were dropped within the city's fortifications for several days.

The Albanian Puzzle

It is difficult to understand the news, or rather the lack of news, from the Balkans. Last week Albania was being rapidly overrun by Austrians from the north and Bulgars from the east and the Italians and Serbs were reported to have been withdrawn from Durazzo, the capital. But this week the invaders appear to have made little or no progress and the garrison of Durazzo is said to have been strengthened. The apparent inactivity of the Austrians may be plausibly explained by the difficulty of carrying forward a campaign in mid-winter in a mountainous country devoid of roads, yet on the other hand there is reason for believing the rumors that the check is due more to diplomatic than military causes. Certainly the Austrians met with no serious resistance until they came within ten miles of Durazzo, where they encountered and apparently defeated a small force of Italians sent out from that city.

That part of northern Albania through which the Austrians are now passing is mostly inhabited by the Mirdite tribesmen, who are Roman Catholics and hostile to both the Serbs and Mon-

tenegrins, who are Slavic and Orthodox. It is said that the Austrians are inciting the Mirdites to massacre the Serbian and Montenegrin refugees, but that is an unnecessary supposition. Their native hatred of their Slavic neighbors and the memory of the wrongs they suffered during the Serbian invasion only four years ago are quite sufficient to arouse the spirit of revenge which is being manifested in their attacks on the fugitives. The Austrians have for many years been conducting an active propaganda by means of school and church in the hope of winning them over and now they are reaping the reward of their efforts in the friendliness of their reception by the Albanians.

It is said that the Albanian immigrants in the United States have sent home considerable sums which are being spent for arming the Albanian bands now aiding the Austrians. In 1912, when the Albanians were brought to the verge of starvation by the Serbian conquest, American citizens of all races contributed generously to the relief of their distress, especially by sending them seed corn.

Those of the Serbian soldiery who, when they were driven out of their own country, succeeded in making their way to the coast, have been carried by Italian ships to the Greek island of Corfu, of which the Allies have taken possession. Since Corfu lies close to the coast of southern Albania they will be ready for service in the conquest of Albania whenever they are recuperated and reorganized. They are said to number about eighty thousand.

One theory to account for the cessation of the advance in Albania is that the Bulgars and Austrians have fallen out over the division of the spoils just as the Balkan States did four years ago. It is even rumored that the Bulgars, having obtained all the territory they are likely to get, refuse to take any further part in the war and are negotiating a separate peace with the Allies. To conclude this bundle of Balkan rumors we should mention that Rumania is again alleged to be on the eve of casting in her lot with the Allies.

As the observant reader has discovered for himself the estimates appearing in print of the casualties and the number of available men in the belligerent countries have a wide range of variation. This is because the data necessary for accurate calculation are altogether lacking. Naturally no country has revealed the number of men it has in its armies or the number it has still to draw on. The estimates of military strength which are published in the newspapers now and then are mostly made by assuming that a certain proportion of the population, usually between ten and thirteen per cent, is eligible for military service. For instance, it is customary to figure out in this way that Germany has some nine million potential soldiers. But how many of these must be kept at home to run the necessary industries is pure guesswork.

The calculation of losses is still more

Underwood & Underwood ST. PAUL TAKES WINTER JOVIALLY
Teepees and a toboggan slide for the use of thousands who have been celebrating the Outdoor Sports Carnival which has been revived after a lapse of twenty years. The State Capitol in the background

uncertain. In the first place Germany and Great Britain are the only countries publishing casualty lists. These are presumably truthful tho sometimes belated. But adding them up does not give the net loss, for the "missing" are not always dead or captured. Many of them turn up later. And a considerable proportion of the wounded eventually return to the ranks perhaps to figure once or twice more among the wounded. Owing to the advance of surgical science and the efficiency of the hospital service the number recovering is much greater than ever before. The percentage of the wounded returned to the ranks is variously estimated at 60, 70 or 80 per cent in the different armies, but the Germans make the astonishing claim that out of every 100 wounded 89.5 were again fit for service, 8.8 were discharged or given indefinite leave of absence, and only 1.7 died.

The estimates of enemy losses in battle are naturally exaggerated and usually quite worthless. If all the losses reported in the papers had been genuine the armies engaged would long ago have been wiped out. Under the circumstances the best thing we can do is to consider such figures as appear to have some authority and avoid making rash speculations as to the rest.

We have, for instance, the statement of Premier Asquith that the total British casualties up to January 9 amounted to 549,457, distributed as follows:

FRANCE AND FLANDERS		
	Officers.	Other Ranks.
Killed	5,138	82,130
Wounded	10,217	248,990
Missing	1,691	52,344
Total officers and men, 400,510.		
DARDANELLES		
	Officers.	Other Ranks.
Killed	1,745	26,455
Wounded	3,143	84,952
Missing	353	10,901
Total officers and men, 117,549.		

OTHER FRONTS

	Officers.	Other Ranks.
Killed	918	11,752
Wounded	816	15,165
Missing	101	2,656

As for the German losses the sum of her casualty lists has been stated to be from 3,500,000 to 4,000,000 up to January 1, 1916, but Harold J. Tennant, Parliamentary Under Secretary of the British Foreign Office, gives much lower figures, namely a total for all Germany of 2,535,768, of whom 588,986 were killed, 1,566,549 wounded and missing, 356,153 prisoners and 24,080 died of disease.

Of the wounded and missing an undetermined number have, as we noted above, returned to the front. The military expert of the London Times calculates that Germany has now about one million men in France and Flanders, two million on the Russian front and from one to two and a half million on other fields and in the interior. She has some two million prisoners who can be set to work. He calculates that since Germany has lost an average of nearly two hundred thousand men a month since the war began her military strength will begin to fail some time between May and October. A French statistician is more definite and sets August 1 as the date of Germany's collapse for lack of men. On the other hand the pro-German calculators, figuring that in Germany 850,000 boys arrive at military age every year and 550,000 in Austria-Hungary and that Bulgaria and Turkey can be drawn upon, are convinced that the Central Powers can hold out indefinitely.

No official figures are available for France, but a French Socialist Deputy speaking at the Bristol Labor Conference said that 800,000 soldiers had been killed, 1,400,000 had been wounded, and 300,000 had been taken prisoners.

The Russians are said to estimate their own casualties at three million.

WINTER LIGHTS AND SHADOWS

THE SCENE HAPPENS TO BE MT. KOSCIUSKO, NEW SOUTH WALES, BUT
THE SHARP TINGLING SUNLIT DAY IS EVIDENTLY NOT
UNLIKE THE BEST OF AN AMERICAN WINTER

WANTED: A COLUMBUS

BY THOMAS R. MARSHALL

VICE-PRESIDENT OF THE UNITED STATES

AMERICA has no right to be unless she stands for man and for the rights of men. Evils are abroad in the land, now as always. Notwithstanding our boast, our government is not of and by and for the people. Yet I make bold to say that it is still a representative democracy. Our coördinate system of government was formulated by Thomas Jefferson, and many a man wholly ignorant of Jefferson's theory of government is now proclaiming himself a Jeffersonian Democrat. Public speakers and the public press have been giving voice for twenty years to the fact that this is not a people's government. It has been shouted that the bosses are in control from ocean to ocean; that their machines have taken over the politics and legislation of the country; that they have prevented the people from crystallizing our ideals into enforceable laws. To be sure, we have had bosses and we have had machine politics in America. We have had legislation which, in enactment and construction, has not tended to promote the ideal of equality and the opportunity for honest success. But it has also been loudly proclaimed that the people, if they could only get a chance to express themselves, would declare in unmistakable terms their belief that this system was vicious; that they would smash the machines, banish the bosses and select officials who would always stand four-square with the theories of the fathers of the republic.

As a matter of fact, opportunity has been given us during the last three or four years to agonize over conditions and correct them; revealing to us what we should have known all along, what, indeed, we had known, but had been allowed to forget: This is a government not of stocks and bonds and mortgages, not of factories and mines, but a government of men—men who will neglect the common good in looking after their own welfare, unless they are touched with the weight of that responsibility which rests upon them as individual citizens.

We have adopted in many of the states and many of the cities the direct primary as a means of giving the citizen a chance to insure for himself office-holders who are honest and who believe in the high ideals of the republic and will stand for them. What has been the result? Has the average elector been deeply impressed with the weight of

responsibility which rests upon his shoulders? He has cried out bitterly at conditions; he has charged the office-holder with being corrupt and controlled by corrupt bosses, but he fails to vote at the primary as he failed to attend his party caucus; he does nothing to prevent the renomination of the office-holder he has been railing against.

EQUITABLE enforcement of the laws can never be made to rest upon the office-holders of the land. It must rest upon the individual. You may abolish the caucus and adopt in its stead the primary; you may go further and have a second primary to determine who shall run in the primary for the nomination to be voted for at the election; you may keep on adding machinery and machinery to the system of nominating and electing officials, and your effort will come to naught until a public sentiment, which puts upon the conscience of every man his great responsibility for good government in this country, is aroused.

The direct primary has disclosed that the citizen is not deeply concerned about public affairs, and that conditions will have to grow far worse before we can hope for them to get much better. The primary has failed to bring out the vote. It has aroused suspicion. Many are inquiring whether the new system is not the result of a scheme to syndicate candidates and fool the people.

The people's rule does not depend necessarily upon the system of government under which they vote. Good or bad government must go back to good or bad citizenship, to intelligent or ignorant, to honest or dishonest electors. American democracy was intended to mean, and, I believe, does mean, something more than voting, something more than selecting officers. It does not depend upon caste or creed or condition, upon race or color, upon wealth or poverty, upon success or failure; it does depend upon the inner life of the individual citizen. It is an inspiration and an aspiration. It does not always depend upon the ticket which a man votes. It does depend always upon the motive back of the ballot.

Political events have disclosed, especially during the last few years, that we have been mistaken in some of our popular conclusions touching

government in America. We have yielded a quiet assent to the proposition that a majority is all-powerful and that a minority has no rights which a majority is bound to respect. But now we know that the theory of the historic Democratic party that it is the right of a majority to rule, but only within constitutional limitations and without usurpation of a single inalienable right of a single individual, is correct.

It cannot be said that it is the system of government which is wrong. It is the unjust use of the system. It has not been the use but the misuse of the powers of government which has produced this discontent in the minds of men.

THE individualism of Thomas Jefferson is not dead. It has not moldered back to dust in the grave at Monticello. It walks the earth this day knocking at the door of rich and poor, of wise and ignorant alike, calling upon all men to make this age the millennium of statecraft, wherein no one shall claim to be the master and all shall be glad to be the servants of the Republic.

This is the land of the pioneer and the pathfinder. It has been suggested that his work is done, that he rests from his labors, and that men now know where and how to go. If there were an end to pathfinding, this would be a time of great sorrow rather than of unbounded exultation. But it is not so. The pioneer and the pathfinder will be as needful for the future as they have been to the past. Men walk oftentimes when they stand still, and they go farther in dreams than in thoughts or deeds. The mission of the Republic is vain if it be not to bring the blind by a way they know not, to lead them in paths that they have not known, to make darkness light before them, and crooked things straight. And none of these things can be done without vision and thought.

Old things have passed away. No one can convince me that the awful cataclysm in Europe has not swept aside all that we have known as safe and sure charts on the sea of life. I think it is necessary for some new Columbus to discover again a new America, and I do believe that there must exist today some new Columbus who will discover a new America not bound by the selfish interests of the past, but bound by the commonwealth of the Americas.

Washington, D. C.

THE MEETING

BY CAPTAIN PAUL VIGNON

TRANSLATED FROM THE FRENCH BY CHARLES PEABODY

LIFE is made up of nothing but contrasts; life is nothing but a series of stirring paradoxes; ever since this war has been piling one astonishment on another, each day is marked by something astounding, which, while it too often overwhelms, yet sometimes calls forth the tenderest feeling.

I have seen suffering and strength meet and pass by in the person of two soldiers, and I shall always remember it.

I have seen—at the moment when the combat begins to relax because night and fatigue are too much for the fighters, when anxiety rules the weary soldiers who yet watch—

I have seen, by the light of the sparkling rockets, in the trench all green and dirty, full of corpses, full of slops, redolent of noxious smells, in this melting pot of death and transfiguration, blood and tears, of hero and of madman, of the most sublime of spirits and of the most repulsive decay—

I have seen suffering and force meet and pass by, and I shall always remember it.

In that setting of opposites fixed tremendously face to face—there, where we talk low while the cannons roar furious and loud; there, where we scold and where we pray—there where we think it over of the having killed, killed so as not to be killed—so as to save France—there, where we laugh after we have wept; there, where we forget all—family, self-pride, egotism and all the ordinary motives that one so clings to otherwise—there, where we snap our fingers at prejudice, custom and foolish habit—there, where usage faces usage.

I have seen the kindly contrast, suffering and force meet and pass by. This war, like all that calls forth madness, ecstasy, fury, dash, often places side by side insanity and coolness, indomitable will and pity, ugliness and beauty—it opposes the extravagances of the body to the emotions of the soul.

Yes, I have seen the frightful onslaught of battalions charging to the front; I have seen whole columns dissolve, nearer and nearer to the ground, and disappear then in the mud, their only burial, the sticky, chalky clay.

I have seen all these soldiers, so many that they made a great big blue spot reflected in the sky marching happily, gaily into battle—into mud and their own blood.

Let us follow this march to the front—first it is the passing thru the villages all full of ambulances—then a slow procession by unnumbered paths in field and wood.

Sometimes they stop to wait for the night; then the men spattered with mud, soused with the rain which always falls, halt and sup.

But as soon as the dark seems black enough they start on again with the long, slow train thru endless ditches till they reach the trench.

Shells burst and bullets whistle; what of it? Onward anyhow; that's the way to conquer. Perhaps this instant there'll be the charge and we'll go with a good heart, full of heart, all of us, singing victory, singing the "Marseillaise."

There will be wooden crosses tomorrow, but what matter? Afterwards there will be the *Croix de Guerre*.

What's a man worth when he goes to the charge? All and nothing.

All, for one single one may save the situation; nothing, for France goes first and self-love follows after.

The soldier knows it and he says it then, when all the guns go off, the bayonets flash under the lightning of the rockets showing up the trenches, the labyrinth, and all the works—then, when the crazy raging, pitiless charge is imminent.

I have seen this march to triumph and to death; I have seen at the same time the procession of stillness, that of suffering which pity walks beside.

Just now there passed by singing men by hundreds; a few hours, and there are but rags and tatters that they bring back to the village where there are so many ambulances.

How well I can see these hospitals of passage that I would not look at just now when I was running with the mob of soldiers.

They have fixed them up the best they could, they have cleared out the mud round about, chocked up the roofs smashed by the shrapnel, and even set up beds in the chilly, gloomy church.

The village is full of them and everywhere you see the little lantern with its red cross shining near another one all white.

It is the refuge of pain, some kilometers from the tourney-field of might.

All along the road that's all you meet—these two figures tragic and poignant, varying according as might is the more brutal, or suffering the more worthy of pity.

A hundred times I have seen these scenes that make me weep, but never have I been so moved as one evening when the cannon raged and the general assault had been ordered.

I was waiting near a rest-shelter until all the reinforcing and attacking columns should have come out of the ditches.

The going and coming was incessant, wearisome, crushing, even for the looker-on; for in the darkness the ground never stopped groaning under the tramp of men, nor the air resounding with whistling shells and rattling arms.

Suddenly they cried near me, "Look out!" It was the bearers who were carrying a wounded man on a litter: a piece of shell had pierced his breast; he was all pale and the hospital men had hard work to avoid knocks and bounces—not easy in this crooked, hollow path, full of ruts. They stopped.

The rockets blazed up the sky and each time the white face of the wounded man could be seen in the night.

Suddenly I felt some one touch me; a commanding officer had taken me by the arm and whispered low: "Pardon, Lieutenant, but it seems to me that this wounded man is not unknown to me."

Another rocket went up into the sky among the black bellying clouds; the face of the dying man appeared again wan and white as the chalk of the road.

"My son!" cried the officer, coming near to him and bending over as if to speak to him.

He remained thus motionless for some minutes while the flashes in the sky came quicker and the columns continued their solemn, tragic march.

Each soldier who passed cast his shadow on the white spot, the wounded man; it was a reflection of life and force resting like a dare on the prey of Destiny and Death.

"Can we go on now that the way is clear?" asked the hospital corporal of the officer. "The road is long and hard and we have no time to lose."

"Go," said the superior officer.

I was going to ask him if I could help, but he had already kissed his son and I heard him say very quietly, without a sob, "Thus suffering and strength come face to face." He disappeared at top speed to regain the head of his regiment.

Somewhere in France

ARNOLD BENNETT'S PROVINCIALISM

By J. W. CUNLIFFE

ASSOCIATE DIRECTOR OF THE SCHOOL OF JOURNALISM IN COLUMBIA UNIVERSITY

PROVINCIALISM is not confined to any particular locality; it is (like Boston) "a state of mind." One may be provincial in a big city or metropolitan in a small one, for size is obviously no guarantee of superiority. Life in many a city of 25,000 is, on the average, cleaner and happier and more wholesome than life in New York. There is nothing ideal about the subway or a railroad apartment or the glare of Broadway.

The difference lies in the point of view: the metropolitan New Yorker knows that the Great White Way is a horror; the provincial thinks his brilliantly lighted Main Street a model for the world. Provincialism consists chiefly in this self-satisfaction, encouraged by lack of artistic opportunity and of contact with the great currents of thought. It is the presence of these elements that makes the metropolitan attitude critical.

If we compare Arnold Bennett with the writers of his time with whom he naturally groups himself—Shaw, Wells, Galsworthy—we see that he is, in this sense, provincial, and they are metropolitan. They voice the latest heresies—humanitarianism, socialism, feminism, and so on—each with his particular note—Mr. Shaw with rhetorical exaggeration and ingenious paradox, Mr. Wells with passionate vehemence, Mr. Galsworthy with a superficially cold detachment which only half conceals a white heat of indignation. Mr. Bennett disregards these great issues, or presents them merely as incidents in the intellectual and emotional life of his characters. In *These Twain*, recently reviewed in these columns as completing the *Clayhanger* trilogy, Edwin Clayhanger does concern himself (to the extent of one paragraph) with the low wages of his work people:

Those greasy, slatternly girls, for instance, with their coarse charm and their sexuality,—they were underpaid. They received as much as other girls, on pot-banks, perhaps more, but they were underpaid. What chance had they? But he dismisses the evil from his mind forthwith as beyond remedy. In the same fashion (also to the extent of one paragraph) Hilda reasons about her economic dependence on her husband:

No, they were not equals. The fundamental unuttered assumption upon which the household life rested was that they were not equals. She might cross him, she might momentarily defy him,

she might torture him, she might drive him to fury, and still be safe from any effective reprisals, because his love for her made her necessary to his being; but in spite of all that his will remained the seat of government, and she and George were only the Opposition. In the end, she had to incline. She was the complement of his existence, but he was not the complement of hers. She was just a parasite, tho an essential parasite. Why? . . . The reason, she judged, was economic, and solely economic. She rebelled. Was she not as individual, as original, as he? Had she not a powerful mind of her own, experience of her own, ideals of her own? Was she not of a nature profoundly and exceptionally independent? . . .

But her meditations do not lead her any further. She wants a dog cart and a house in the country and she cajoles her husband into indulging her in both. They get on in the world by the old-fashioned plan of pulling down their barns and building greater; they get on together thru the traditional force of sex-attraction, which Shaw, Wells and Galsworthy, following the lead of Hardy, make out to be "evanescent as steam." Yet both characters are presented to us as noble and elevated, worthy of our admiration and sympathy. Mr. Bennett's point of view is their point of view—the point of view of the Five Towns.

It is one of the oddest of popular fallacies that Mr. Bennett should be generally regarded as the mordant critic of provincial life in a small district of the English Midlands. He is really the sympathetic interpreter of provincial life as it exists all over the English-speaking world. The eye of the ordinary reader is caught by Mr. Bennett's skill in making fun of externals—the houses the Five Towns people live in, their trains and street cars, the food they eat and the clothes they wear. But these things, tho amusing because of the mastercraft by which they are realized, are secondary, and in a sense indifferent, mere background. What really interests Mr. Bennett is not what his characters eat and wear, but how they think and feel. It is their essential right-mindedness, their honesty and endurance, their courage and faithfulness to their standards of clean and straight living—such as they are. These are the qualities that attract us to the stay-at-home Constance, the original heroine of *The Old Wives' Tale*; the more enterprising Sophia was an afterthought. In this novel and in the *Clayhanger* series—upon which Mr. Bennett's fame

will rest secure, despite his too numerous pot-boilers—it is not the material ugliness of life in the Five Towns which is the permanent impression, but its spiritual beauty. In these novels Mr. Bennett is faithful to the literary principle he has laid down in *The Author's Craft*:

No man's instinct can draw him towards material which repels him—the fact is obvious. Obviously, whatever kind of life the novelist writes about, he has been charmed and seduced by it, he is under its spell—that is, he has seen beauty in it. He could have no other reason for writing about it. He may see a strange sort of beauty; he may—indeed he does—see a sort of beauty that nobody has quite seen before; he may see a sort of beauty that none save a few odd spirits ever will or can be made to see. But he does see beauty.

The spiritual beauty, it should be noted, is not associated by Mr. Bennett with organized religion, which finds its place merely among the grotesque material conditions of life in the Five Towns as a dead convention, affording comic relief, as in the incidents of the penknife sent in answer to prayer in *These Twain*, and the attempt to make Edwin Clayhanger treasurer of the Macclesfield District Additional Chapels Fund. The people in Mr. Bennett's novels live without religion, and die without it, in spite of their church activities and the parsons at their funerals. What counts for them as religious feeling—quite dissociated from the religious organization to which they may happen to belong—is the steadfast courage with which they meet the ordinary trials of life. They are, as he says of the Five Towns characters in *What the Public Wants* fundamentally "decent" and sagacious people, and it is their standards that are upheld in the great novels and in this play, in which the metropolitan newspaper proprietor, so far as he has departed from Five Towns standards, is condemned. Mr. Bennett has fled from the Five Towns to London, to Rottingdean, to Fontainebleau. He is no longer in the Five Towns, but he is still of them, and if he chose to return it is to be hoped (and believed) that the Five Towns would have common sense enough to give him as warm a welcome as Warwickshire gave to Shakespeare, in spite of Justice Shallow and Silence, and as Tarascon gave (after the first impulse of resentment had evaporated) to Daudet.

New York City

CARRYING THE WAR INTO AFRICA

WHERE THE BIGGEST PRIZE IS AT STAKE AND THE
BIGGEST GAINS HAVE BEEN MADE

THE biggest prize in the Great War is Africa. However the conflict may come out, there will be but comparatively slight changes in the map of Europe. In Asia the chief issue at stake is which shall control Turkish and Persian territory. But the fate of practically the whole continent of Africa depends upon which side wins. If the Allies are victorious they are not likely to restore to Germany any of her African colonies. If Germany is victorious she can take her pick of the British, French, Belgian, Italian and Portuguese possessions. If the war is a drawn game and settled by bargaining, the peace terms will be some compromise between these extremes, but probably involving a shift of territory larger than any of the belligerent countries of Europe.

The struggle for the possession of Africa, which had occupied the European Powers for twenty-five years, seemed to have come to a close in 1912, when France declared a protectorate over Morocco and Italy conquered Libya. The partition of Africa was complete except for the tiny state of Liberia under the protection of the United States and Abyssinia, which was still in dispute. The map of Africa as it appeared to have been definitely drawn two years before the outbreak of the war is given on the adjoining page. In figures it was as follows:

THE PARTITION OF AFRICA

	Square Miles
French	4,100,000
British	2,100,000
Egypt and Sudan	1,600,000
Total British	3,700,000
German	900,000
Belgian	900,000
Portuguese	800,000
Italian	600,000
Spanish	80,000
Abyssinia	350,000
Liberia	40,000

The world breathed more freely when the long process of partitioning came to an end, for more than once it had brought Europe to the verge of war. One such critical occasion came in 1898 when a dashing French captain encountered a square-jawed young Englishman at Fashoda in the heart of Africa. Captain Marchand had come overland from the French Congo. Sir Herbert Kitchener had steamed up the White Nile from Khartum. Neither man would give way, so two flags, the French and the Egyptian, were hoisted side by side over the mud-

flat in the midst of the swamp. In France and England there was clamor for war, but cooler counsel prevailed. France swallowed her pride and withdrew from Fashoda, leaving England in undisputed possession of the Nile valley.

The same sensible system of compromise was later adopted in the division of the territory along the Mediterranean. By mutual agreement it was arranged that France should be free to take Morocco and England Egypt at any time they chose, and that Spain should have the strip of Moroccan territory opposite Gibraltar and Italy should be allowed to conquer Tripoli for herself. The Anglo-French treaty was signed in 1904, but the secret clauses which provided for the ultimate disposition of Egypt and Morocco were not disclosed until 1911, when Germany, suspecting that she was being shut out in the cold, sent a cruiser to the Moroccan port of Agadir and demanded "a place in the sun." Within the last few months we have heard from English sources that war was then thought to be imminent and inevitable. The British fleet was ready for instant action when Germany backed down and consented to accept a bit of Congo land from France in compensation for refraining from interference with French designs on Morocco. According to the treaty signed at Algeciras in 1906 by the European Powers and the United States, the independence and sovereignty of the Sultan of Morocco was to be respected and his territory maintained intact. But when within six years thereafter Morocco was invaded by the French and the country divided between France and Spain nobody in America seems to have suggested that it was the duty of our Government to intervene in behalf of the sanctity of treaty obligations. Perhaps this is because it was generally recognized that it was not possible for the French or anybody else to rule Morocco worse than she has been ruled for many centuries by her own sovereigns. Some people would say that shutting Germany out from the final partition of Africa was not fair and many people would say that it was not good politics, but they would agree that Morocco, like all the other waste places of the world, must be taken in hand and cleaned up by somebody.

In accordance with the secret clauses of the Anglo-French treaty of ten years before Egypt has now been incorporated into the British

empire. On December 18, 1914, the Khedive Abbas Hilmi was deposed by the British and Hussein Kamil, his uncle, made Sultan of Egypt, thus definitely separating Egypt and the Sudan from the Ottoman empire. This is, of course, merely a paper change since Egypt has ever since 1883 been governed from London and greatly to her advantage. It is questionable if the pyramids, during the "forty centuries" that they have looked down upon Egypt, have ever seen it so peaceful and prosperous as it has been under British rule. Everybody except her envious rivals is glad now that England has never kept her promise to evacuate Egypt.

The Suez Canal has been strongly fortified in anticipation of an attack from Turkish and German forces now rumored to be preparing in Palestine. A year ago the Turks attempted the conquest of Egypt, but by the time they had crossed the desert of Sinai they had not the strength left to capture the Canal.

On the other side of Egypt, the western frontier, the British outposts have had to meet some sharp attacks from the Senussi, a militant Moslem sect. Their activities in Tripoli have driven the Italians out of the hinterland and now they have only a precarious hold on the coast cities.

At the outbreak of the Great War efforts were made by both the Belgian and German governments to prevent central Africa from becoming involved in the conflict. The conference of the Powers called by Bismarck at Berlin in 1885 to establish the Congo Free State decided that free trade in time of peace and neutrality in time of war should prevail thruout the region watered by the Congo and its tributaries including Lake Tanganyika, an area of a million and a half square miles. On August 7, 1914, the Belgian Government asked France and Great Britain to declare their Congo colonies neutral in accordance with the Berlin convention. France was willing, but Great Britain refused on the ground that it was impractical and that hostilities had already begun in Africa. The German Government on its part solicited the United States, as one of the signatories of the Berlin convention, to arrange an agreement among the belligerents to exclude the Congo basin from war. Such an appeal to us was natural since the United States had taken an active part in launching the Congo Free State and was the first to recognize its flag.

Germany was the second. But our Government excused itself from undertaking the negotiation of such an agreement on the ground that the Senate had never ratified the Berlin convention.

In Africa, as in Europe, each side accuses the other with having "begun it first." Obviously the temptation to pounce upon interior stations, still unaware of the war, was too strong to be resisted, and there were raids over the border on several frontiers early in August.

But it was by an ironical coincidence in the "Harbor of Peace,"

Dar-es-Salaam, that hostilities definitely opened. On August 8, 1914, the British cruiser "Pegasus" appeared before Dar-es-Salaam, which is the chief port of German East Africa, and bombarded the city and shipping. On November 28 and January 13 the bombardment was repeated in spite of the protests of Germany that such attacks upon an unfortified city were in violation of international law. In one of these raids the surveying vessel "Möwe" was sunk. The name reappeared recently attached to the much larger vessel which captured the "Appam."

German East Africa is not an island, yet there have been "naval engagements" on all four sides of it, that is, on lakes Nyanza, Nyasa and Tanganyika as well as the sea. Tanganyika, which separates the German colony from the Belgian Congo to the west is the longest lake in the world. A railroad 780 miles long has recently been completed which connects it with the coast at Dar-es-Salaam. On this railroad and in the heart of the country is Tabora, which has now been strongly fortified to resist the British attack. Big guns have been brought

THE PARTITION OF AFRICA

At the outbreak of the war the African continent had been divided up among the European Powers in this fashion. Abyssinia and Liberia were nominally independent. B stands for British possessions; F for French, G for German, P for Portuguese, S for Spanish, I for Italian. Since the war began Great Britain has formally declared a protectorate over Egypt and the Sudan. The South Africans have conquered German South west Africa. The French and British together have conquered Togoland and Kamerun. The British are now undertaking the conquest of German East Africa. If we count in all these the new acquisitions of the Allies will amount to over 2,500,000 square miles.

from the cruiser "Königsberg," which the British fleet ran to earth, and rifles have been obtained thru Portuguese territory. In this way 4000 white soldiers and 30,000 natives have been armed to meet the British invasion. That the British Government is aware of the difficulty of the conquest of a territory nearly twice the size of Germany is shown by the fact that Sir Horace Smith-Dorrien was ordered from France to take charge of the expedition, but on account of his illness General Smuts will replace him.

All of the other German possessions in Africa have now been conquered. The Kamerun colony, which was attacked on three sides in August, 1914, held out till February, 1916, altho there were probably not two thousand Germans in the colony. The early invasions of Kamerun from British Nigeria on the west and from French and Belgian Congo on the east did not do much, and the conquest was accomplished by a joint British and French force which followed up the two railroad lines from the coast. On the first of January they took Yaunde, the last tenable post in the interior. The Governor and his soldiers escaped into the Spanish enclave of Rio Muni.

Togoland was the first of the German colonies to capitulate, which is not surprising when we know that the German army in this colony consisted of only sixty Europeans and four hundred natives. The joint French and British force which was sent in against them lost seventeen per cent of its men before the Germans surrendered, August 26, 1914.

German Southwest Africa was conquered by General Botha, Premier of the Union of South Africa,

with a force of 50,000 men, half Boer and half British. This was more than ten times the number of German troops defending the colony, nevertheless it was a considerable achievement to conquer a territory about the size of all of our Atlantic states put together, especially since he also had a rebellion on his hands at the same time. General De Wet with a small number of irreconcilable Boers tried to take advantage of the opportunity to reestablish the Boer republics. It was understood that the Kaiser had promised to guarantee their independence if they would rebel. Colonel Maritz, who commanded the Union forces on the northwestern frontier, at once joined with the Germans from over the border. But General Botha and General Smuts acted with promptness and energy. The rebellion was soon crushed and De Wet captured. He was tried for high treason, convicted—and released. The South Africans practise mutual forgiveness more than any other people, and somehow it seems to work.

The conquest of German Southwest Africa was a motor car campaign, just the thing for an open arid country. When the Germans took possession of the territory in 1884—it was the first fruit of their expansion policy—the British held possession of Walfish Bay, the only good harbor on the coast. But the Germans put in expensive harbor works at Swakopmund and so made of it a far better port than Walfish Bay. In January Swakopmund was taken by the aid of the British fleet. The South African forces then advanced into the interior along the railroad lines and on May 12, 1915, captured Windhuk, the capital, 129

miles from the coast. Here they found a wireless station, completed just before the war, of such power that it could with one relay communicate directly with Berlin.

The campaign in German Southwest Africa cost the Union \$80,000,000, but it is worth it. The Germans have spent more than that on public works in the colony. They were just beginning to get their money back when they lost it. In the casualties of the campaign the two races by chance shared almost equally; 126 British killed, 126 Boers killed, 273 British wounded, 275 Boers wounded.

When Portugal at the beginning of the war declared her sympathies with the Allies the Germans invaded the Portuguese colony of Angola from German Southwest Africa and captured the border fort of Naulila in December, 1914.

To sum up the situation as it stands after a year and a half of war: Germany has lost all her African possession except one; Great Britain and France acquired at comparatively small cost in life and money over two million square miles of territory, that is, an area equal to two-thirds of the United States. The rich and fertile lowlands of the tropics are capable of producing wealth incalculable and there are immense tracts of healthful plateaus, where communities of the highest civilization may flourish. No wonder that the long struggle for African territory has become fierce as it nears the end. We know what a wild rush there was in Oklahoma when the last of the public lands was opened for settlement. The present war is the last chance at the last of the continents on which the Powers may stake out their claims.

MY BATTLE-PRAYER

BY F. F. V.

I do not ask for peace,
Nor yet that on my path
The sounds of war shall shrill no more,
The way be clear of wrath.
But this I beg Thee, Lord,
Steel Thou my will with might,
And in the Strife that men call "Life,"
Grant me the strength to fight.

I do not pray for arms,
Nor shield to cover me.
What tho I stand with empty hand,
So it be valiantly!
Spare me the coward's fear—
Questioning wrong or right:
Lord, among these mine enemies,
Grant me the strength to fight.

I do not pray that Thou
Keep me from any wound,
Tho I fall low from thrust and blow,
Forced fighting to the ground;
But give me wit to hide
My hurt from all men's sight,
And for my need, the while I bleed,
Lord, grant me strength to fight.

I do not pray that Thou
Shouldst grant me victory;
Enough to know that from my foe
I have no will to flee.
Beaten and bruised and banned,
Flung like a broken sword,
Grant me this thing for conquering—
Let me die fighting, Lord!

A FIREMEN'S AERIAL PARADE IN TOKYO

ON NEW YEAR'S DAY IN JAPAN THE FIREMEN ARE INSPECTED—SHOW OFF, IN OTHER WORDS—
ALL OVER THE COUNTRY. THIS SCALING LADDER CONTEST, WITH MEN COMING DOWN
"HANDS ONLY" IS A SIGHT WORTH GOING FAR TO SEE

Royal Master Model 10
Price \$100

The Royal cuts the cost and better the quality of your letters

NO matter how quick, how intelligent, how efficient, how prompt your stenographers are—their ability is worth just as much to you as is shown by the quality of their *typewritten work*.

With the Royal Typewriter your stenographers can do more work, better work, and with less effort. And the Royal stands up under the most strenuous usage, day in and day out, because it is accurately designed for just that purpose, and built by master-workmen who know the value of *quality* in materials and workmanship.

Compare the Work

The Royal proves itself not only in the quality of typewritten work done on it, but in the actual saving in the cost of that work.

It saves *day by day*, because its users are enabled to turn their work out better and faster.

It *cuts the cost* of producing every letter written on it—the saving being almost enough to pay the postage bills.

It saves *in the long run* because it ends the necessity of “trading-out” after two or three years, and because it does away with excessive repairs.

Get the facts. Know the Royal.

Write or telephone us or any of our branches or agencies, and a representative will call and demonstrate the Royal without the least obligation on your part.

Write today for these
free booklets

“Better Service” and “One Problem Solved” tell how to cut the cost of typewritten letters—save operators’ time—give your correspondence “class.” A postal brings them now.

“Compare the Work”

Royal Master Model 10
Price \$100

The typewriter you will not have to "trade-out"—and why

THE Royal Typewriter does not have to be "traded-out"—because it is built for long life and finest work

The very *looks* of the Royal convince you that the master-workmen who make it, build endurance into it, build the capability for best work into it, build into it that superiority which ends the necessity for "trading-out."

Only the most exact, correct scientific design and construction could insure the unfailing responsiveness, the precise harmony of all moving parts which result in the perfect presswork for which the Royal is famous.

Compare the Work

Compare the *work* done on the Royal. Note the clean, clearcut typewriting; the exact, properly-spaced lines; the smooth even presswork which carries with it the undoubted impression of class.

Compare the *convenience* of the Royal. It typewrites letters, cards and does billing and charging—all on the one machine and without a single extra attachment.

Compare the *ease* with which the work is done. Nothing but master-workmanship could build a machine which takes the "grind" out of typewriting, and always turns out work of super-class.

Investigate the Royal. Study it from all angles. You will quickly appreciate why the demand for it is testing every resource of the model Royal factory.

Write for "Facts About the 'Trade-Out'"

—a little book which doesn't mince words in telling the story of the typewriter. Every typewriter owner or user should have it. We want to place a copy in your hands. A postal will bring it to you free.

M. William Shak-speare:

EIGHT PAPERS BY FREDERICK HOUK LAW
IN OBSERVANCE OF THE THREE HUNDREDTH
ANNIVERSARY OF SHAKESPEARE'S DEATH

Shakespeare's England

SHAKESPEARE when he went to London, about 1587, might have heard "The shrill trump, the spirit - stirring drum, the ear-piercing fife," or

heard the shout along the street:

The trumpets sound: stand close, the Queen is coming,

and hurried with a picturesque crowd to see a wonderful procession sweep by—company after company in linked armor or glittering steel, with fantastic pikes; strangely-costumed dancers with tinkling bells; rumbling cannon; carts with caged animals; and then—proud, self-reliant, magnificently drest—the great Queen Elizabeth, for whom hats went into the air and the populace yelled itself hoarse. All England in those days saw the superb sweeping by of the wonderful queen who had lifted England into prosperity and developed the spirit that now lives in Elizabethan literature, and especially in the plays of Shakespeare.

A great spirit filled little England then—for little England it was, with

scarcely five million inhabitants, fewer people than now live in Greater New York alone; and the London of those days with about 200,000 people, was smaller than today's Denver or Rochester. But

Like little body with a mighty heart

England was thrilling with a national life that made her great in war, in wealth and in literature.

The fall of Constantinople in 1453, by spreading Greek learning, had stimulated new thought; Caxton's printing-press, set up in Westminster in 1476, had opened the gates of literature; Luther's daring theses in 1517 had declared religious freedom; and Columbus' discovery of America in 1492 had encouraged voyages to lands of wonder

To try the fair adventure of tomorrow.

When Shakespeare was thirteen Francis Drake made a voyage around the world

Full of peril and adventurous spirit.

When Shakespeare was twenty-one Drake plundered the Spanish possessions in America and returned with incredible wealth. Three years later thirty-four royal English vessels and a few seaport sailing boats

surprisingly defeated Philip of Spain's Great Armada of one hundred and thirty-two magnificently outfitted ships of war. After such events it is small wonder that all England quivered with national life.

The whole spirit of the times was full of interest, romance and greatness. The romantic story of Mary Queen of Scots was moving toward its end—with her execution—in 1587, when Shakespeare was twenty-three. Elizabeth's femininity, her love of dress, of flattery, of ostentation, and her romance with Leicester, made the Queen a romantic influence. When Shakespeare was twenty-seven he must have heard how Sir Richard Grenville, with one little ship and a hundred men, fought with fifty great Spanish vessels of war. Such deeds made it a gallant thing to be an Englishman, for they

Did all the chivalry of England move To do brave acts.

Elizabeth had found England poor in money and men, her trade and commerce small, and her unity threatened by religious differences. The present vast commercial life of England is largely due to Elizabeth, who strengthened English

LONDON ABOUT THE TIME OF SHAKESPEARE'S DEATH

Looking from the south bank of the Thames toward the city. London Bridge in the center, with "Traitor's Gate" at its near end, where the heads of decapitated traitors were exposed. St. Paul's is the large church in the background. No public theaters were allowed within the city limits; they were built either to the north or on the Bankside in Southwark (foreground). Three of them, octagonal buildings with a flag flying, are seen to the left, the "Swan," the "Hope," and the "Globe." From an old print

EVERY MOMENT
A PLEASANTER
MOMENT = EVERY
MILE A SMOOTHER
STEADIER MILE =
EVERY HOUR AN HOUR
OF GREATER EASE

commerce and wealth when the rest of Europe plunged into war. She developed a vast export trade, especially in woolen goods sent to the low countries.

With the resulting wealth the great lords made castles into palaces, where they held

Nightly revels and new jollity.

Beautiful buildings in brick and stone took the place of wooden dwellings, Shakespeare bought in 1597 New Place, the most substantial house in Stratford.

Glass windows took the place of lattice, of which Lafeu says in "All's Well that Ends Well":

My good window of lattice, fare thee well: thy casement
I need not open, for I look through thee.

Well-constructed chimneys added much to comfort. Rushes still covered the floors, but rich furniture and costly tapestry gave a magnificence that delighted the eye. Shakespeare often speaks of rich houses, as in "Cymbeline," where Iachimo says:

Her bedchamber . . . was hang'd
With tapestry of silk and silver . . .
a piece of work
So bravely done, so rich, that it did
strive
In workmanship and value . . .
The roof o' the chamber
With golden cherubims is fretted: her
andirons
were two winking Cupids
Of silver.

In "The Taming of the Shrew" Gremio gives us some idea of the prevailing delight in luxury when he says:

My house within the city
Is richly furnished with plate and gold;
Basins and ewers to lave her dainty
hands;
My hangings all of Tyrian tapestry;
In ivory coffers I have stuff'd my
crowns;
In cypress chests my arras, counter-
points,
Costly apparel, tents, and canopies,
Fine linen, Turkey cushions boss'd with
pearl,
Valance of Venice gold in needlework,
Pewter and brass, and all things that
belong
To house or housekeeping: then, at my
farm
I have a hundred milch-kine to the pail,
Sixscore fat oxen standing in my
stalls.

Table-knives, forks, silver spoons and china dishes were just coming into use in Shakespeare's time, and the plays have contemptuous references to lead, pewter and wood, Marcius, in "Coriolanus," saying:

Cushions, leaden spoons,
Irons of a doit, doublets that hangmen
would
Bury with those that wore them, these
base slaves
Ere yet the fight be done, pack up.

And Pompey, in "Measure for Measure," says apologetically:

A fruit-dish, a dish of some three-pence; your honours have seen such dishes; they are not China dishes, but very good dishes.

The humbler people in Stratford and elsewhere ate at one and seven without ceremony, the very poor using wooden dishes and helping themselves with their fingers, a custom that the First Stranger, in "Timon of Athens," refers to when he says satirically:

Why, this is the world's soul;
And just of the same piece is every
flatterer's spirit.
Who can call him his friend that dips
in the same dish?

The very rich dined in state at eleven and five, having many meat-courses and a great number of wines, the more important guests being at an elevated table and seated according to rank, a custom referred to by Macbeth when he says to his guests:

You know your own degrees: sit
down: at first
And last the hearty welcome.

Then, if ever, was England
"Merrie England," filled with

Revels, dances, masks and merry
hours.

At Christmas time the wassail-bowl, the boar's head, the mistletoe and the holly delighted gay companies: men in doublet and hose, with white ruffs, laces, gems and sometimes earrings; ladies in gowns of rich material, with ruffs, jewels, and most elaborate coiffeurs. In "Much Ado About Nothing" Margaret says:

THE SWAN THEATER IN LONDON

This drawing, made by a Dutchman, John de Witt, probably in 1596, is the earliest picture known of the interior of a playhouse. Note the broad open stage, with an inner stage under a balcony, and the encircling galleries in whose "rooms" or boxes spectators sat. Others stood in the pit. After 1620 the Swan was used for prize-fights

Cloth o' gold, and cuts, and laced with silver, set with pearls; down sleeves, side sleeves, and skirts, round underborne with a bluish tinsel: but . . . yours is worth ten on't.

And in "The Taming of the Shrew" Petruchio promises his bride she shall

Revel it as bravely as the best,
With silken coats and caps and golden
rings,
With ruffs and cuffs and fardingales
and things;
With scarfs and fans and double-
change of bravery,
With amber bracelets, beads and all
this knavery.

In this love of display the Queen set the fashion, having no less than three thousand dresses! New Year's Day, Twelfth Night, Candlemas, May Day and other holidays gladdened the people, and what with Elizabeth's royal progresses, court splendors, weddings, masquerades, morris-dancing, archery contests, fairs and village sports, life was full of pageant and frolic.

In Shakespeare's youth school-boys and university students frequently acted Latin plays, and sometimes plays in English, but the first regular English theater was not built until Shakespeare was a boy of twelve. Under the influence of prosperity the drama developed rapidly, so that in a period of eighty-four years fifteen hundred new plays were produced! When Shakespeare reached middle age there were seven regular London theaters and many other places where plays were given at times. The old religious plays gave way to plays for mere amusement. Shakespeare's rivals were many in number and included Peele, Lyly, Marlowe, Nash, Kyd, Ben Jonson, Chapman, Marston, Middleton, Dekker, Tourneur, Webster, Massinger, Beaumont and Fletcher, and dozens of others, but Shakespeare's works alone have survived for common reading.

A penny or two admitted to the wooden theater, but the floor was bare ground, and there were no seats and no roof except for those who paid a shilling: such people could sit in protected galleries or on the stage. Sometimes there was crude scenery, but more often the foreground represented any open place; a permanent balcony might be an upper chamber or a tower; and a curtained recess below served as an inner room. Shakespeare felt the restrictions of the stage and theater of his day, and, in the prolog to "Henry V," says:

But pardon, gentles all,
The flat unraised spirits that have
dared
On this unworthy scaffold to bring
forth

*Hauling Problems Now are Simplified—the
Introduction of PACKARD Light Service
Motor Trucks Insures Dividend-Earning
Delivery for Every Branch of Traffic*

THEY are true Packards all the way through—of the same quality and stamina as the 10,000 Packard heavy trucks now serving successfully in more than 200 lines of trade. Their construction embodies every efficiency principle learned in the ten years the Packard Motor Car Company has been engaged in truck manufacture. And they are guaranteed by the \$25,000,000 investment in the Packard factory—a mile-long plant employing 12,300 workmen.

They are built throughout in that factory—within the 51 acres of floor space where, also, are made Packard Twin-Six Cars and Packard Heavy Service Trucks. It is the only place in which a Packard can be made—because assembled units will not make Packard vehicles.

These Light Service Packard Trucks are built in two sizes, rated respectively at 1 to 1 $\frac{1}{4}$ tons and 1 $\frac{1}{2}$ to 1 $\frac{3}{4}$ tons. They provide the speed, ease of operation, activity in traffic, reserve power and permanent economy of maintenance necessary to make light delivery a source of greater profit—qualities to be found only in a vehicle built as these are built.

They are sold with the backing of a world-wide service organization as truly and essentially Packard as the institution of their origin—the institution upon which was conferred the *HIGHEST AWARD for MOTOR VEHICLES* at the *Panama-Pacific International Exposition*.

There are seven sizes, altogether, in the Packard commercial line, ranging from 1 to 6 $\frac{1}{2}$ tons' capacity, inclusive. All sizes are of the same advanced chainless design. In sending for catalogue, please specify the kind of hauling.

PACKARD MOTOR CAR COMPANY, DETROIT

Ask the man who owns one

Packard

So great an object; can this cockpit
hold
The vasty fields of France? or may we
cram
Within this wooden O the very casques
That did affright the air at Agin-
court?

The companies sometimes consisted entirely of boys, and, as there were no actresses, boys always took the parts of women, a custom referred to in "Antony and Cleopatra" when Cleopatra says:

I shall see
Some squeaking Cleopatra boy my
greatness.

When we think of the inimitable women of Shakespeare, Rosalind, Viola, Portia, we wonder how Shakespeare could have endured seeing the parts enacted by boys. And yet, in spite of all difficulties, the plays were well presented, with gorgeous costuming and excellent acting. Richard Tarlton, John Heming, Edward Alleyn, Richard Burbage and other actors of the day gained great fame.

Many companies were licensed, but less than half a dozen were maintained for a long time. The Earl of Leicester's men, at various times known as Strange's, Derby's, Hunsdon's, The Lord Chamberlain's, and The King's, were among the best known and gave their plays in The

Theater, The Globe, and The Blackfriars. With this company Shakespeare was closely associated as actor, playwright and shareholder.

In the England thus throbbing with national life, and under the crude conditions of the theater of his time, Shakespeare, sublimely careless concerning the preservation of his great work, and writing quickly for a changing public, wrote always for the stage and never for publication. He based his work on material ready at hand—old plays, histories, poems, Italian romances—whatever seemed best, but adding to bare plot effective arrangement,

BOOKS FOR FURTHER READING

The Age of Elizabeth, by M. Creighton; *The Age of Shakespeare*, by J. W. Allen; *Shakespeare, His Times and Contemporaries*, by G. M. Tweddell; *Shakespeare and His Times*, by N. Drake; *Shakespeare's London*, by H. J. Stephenson; *Shakespeare's London*, by T. F. Ordish; *Stratford-on-Avon*, by Sidney Lee; *Shakespeare's England*, by William Winter; *In Shakespeare's England*, by Mrs. F. S. Boas; *History of the London Stage and Its Famous Players*, by H. B. Baker. At Columbia University there is a *Dramatic Museum* containing very interesting models of an inn-yard theater and the Fortune Theater, which was built in Shakespeare's time.

beautiful poetry and wonderfully searching and realistic character portrayal. In spite of his apparent failure to seek renown and hand down a name to posterity we can say of him as he wrote concerning Coriolanus:

His fame folds in
The orb o' the earth.

In the dim old London streets, in the cramped circle of the wooden theaters, or in the smoke of the Mermaid Inn, Shakespeare moved with the world of London life. We know from his works that his thoughts ran frequently to the thatched roofs, green lanes and spreading meadows of Stratford, where one might see In emerald tufts, flowers purple, blue, and white;
Like sapphire, pearl, and rich embroidery.

And yet the world of Shakespeare was only in part this wonderful Elizabethan world of city and country life. It is as tho his own Henry V said to him:

You and I cannot be confined within
the weak list of a country's fashion.

His world was more than London, more than England—he saw so clearly into the heart of life that he lived in the abiding world of humanity.

BÁRÁNY AND NYSTAGMUS REACTIONS

THE NOBEL PRIZE WINNER IN MEDICINE AND HIS WORK

ALL of us are familiar as children with what happens when we have "turned round and round" a number of times and then find that we are dizzy or "drunk" and have to stagger for a moment and can scarcely stand, or may actually fall. It is practically this phenomenon that Dr. Robert Bárány, of the University of Vienna, has investigated to such good advantage that he has been awarded the Nobel Prize in Medicine for 1914 for his work in the physiology and pathology of certain structures connected with the ear, the vestibule and semi-circular canals. The award was delayed by the war and has been but recently announced, while no prize is given for 1915.

While clinical assistant in the great ear clinic of Professor Politzer at Vienna, Dr. Bárány was able to employ the results of his study in the diagnosis of pathological disturbances of the middle ear and also in the differential diagnosis of various pathological conditions of the cerebellum or posterior part of the brain.

That such a childish bit of play should prove to be so significant

seems almost impossible, but in medicine a number of very simple and apparently trivial bits of technic have proved invaluable. Auenbrugger "drummed on the chest" and his colleagues made fun of him for doing so; Galvani played, as envious contemporaries said, "the dancing master to frogs"; Laennec introduced what was contemptuously called "a toy hearing tube," but their contributions to medical practice are now indispensable.

So it has proved with Bárány's studies of the consequences of revolving patients on specially constructed stools, noting the subsequent movements of the individual and particularly of his eyes, which give a characteristic nystagmus or oscillatory movement for the different conditions immediately afterwards, or noting the effect on the individual's feeling and his nystagmus reaction after the injection of warm and cold water into the ear, or after the increase or decrease of the air pressure in the auditory canal.

As Dr. Bárány himself notes in his lectures on the subject, which

have attracted specialists to his courses from all over the world, the study of the various forms of nystagmus or oscillation of the eyes is also valuable for the investigation of vision itself as regards the visual field and color and spark vision. Such phenomena as blushing, spontaneous perspiration, palpitation of the heart, or distinct slowing of the pulse, tremor, and slowing and deepening of the breathing may be noted in nervous persons in connection with rotary and vertical nystagmus. Dr. Bárány's work has come to be of special service in the study of those extremely puzzling cases of accidental injury followed by nervous conditions of various kinds which occupy so much attention in our courts. In a word the faithful development by experimental research of the hint given by childish playfulness has resulted in a series of diagnostic developments that are of invaluable service.

Dr. Bárány was captured by the Russians last year and is now serving as physician to the Austrian prisoners in Russia.

THE EQUITABLE

LIFE ASSURANCE SOCIETY OF THE U. S.

120 BROADWAY, NEW YORK

The 56th Annual Report of the Society, which will be sent to any address on application, shows:

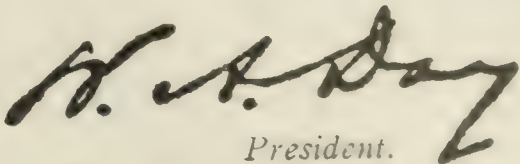

NEW INSURANCE PAID FOR IN 1915.....	\$ 158,456,612
(The maximum which the Society was permitted to write in that year under the Insurance Law of the State of New York.)	
OUTSTANDING INSURANCE DEC. 31, 1915.....	\$1,529,886,053
ADMITTED ASSETS, DEC. 31, 1915.....	\$ 546,961,912
GENERAL INSURANCE RESERVE.....	\$448,826,331
OTHER LIABILITIES.....	10,079,766 \$ 458,906,097
SURPLUS RESERVES:	
For Distribution to Policyholders in 1916..	\$ 13,573,499
Held awaiting apportionment upon deferred dividend policies	63,910,551
For Contingencies.....	10,571,765 \$ 88,055,815
RECEIPTS FROM PREMIUMS IN 1915.....	\$ 56,015,862
RECEIPTS FROM INVESTMENTS.....	\$ 24,899,405
TOTAL INCOME FROM ALL SOURCES	\$ 83,290,810
PAYMENTS TO POLICYHOLDERS.....	\$ 58,371,388

During the year the Society invested \$27,888,067 at an average yield of 5.06%.

The Annual Report contains the Financial Statement, verified by Certified Public Accountants, schedules of investments, and full details regarding the substantial advances made during the year.

It also describes a variety of new policies including one under which the Equitable will pay an income for life to the person insured if he should become totally and permanently disabled, as well as an income for life to the beneficiary after his death.

Of the death claims paid in the United States and Canada, over 98% were settled within twenty-four hours after receipt of due proof of death.

President.

OFFICE EFFICIENCY

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

EVERY business, like every wheel, has a hub. The office is the hub.

A spoke of a wheel may be damaged and repaired, without much loss. But when the hub is smashed, the wheel is gone, with the cargo it conveys.

If the enterprise you carry seems shaky, or the road to your goal eternally hard and long, the fault is not with the load or the road, but with the hub of your conveyance. Look for all your business troubles in the office. You may say you have enough and don't need to "look" for more! You are wrong—a man never has enough trouble till he stops making it.

We may carry the analogy further. We may name the four wheels of every business, calling them the *Product* wheel, the *Employer* wheel, the *Employee* wheel, and the *Consumer* wheel. The hub, in each case, is the office. By means of the office the Product must be measured and delivered; the plans of the Employer carried forth and his dynamics gaged; the skill and service of the Employee extended; the satisfaction and profitable patronage of the Consumer quickly and easily attained.

By the word "business" I mean every human service for which pay is received. The teacher, the preacher, the doctor, the poet, the sage, all are business men. Or if they are not, they should be. A man without a business side to him is an unfinished product. He is no more complete than a wagon-bed off its wheels.

GOING IT BLIND

Industrial experts tell us that in the United States about 90 per cent of all business undertakings end in the ditch. The explanation is quite simple—about 90 per cent of the business offices are improperly managed and equipt. Success is a compound of shrewd thought, good work, and kindly feeling. But, alas, only about 10 per cent of the office managers in this country are awake to their opportunities. The other 90 per cent are headed for destruction—going it blind.

A brief survey of the modern science of office management would include the following items, which may be held of first importance, among others of lesser utility.

An office needs an architectural plan;—to choose and occupy one bereft of this plan would be as unscientific as to build a factory on a guess,

or open a store in a barn. The basic feature of this floor plan is the *time value* of the respective workers, from the manager to the errand boy. Large offices occupy an entire floor, the circuit of which means a walk of perhaps 100 to 300 feet. Suppose the manager travels this route a dozen times a day, to execute or supervise a task or group of tasks. He walks perhaps 3000 feet, wastes probably a half hour, and expends at least 150,000 foot-pounds of nervous energy, simply on a mechanical operation of walking a certain distance without rime or reason. This largely explains the "tired business man," who frequents the low-brow comedy on the homœopathic principle—to relieve his own absurdity. By a sane "routing" system the desks and departments requiring his personal attendance may be grouped near his private office; while the work needing his general supervision may be carried to him by the office boy. Suppose the time of the manager is worth \$2 an hour, that of the office boy 10 cents an hour; by transferring a half-hour of daily promenading from the manager to the boy, we save approximately 95 cents a day, and put the physical fatigue where it belongs, on the worker whose strength is least valuable to the company. The constantly recurring interviews between executives, managers and department heads may be disposed of in a shorter order than before if a properly arranged system of automatic or inter-communicating telephones has been established.

We referred to the manager's "private office." We assume that he has one. If he hasn't, he should get one. That word *Private* on a glass door exerts a magic power. It raises the inmate of the secret room far above common mortals, in the opinion of his clerks, his clients, and himself. The chief executive in any business requires a certain amount of silence and seclusion. Should space or funds be limited, a temporary partition of opaque glass, or even a set of plain, substantial screens, would give the psychological effect of a private office.

The nervous and muscular effort required in the day's work of any high-salaried man should be reduced to a minimum. All his routine duties may be handled by trained employees, or by special devices and machines. Roughly, a \$10 man should do four times as much physical toil

as a \$40 man, the latter being paid for mental efficiency, not muscular force. The mind can expend in one hour as much nervous energy as the body would in five hours.

Let S represent the salary of an office worker, UT the useless time he spends, UF the useless fatigue he carries around with him, and P the profit to the company that hires him. Then here we have an efficiency formula, by which to measure his value:

$$S - (UT + UF) = P$$

The problem of first importance in any office is to make UT and UF as near zero as possible. A good way to start would be for somebody to count the steps taken by a "good business man" in his office during one whole day—without his awareness—then figure how a little head-work would save most of the foot-work, and present him with the tabulation. A general rule for subordinate employees holds to this effect: A good stenographer, a good office boy, and a set of mechanical devices will do the work of three ordinary stenographers, and do it better. I have applied this rule to my own office, where one \$15 typist and a \$5 boy have turned out as much work as three \$10 typists formerly handled; the \$10 weekly saving soon paid for the machines we bought, and one \$15 clerk is usually a better investment than three \$10 ones.

SPECIALISTS AND MACHINES

A pertinent example of the growing use of machines may be found in the art of bookkeeping, which is now performed chiefly by a moderate-priced man operating a few keys on a mechanical invention that will add, subtract, multiply and divide, compute interest, and do other interesting and necessary things more quickly and accurately than the human brain could. Also more cheaply, in the long run. The time is coming when all the work of an office will be divided between highly-skilled, highly-paid, specialists who plan, order and supervise, and a few low-priced workers who manipulate a large number of marvelous tools and instruments. Adding machines may now be had from \$2.50 up. Mimeographs and multigraphs not only produce letters, blank forms, and other typewritten documents in tenthousand lots, but also print your letter-heads, bill-heads, and advertising booklets. For a small business, a small duplicator guaranteed to re-

produce 1000 copies of a letter or other one-sheet manuscript may be purchased for little. Every growing business has a mailing list of customers or clients, actual and prospective; for the regular communications that should be sent these individuals a high-quality addressing machine will be found worthy of a trial—it should surpass the typewriter in speed, accuracy and economy, for the recurrent mailing of bills or announcements to the same list of names.

EFFICIENT TYPING

The typewriter of today is 300 per cent more efficient than the machine of fifteen years ago. It will be news to many office managers to learn that fifty special varieties of typewriter, each designed for a special use or line of business, are now manufactured; and to buy one without looking up the other forty-nine is to run the risk of losing a time-saver and money-saver. In both dictation and transcription, many short-cuts have been found. The dictating machine, properly worked, will save perhaps 20 per cent of the manager's time usually spent on dictation, and perhaps 30 per cent of the stenographer's time. A new method of fingering the typewriter is said to reduce the fatigue and double the daily output of the typist. One of the most revolutionary changes abolishes the whole scheme of shorthand hieroglyphics, prints on a small device the dictation notes in phonetic English characters, preserves the notes in legible form, and enables a lower-priced clerk to complete the transcription while the higher-priced one takes more dictation.

What is your corps of typists doing every day? What should they do? What can they do? Are they given a scientific daily schedule, to complete or surpass? These questions, applying also to every other clerk or official, seldom find the proper answer in an office. A leading typewriter company has evolved a system of cutting stenographic costs by measuring, facilitating and improving the daily output of the typewriter; some book on this line should be read and studied by every stenographer and every office manager; the probable saving would be 30 cents in every dollar spent for stenography and typewriting.

Regarding his equipment, schedule, training, methods and supplies, every office worker—manager as well as clerk—should ask himself these questions: "Have I borrowed my alleged system from my neighbor? Have I inherited it from my predecessor? Have I hit upon it by guess-

*The Grand Prize at the
San Francisco Panama-Pacific Exposition
was awarded to*

Waltham Watches

This is the highest possible award and the only one of the class. In addition we received five gold medals and one silver medal.

At the great world expositions, wherever exhibited, Waltham Watches have received highest awards.

The English language is free to all, and the words, "precise" "best" and "reliable" can be used by any watch manufacturer with impunity. Rather than indulge in a battle of adjectives we prefer to point out that where scientific tests are made and where the judgment of watch experts is encountered, Waltham Watches are invariably chosen as being the most accurate and dependable of all timepieces.

Such evidence is not a mere claim—it is proof.

ing out of my own ignorant head?" If the honest reply to any of these queries is "Yes"—now is the time to wake up, look around, and get in line with progress. First rule in business: Remember that the biggest grows out of the best. The quantity of a man's work is fixt by the quality, hence every man may determine the size of his own future.

The difference between the president and the manager of a concern is that the president works a telescope and the manager a microscope. A few examples of managerial, microscopic, mastery of detail: Carbon paper that gives twenty clear copies; typewriter ribbon guaranteed for 75,000 clean impressions; typewriter cabinet with special drawers, files and racks, to hold all records and supplies needed by the operator; cushion pads to silence noise of typewriter; self-closing inkstand to prevent waste of ink, smearing and spilling; bottle for liquid paste with patent device to save daubing the fingers; waste paper baling machine, reducing fire risk and turning loss into profit; envelope opener and

sealer; parcel sealer and labeler; stamp perforator; detacher and affixer; paper clips of diverse forms and sizes, to suit the best work of each, with clipping machine for permanent binding of loose sheets; rubber bands guaranteed not to break for five years; waste-basket solid, rustless, fire-resisting.

Under the heading *Safety and Sanitation* come various implements, inventions and precautions; such as the fire-proof filing cabinet, at least one being essential in every office; the check writer and protector, that makes forgery and check "raising" impossible; an economy expense book for each department, serving as an automatic guard against waste; patent ventilators in' all windows, permitting free access of pure air at all times without draught or discomfort; sanitary mouthpiece for telephone; sanitary moistener for stamps and envelopes; fit-the-back chairs for all sedentary workers; overhead electric lights carefully shaded, with a brilliant, hooded, portable and turnable drop light for each desk or table

where close work, hard on the eyesight, is demanded; liquid soap; individual towels or paper towels; abundance of pure, soft, drinking water in a closed, sanitary container; individual glasses or paper drinking cups; teaching of health habits to employees, with assurance of regular and reliable examination by a physician.

LIGHT AND AIR—YOU NEED THEM

A primary factor in good office work is a large number of large windows, and the location of each desk so that a constant flood of light pours over the left shoulder of the worker. To avoid the glare of direct reflection, some office managers prefer window-shades hung at the bottom, which are raised to meet the angle of the sun. The color of walls and ceilings makes a pronounced difference in the illumination—the superior brands of white paint are said to increase daylight about twenty-five per cent, and of course the bills for artificial lighting are reduced, together with the costs of spoilage and accident, while more

OFFICE EFFICIENCY TEST

FOR APPRAISING ANY OFFICE IN ITS USE OF MODERN METHODS

DIRECTIONS. If answer is Yes, write 4 in blank space at end of dotted line. If answer is No, or indeterminate, leave space blank. To find your percentage, add column of figures. Most of these questions, to be answered properly, demand supervision by an expert. Even then, the resulting grade will be only partial and approximate. If any point is not understood, consultation may be arranged with Mr. Purinton, care of Independent Efficiency Service, 119 West 40th Street, New York.

1. Is every operation standardized and recorded?.....
2. Are all desks, supplies, departments, arranged on a scientific "routing" plan?
3. Is all your buying done wholesale, on a comparative, competitive basis?
4. Have you adopted the best cost-finding, cost-keeping, and cost-cutting systems?.....
5. Was each employee obtained, and assigned, according to reliable vocational tests?.....
6. Has the formula $S-(UT+UF)=P$ been applied to every employee?
7. Have you installed approved charting, filing and recording systems?
8. Are salaries and wages governed solely by quality and quantity of work done?.....
9. Have you reduced stenographic and typewriting costs 30 per cent, relatively, from what they were a year ago?
10. Are machines, mechanical aids and electrical devices used wherever possible?
11. Are the heat, light, ventilation, drinking water, etc., approved by sanitation experts?.....
12. Have you answered pertinent advertisements in the best trade journals and business magazines—then studied the results?
13. Has every employee a daily schedule and memorandum pad to work by?.....
14. Is the talk in your office the least and best possible?.....
15. Can you yourself do as much in one hour as you formerly could in 3 hours?.....
16. Is it your invariable rule to "satisfy the customer" at any cost?
17. Have your credit losses been reduced to zero?.....
18. Do you maintain a business library of books and magazines chosen by experts, and do you instruct employees how to use it?.....
19. Have you changed the "time-clock" penalty system to the time-stamp reward system?
20. Do you somehow make every employee a partner in the business?
21. Is the "continuation school" a part of your efficiency scheme?
22. Would every employee rather work for you on three-quarters pay than for any other concern on full pay?
23. Do you belong to a national efficiency organization?.....
24. Have you had your whole business analyzed by an efficiency engineer?
25. Are your net profits increasing every year?.....

work and better work is accomplished.

Health statistics recently compiled show that mental capacity and endurance relate not only to the supply of pure, fresh air in a room, but also to its circulation. If air partially breathed is kept moving, the minds and fingers of the workers act more swiftly and forcefully. A good custom is to ventilate the office completely at the noon hour, every day; and a wise experiment would be to use an electric fan at low speed, during the afternoon hours, even in the winter time. Currents of air generate currents of thought. Speaking of "currents" reminds us of electricity—one of the growing aids to office management. The old-fashioned "buzzer" is being replaced by an electric sign-system; when the manager wants a certain document or assistant, he presses a button and flashes a light of a certain color—presto, the paper or the person is beside him. And instead of giving roundabout orders to a particular department on a particular job, he gets the man directly on the wire from his own desk by the new inter-phone system of communication.

THINK

A good habit in an office—one to be highly recommended—is the habit of thinking. While unusual, this habit may be cultivated. For instance, have we compared in our work the economy and utility of wood pencils, paper pencils, and those of the metallic "propel" variety? Do we sharpen away 30 per cent of the lead without thinking? Do we pay ten cents for one pencil beautifully varnished and engraved—or three cents for one just as good if not so pretty, bought in gross lots? Have we figured the cost of producing our letter-heads by the four different methods—printing, lithographing, embossing, engraving? Lithographing, in large orders, may be cheaper than printing; while embossing is cheaper than engraving, and often serves as well. A glass desk pad is clean, attractive, expeditious; but if a man writes much, or signs his name to hundreds of letters and checks, a large blotter pad, with a dozen blotter sheets inserted, will save the man the usual fatigue of writing on a hard surface. A steel pen, a fountain pen or a glass pen—which is better for us? Every pen point should be temperamental, chosen to fit the user, according to the slant, curve and force of his handwriting. Much pen work in the average office will be found superfluous, and may be saved by a complete set of rubber stamps for routine records and labels, with a

Is Your Organization Running You?

Are your department heads and foremen continually at your elbow? Are you besieged by your subordinates with a thousand interruptions? Or, are you realizing full efficiency by an Inter-phone system? The best way to keep your organization on the job and save your time for your own executive work is with

Western Electric Inter-phones

Then you can get your man when YOU want him—without taking him away from his desk. In the Inter-phone system any station can talk direct to any other station. Any reliable electrician can put in the system. Built by the makers of all "Bell" telephones, and fully guaranteed.

rack for the stamps and the name of each lettered above its place. Another little thing of large effect is the proper use of the end-flap, open-seal envelope, with or without the "window" feature; in some lines of trade this envelope, carrying one-cent postage, has brought results that mean a saving of hundreds of dollars a year in postage alone.

Office management deserves a volume in itself; we can here but suggest a few points of recent development. The most vital principle we consider to be this: Change your "time-clock" for a time-stamp! The old idea of good workmanship was that a man should spend nine or ten or twelve hours on the job—then a "time-clock" was needed, to threaten the man with loss of pay if he didn't stick around. The new idea of good workmanship is that a man shall do the most and best possible, in the least time possible, with the least annoyance and fatigue possible—and now the time-stamp merely records what the man *does*, this alone being the reckoning of his pay. The value of a worker is not how much he is "on the job," but how much he is in the job. Certain things that formerly took me three days to accomplish I can now finish in three hours—I have learned to focus mind, body and soul on the thing I am doing.

STANDARDIZE YOUR OFFICE

We mentioned the time-stamp. Every act, order, and operation in a business office should be standardized, whether it be wrapping a bundle, typing a letter, posting an account, or entertaining a visitor. Each employee, from the manager down, should know in how short a time his work can be done effectively, and should keep a daily record until he forms the habit of equalling the standard of possible output. Here the machine called a "time recorder" will be found essential, to compute amount and cost of work. I have had a typist who could write with a flourish five letters on her machine while the girl next her barely had two letters finished. Why should they get the same salary? Promotions and rewards should follow not only a maximum record-breaking feat, but also a steady improvement over one's daily habit.

Here a caution should be noted. Often the most faithful clerk is the least rapid in his mental processes, and should not be reprimanded for lack of interest. When employees are chosen by the new vocation tests for physical, mental and temperamental fitness, both employer and employees gain immensely. To make a typist of a born executive, or a salesman of a born mechanic, is a fatal business blunder—and a frequent money loss. By alternating the positions of slow and fast workers, a total net gain is often reached, as the rapid clerks by spirit and example hasten the sluggards. Two girls who naturally gossip and chew gum should not be located alongside each other—granted that they belong in a business at all. When a worker has fully mastered his job, it may be well to segregate him, by a partition or otherwise, in order that lazy and foolish employees may not disturb him, and that he may have

PHILLIPS BROOKS

Said:

"I have the profoundest honor for the character and works of Emanuel Swedenborg. I have from time to time gained much from his writings."

Swedenborg's religious and ethical teachings are based upon a wonderfully profound interpretation of

The Holy Bible

They will help you personally to a rational understanding of the word of God,—to a clearer conception of the spiritual significance of creation; of the joys of heaven and the miseries of hell; of the process of dying and the life of the real man; and of what the final judgment consists.

Swedenborg's Works

5 cents each volume, postpaid

Printed on excellent paper, in large readable type, substantially bound in stiff paper cover.

"Heaven and Hell" 632 pages
"Divine Providence" 629 "
"Four Leading Doctrines" 635 "
"Divine Love and Wisdom" 618 "

Free distribution would involve unwarranted waste, so we make a nominal charge of 5 cents for each volume, postpaid

a little time and space in which to prepare himself for greater advancement.

Many offices unwittingly employ a hidden corps of peculiar but highly efficient specialists. These persons are specialists in small talk and imitation conversation, and they begin to specialize whenever the "boss" goes out. Small talk is the kind that makes you feel small when somebody says you said it. Imitation conversation includes slang, bluff, boast, roast, raillery and gossip. A low and loose kind of talk in a business ends in a low profit and a loose credit. What about the speech in your office?

MAKE EVERY EMPLOYEE A PARTNER

The best way to eliminate friction and ensure satisfaction among the workers in any trade or profession is to adopt this rule: *Make every employee a partner in the business.* Whoever is not worth becoming a partner is not worth being an employee. How to engineer this radical move would require a long, technical discussion, and the yielding of certain adjustments and concessions on both sides, which are seldom granted without a full explanation of the principle and method of profit-sharing. We commend the subject to every business official, as worthy of deep study. The force in an "office force" is the force of attraction—not compulsion. To make the work attractive is to make the worker effective.

We pause, for lack of space. A thousand other items belong to good office management. We have not here presented the facts about filing systems; cost-finding, cost-keeping, and cost-reducing methods; advertising and salesmanship; office furniture and furnishings; books and magazines for an office library; health habits of all workers; training, education and promotion of employees; treatment of clients or customers; principles and policies of the management, with qualitative and quantitative measure of the product. These matters belong in the realm of the business counsel, or efficiency engineer, who should be consulted personally. A number of firms and institutions recommending or supplying efficiency engineers may be found in almost any large city, about seventy of these being located in New York. Some are very good—and very expensive. Others are quite good—and reasonable in price. A few are poor—and as costly as poor things always are. It is wise, before entering into contract with an efficiency engineer, to consult an impartial authority.

Next to ability and effort, the greatest thing in a man's vocation is Opportunity. Every office means concentrated opportunity. Here alone may every worker have direct touch with his fellow employees, with the heads of the business, with their patrons, and with their associates and friends in the entire commercial world. A man who does good work will be discovered sooner in an office than anywhere else. And Destiny waits for the man who is found quietly doing his best.

Extraordinary Prices on These Oliver Typewriters

Here's Your Chance!

Must Sell a Thousand Machines Quick

No. 5 OLIVER

The great European War makes it impossible to ship typewriters to Europe. We have 1,000 No. 5 Oliver machines which we must sell quick. And we are determined to dispose of them in this country at prices which defy competition. These grand typewriters must be sold at once. Here is a great opportunity to secure an Oliver at bed-rock prices. You will never have another chance like this, as the small number of Olivers at this ridiculously low price will be sold to the first thousand readers sending in the coupon. Are you going to be one of these fortunate people? Act now if you want a good typewriter. Investigate today.

Genuine Oliver Typewriter
Guaranteed a Lifetime

These machines come to us fresh from the factory. Money will not buy greater typewriter value. They have all the wonderful Oliver advantages—visible writing, U-shaped type bar, built-in tabulator, marginal release, universal keyboard with six extra characters, etc., etc. Each full standard size,

complete with every accessory and full instructions for operating.

The Oliver has the lightest touch and greatest durability of any typewriter made. Anyone can operate the Oliver successfully.

We will sell you one on the easiest terms ever known. Better still, we cover every single machine with a lifetime guarantee. Other machines are guaranteed for one year. But we have such confidence in the No. 5 Oliver that we will guarantee it for life. When you buy an Oliver you buy "for keeps."

Half the Price of Other Machines

Payments Just Like Rent

These 1,000 machines must go at once. And the price we make is so low that we do not dare even publish it. We can quote this price only in a confidential letter. Ask for it, if you need a machine. Don't wait until they are all gone before investigating. Mail the coupon or a post card today. Our price and terms will surely astonish you.

And remember that this is a regular \$100 machine, with many thousands in use all over the world right now. We can always undersell manufacturers, because we have no salesmen with their big salaries and expenses. All of our machines go direct to the consumer, and he gets the saving.

And right now we are going to cut our own low price clear to the bone. Seize this opportunity while you may, for we doubt if it ever can be repeated. At the astonishingly low price we are quoting, these thousand Oliver Typewriters will all be disposed of in a very short time.

Get Our Amazing Price and FREE Trial Offer!

Send for our offer today. Use the coupon or a post card. Find out all about our sensational cut in prices. A few cents a day will buy your Oliver. And we will let you try one free, without sending us a single cent. Mail the coupon now, whether you're ready to buy or not. Then you will know whether you can afford to do without a standard No. 5 Oliver any longer.

The New Books

CHINA AND JAPAN

While all eyes have been fixt upon Europe little attention has been paid to events in another part of the world which will very likely affect the course of history even more. In the opinion of Mr. Jefferson Jones, May 9, 1915, is a date of stupendous importance, for it marks "Japan's deathblow to China and the passing of the oldest nation in the world." In *The Fall of Tsing-tau* he describes the siege of the German city, of which he was the only American civilian eye-witness, and discusses the demands subsequently made upon China by Japan. He praises the courtesy of the Japanese in their treatment of the Germans, but condemns their conduct toward the Chinese as treacherous and brutal. The crossing of the Shantung peninsula by the Japanese troops to get at Tsing-tau was, he says, a violation of territorial neutrality as much as that of the Germans in Belgium, yet England did not utter a word of protest against the conduct of her ally. The Germans had made of Tsing-tau "the finest, the prettiest, the most modern and sanitary city in the Orient" and it was becoming the most popular part of China for residence and business.

The Fall of Tsing-tau, by Jefferson Jones.
Houghton, Mifflin. \$2.

THE NATION

The first issue of *The Nation*, projected by Mr. Godkin, with Wendell Phillips Garrison as his associate, marked an epoch in American journalism. Godkin was a young Englishman with an ambition to create an American weekly equal to the British *Spectator*, and Mr. Garrison was a youth of twenty-five, literary editor of *The Independent*, and son of the Abolitionist. The time was ripe for such a venture, for it was their aim to provide a weekly which should be utterly free from partizan bias, absolutely fearless, thoroly scholarly and represent the highest idealism in politics and sociology. The third issue secured five thousand subscribers and for years it set the standard of criticism for the country. In the historical volume, *Fifty Years of American Idealism*, Mr. Polak's account of this journal's career is followed by selected editorials and book reviews, every year being represented by one or more. As we run them over we recall the critical questions that agitated the public and in none has this paper done nobler work than in civil service reform. There has never been any question as to its position, which has been exprest with plainness, with avowed moral purpose and not a little

acerbity. Later *The Nation* was attached to the *Evening Post* and if its influence has been less of late years it is because its idealism has permeated journalism and civil service reform has been so far achieved.

In this respect its influence may be compared with that of Johns Hopkins University, which was unique in its day, but is so no longer. As Tennyson said,

"Most can raise the flowers now
For all have got the seed."

Fifty Years of American Idealism, by Gustav Pollak. Houghton, Mifflin. \$2.50.

THREE SORTS OF WAR BOOKS

As war books flow from the presses, they may be thus classified: military, war correspondent, civilian. Sometimes one overlaps the other, as is the case in *War Pictures*, by Ian Malcolm, whose Red Cross work occasionally induces the military view, but what he writes of chief note is from the civilian outlook. Some personal intimacy with the German Imperial Family while an attaché at Berlin enables him to recount an informal interview with the Crown Prince; lay the blame for the war on that headstrong young man, together with the military party; absolve the Emperor from a wilful design to bring it about. He relates much about Thomas Atkins in France, and condemns those English "groups" without "spirituality or imagination" who seem utterly incapable of rising to the courageous optimism of the front.

With Our Army in Flanders, by G. Valentine Williams, "war correspondent," but not of the best. The news-gatherer tells too much of what he thinks, instead of what he sees. Cut to half the length the pith of the book might be apparent.

For those whom the doctor has positively forbidden the reading of war books, we can heartily recommend the Rev. E. J. Hardy's *The British Soldier*. With entire truth Mr. Hardy reveals the British soldier, from the view of a chaplain of the forces. His sub-title is *Courage and Humour*. He refrains from German abuse, and, in place of it, notes instances of chivalrous conduct on the part of his country's enemy.

For a description of what apparently the author did not witness, *The Undying Story*, by W. Douglas Newton, is well done. But his effort lacks the supreme quality of human feeling. He does not grasp the comradeship of arms; he has not heard with ears tuned rightly the singing of French and German national anthems as men go to their death; he seems not to know that deeds of chivalry and courage lie on both sides of the fighting line. Of such matters are composed the truly great war story. A brave soldier once wrote an undying work. It contains a panegyric on arms, worth re-reading as singularly modern in soldierly spirit. His name was Cervantes.

It is not until page 125 of *A Surgeon in Khaki* that the author, Arthur Anderson Martin, M.D., seems to realize what the reader expects from him. Marching, camping and fighting he

The Great Manual of Office Efficiency

IN these days haphazard, rule-of-thumb office methods *cost too much*. This manual, "The American Office," does for the office what the works of Taylor, Emerson and Brandeis have accomplished for the factory. It shows by text, chart and form how the best managed business concerns have worked out shorter, quicker, cheaper methods of getting each day's work cleaned up on time.

Points Like These

Modern office appliances for saving time and money.
Getting the right lighting system.
Arranging the office for efficiency.
Creating and building an organization.
Getting the best employees.
The value of bonuses.
The Commonwealth Edison Co.'s Merit System.
The late habit; Overtime.
Supervision by reports.
The Elliott-Fisher "Efficiency Vacation."
Speeding up the office force.
Marshall Field's Rule Book.
How to schedule office routine.
Keeping a Decision Book.
Quick handling of correspondence.
Records for the advertising, sales, shipping, credit departments.
Etc., Etc.

Draws Strong Comments

"The completeness of your book is evidence of a great deal of investigation and painstaking work. You are to be congratulated upon such a successful undertaking."—E. C. Wolf, *Curtis Publishing Co.*

"The average executive is entirely unfamiliar with most of the information in 'The American Office.' It is unusually valuable for the young office man."—Geo. B. Everitt, *General Office Manager, National Cloak and Suit Co.*

"I found a number of ideas from which we in our small office (there are twelve of us) will profit, and it should be of much more value in a larger office."—C. E. Conarroe, *Carroll, Brough and Robinson, Oklahoma City.*

How to select, use and maintain office machinery; how to plan, lay out, and organize an office; how to choose, train and manage employees; how to cut office expenses—the solutions of scores of definite, immediate problems like these are given in detail in this book. It is the first such collection of cost-cutting, dividend-paying facts about office work to be concretely presented to the American business man.

To gather the facts for this much-needed book, the author, Mr. J. W. Schulze, Controller of the great Ingersoll Watch concern, had to spend months in a countrywide investigation of the methods of the best managed offices in the country—National Cash Register Co., Burroughs Adding Machine Co., Hill Publishing Co., Marshall Field & Co., big mail order houses—concerns who could afford to keep the best brains money can buy hunting for better methods and proving that they paid before final adoption. There are few offices where even one or two of the thousand suggestions will not effect in a year's time an actual cash saving of twenty times the cost of the volume. But get the book and see for yourself.

How to Get "The American Office"

Send no money. So certain are we of this book's self-evident dollars-and-cents value to every business paying rent and office salaries, that we will send it to any responsible man to examine for himself before he pays a cent for it. Simply sign the coupon, attach it to your business letter head and mail at once. Your copy will come by return mail. If you decide to keep it, remit \$3. Otherwise, just return the book. CAMP PENN

Valcour Island, Lake Champlain 10th Season

A very distinctive, unusual kind of camp, that uses the cultural value of real camp-life to an uncommon degree. 500 acres of woods and clearing. High character-standard. Individual oversight. Exceptional cuisine. Our new booklet may interest you.

CHARLES K. TAYLOR, M.A., Director,
 St. Martin's, Phila., Pa.

might have left to others, since when he does settle down to the surgeon's work in warfare his book becomes conspicuously informing. He describes the lack of organization in the British Medical Service, and difficulties of relieving the wounded without proper appliances. From personal observation he concludes that men over forty, with little previous physical training, can endure hardships at least as well as men much younger.

Stanley Washburn's second volume *In the Russian Campaign* begins with the Russian capture of Przemyśl. At the outset, while mindful of subsequent events, he affirms his conviction of the final victory of Russian arms. This he believes because of the long enduring qualities of the Russian soldier, and the newly united pride of race felt by the Russian people. He notes a great national awakening to the consciousness that Russia at last marches forward to a worthy destiny. He emphasizes the fraternal relations between Russian officers and men, and quotes an American doctor in high praise of their stoical resistance when wounded.

Part ownership of the New York *World* has deprived that paper of Ralph Pulitzer's services as a first rate war correspondent. His little volume *Over the Front in an Aeroplane* gathers much interesting material, without even suggesting the manner of a text book. A graphic description of a flight to the firing line is followed by numerous scenes at the front, incidents of moment, and a curious explanation of how Von Kluck missed his chance of Paris. This is a book worth while slipping in your grip for a railway journey.

War Pictures, by Ian Malcolm. Dutton. \$2. *With Our Army in Flanders*, by G. Valentine Williams. Longmans, Green. \$3.50. *The British Soldier*, by E. J. Hardy. London: Fisher Unwin. *The Undying Story*, by W. Douglas Newton. Dutton. \$1.35. *A Surgeon in Khaki*, by A. A. Martin, M.D. Longmans, Green. \$3. *In the Russian Campaign*, by Stanley Washburn. Scribner. \$2. *Over the Front in an Aeroplane*, by Ralph Pulitzer. Harper. \$1.

THE PITTSBURGH SURVEY

Of the final two volumes of the report on the Pittsburgh Survey, *The Pittsburgh District* should properly precede the others. It contains three main parts: The Community, dealing with descriptive and historical matter; Civic Conditions, relating to housing, health, taxation and administration from the civic side; and Children and the City, with special chapters on the different child-welfare agencies.

The chief divisions of *Wage-earning Pittsburgh* deal with the Community and Workshop, Race Studies, Industry (kinds of occupations, wages, hours, conditions, factory inspection, industrial hygiene, child labor), and "The Reverse Side"—that is, the under side, beggars, prostitutes, yeggs, police problems and police opportunities.

Much of the material in these volumes has already appeared in magazines, special reports, and in papers before various gatherings. The tables, charts, maps and pictures, and the distinctively human and social tone set a standard for work of this kind. The mechanical side is of the same high

quality that characterizes the other publications of the Russell Sage Foundation.

The Pittsburgh District; Wage Earning Pittsburgh. Survey Associates. \$2.50 each.

OUR ISLAND PROTEGEE

Cuba Old and New is a somewhat discursive description and history of the island by A. G. Robinson, who has been familiar with it for nearly twenty years. The photographs by the same are rather better than the text.

Longmans, Green. \$1.75.

LINCOLN

A very interesting collection of poems on the great President has been made by Osborn H. Oldroyd in *The Poet's Lincoln*. The illustrations are many and for the most part Lincoln portraits, which will give the book an especial value to those who cannot readily come at these pictures.

Washington, D. C.: O. H. Oldroyd. \$1.

PEACE LITERATURE

All readers and debaters interested in the problems of the war and their possible solution should procure the bulletin on *Peace Literature of the War* sent free by the American Association for International Conciliation, New York. It contains a list of references to the best books and periodicals on the subject.

DITCHES, DERRICKS AND DREAMS

Sketches of the romance of industry and the human interest of manufacture give us, in impressionistic pictures, a new viewpoint of *America at Work*, a vision of the world significance of her labor and the glory of its achievement. Joseph Husband writes of industry as many men have written of war—as a spur to the imagination and a stirring call to an ideal.

Houghton, Mifflin. \$1.

AMATEUR THEATRICALS

Constance d'Arcey Mackay has prepared a much needed practical handbook in stage craft. Simplicity and economy are kept in view thruout *Costume and Scenery for Amateurs*. There are descriptions of typical costumes, for different nationalities, epochs and callings, designs for simple scenery and furnishings and directions for an outdoor Greek stage.

Holt. \$1.75.

MINE AND THINE

Dr. Healy, of the Psychopathic Institute, Juvenile Court, Chicago, in *Honesty*, records skillful analyses of instances of dishonesty in children showing the substitutions and sublimations involved. He is more effective in case records than in general exposition, but makes clear the complexity of apparently simple problems, the personal habit and social responsibility factors in acquiring this trait.

Indianapolis: Bobbs-Merrill. \$1.

COLLEGIATE BOOK PLATES

The subject of institutional bookplates has been happily considered by Harry Parker Ward, in *Some American College Bookplates*. The strength of the volume lies, however, in its illustrative reproduction of many bookplates of the various colleges, some of which are in color. The admirable list of bookplate literature, and of the names and addresses of the leading bookplate designers, will be useful to amateurs and collectors.

Columbus, Ohio: Champlin Printing Co. \$4.

THE STOICS

Prof. Gilbert Murray demonstrates his personal appeal by draping it about the great names of *The Stoic Philosophy*, and further negotiates successfully a precarious correlation of a system of thought with social conditions and human nature. But he cannot resist the temptation to drag in at the end his psychological anthropology, which even the fine poetry on a "Friend behind phenomena" who dwells "in the great spaces between the stars" will not excuse.

Putnam. 75 cents.

DREER'S 1916 Garden Book

contains 288
pages, four
color and four

duotone plates, besides numberless photographic true-to-life reproductions. It lists all the standard varieties of flowers and vegetables, as well as the best of the season's novelties.

The newest Roses, the best Dahlias, and Dreer's Improved Hardy Perennials are given special prominence.

Sent free to any one mentioning this magazine.

Dreer's Orchid-Flowered Sweet Peas—with immense wavy flowers in sprays of 3 and 4 blossoms each. Our mixture contains a full range of colors, 10 cents per packet, 20 cents per ounce, 60 cents per 1/4 pound. Garden Book free with each order.

The Market Place

THE NEW STEEL MERGER

When the Midvale Steel Company was bought last summer by William Ellis Corey, formerly president of the United States Steel Corporation, and a group of bankers and capitalists, it was understood that a new association of steel and munition companies was to be made. The new president of the company, Alvah C. Dinkey, had been president of the Carnegie Steel Company for several years. He resigned to become the head of the Midvale. In October the Midvale Steel and Ordnance Company, with an authorized capital of \$100,000,000, was incorporated in Delaware. It took over the original Midvale company and acquired several smaller companies, the Coatesville Rolling Mill Company included. The Remington Arms Company, which has orders for 2,000,000 rifles, is a part of the new holding corporation, whose president is Mr. Corey, while Mr. Dinkey is vice-president. There is a very strong board, including Frank A. Vanderlip, president of the National City Bank; President Sabin, of the Guaranty Trust Company; President Wiggin, of the Chase National Bank; Percy A. Rockefeller, and Marcellus Hartley Dodge, who is largely interested in the Union Metallic Cartridge Company and the Remington Company.

It became known last week that the new Midvale had bought control of the Cambria Steel Company, agreeing to pay \$81 a share for its 900,000 shares of stock. This purchase followed the failure of negotiations for acquisition of the Lackawanna Steel Company and the Youngstown Sheet and Tube Company. Not long ago Dr. J. L. Replogle, for himself and others, bought from the Pennsylvania Railroad Company 240,000 Cambria shares at \$60, and in the open market 110,000 more shares at about \$70. It is understood that W. H. Donner, Cambria's president, had paid \$50 a share to the railroad company for 112,000 shares. The profits of these buyers now exceed \$9,000,000. To obtain the money which is to be paid for the Cambria stock the Midvale will issue \$50,000,000 of twenty-year five per cent bonds and offer to stockholders at \$60 a share \$25,000,000 of its capital stock which is now in the treasury. The price in the curb market is about \$69.

Some expect that the Lackawanna and Pennsylvania Steel companies will be brought into the association. Be-

THE INDEPENDENT

Shakespeare Contest Dept., 119 W. 40th St., New York

cause Mr. Rockefeller is on the board, there are predictions that the Colorado Fuel and Iron Company may come in. It is said that the Midvale, which has been making shells for the French Government, has orders enough to keep its works going at full capacity for the remainder of this year. The Remington Company has begun to make deliveries on its rifle contract. A few shares of the original Midvale Company were not bought by Mr. Corey and his associates, and 100 of them were sold at auction last week for \$350 a share. The price paid by Mr. Corey is said to have been about \$225. Acquisition of the Cambria gives to the Midvale control of valuable iron ore properties in the Lake Superior district. It is reported that thus far the Government has found no warrant for proceeding against the new association under the Anti-Trust law.

NATIONAL REVENUE

While the reduction of the value of our imports last year was not large, the customs revenue derived from those that were dutiable declined, on account of the war, from \$283,700,000 to \$205,800,000, according to a report issued recently by the Government. This loss of about \$78,000,000, or 27½ per cent, must be taken into account in all plans for raising sufficient revenue for the Government's ordinary expenses, as well as for the proposed enlargement of the army and the navy. The average customs revenue for the last twenty years has been a little more than \$257,000,000, and the highest point was reached in 1907, when the sum collected was \$329,500,000.

This reduction, as well as the increase of expenses involved in the new defense projects, has had weight in leading the Administration to oppose removal of the present duty on sugar, which yielded \$49,000,000 last year. The new special taxes on gasoline, automobiles, iron, steel and bank checks, proposed by President Wilson and Secretary McAdoo, have encountered formidable opposition on the Democratic side in Congress, where the party leaders now intend to obtain the needed additional revenue by increasing the income tax rate, without lowering the exemption limit, and by a tax on munitions.

Kansas spent \$37,000,000 for motor cars last year.

The average price of finished steel products is now the highest in fifteen years, and forty per cent above the average for the year 1914.

Sales of copper at 27 cents were made last week, and an advance to 28 was expected. At 27 cents the price exceeds the previous high record, which was 25½.

Annual reports of munition companies show how large last year's profits were. The Winchester Arms Company had net profits of \$4,652,000 on a gross business of about \$20,000,000. The Hercules Powder Company had net earnings of \$4,992,000, against \$1,434,000 in 1914, and the net of the Atlas Powder Company rose from \$294,000 to \$1,705,000.

The following dividends are announced: Liggett & Myers Tobacco Company, common, quarterly, 3 per cent, payable March 1.

Niles-Bement-Pond Company, preferred, quarterly, 1½ per cent, payable February 15; common, quarterly, 1½ per cent, payable March 21.

Insurance

Conducted by

W. E. UNDERWOOD

LOW-PRICED ACCIDENT POLICIES

This department is constantly in receipt of inquiries from readers respecting the value of certain low-priced accident policies offered by some companies. Sometimes I get the impression that my correspondents regard these contracts as equal in coverage to the policies for which \$25 and \$30 a year are charged, but are prompted to make inquiries because of the seeming great difference in prices, perhaps suspecting that the companies offering the cheaper forms are financially unreliable. This is an error. Different combinations of benefits are made and the premium charges conform—the smaller the charge, the less one gets. The lower priced policies have many exceptions, limitations and restrictions. There are many accident associations furnishing insurance at a comparatively low rate; sometimes their policies contain all the contract, but more often the latter is governed by the association's by-laws, copies of which insured members seldom possess, which can be, and not infrequently are, altered and amended without their knowledge. These associations render good service at the price paid—and that is the point—one gets what one pays for, not more nor less. The man who has some special policy at \$5 or \$6 a year is not warranted in assuming that he has the same quantity of protection as is furnished under a contract costing \$25 a year. So with the coöperative association policies at from \$9 to \$12 a year. As I have frequently observed, there are no bargains in insurance.

J. H. K., Seattle, Wash.—Unless a parent is wholly or partially dependent on a child, he has no insurable interest in its life. Ordinarily the death of a child works no financial loss—aside from the expenses of burial—on a parent. Industrial insurance is designed to cover that expense, and that is its principal merit. While I cannot make a positive statement, there being so many companies now, I do not believe any company would issue a policy on the life of a dependent child for the amounts you name. Some companies issue endowments on young children, payable as such only if they survive the endowment period. These policies may be had without premium return or with premium return in case the child does not survive the period. As to paying industrial premiums annually or semi-annually instead of weekly, consult an agent of any of the companies you mention.

H. N. C., Pittsburgh, Pa.—Am indebted to you for information that the Standard Life Insurance Company of Pittsburgh writes a special policy for total abstainers. The Security Mutual of Binghamton, N. Y., and the Peoria Life of Peoria issue similar policies.

FREE to Men!! this Book on Shaving

Merely Send a Postal

Instead of becoming more simplified, shaving has become a more *complex* problem during the last few years—since the introduction of the numerous hoe-like shaving devices or razor substitutes "whose name is Legion."

This intensely interesting free Shavers Book has done more to gladden shaving mankind than anything since whiskers were declared "off." Write for it. It will tell you about De Vine, a unique—an almost *revolutionary* shaving outfit—revolutionary in its *efficiency*—revolutionary in its contrast to shaving junk.

De Vine Endorsed by Thousands

With little sales work and a trifling amount of advertising, De Vine has grown into immense popularity. It's *merit*—the De Vine *Idea* is largely responsible for this. You should know De Vine. You should give yourself the pleasure and the profit, at least, of reading this interesting Shavers Book to which you are quite welcome. Simply send us your name and address.

Journalism As An Aid To History Teaching

By Edwin E. Slosson, Ph. D.

Literary Editor of The Independent

Associate in the School of Journalism,
Columbia University

This address, which was given before the History Section of the New York State Teachers' Association at Rochester, November 23, 1915, has been published in pamphlet form and will be furnished free to teachers—Write to W. W. Ferrin, 119 West 40th Street, New York.

For Swollen Veins

Absorbine Jr. THE ANTISEPTIC LINIMENT

That Absorbine, Jr., would relieve Varicose Veins was discovered by an old gentleman who had suffered with swollen veins for nearly fifty years. He had made many unsuccessful efforts to get relief and finally tried Absorbine, Jr., knowing its value in reducing swellings, aches, pains and soreness.

Absorbine, Jr., relieved him, and after he had applied it regularly for a few weeks he told us that his legs were as smooth as when he was a boy and all the pain and soreness had ceased.

Thousands have since used this antiseptic liniment for this purpose with remarkably good results.

Absorbine, Jr., is made of oils and extracts from pure herbs and when rubbed upon the skin is quickly taken up by the pores; the blood circulation in surrounding parts is thereby stimulated and healing helped.

HISTORY AND ENGLISH

WEEKLY LESSON PLAN FOR HISTORY, CIVICS AND ECONOMICS, BASED ON THE INDEPENDENT, FEBRUARY 14, 1916. PREPARED BY ARTHUR M. WOLFSON, PRINCIPAL OF THE JULIA RICHMAN HIGH SCHOOL, NEW YORK CITY.

AMERICAN HISTORY AND CIVICS

I. The Territorial Expansion of the United States.

- Read (1) "Lower California," page 227.
- Look up the acquisition of territory by the United States from 1783 to 1848.
- Study the history of the negotiations which led to the treaty of Guadalupe Hidalgo (1848) and those which led to the Gadsden Purchase (1853).
- Why was the "slave power" in favor of the acquisition of territory from Mexico? the New Englanders opposed to it?
- Investigate the facts concerning the "Magdalena Bay Incident" and discuss the present movement toward the "rectification of our Mexican frontier" in the light of this incident.
- Do you agree with the author of this article in his conclusions?

II. The Issue of Preparedness.

- Look over your notes on "The Army and Navy of the United States," based on the issue of The Independent of Feb. 7th.
- Read (1) "The President's Tour," pages 216-217.
(2) "The President's Speeches," "In Iowa, Kansas and Missouri," page 221.
- What is the present size and equipment of the United States army and navy?
- What are the various proposals offered for increasing the army and navy?
- What are the reasons given by the president in his speeches for favoring a larger army and a larger navy? Are his reasons good?

III. The Philippine Government Bill.

- Look over your notes on "The Philippine Islands and their Relation to the United States," based on the issue of The Independent of Feb. 7th.
- Read (1) "Independence or Self Government," pages 217-218.
(2) "Philippine Independence," page 222.
- What does the writer mean by the paragraph on page 218 beginning, "The peoples of Canada and Australia have self government without independence"?
- Upon what facts does he base the statement: "The American Revolution had its origin in the intense conviction," etc.?
- What are the provisions of the present "Philippine Bill"? What further steps are necessary if it is to become a law?

IV. The proposed Treaties with Colombia, Nicaragua, and Hayti.

- Read (1) "Treaties Favorably Reported," page 222.
- Read Article II., section 2, clause 2, of the Constitution.
- Look up the history of the negotiations with Colombia in 1901-1903 and the Panama Revolution of 1903.
- Look up the history of the proposed Isthmian canal by way of the Nicaraguan route.
- In view of the fact that the United States already owns the Panama Canal, why do we propose to pay \$3,000,000 for the exclusive right to construct a canal over the Nicaraguan route?
- When and under what circumstances did "the powers of a financial protectorate" in Hayti begin?
- Municipal Improvements in the United States.
- Read (1) "The City of the Future," page 231.
- How far has your city progressed toward the ideal described?
- Give in detail the provisions which are made in your city for some three or four of the things indicated in the article.

EUROPEAN HISTORY

I. The Destruction of Commerce During a War.

- Read (1) "The Arrival of the 'Appam'," (2) "The Mysterious Raider," (3) "The 'Appam' Case," page 219.
- What methods are legitimate under international law for destroying an enemy's commerce?
- What method was legitimate during the Napoleonic Wars which is forbidden to civilized nations at the present time?
- What rights has the vessel of a belligerent in a neutral port? Does the "Appam" come under this right?

II. European War in Asia.

- Look up your notes on "The Interest of England and Russia in the Tigris Valley," based on the issue of The Independent of Feb. 7th.
- Read (1) "The War in Asia," page 220.
- Locate the places mentioned in the article on a map. Are the Russians and English advancing in their campaign?

ECONOMICS

I. Foreign Trade.

- Read (1) "Our Great Foreign Trade," page 244.
- What has caused the rapid change in the "balance of trade"?
- What were the chief articles of export and import before the beginning of the war? What are they now?
- What is the relation between the "gold movement" and foreign trade?
- Study the figures given concerning the present trade with South America. Upon what does the future of this trade depend?

Teachers realize that they have not done their full duty when they have personally conducted their students down the well-beaten paths of History and Literature unless they have also shown them how to use the History and Literature of the future, which the newspapers and magazines will provide. The day when it was necessary to present extended arguments in favor of the use of a weekly magazine like The Independent in the teaching of Civics, Economics, History, and English has already passed. It is also decided in the minds of the majority that a weekly journal is far superior to the newspapers or monthly magazines for class room use. Several thousand teachers are agreed that there is no better medium for arousing interest in the social sciences, and no better laboratory material than The Independent presents. The human mind is stimulated by things which are immediate and familiar. Present day interest in the affairs of Europe, for example, is enormous. Thousands of copies of books, maps, and pictures are purchased each week. The reason for this interest is obvious. The task of the teacher is easy; all that he needs is a proper method of presenting the facts.

The Independent is already being used as laboratory material, but the laboratory manual has thus far been lacking and we propose in future to furnish such a manual each week. By means of the outlines, topics and references furnished, the teacher can easily make his assignments definite and exact.

We advise the teacher to allow two or three days to elapse between the assignment of topics and the class recitation in order that students may have adequate opportunity for study and thought. We advise him to check up results quite as carefully as though he were a teacher of Biology, Physics or Chemistry. Note book work in connection with laboratory exercises in Current Topics and English is quite as essential as it is in science. Haphazard, unprepared, discussions and unverified assertions about History, Economics, Civics or English are quite as vicious as guesses in physical sciences, and should not be allowed.

Hundreds of instructors have told us that The Independent has made their work more interesting and more fruitful. This new arrangement of mailing a lesson plan giving outlines, topics and references should make the work easier and still more interesting. We have printed on this page a sample set of these "lesson plans" based on the February 14th issue. These lesson plans are equally well adapted for the use of clubs and private classes for they make the study of current events more interesting and profitable, and greatly relieve the labor of the leader.

To secure a copy of either or both of these weekly lesson plans it is only necessary for you to use the coupon below and we shall gladly mail a copy each week without expense to you.

W. W. Ferrin, The Independent,
119 West 40th Street, New York:
Without cost to me, please mail each week
your Lesson Plans for {English} as outlined
above.

WEEKLY LESSON PLAN FOR ENGLISH, BASED ON THE INDEPENDENT, FEBRUARY 14, 1916. PREPARED BY FREDERICK HOUK LAW, HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY.

Section I. The Story of the Week.

- Write a story of imaginary adventures in connection with the capture of the "Appam" in the style of Jim Hawkins in *TREASURE ISLAND*.
- Prepare an argument for or against the use of Zeppelins in war.
- What is the plan of the article on The War in Asia?
- What method has The Independent followed in reporting the series of speeches delivered by President Wilson?
- Which article in The Story of the Week is the best written? Write a similar article concerning some school event.
- Study the methods of condensation evident in the articles on page 224. Write a condensed article concerning an important school event.

Section II. Editorial Articles.

- How does the article on The President's Tour, Page 216, differ from the article on The President's Speeches, Page 221? Write a brief of The President's Tour.
- Study the article on Independence or self Government. Prepare a debate on the subject of Philippine Independence. See Page 234.
- Point out the topic sentences in the article on The Non-Jewish Sabbath.

Section III. Shakespeare.

- What reasons does the article, Three Hundred Years After, (Page 224) assign for Shakespeare's abiding popularity? What is the purpose of the article?
- Write an outline of the article on Shakespeare the Man.
- Give the principal facts in Shakespeare's life.
- What does the article tell us concerning the personality of Shakespeare?
- How did Shakespeare gain his education?
- What was Shakespeare's attitude toward formal education?
- What shows us that Shakespeare was a lover of music?
- Explain the allusions to Romeo and Juliet, Macbeth, Othello, King Lear, Richard III, King John.
- Since the quotations give the thoughts of characters in Shakespeare's plays, how can they be said to give Shakespeare's own thoughts?
- In what sort of place was Shakespeare born?
- What was the effect of his early surroundings?
- Make a list of the plays referred to in this article. How many have you read? How many are now played on the stage?
- What is Shakespeare's attitude toward nature?
- Comment on Shakespeare's patriotism.
- What types of humor are employed by him?
- What is said of Shakespeare's sympathy?
- Who was Ben Jonson? Why is his opinion valuable?
- What is the moral effect of Shakespeare's plays?
- In what ways is Shakespeare a philosopher?
- Explain the various quotations in the article.
- How does the article make you feel toward Shakespeare?
- Ask your librarian for some of the books recommended for further reading.
- Read some of the plays mentioned in this article.

Section IV. Leading Articles.

- Point out unusually effective words in the article on Confessions of a Peace Pilgrim. Point out unusually effective sentences. Do you approve or disapprove of the paragraph structure? Why? How does the style differ from that of Old Winter in His Home? Which style do you prefer? Give reasons.
- Point out various methods of exposition in the article on Lower California. How does the author prove that the acquisition of Lower California is necessary? Point out the course of thought-development in the article. Give an account of the life and work of Daniel Webster.
- Comment on the introductory paragraph of the article on What Young Ireland Needs. What means does the author take to present his thought? What gives the article its peculiarly forceful effect?
- Old Winter in His Home is an excellent example of essay writing. How does it differ from the article on Lower California? What is the spirit of the article? How does the author make his spirit appeal to us? Give the meanings of the following words: beaker, vagaries, shrewish, chic, puttees, fostering, quondam, ignominy, mettle, Druid, looming. Who is "Van Dyke" and what is the story of "The First Christmas Tree"? Tell the story of Loki and Baldr the Beautiful. Which is the best paragraph of the essay? Point out unusually effective adjectives. What words are used colloquially? What is their effect?

Section V. Poetry.

- What is the thought of the poem called The Charge? What war does the poem concern? Why does the author use figurative language? What is meant by the words: "Truth again flung out her ensign before men"? Define the following words: grim, frenzied, cults, gore, ruthless, pinnacle, carnage, ensign.

Section VI. Miscellaneous Articles.

- Make a careful study of the debate plans on Page 234. How many principal divisions are suggested? Point out methods of proof.
- Which is the best written book-review? Write a review of a book you have read.
- Write a description based on any picture in this number of The Independent.

J U S T A W O R D

The next issue of The Independent—March 6—will be the Little Gardens Number, with a colorful cover, suggestive of springtime. Experts on gardening will give practical advice to the amateur on Planting Flowers and Shrubs—What, Where and When, How to Grow Vegetables in the Backyard, and What Tools are the Most Useful?

Readers of The Independent have enjoyed for some time the whimsical humor of Edwin E. Slosson, which has appeared at frequent intervals under the title of "A Number of Things." Now we plan to publish regularly the contributions of two other genial commentators on American life, one representative of New York City and the other of the Western small town point of view.

John Kendrick Bangs, the author of *A Houseboat on the Styx* and fifty-five other varieties of popular books, will introduce the Genial Philosopher to our readers in a delightful essay on his novel theories for the utilization of one of our greatest natural resources—Noise.

Ed Howe (the Ed stands for both Edgar and Editor) has spent fifty years of his life in a printing office, writing and publishing the gossip "human interest" news that people the world over love to read. He has found time, however, to write several books on the side. His best known piece of fiction, *The Story of a Country Town*, was said by Mark Twain to be the best American novel since *The Scarlet Letter*. His contribution to The Independent will appear in an early issue.

Each of these three page features will be published once a month.

SCENERY OR SPEED?

The five-mile Canadian Pacific tunnel whose western portal, three miles west of Glacier, is pictured on another page, will cut four and a half miles out of the main line and reduce the stretch of maximum-grade track (2.2 feet in the hundred) from 22.15 miles to 6.61. But in so doing it eliminates two picturesque loops which have delighted tourists, including the famous horse-shoe from which the Great Illecillewaet Glacier is visible.

A new method of construction has made this a speedy piece of building. A "pioneer bore," seven feet by nine, was first put thru, paralleling the main tunnel route. This carried pipes and wires, and from side shafts run out of this work was done on the large bore at many points simultaneously. The advance headings of the main tunnel met in December. The tunnel will be completed at the beginning of 1917, or possibly earlier. In the pioneer tunnel a world's record for hard-rock boring, 932 feet in one month, was made in January, 1915.

REMARKABLE REMARKS

W. H. TAFT—I shrink from seeing my views in print.

KING CONSTANTINE—I have always played safe.

COLONEL HOUSE—President Wilson is a great man.

CLARK HOWELL—Bryan will not work in double harness.

LINDLEY M. GARRISON—I shall not make myself vocal.

LILLIAN RUSSELL—Life is one long round of masquerading.

HENRY HOLT—It takes at least a year to write a good novel.

EDWARD P. MITCHELL—The dodunk is not extinct like the dodo.

CONGRESSMAN CARY—A "dry" national capital would be a menace to society.

GEORGE ADE—You can lead a boy to college, but you can't make him think.

DR. DAVID STARR JORDAN—A low-brow is only one degree removed from a rough-neck.

WOODROW WILSON—I hope every man in public life will get what is coming to him.

SENATOR JOHN SHARP WILLIAMS—The British Empire will probably be wrecked some day.

COMMISSIONER OF HEALTH EMERSON—There were 3000 dog fights in New York last year.

GENERAL LEONARD WOOD—This much I know—our next war will be with a power of the first class.

ED. HOWE—We had eight guests for dinner Christmas day; not one of them got a spot on the table cloth.

CONGRESSMAN MOORE—The panic of 1907 is the only thread that the Democrats have to hang their hats on.

CONGRESSMAN "CYCLONE" DAVIS—Democrats rarely put up at anything higher than two-dollar-a-day hotels.

ELIHU ROOF—The government which shakes its fist first and its finger afterward, falls into contempt.

REV. G. H. TOOP—The Protestant Episcopal Church is probably nearer to a deep sundering split than ever before.

LAURA JEAN LIBBY—When the man pops the question, be it in ever so slipshod a manner, the girl is ready to give her consent.

“There, Mother, Just As You Predicted—”

Missing the “game-ball” *right in front of the pocket* is only one of the whimsical turns with which Home Billiards abounds. It’s part of the frolic to twit the family sharp-shooter. So leave it to mother and the boys to hold their own.

Your family deserves this daily sport and exercise that Brunswick Carom and Pocket Tables are providing for thousands of homes.

Send today for our color-illustrated book of details. *It’s free.*

Brunswick “Baby Grand”

“Grand,” “Convertible” and “Quick Demountable” Billiard Tables

Now \$27 Up—Pay 10c a Day

Brunswick Home Tables are scientifically built, with accurate angles, fast ever-level billiard beds and quick-acting Monarch cushions—the choice of experts.

Why buy a toy table when a real grown-up Brunswick costs so little? By paying while playing, you never will miss the amount.

Any Home Has Room

Now you can get a genuine Brunswick in any size your home requires. Our “Quick Demountable” fits on top of your library or dining table, or comes with folding or quick-detachable legs.

“Grand” and “Baby Grand”—for homes with a spare room, attic, basement or den—are the finest and fastest in the world.

30-Day Trial—Outfit FREE

Balls, Cues, Rack, Markers, Spirit Level, Expert Book of 33 Games, etc., all included free with every Brunswick. No extras to buy—no heavy after-expense.

Our plan lets you try the table 30 days *FREE*. Then pay monthly, *as little as 10 cents a day!*

Send at once for our widely-read book, “Billiards—The Home Magnet,” that shows these tables in realistic colors, discloses factory prices and full details. New edition now ready. Mail the coupon for this valuable book today. It’s *FREE*.

VOLUME 85

FEBRUARY 28, 1916

NUMBER 3508

THE KEYNOTE OF THE OPPOSITION

THE speech of Elihu Root as temporary chairman of the unofficial Republican Convention in New York State has every appearance of sounding the keynote for the approaching presidential campaign. It is a speech remarkable for its lucidity, its forcefulness and the restrained passion with which it arraigns the course of action of President Wilson and the Democratic party. The gravamen of the charge which Mr. Root brings to the President's door is the failure of the Administration's foreign policy. It concerns itself with two subjects—our course toward Mexico and our course toward the Great War.

In both of these directions Mr. Root finds the President's policy to have been weak, vacillating and stultifying.

In the disturbed condition in Mexico when Mr. Wilson took office the duty of the President of the United States, says the former senior Senator from New York, was a double one. First, to use his powers as President to secure protection for the lives and property of Americans in Mexico; and, second, to respect the independence of Mexico and to refrain from all interference with its internal affairs.

President Wilson, in the belief of Mr. Root, failed to observe either of these duties. He interfered to aid one faction in civil strife against another; and he ignored and condoned the murder of American men and women, the rape of American women, and the destruction of American property. More than fifty American soldiers, in uniform, on duty, have been shot and killed and wounded across the border by soldiers belonging to one or another faction in the Mexican civil strife, and no attention has been paid to it by the American Government. While ignoring these assaults upon the rights to life and property of American citizens, the President has, in Mr. Root's view, made war upon Mexico, ostensibly to secure reparation for an insult to the American flag, but actually in order to support the faction in which Mr. Wilson believed against the man in power, whom Mr. Wilson adjudged to be a usurper. The results of this course of action, says Mr. Root, were most unfortunate. He adds in explanation:

If our Government had sent an armed force into Mexico to protect American life and honor we might have been opposed, but we should have been understood and respected by the people of Mexico, because they would have realized that we were acting within our international rights and performing a nation's duty for the protection of its own people; but when the President sent an armed force into Mexico to determine the Mexican presidential succession he created resentment and distrust of motives among all classes and sections of the American people.

Who can interfere in a quarrel and help some contestants and destroy others and then absolve himself from responsibility for the results? It is not by force of circumstances

over which we had no control, but largely because the American administration intervened by force to control the internal affairs of that country instead of asserting and maintaining American rights that we have been brought to our present pass of confusion and humiliation over Mexico.

This is the one great failure in foreign policy that Mr. Root charges against President Wilson. The other relates to our relations with the warring nations of Europe. In the President's conduct of these relations Mr. Root finds three fundamental errors:

First, the lack of foresight to make timely provision for backing up American diplomacy by actual or assured military or naval force;

Second, the forfeiture of the world's respect for our assertion of rights by pursuing the policy of making threats and failing to make them good;

Third, a loss of the moral forces of the civilized world thru failure to truly interpret to the world the spirit of the American democracy in its attitude toward the terrible events which accompanied the early stages of the war.

To put the matter concretely, Mr. Root believes, in the first place, that the President should have taken the lead in a movement for military and naval preparedness immediately upon the outbreak of the war, instead of waiting until an aroused public opinion had forced him to acquiesce in such a movement then already under way. He believes, in the second place, that the President should have acted more promptly, more forcefully, and more decisively in following up his original declaration to Germany that she would be held to a strict accountability for the destruction of American ships and lives by German submarines. In criticizing the course of Mr. Wilson in this regard, Mr. Root uses the picturesque language: "No man should draw a pistol who dares not shoot. The government that shakes its fist first and its finger afterward falls into contempt." In the third place he believes that the President should have protested solemnly and vigorously against the violation by the German arms of the neutrality of Belgium. His conception of the effect of such an action is set forth thus:

It was not necessary that the United States should go to war in defense of the violated law. A single official expression by the Government of the United States, a single sentence denying assent and recording disapproval of what Germany did in Belgium would have given to the people of America that leadership to which they were entitled in their earnest groping for the light.

It would have ranged behind American leadership the conscience and morality of the neutral world. It would have brought to American diplomacy the respect and strength of loyalty to a great cause.

This constitutes a strong indictment of the Wilson administration. Its utterance by Elihu Root in this impressive fashion is a significant sign of the direction in which the currents of thought in the national opposition are running. For it is precisely what Theodore Roosevelt has been saying with vigor for some time. Allowing for differences of temperament and of mental make-up the statements of their respective beliefs by the two

arch antagonists of the Republican National Convention of 1912 are identical.

The two streams of Republican thought and membership which then and there violently diverged are running together again. There is every reason in the coming campaign to expect a unified opposition to the aspiration of the Democratic party for a continuance in power.

As The Independent has said before, such a united opposition will be a benefit to the nation. It is not good for the party in power, no matter which party it is, to be weakly and ineffectively opposed. It weakens its sense of responsibility, and tends to make it forgetful of its duty to the people. *A fortiori*, a flabby or divided opposition is a detriment to the interests of the country.

On the merits of Mr. Root's indictment, the case is not so clear. The Independent agrees with Mr. Root in his belief that the American people missed a great opportunity when their Government did not enter a solemn protest against the German violation of the neutrality of Belgium. As early as August, 1914, our special representative in Belgium, Major Seaman, in a cable article from Antwerp, urged the President to take the same action which Mr. Root now says he should have taken. It agrees with him that the controversy with Germany over the killing of Americans by submarine attacks—especially in the "Lusitania" case—could and should have been pressed with more firmness and with greater insistence on a prompt and full compliance with American demands. It believes that the capture and evacuation of Vera Cruz was a series of mistakes, that Americans in Mexico have not been afforded the adequate protection to which they are entitled, and that the killing of fifty American soldiers on duty on American soil called for more drastic action than watchful waiting.

But we believe that the President, in bending every effort to keep the United States out of war, whether in this hemisphere or the other, was following the dominant desire of the American people. In trying faithfully to carry out that desire, Mr. Wilson has had a terribly difficult task to perform. He has kept us out of war thus far—except to the degree that the capture of Vera Cruz constituted an act of war. In so doing he has been compelled to make some sacrifices of American interests. Whether another man of different temperament and different mental equipment could have accomplished the same result with fewer sacrifices is an open question.

In the early months of the war the public opinion of the United States was emphatic in approval of the President's determination to keep this country out of war even at some sacrifice. Has this sentiment persisted? There are indications that it has changed and is changing. Mr. Root believes that it ought to make a complete about face. Only the result of the campaign will show how complete the change is to be.

THE NICARAGUA TREATY

THE Senate is to be congratulated upon its ratification of the treaty with Nicaragua by the handsome majority of 55 to 18. The House of Representatives, when called upon to do so, should pass without undue delay or debate the three million dollar appropriation which, according to the treaty, is to be expended "for the advancement of the welfare of Nicaragua" in such ways as our Government may approve. It is questionable if the House has a constitutional right to refuse to make any appro-

priation necessary for carrying out a treaty, and certainly it would be unwise to impede the passage of such a bill in these critical times.

The Nicaragua treaty is merely one more of the many efforts we have made in the last sixty-five years to rectify that most unfortunate blunder of American diplomacy, the Clayton-Bulwer treaty. If the new treaty is ratified we will be nearly, tho not quite, as well off as we were in 1849, when both Nicaragua and Honduras consented to cede to us the canal route and its terminal, Fonseca Bay. But before these treaties were ratified a British fleet sailed into Fonseca Bay and took possession of what we claimed as our property.

Since the British then held both sides of the isthmus of Nicaragua we were powerless to do anything without their consent, so we promised, by the Clayton-Bulwer treaty, to give them equal rights over any canal or railroad that we should construct at any time in the future across Nicaragua, Panama, Tehauntepec or anywhere else. It is this promise, carried over in an attenuated form into the Hay-Pauncefote treaty, that is bothering us yet whenever we want to settle canal tolls or arrange our difficulty with Colombia.

Another and even more serious embarrassment has resulted from the Clayton-Bulwer treaty. According to its provisions the United States was never to occupy, fortify, colonize or assume any dominion over any part of Central America, and at the same time the United States was required to acquiesce in all the British holdings and claims in Central America. Now, Great Britain had, by the treaty of Versailles in 1786, renounced all claims to sovereignty in Central America, and, as our Government repeatedly pointed out, her continued occupation of the Caribbean coast was in direct violation of this treaty. Nevertheless, Great Britain ignored our protests and holds Honduras to this day.

Personally, we Americans have no objection to the British holding Honduras. To be sure, she has no title to it, but then most land tenures are equally illegal when you go back far enough. The original title deeds to Manhattan Island are, we fear, not on file at the City Hall. The natives of Honduras are doubtless better off under British administration than if they were nominally free and independent. Our last attempt to dispossess the British was when we bombarded Greytown at the eastern end of the proposed Nicaragua canal. Our feeling toward Great Britain has become, on account of our sympathy with her side in the war, more friendly than it has ever been since the Revolution, and it would be absurd to suppose that we should now or in the future revive our old contention against the British occupation of Honduras. We are never likely to submit to The Hague Court or to "the dread arbitrament of war" the unsolved question on which the British claim in its origin depended: whether it was a crown or a cocked hat which Charles II gave to Oldman, chief of the Mosquito Indians.

But the question of the British claim to Honduras and our acquiescence in it has a present interest in that it is claimed by some to invalidate the Monroe Doctrine. When we talk of the Monroe Doctrine to our Latin-American friends they are apt to reply: "The Monroe Doctrine no longer exists. It was abrogated in 1850 by the Clayton-Bulwer treaty, when Great Britain was permitted to extend her colonial possessions in Central America."

It is not easy to meet this Latin-American argument,

especially since the British Government seemed to take the same view of it, for four years after the conclusion of that treaty Lord Clarendon, the British Foreign Minister, declared that Great Britain did not recognize the Monroe Doctrine as international law. Doubtless it is just as well to let it go at that and regard the Monroe Doctrine as merely our own national policy, which we have pursued with tolerable persistency for many years and seem likely to continue indefinitely.

If we so regard it we need not care whether the Clayton-Bulwer treaty was a violation of it or not. But at any rate the Clayton-Bulwer treaty got us into a terrible tangle from which the new Nicaragua treaty will help to extricate us.

THE NOMINATION OF MR. BRANDEIS

THE subcommittee of the Senate has been hearing testimony all the week for and against the confirmation of Mr. Brandeis to the Supreme Court. This is as it should be. If Mr. Brandeis, for any reason, is unfitted to occupy the exalted office to which the President has nominated him, now is the time to know it. If, on the other hand, the charges against him are without real foundation, as we firmly believe, then his name will be cleared once and for all. Reports from Washington now indicate that the opposition in the Senate is crumbling. This gives us no surprise, for the adverse testimony so far given is based more on hearsay than on direct evidence. On the other hand, there is abundant personal testimony to his integrity as well as to his judicial temperament. We trust that the Senate will confirm the nomination without delay.

A MISTAKE IN CHEMISTRY

IT was such a little mistake. A critical teacher might mark it "five off" on a chemistry quiz. But a little mistake made by big people may be a big blunder. It all happened because the British Government is composed of able lawyers, metaphysicians, authors, military men and gentlemen of leisure, but not a scientist among them. Oxford seven, Cambridge six, scattering seven, so the cabinet stands—quite the usual and proper thing, according to British traditions, except that the unsettled state of politics necessitated the admission to this inner circle of an unusual number of men from scrub colleges or from no college at all, like Kitchener and Lloyd-George.

Upon these distinguished gentlemen, none of whose hands had ever been soiled with soot or stained with nitric acid, was unexpectedly thrust the unpleasant duty of making war upon a people quite exceptionally proficient in chemistry. They undertook to cut off from the enemy all materials necessary for munition and nutrition.

Now, the smokeless powder and high explosives which have revolutionized warfare are mostly made from cotton and glycerine by the action of nitric acid. On account of the demand for munitions the price of glycerine jumped from fifteen to fifty-five cents a pound. Since cotton was chiefly used in England for the manufacture of cloth it does not seem to have occurred to the British Ministers that the wicked Germans were using it extensively for nefarious purposes. The chemists of England, not being represented in the Government, had to organize mass meetings and write letters to the papers to per-

suade the Government to put an embargo on the importation of cotton into Germany.

Glycerine was, of course, put on the contraband list. So were all fats and oils used for food. But what reason could there be for shutting out soap fats? If "the Huns" wanted to adopt the Englishman's "bawth" would it not be wrong to hinder them? But when the trade reports of the first year of war came in it appeared that the Germans had taken to the use of soap to an astonishing extent. Fish oils, copra, rancid fats, all sorts of stuff good for nothing but soap and axle grease were being imported in large quantities from Holland and Scandinavia. The Cabinet then looked into the matter and discovered to their surprise that glycerine is a by-product of soap making.

So finally His Majesty's Ministers perceived that the Germans had been taking an unfair advantage of their ignorance of chemistry and the Attorney General, Sir John Simon, gravely stated to the Commons that, since it had "recently been discovered" that glycerine could be obtained from fat, the importation by Germany even of inedible fats would be henceforth prevented. If a speaker in Parliament uses a false quantity in a Latin quotation he gets a general ha-ha, but nobody cracked a smile when the Attorney General announced as "a recent discovery" an experiment which was first performed by Scheele in 1779 and included in the list of exercises for pupils in elementary science. Of course, cabinet ministers cannot be expected to know everything, but the lack of somebody about the shop who knew that handy bit of information must have cost the Allies many thousand lives.

In consequence of this and similar humiliating blunders during the war the leading scientific men of England have organized a committee to effect a revolution of the educational system of the country by overthrowing the monopoly of the classics and admitting science to an equal footing. They point out that Sandhurst, the British West Point, "is probably the only military institution in Europe where science is not included in the curriculum." In the navy some knowledge of science is expected, but not in the army. Now, the British navy has driven its foes from the sea, but the British army has nowhere achieved a signal success in eighteen months of war.

But even with these terrible lessons in view the reformers do not seem likely to succeed. To overthrow the classics is as difficult as to overthrow the monarchy. In fact, they are regarded as much the same thing. The leading speaker before a session of the British classical association held since the war began brought forward as one of the chief arguments for the present system that the study of the classics proves the impracticability of republics, and so strengthens the monarchy. The same view is held in Russia, where science is excluded or minimized in the schools because of its supposed democratic tendencies.

But the classicists have another argument; namely, that science is a dangerous thing, for see what it has made of the Germans! As one of them puts it in the *London Times*: "A lover of 'the humanities' might, perhaps, urge that 'science' when put to service of the devil—Milton's Satan has a Teutonic delight in explosives—is today working more human misery than was ever wrought by pedants and the Latin grammar." Evidently the British scientists made a mistake in tact when they

held up Germany as a model for their educational reform. In the sixteenth century, when England refused to adopt the reformed calendar of Gregory XIII, it was wittily said that the English would rather disagree with the solar system than agree with the Pope. So now it appears that they are inclined to take pride in their neglect of what has been called "a German science." But somebody should remind the classicists of *Fas est et ab hoste doceri*.

MAKING ALIENS INTO CITIZENS

WE have a way of doing things in America "when we think of them," and our thinking is spasmodic. The method leaves much to be desired. It cannot be described as businesslike. It offers a sharp contrast, for example, to those well-considered, planned-ahead programs and day-by-day ploddings according to schedule, which we are beginning to associate with the word "efficiency."

Naturally enough, our habit of thinking about things when something excites us, and then working at them furiously until we get interested in something else, has been made worse and more absurd by the onset of new dangers, interests and responsibilities let loose by the upheaval in Europe. We ought to have been busy with a rational scheme of preparedness twenty years ago. It ought to have been well advanced toward realization ten years ago. It should have included educational, commercial and industrial preparedness, and a vast amount of preparedness in social efficiency, as well as preparedness of the military and naval sort. Now, we are jumping into the business much as a lot of respectable villagers in pajamas jump into amateur fire-fighting when a midnight conflagration breaks out. That we shall do the thing in the wrong way, in the most wasteful way, and get a minimum result, is a safe bet, with odds 90 to 10. In like manner, there is every indication that we shall deal emotionally, thoughtlessly and more or less ridiculously with the practical problem of converting our millions of unnaturalized aliens into Americanized American citizens.

A generation has gone by since our attention was called to the importance of assimilation in its relation to naturalization, and of naturalization in its relation to political solidarity, by such events as the Sand Lots disturbances in San Francisco, the ill feeling over the attempted substitution of German for English in Wisconsin public schools, and the killing of unnaturalized Italians in New Orleans, which made us beholden to Italy. But nothing deserving to be called thought-out and systematic effort has been attempted. We have drifted along in our happy-go-lucky fashion, until now, with the zeal of camp-meeting converts, we throw ourselves into a feverish campaign of Americanization.

Of course we shall commit all the excesses of virtue unrestrained by common sense. We shall forget that assimilation is not a machine-made product. Assimilation takes time, and it cannot be hurried. And we shall not only be foolish, we shall be unjust.

Pressure of various kinds should be applied in a great variety of ways to the alien. He should be compelled to choose between American citizenship and certain real disabilities and hardships. He should be made to understand that our hospitality is hospitality, and not largesse. He should be assisted to discover quickly that

aliens in America who do not take the trouble to learn our language must inevitably suffer in mind and estate. He should be told that his chances of economic betterment will greatly improve if in good faith he takes steps to become a citizen. Employers may properly give preference and precedence to citizens; it is sound policy from every point of view—political and economic.

All this, however, is a different thing from "drawing the line" at the alien. Drawing the line and bringing pressure to bear are confounded only by men who do not make a practice of thinking their problems thru. Drawing the line is a hasty action, it is ill considered, it cannot be lived up to, and when its impossibility becomes manifest it is abandoned and everything goes back to the old *laissez-faire* indifference. Bringing pressure to bear is a businesslike, day-by-day proceeding. It demands knowledge, patience, adjustment, adaptation of means to ends. Nothing short of persistent, patiently applied pressure will convert our alien population into American citizens that are Americanized in heart and mind, and not in name only.

We are thoroly in sympathy with the demand for Americanization. As a people we are a mechanical mixture of incongruous elements, and it will be generations before we shall become a consistent blend of the good qualities that exist potentially in our alien nationalities. We firmly believe that well-considered, broadly planned, persistent effort should be made by patriotic Americans in every part of the country to further the work of assimilation and blending. We cannot expect to be an efficient nation, a nation with a mind of its own, formulating and maintaining great policies and respected by the world, unless we become more homogeneous and united than we now are. But let us have done with spasms and fads. Let us look at our task like grown up, reasoning men, and handle it in a businesslike way.

MUSIC OR MOVIES?

IT was bound to happen. You cannot mix movies and opera with impunity. It's like expecting Bryan and Boadicea to live happily together. In the movies you act as much as possible, to the accompaniment of music. In the opera you act as little as possible, also to the accompaniment of music.

Mrs. Lou-Tellegen, otherwise Geraldine Farrar, has been doing Carmen for the movies. Last week she did Carmen at the Metropolitan for the first time after her sojourn with strange gods, and her performance set the critics' tongues to wagging furiously. She not only introduced "a lively wrestling bout in which she threw her opponent easily and had all but succeeded in plucking out handfuls of her hair when the rude soldiers intervened," but, according to gossip, slapped Caruso's face and clung to him so violently that he was obliged to pinion her in order to be able to sing, and half threw her to the floor when he had finished. Then, in the wings, he inquired, with all the hauteur of which a million-dollar throat (or is it a billion?) is capable: "Do you think this is an opera house, or a cinema?"

There is the question flung in the face of operatic art. Shall opera be cinematized? For ourselves, we say Amen. If every impresario sent his singers to school to the movies there might be a spice of ginger in the wooden lovers and molycoddle fighting men that cumber the boards today.

THE STORY OF THE WEEK

THE GREAT WAR

February 14—Turks defeat British on Euphrates. British cruiser "Arctusa" wrecked by mine off east coast.

February 15—Russians capture Erzerum, Armenia. French move up Vardar to Bulgarian frontier.

February 16—Germans gain British trenches near Ypres. Sweden asks United States to join in protest against British interference with neutral commerce.

February 17—British defeated on Tigris opposite Kut-el-Amara. Austrians occupy Kavaya, south of Durazzo.

February 18—Russians take Mush in Armenia. French attacking near Tahure, Champagne.

February 19—Germans continue attacks on Dvinsk and Riga.

February 20—German seaplanes bombard east coast of England. Russians attack Trebizond.

The Caucasian Campaign

The most signal victory of the Russians in Asia since the war began is the capture of the Turkish stronghold of Erzerum. There are two remarkable things about it; first, that Erzerum was not taken a year ago, and, second, that it should have been taken now. When the war between Russia and Turkey began in November, 1914, it was generally expected that Erzerum would soon fall into the hands of the invaders; in fact there were rumors that they had captured it. It lies only fifty miles from the frontier of the Russian Transcaucasian province and the Russians had years before prepared for an advance in this direction by running a military railroad from the fortress of Kars to Sarikamish, on the frontier directly opposite Erzerum.

The Turks tried to forestall the Russian invasion by taking the initiative and seizing the railroad. But they were severely defeated at Sarikamish and thrown back into their own country. The Russians pursued the fleeing troops to the chain of forts in front of Erzerum, but there they stopped and made no serious effort to break the barrier, altho it was then feebly fortified and ill-prepared for defense. A vigorous attack would probably have carried it, but at that time the Russians needed all their men and more munitions to check the German invasion of Poland. It was supposed in 1914 that the war would be decided in Europe and neither side took much interest in Asia.

Now it is felt to be different. On all the European fronts, Belgium, France, Italy, Galicia, Greece and Russia, the armies of both sides occupy entrenched positions which it seems impossible to break thru. Albania is the only European field where the war has not settled down into a state of siege. So attention is being directed toward Asia and

Africa, where large territorial gains are still attainable. In Africa the French and British have completed the occupation of German Kamerun, and the British have undertaken the conquest of German East Africa. In Asia joint operations against the Turks are being conducted from three points; the British northward from the Persian Gulf, the Russians southward from the Caspian and the Caucasus.

Last fall, when the Grand Duke Nicholas was removed from the supreme command of the Russian armies and sent to the Caucasus, it was commonly supposed that this meant banishment in disgrace because of his failure to save Poland. But now it seems rather that he was being given an opportunity to retrieve his reputation by conducting the most important campaign of the winter. At any rate that is what he has done, for his swift advance and speedy capture of Erzerum is a brilliant feat of arms, comparable to his Galician campaign of a year ago when he captured Przemyśl and stormed the crest of the Carpathians. In fact the Russians seem to fight best in cold weather. Erzerum was captured when the mercury was thirty degrees below zero and the mountain passes filled with snow.

The Capture of Erzerum

The news of the fall of Erzerum was as much of a surprise to the outside world as the fall of Namur and Antwerp at the beginning of the war. It was, of course, anticipated that the place would eventually succumb to the Russian attack. The old adage, "a city besieged is a city taken," was never so true as today. These antiquated forts could not be expected to withstand the heavy artillery which the Russians suc-

ceeded in bringing thru the mountains. But on the other hand the Turks had had a year in which to prepare for the Russian attack with the assistance of German engineers and under the direction of one of the most renowned of contemporary strategists, Field Marshal von der Goltz. The chain of forts which had been erected before the war for the protection of Erzerum against the Russians extended from fifteen miles north to five miles south of the city. They were garrisoned, it is said, by four army corps of Turkish troops, amounting to more than 100,000 men. Provisions and munitions for a long siege had been laid in. According to the Petrograd report, which is the sole source of information, there were 467 guns in the outer forts, 374 in the central forts and 200 field guns. Most of these arms and supplies were taken intact by the Russians, for the Turks appear to have given up all hope of holding Erzerum as soon as the outer forts fell, and to have confined their efforts to getting the troops safely away. This they seem to have accomplished, for the early report that the Russians captured 100,000 or 40,000 Turks in Erzerum was later discredited. Such prisoners as the Russians took were either the small garrison left in the inner forts as a rearguard or the regiments they overtook in following up the retreat.

The Russian attack was carried out by three columns directed at the northern, central and southern forts of the chain. On January 29, after a brief bombardment, the most distant of the Erzerum forts, Kara Gobek, eighteen miles northeast of the city, was carried by assault. On the following night Fort Tafta, twelve miles out in this direction, was stormed. The forts on the Palandoken mountains, southeast of

THE CAPTURE OF ERZERUM

The Russian Army of the Caucasus has taken Erzerum, the chief Turkish stronghold on the eastern front. Being relieved from danger in this quarter the Russians may move on southward from Lake Van and rescue the British, who are besieged at Kut-el-Amara.

the city, were enveloped and taken in the same way, and the frontal attacks were equally successful. The Turkish commandant, Ekved Pevzi Pasha, then began the evacuation of the city, which was accomplished before the inner chain of forts were taken.

The Effect of the Russian Victory The situation has been decidedly altered by the capture of Erzerum, because this was the only stronghold in eastern Turkey. Doubtless the retreating Turks can make a stand in the mountains to the west, but there is no reason why the Russians should attempt to pursue them further in this direction when there are more promising fields to the north and south. Only a hundred miles northwest of Erzerum is the ancient city of Trebizond, where Xenophon's Greeks first saw the sea. This has several times been bombarded by the Russian warships and now a landing has been made about fifteen miles to the east. With this port once in their possession the Russians will have as secure a hold on the southern littoral of the Black Sea as they have on the northern and eastern. There seems little chance of the Turks retaking Erzerum, for it is over six hundred miles from Constantinople and there are no railroads leading toward it, while the Russians have the railroad from Kars coming within eighty miles on the northeast and are likely soon to have the port of Trebizond on the northwest.

Twice before, in 1828 and 1878, the Russians took Erzerum from the Turks and both times they were forced by Great Britain to restore it. This time, being allied with Great Britain, Russia will doubtless hold it unless the Allies are defeated. The extension of Russian sovereignty over this territory would mean the suppression of the American schools, hospitals and churches unless Russia could be compelled to change her historic policy for one of toleration. All thru this part of Armenia American missionaries, doctors and teachers have been active for many years. In Erzerum there is a school for boys and another for girls. The American Board

had five stationed there, the Reverend Robert S. Stapleton and his wife, Dr. E. P. Case, Miss Atkins and Miss Sherman.

The Turks have been engaged in clearing the Armenians out of the region into which the Russians are now advancing because the Armenians favored the Russians. In the course of these repulsions and deportations hundreds of thousands of Armenian Christians have been murdered or perished by the way. Our Government has addressed a note of protest to the Ottoman Government, said to be in substance as follows:

The American people have been deeply stirred by the fate of the Christians ruthlessly slaughtered in Armenia. The Government of the United States, having received precise official information of the occurrences, no longer can doubt that authorities of the Turkish Government are responsible for hitherto unparalleled atrocities, which have shocked the civilized world.

The United States is prompted to express to the Turkish Government the confidence that the authors of the atrocities will be punished.

Furthermore, the United States, actuated by a wholly disinterested desire to uphold the principles of justice and humanity, protests against the toleration of such occurrences and gives warning that in the event of a repetition thereof the American Government will be compelled to take action of a more drastic character.

The Russian Movement Southward

The Russian army which passed south of Erzerum is reported to have reached the city of Mush, fifty miles west of Lake Van. This would indicate that the Russians intended to push on in this direction until they cut the line of Turkish communications with Bagdad and Persia. The German Bagdad railroad has probably been completed to a point about half way between Aleppo and Mosul. At Mosul troops and supplies are presumably transhipped to river steamers to be sent down the Tigris to Bagdad or to Samara, which is connected with Bagdad by rail.

But the Russians south of Lake Van are within a hundred miles of Mosul and may be able soon to reach the Tigris and perhaps to attack Bagdad from the north while the British at-

tack from the south. At present the British expedition under General Townshend which attempted to reach Bagdad is invested by a Turkish force at Kut-el-Amara, a hundred miles down the river, while the relief expedition under General Aylmer is held up at Sheikh Said, about thirty-five miles below.

More alarming still is the report that the third British expedition under General Brooking, which had gone up the Euphrates River as far as Nasirjeh, is also in trouble. It appears that the attempt which was made to reach Kut by moving north from this point was frustrated by the Turks and that they have recaptured Nasirjeh. If the Turks should be strong enough to follow up their success and attack the British base at Kurna, where the two rivers join, it might involve the loss of all the British expeditions.

It seems, then, that if the British are to be rescued from their dangerous predicament on the Tigris, the Russians must come to their rescue. This they are evidently doing with astonishing celerity considering the character of the country and the state of the weather. The remnants of the Turkish army are retreating rapidly toward the Tigris, but several detachments have been overtaken and captured by the Cossacks. From Lake Van and Lake Urmia they are covering the territory to the south and west.

The Swedish Protest The Swedish Government has been urging our Government to unite with it and other neutral nations in opposing British interference with neutral mails and commerce. The latest Swedish note calls our attention to increasing violation by Great Britain of the rules of international law which concern the protection of neutral commerce and navigation and says:

Of late the British authorities have violated the mail traffic. Parcel post from one neutral country to another is being unloaded in British ports and the contents are being seized. While parcel post is not protected thru The Hague Postal Convention, it nevertheless seems to his Majesty's Government that the British procedure, in the form and extensiveness practised, would

Underwood & Underwood

GERMAN AND RUSSIAN

be invalid even with regard to ordinary express goods, and that this seems particularly evident when the seizure of parcel post is directed against a means of conveyance under guarantee of sovereign powers. Besides, great personal inconvenience is connected with seizure of this kind.

However, England's present practise of censoring also first-class mail, sent by neutral vessels from one neutral country to another, is an even greater violation of the rights accorded neutral powers by the rules of international law. It is not necessary to particularly point out how contrary this practise is to the stipulations in the above-mentioned Hague Convention, which stipulations or rules must be considered to have been in existence even before the promulgation of this convention.

As a measure of reprisal for interference with the Swedish mails the Swedish Government is holding up the British mail passing thru Sweden. It is said that there are in Gothenburg 58,000 parcels bound for England which have been detained on this account. Since Sweden is the chief channel of communication between England and Russia, she is in a position to cause the Allies serious inconvenience if driven to take a hostile attitude.

The Swedish Government seems disposed to acquiesce in the distinction which Germany is seeking to establish between armed and unarmed merchantmen, for it has formally warned all Swedish subjects against traveling on armed merchant vessels after February 29. The German Government announced that after this date armed merchant vessels would be torpedoed without warning.

Secretary Lansing has declined to join with Sweden or other neutral powers in any joint action such as has been proposed. He has stated it as the opinion of the American Government that merchant vessels should not be armed, but this does not imply assent to the German proposal to sink armed merchantmen at sight. Where Italian and British merchantmen have been permitted to leave our ports armed it has been on the assurance that their guns would be used solely for defensive purposes.

German Attack
at Ypres

The old Flemish town of Ypres, about which some of the fiercest fighting of last year occurred, is again the chief theater of action. The Germans attacked the British lines southeast of Ypres along a front of nearly two miles and succeeded in gaining possession of some six or eight hundred yards of first line trenches. This gain was made by a heavy bombardment and the explosion of five mines from tunnels which had been run beneath the British trenches. The efforts of the British to regain the position have been so far unavailing. This ground has changed so many times that it has become known as "the international trench." The Canadian troops are standing the brunt of the German attack on the Ypres front. It is rumored that the Germans are running many troop trains thru Belgium to this sector in preparation of a heavy drive against the British lines. North of Ypres on the Yser Canal the Germans have also carried a few hundred yards of British trenches.

The Entente Powers have informed Belgium that they will not cease hostilities until Belgium's political and economic independence is reestablished and that Belgium will be called upon to take part in the peace negotiations.

For a Canal
Monopoly

A long step toward giving the United States control of all interoceanic canal routes thru Central America was taken on February 18, when the Senate, by a vote of 55 to 18, ratified the Bryan treaty with Nicaragua. The treaty gives this country in perpetuity

The unencumbered exclusive rights necessary and convenient to the construction, operation and maintenance of an interoceanic canal by way of the San Juan River and the Great Lake of Nicaragua or by way of any other route over Nicaraguan territory,

together with a ninety-nine year leasehold, which may be renewed, of Great Corn Island and Little Corn Island, in

the Caribbean Sea east of the Nicaraguan coast, and a naval base on the Gulf of Fonseca to be selected by the United States.

The compensation to Nicaragua is \$3,000,000, to be spent under the supervision of the United States for Nicaragua's debt or other public uses. This Government will choose the banks where the money is to be deposited and disbursements are to be made only with the approval of the Secretary of State or his appointee. In order to meet the objections of Costa Rica, Salvador and Honduras to various provisions, the ratification resolution contained a proviso expressly declaring that nothing in the treaty was "intended to affect any existing right" of the three states.

The statement that Germany had outbid the United States in its efforts to get control of this route was used in the Senate as an argument for ratification. Forty Democrats and fifteen Republicans were counted in favor of the treaty. Opposed were five Democrats and thirteen Republicans. General Chamorro, Nicaraguan Minister, expects his government to ratify the treaty promptly.

The Nicaragua
Project

When this is done the negotiations of half a century will be completed. In 1849 Nicaragua gave us the exclusive right to construct a canal thru her territory and ceded us Tiger Island in the Gulf of Fonseca, but Great Britain objected, seized the island, and forced us to negotiate the Clayton-Bulwer Treaty which provided that neither nation should control the isthmian canal. The Hay-Pauncefote Treaty in 1901 modified this restriction and left the United States free to build a canal by either the Nicaragua or Panama route. A private American company was already at work at Nicaragua, but the panic of 1893 put it out of business. In 1900 the Isthmian Canal Commission reported in favor of this route, and the House of Representatives had actually passed a bill author-

THE RISING TIDE

'ONE ASPECT OF PREPAREDNESS THAT FINDS WIDE APPROVAL

izing the construction of the Nicaragua canal by the Government when the Panama Company reduced its price, which led the commission and Congress to decide on the present route.

Late in President Taft's administration a treaty substantially the same as the one just ratified was negotiated. It failed of ratification, and after Secretary Bryan had added provisions for a protectorate it was still less liked by the Senate. In the summer of 1914 the present treaty, without the protectorate clause, was submitted, but the Senate, after an investigation, adjourned without ratifying it.

The Isthmian Canal Commission estimated the cost of the Nicaraguan canal at \$180,000,000, less than half what the Panama Canal has cost, and it was therefore within the bounds of possibility that some other nation would build a competing canal if we did not secure a permanent option. The Atrato River route, thru Colombia, is still not under our control. The Gulf of Fonseca offers one of the very few good harbors on the Pacific coast. Nicaragua has been financially embarrassed for a long time, and the \$3,000,000 will materially aid her.

of its provisions are already in force, by agreement with Hayti, and the Senate was expected to ratify it.

The Colombian question, however, which has stood in the way of Pan-American concord for twelve years, seems as far from adjustment as ever. The action of the Senate Committee on Foreign Relations in reducing the indemnity to Colombia from \$25,000,000 to \$15,000,000 and practically nullifying the American apology by softening it into an expression of mutual regret, is bitterly resented in Colombia. The Colombian minister at Washington, Julio Betancourt, has asked for leave of absence, which may be made a permanent withdrawal if the original treaty fails of ratification, and Colombia has notified this Government that she will not accept the revised convention. It is said that Colombia may withdraw from the Pan-American Union and that other Latin-American countries are likely to support her protest.

It is not thought that the treaty even in its present form can secure the necessary two-thirds vote in the Senate.

The Work of Congress

Altho the House Committee on Rivers and Harbors was committed to a program of merely continuing work on existing projects, a new undertaking—an appropriation for the improvement of New York Harbor—was included in the Rivers and Harbors

bill, after a hot fight, before it was reported on February 16. The \$200,000 now voted, with \$500,000 to come, is to be used to clear a 35-foot channel in the East River from the Hudson River to the Navy Yard. It is endorsed by Secretary Daniels as a defense measure, and President Wilson's approval carried it thru, altho the Republican minority opposed what they called the President's interference, for political reasons, in the committee's work. The bill carries a total appropriation of \$39,608,410, of which \$6,000,000 is for the Mississippi River.

The Democratic House caucus, by a vote of 84 to 20, ten members refusing to be bound, has committed the party to a repeal of the free sugar provision of the Underwood tariff law. This will continue in force the present tax of about one cent a pound, which would have ceased automatically on May 1. The Democratic explanation of this reversal of a party policy is that the unforeseen emergency of the war makes it necessary to retain the \$40,000,000 of revenue from this source. The Ways and Means Committee is therefore including this provision in the Omnibus Revenue Bill which was nearly completed last week. The bill will probably provide for a lowering of the exemption and raising of the surtax in the income tax law, and the establishment of a tariff commission.

Action on the Susan B. Anthony

Other Treaties The Haytian treaty providing for a virtual protectorate, the terms of which were reported in detail in these pages last week, was to be considered next. Some

amendment to the Constitution, granting nation-wide woman suffrage, has been postponed nearly a year. The House Judiciary Committee voted on February 15 to defer consideration of the measure till December 14, 1916. By a tie vote the prohibition amendment was still left before the committee.

Before the House Committee on Naval Affairs, which is framing the naval part of the defense program, Rear Admiral Grant, Chief of Submarines, U. S. N., urged the need of a fleet of 183 submarines, three divisions of six each to cruise with the Atlantic fleet, two with the Pacific, and the remainder to work from numerous shore bases. At present twenty-seven submarines are ready for war service, ten more are laid up, and thirty-five are building or authorized. The House Committee on Military Affairs was told last week that the coast fortifications of the country lack 52 per cent of the men necessary to man them according to the plans of the War Department.

An investigation into the possibility of government ownership and operation of all public utilities engaged in interstate commerce is sought in a bill introduced by Senator Newlands, of Nevada, chairman of the Committee on Interstate Commerce. In the form of an amendment to a bill providing a joint committee to study traffic conditions, the proposal was approved by the Senate by a vote of 39 to 22.

Killed in Mexico Secretary Lansing has replied to the Senate's sweeping request for information on the history and present status of our relations with Mexico. In January, on the motion of Mr. Fall, Republican, of New Mexico, who has been the Administration's bitterest critic on the subject of Mexico, ten questions were asked, and the Administration now replies to all but one. The request for all reports from the Brazilian Minister who has cared for American interests at

WHERE TWO WAR CARGOES BURNED

The "Bolton Castle" and "Pacific," loading with supplies for the Russian government, were burned at dock on February 16, together with the pier in Brooklyn, where they lay. There was suspicion of a bomb plot, but it was found that frost wires started the fire

Mexico City while we were without diplomatic representative there, and from our consular representatives and other informants, was refused. Secretary Lansing explained that the information in these thousands of documents was highly confidential and could not be made public without destroying the usefulness of the Government's correspondents.

There have been 76 Americans killed in Mexico in the last three years, 24 from causes attributed directly to the revolution, to which may be added eight deaths in the Cumbre tunnel disaster, and 44 by bandits, Indians and civilians. In the years 1910, 1911 and 1912, with less widespread disorder, the total had been 47. Twenty civilian Americans, 16 American soldiers and 92 Mexicans were killed on the American side of the border in 1913-15.

Secretary Lansing defined the pres-

ent authority in Mexico as a *de facto*, not a constitutional, government, "established by a military power, which has definitely committed itself to the holding of popular elections upon the restoration of peace." In answering the inquiry as to the circumstances surrounding the recognition of Carranza, he emphasized the fact that when the Seven Diplomats invited the Mexican chiefs to confer, all the Villistas replied separately, while all the Carranzista leaders referred the question to the First Chief, and continues:

The inference to be drawn was plain. On the one hand there seemed to be no central organization among the Villista forces, while, on the other hand, submission to a central authority was evidenced in the replies of the Carranzistas. The unity and loyalty of the Carranzistas appeared to indicate the ultimate triumph of that faction, especially as the Carranzista forces were then in control of approximately seventy-five per cent of the territory of Mexico.

On these grounds the decision to recognize Carranza was reached. As to the power and determination of Carranza's government to maintain order, he declares that

The *de facto* Government is now in control of all but a few sections of Mexico and that, bearing in mind that the nation is just emerging from years of domestic strife, it may be said that within the territory which it controls it is affording in all the circumstances reasonably adequate protection to the lives and property of American citizens, and it is taking steps to extend its authority over and to restore order in sections now in the hands of the hostile factions.

Papers relating to Carranza's guarantee of the payment of claims, religious freedom and personal liberty and to the seizure and evacuation of Vera Cruz accompanied the note. It is thought that the principal object of Senator Fall's resolution was to get the correspondence which the Administration declines to release. Now that the formal reply has been received, the Senate is expected to proceed to consider the nomination of Henry P. Fletcher as Ambassador to Mexico.

THE most wholesome single influence in our town is what George Fitch calls *The Homeburg Democrat*, which in this instance is the *LaGrange Indicator*. It is published by a pair of brothers commonly known hereabouts as the Painter boys, and we are proud to call it the best newspaper in the county. In fact, LaGrange has tried to become famous as a place of mineral water and summer resorts, and as the boyhood home of Vice-President Marshall, and has failed at all three. But it is known all over the state among the newspaper fraternity for the character of the paper it supports. Our twenty-two year old editor has already had his name coupled with the Frankensteins of Missouri. And there are reasons.

Not the least of these is the frank and straightforward way in which the *Indicator* acts as the guardian of the common weal. It defends everyone and everything that is being abused. And yet it keeps above the muckraking spirit of so many small weeklies which attempt reform. This town of ours has a typical set of genuine Missouri petty politicians who do nothing of their own initiative, partly because they do not know how, and partly because they are afraid they will make enemies. When our editor finds that a city ordinance is not being enforced, the text of the ordinance is printed in big type across three columns of the "personals" page like this:

Is Your Son A Lawbreaker?

CITY ORDINANCES, Section 428

—Any person who shall kill, wound or attempt to kill or wound by the use of firearms, bow and arrow, pelting with stones or other missiles, OR OTHERWISE, any bird within the city limits, or throw stones, clubs or other missiles at any bird within any private grounds or public park, squares or grounds, or enter upon any private enclosure or public grounds belonging to the city, for the purpose of doing any act prohibited in this section, shall forfeit and pay a fine of not less than two, nor more than ten dollars for each offense.

Do you know what your boy is doing with that air rifle?

BY REV. DAVID R. PIPER

And on the first page of the same issue a paragraph on the enforcement of the law appears, in which the name of the responsible official is unobtrusively but suggestively inserted. The good people of the town awake, and the marshal, who, like all other marshals, wants to be sheriff, swallows his grouch at the editor, and begins to show signs of life. The thing is done and everybody is happy; there are no petty quarrels and no political fights are precipitated.

Advertising is what makes a country newspaper pay—if it does happen to pay! And yet these Painter boys have a way of donating whole yards of perfectly good white space to causes of social and religious betterment. Last April they began to give the best space in their paper to a series of Go-to-Church appeals, a three-column ten-inch space each week. At the lower right hand corner of each insertion appeared this caption: "The above advertisement has been arranged for by men interested in all La Grange churches." The truth was that the only men "interested" were the two Painter boys. They decided that the half a dozen dead or dying churches needed to be resurrected into life. They composed the copy and donated the space, and so got back of religion in "Homeburg." This agitation was kept up during the hottest of the summer months, and the resulting total Sunday School attendance was probably never so great in any two months in the history of the town as during this period. Church advertising is no longer unique, but editorial initiative in these matters is. That makes another reason why the *Indicator* is the best thing in our town.

But the biggest reason is to be found in its editorials. They are not mere political harangues. They do not simply echo the opinions of other journals. They reflect the life of the community. They are written under the inspiration of local scenes and events. They bear a message of cheer

and moral stimulus. They make one see the beauty and the possibilities of good in the life of this sleepy old river town. In the days of disappointment and calamity they give one courage to hold on.

This season the old Father of Waters asserted his might. He came out over the rich wheat-fields and corn-lands of the bottoms, which promised to yield the most miraculous crop in a lifetime, and carried away or destroyed thousands of acres of harvests. Then, if ever, was the propitious time to write a calamity editorial. But no, it is courage men need. Out comes the *Indicator* after the flood, and here on page 3 is one of the greatest editorials ever written by a country scribe:

For years men have gambled against the rise and fall of the Mississippi River. Time after time they have gone back with new hopes to rebuild their possessions and gamble against other floods. We in LaGrange have seen men leave their upland refuges as soon as the waters recede and go back with their families to the house of the bottom land. Call it the "fever"—say if you will that it is the same instinct that impels a man to put his last dollar on a good "hand"; in any event it is the hope that springs eternal—sometimes infernal—of making those rich acres yield their most bountiful some day.

An uplander might farm several years in the bottom and come out. But let him pass thru the baptism of one flood and he is lost to the hills forever. He begins to think what he might have done with a normal stage of the river. The richness of the black soil and its future fabulous yields lure him to day dreams. Nothing but death can remove him. Courageous, contented, happy-go-lucky men these bottom farmers have been. Always they have lost with a smile and have gone back with no tears for the past.

Could any bottom farmer, his year's work gone for nothing, his life till another harvest dependent upon his credit at the bank, keep his case of blues after reading that?

Is it any wonder that such editorials as these in our *Homeburg Democrat* are copied in the St. Louis papers, and recopied in the East? This is why we love it. It stands by us thru thick and thin. It is the best thing in our town.

La Grange, Missouri

WHY NOT SWAP THE PHILIPPINES FOR SOMETHING NEARER HOME?

BY EDWIN E. SLOSSON

AS the holder of a 101,000,000th undivided interest in the Philippines I have been puzzled like the other stockholders in the question of their disposition. To make them "free and independent" is something that Congress could not do if it wanted to. There are, I presume, a hundred thousand tropical islands in the world and not one of them is "free and independent" unless you consider Santo Domingo and Cuba so. All we could do would be to transfer them directly or indirectly to another power, say, England, Germany or Japan. Of the three we should, most of us, prefer to entrust the Filipinos to the first.

But if we relinquish the Philippines we must get an equivalent somewhere, for the development of transportation and tropical agriculture in recent years has shown that the prosperity of a commercial country is dependent upon the possession of extensive territory in the tropics. My Yankee blood suggested a swap. Has Great Britain any tropical possession near to us which would be a fair trade for the distant Philippines? I twirled the globe on my desk. Yes, there was British Guiana or Demerara lying in about the same latitude and as near as I could see about the same size. I had never been to Demerara. None of my kinfolk ever had. None of my friends. Nobody I ever knew of. That was a sufficient reason for wanting to go there. The unknown is always attractive. The sight of an unknown name on the map excites the appetite as does an à-la-something-new on the menu. Now I might have twirled the globe a dozen times and stopped it with a finger touch without hitting

upon a spot which I knew less about than Demerara. The polar regions north and south are familiar to us from the movies. The Forbidden City

EL DORADO

The Golden Land of British Guiana needs American capital to develop its vast resources. Col. Roosevelt is now journeying over the same route that Dr. Slosson took

of Lhasa has been entered by Colonel Younghusband and his attendant photographers. Roosevelt has removed the doubt that hung about the tributaries of the Amazon. But I beat him to Demerara by eight months.

It was with all the rare delight of the discoverer of an unknown land that I approached the shores of Demerara. To be sure there were people already living there when I came. But then so there were when Sir Walter Raleigh discovered it in 1595. In fact, the city of Georgetown, spacious and imposing as it is, cannot compare with the magnificence of the city of Manoa as Raleigh imagined it. Here dwelt El Dorado, the Golden King, in a paradise which for lapidary work rivaled the New Jerusalem and for conviviality surpassed Valhalla.

Raleigh outrivaled Othello in his tales

Of the Cannibals that each other eat, The Anthropophagi and men whose heads

Do grow beneath their shoulders.

"They are reported," says Sir Walter, "to have eyes in their shoulders and mouths in the middle of their breasts and that a long train of hair groweth backward between their shoulders."

But, as it happened, Sir Walter Raleigh, instead of discovering the headless men became one himself. He was in advance of his age. He would have made a fine yellow journalist. And I may say at once that any one taking Hakluyt as a Baedeker will be disappointed, tho, on the whole, agreeably disappointed.

When on the sixteenth day from New York the "Guiana" steamed up the Demerara River to Georgetown the first thing I saw, down by the sea wall, was a cricket ground, that world-wide British cricket ground on which the sun never sets. Towering in the distance was an Episcopalian cathedral, and when I went to the hotel I found my window looked out upon the Carnegie Library. In the shop windows were the signs of American cereals and cameras mingled in Anglo-Saxon amity with those of British beef tea and marmalade. Along the street in front there marched a train of turbaned Hindus as sandwich men, bearing billboards that announced that a most sensational and scandalous film portraying "The Lure of New York" was to be seen that night at the Electric Theater and war films at the Empire on payment of twelve cents. Prices are quoted in dollars and

WHAT RALEGH SAID I SHOULD SEE

According to Sir Walter Raleigh, headless men and amazons inhabited Demerara

BUT WHAT I REALLY SAW

Was a file of Hindu sandwiches marching down a city street for the movies

IN THE CITY AND ON THE PLANTATION

cents; payment is made in pounds, shillings and pence. The process of conversion requires more arithmetical agility than I possess, so I always pocketed without question the change that was handed me, generally more than I expected and often less than I deserved.

I did not see any of the headless Ewianpanos, but all the other races of mankind are, I feel sure, represented in Demerara. The Stabroek Market is a museum of living ethnography. East and West have met here. Asia and Africa have combined to people Guiana, and to crowd out America and Europe. The aborigines form about $2\frac{1}{3}$ per cent of the population and are decreasing. The Europeans form about 5 per cent and are decreasing. The rest of the population is almost equally divided between negroes and East Indians, and they are increasing. The irony of it is that both these races which are crowding out the whites have been brought here by the whites for their own selfish purposes.

When the negroes were emancipated in 1838 they refused to work on the sugar estates, at least for such wages as the planters could pay them. So India was drawn upon and ever since has been the chief supply of cheap labor. At first the Indian coolies were brought under an indenture system which the Anti-Slavery Society of England regarded not without reason as being little better than the old slave trade, but these conditions have been in the course of time reformed until now the interests of the immigrants are very carefully watched over by a paternal government. The Indians are imported by the planters under indentures which bind them to remain on the estate for five years and in the colony for five more. At the end of that time they may return to India by paying half fare. To get an able-bodied laborer under this system costs the planter about a hundred dollars. The employer is obliged to provide free lodgings of a prescribed type and free medical attendance and to pay a minimum wage of a shilling a day.

But no matter how little an East Indian earns he lives on a little less, so that by the time his five years are up he may be able to embark in busi-

ness or till a rice field of his own. In slavery days the planters used to destroy the rice plantations started by runaway negroes in the bush. Now they encourage the industry and more rice is grown than is needed to supply the colony. It is being exported at the rate of sixteen million pounds a year, most of it grown by hand labor on the little patches owned by the East Indians, altho recently an American company has put in five thousand acres of rice to be cultivated by machinery.

The windows of the Chinese shops on Water street are filled with the brass idols of the Hindu pantheon, made doubtless in Birmingham. In the coolie quarters these Hindu temples and Mohammedan mosques are provided just as there are hospitals and schools. I visited a mosque on the road to the sugar factory, a plain board building with crescents painted on the front and nothing inside but matting, rugs and a copy of the Koran, not half so real-like and impressive as the mosque of any "Street of Cairo" in America. The sacristan, muezzin or whatever the name of a mosque-manager is, instructed me on entering to leave on my hat and take off my shoes. He took occasion to explain that this was a much more sensible custom than the Christian because leaving on a

in a shroud. The negro walks flat-footed. The Indian steps on the ball of his foot, delicately, mincingly, like a cat on a cook-stove.

Two paces behind him walks his wife, small and graceful, wearing a gaily embroidered jacket with a green or pink scarf draped about her head and body. There is a nose-ring hanging down over her upper lip or a gold rosette in the side of the left nostril, a style no more disfiguring and grotesque than the earring, which I see still worn in New York. Her forearm is loaded with silver bracelets or soldered into a silver tube reaching from the wrist almost to the elbow. This is the East Indian substitute for a savings bank. You can estimate the wealth of the man by the number of rings on his wife's arms, just as in New York you estimate it by the size of the wife's diamonds. In case of a financial crisis the silver like the diamonds may be cashed for current expenses. But what seemed most strange to me was that the Demerara woman has a baby in her arms instead of the dog that the New York woman carries.

I was forced to make constant comparisons between New York and Demerara not merely because they were the terminals of my vacation voyage, but because they were once considered of about equal value. Two

hat does no harm to anybody, while leaving on the shoes carries into the sacred place the filth of the street.

Shoes seem to be the last article of civilized apparel to be adopted, tho one would think they would be the first in this land of centipedes, tarantulas and chiggers. The two races can usually be distinguished by their dress. If you see a man with trousers but no shirt he is a negro. If he wears a shirt but no trousers he is an East Indian. Those who are white or aspire to be considered so wear both. A costume much in vogue is that of Kipling's "Gunga Din":

The uniform 'e wore
Was nothin' much before,
An' rather less than 'arf
o' that be'ind.

The negroes saunter down the middle of the street in chattering, laughing groups. The Indian slips by singly and swiftly, slim and silent, like an afternoon shadow

THE RESIDENCES IN GEORGETOWN ARE PLEASANTLY ADAPTED TO THE TROPICAL CLIMATE

A VILLAGE OF NEGRO LABORERS ON A SUGAR PLANTATION IN DEMERARA

hundred and fifty years ago the Dutch traded off New Netherland, which we call New York, for Guiana and chuckled at their shrewdness in beating the British at the bargain, for they could not imagine that the northern trading post could ever equal in value this spacious and fertile paradise. After the British lost the North American colony, in the course of a misunderstanding between King George and George Washington, they went and took Demerara from the Dutch. In 1796 the three colonies of Berbice on the east, Essequibo on the west and Demerara in the middle were united to form British Guiana.

Of course it seems absurd now to compare New York and British Guiana as territorial equivalents, but Gabriel's trump has not yet sounded and real estate values have a way of going up and down in the queerest way. New Netherland, that is to say, Manhattan Island and the Hudson valley, has about all the population it can comfortably hold and much more than it can support, while British Guiana is still practically empty. It is nearly the size of Oregon, but Oregon has already more than twice its population and is clamoring for more. Besides, the tropics can maintain a much denser population than northern lands. If British Guiana were as thickly settled as the neighboring island of Barbados, that is, 1034 to the square mile, it would have a population of 93,000,000, which is more than the United States had at the last census. It is not at all impossible, tho it may be undesirable, that British Guiana should have as dense a population, for the climate is much the same and the soil is in most parts as productive.

But Guiana has been a sink for population. Up to a hundred years ago the forcible importation of negroes was necessary to keep up the supply of labor, and later the influx from India took its place. Now, however, the advance of sanitary science has abolished the endemic yellow fever and pointed the way to the possible abolition of typhoid and malarial fevers. In 1912, for the first time in the history of the colony, the birth rate surpassed the death rate. The improve-

ment here, as elsewhere, has chiefly been due to the reduction of infant mortality.

"The conquest of the tropics," of which we hear so much, is not yet an accomplished fact, but enough has been done, in Panama and India, for example, to show that most if not all the disabilities of the climate can be overcome. The white can, it appears, live in the tropics, but it requires more intelligence to live there, a condition of excellent promise for the future. But for the present—well, it was put best by a hale and active septuagenarian of Demerara, who said to me: "Englishmen come out here and drink and drink and drink and die, and then write home to their folks that the climate killed them."

The climate is officially stated in the *Handbook of British Guiana* to be "a delightful one even for the tropics," whatever that may mean. Then it goes on to prove it by statistics, from which it appears that the mercury sticks as close to 80° F. as a timid child to its mother. A variation of five degrees either way is uncommon, night or day, summer or winter. A Demeraran never has to wonder what the weather is going to be. He knows. The sun gets in six to ten hours of shining almost every day in the year and the rainfall measures up to one hundred inches.

The Demerara River is as muddy as the Mississippi and yellows the ocean for miles about its mouth. We are officially informed by the *Handbook* that "the depth of water on the bar is sufficient to allow of large vessels crossing with ease and security." This is doubtless true if the "large vessel" is spread out on top of the water. If it draws more than nine feet of water and tries to get into the harbor at low tide it has to plow thru the mud on the bottom.

The country is flat so far as the eye can see from the ocean, but in the interior there are first wooded hills, then plateaus and finally mountains. The upland savannas are said to offer as good pasturage as the plains of Argentina and it is expected that as soon as the hinterland is opened up by rail it will provide the beef for the markets of England and the United States. Here, too, cotton can be grown and coffee, tobacco, rubber, and all sorts of fruits. Then there are great attractions to the tourist in these inaccessible regions.

Sir Walter Egerton, Governor of British Guiana, who has been over the route, estimates the cost of a railroad from the coast to the southern boundary would be a million and a quarter pounds. The distance is about 380 miles, and then if the Brazilian Government would build a rail-

road from Manaus to meet it, a distance of 300 miles, there would be a thru route from the Caribbean Sea to the Amazon and ultimately to Rio Janeiro and Buenos Aires. This is a project to rival Cecil Rhodes's scheme of a Cape-to-Cairo railroad and perhaps more remote from realization. For Brazil has no money and if she had would not be inclined to spend it in draining the hidden wealth of the hinterland to a British port. The British part of the project, which would be practical and profitable, has been postponed indefinitely by the war. American capitalists have, it is said, offered to construct a railroad into the interior, but they want more land as a bonus than the Government is willing to give them.

A country of such extent and resources as British Guiana cannot remain undeveloped much longer. I'm as confident as

ANOTHER NIAGARA

The Kaieteur Falls on the Potaro River, a tributary of the Essequibo River, are nearly five times as high as Niagara and about four hundred feet wide, but they are rarely visited by tourists because there is no railroad leading into the interior

Raleigh and there's bound to be a boom, but I'm as uncertain as was he when it will come. The colony is doing well as it is, now that its sugar is in demand owing to the shutting off of German beet sugar and the lowering of the American tariff bars. Anthony Trollope says of Demerara that "the Government is a mild despotism tempered by sugar." Some of the people would put it "an absolute despotism of sugar," for they gave me to infer that the factory had more power than the Government House. But whoever runs the country seems to do it well enough.

According to Trollope, "The men in Demerara are never angry and the women are never cross. The only people who do not thrive are the doctors." On the authority of personal observation and experience—for I lived in Demerara from Saturday to Monday—I can contradict all three of these statements. He goes on to say: "When I settle out of England . . . British Guiana shall be the land of my adoption." With this I have no quarrel. For he might easily have made a worse choice of residence. When I returned to New York I

found the thermometer ten degrees above what I had seen it in South America. I got one mosquito bite in Demerara. I got five coming up New York Bay.

My week-end in Demerara was a success. I wondered why I had not gone there before since it is so interesting and so near. The Philippines are still closer to Australia and would form a natural extension of the territory in New Guinea which the Australians have recently taken from the Germans. Under the humane and efficient rule of the Aus-

tralis the Philippines would prosper and the interests of the natives would be safeguarded. On the other hand, our experience in the Philippines, Porto Rico and the Canal Zone has shown that we can be trusted with colonies, for we better the British in some respects, such as education and sanitation. The acquisition of British Guiana by the United States would bring about an influx of capital and a development of the resources of the country which otherwise will be indefinitely delayed.

Intrinsically the Philippines are vastly more valuable. But on account of their situation they are less valuable to us than Demerara would be. To make the bargain more nearly equal and to complete the territorial readjustment the British West Indies and Honduras should be included. That would still leave the advantage on the British side, for the area of the Philippines is 120,000 square miles and their population 9,000,000, while the area of British Guiana, Honduras and West Indies is 111,000 and their population 2,100,000.

Why not swap?

A BARGAIN FOR BOTH

Why not exchange the American Philippines for British Guiana, West Indies and Honduras?

Their area is nearly the same.

They lie in much the same latitudes.

Both contain immense undeveloped resources.

The Philippines are far away from us, and the British Caribbean possessions are far away from England. But the Philippines come within thirty miles of British territory and the British West Indies come within forty miles of American territory.

Under either flag the people would be protected, their welfare provided for, their prosperity promoted, and their present self-government maintained and extended.

More Americans and Englishmen voluntarily exchange citizenship in a few years than would be involved in this transfer of territory.

The danger of war would be lessened.

The cost of the navy would be reduced.

The commercial advantages to all the countries concerned would be incalculable.

RECOMPENSE

BY EDWARD BLISS REED

Where the green fir-tips meet the sapphire sky,
A gull, cloud-white,
Careless of earth, floats insolently by
In the warm light.

Still, imperturbable, it holds a course
To lands unknown,
And scornful of the south-wind's gathering force
It sails alone,

Seeing unmoved the noon's exultant glow,
The evening's grief,
The wind-swept waves that crumble into snow
Upon the reef.

The ships becalmed or scudding for the shore
In wind and rain,
Alluring isles—all these it passes o'er
In calm disdain.

Deep in the woods, the sea left far behind,
I listen long,
Searching in ambush, yet in vain, to find
Who sings that song.

I know those notes pure as the brooks that gush
Down Alpine vale;
Enchantress of the woods, the hermit-thrush,
Our nightingale.

Its world a forest bough; here in the shade
It sings unseen
The magic songs a yearning lover made
To charm a queen.

The ocean-wandering gull from all his quest
Can nothing bring.
You have the world within your throbbing breast,
For you can sing.

M. William Shak-speare:

EIGHT PAPERS BY FREDERICK HOUK LAW
IN OBSERVANCE OF THE THREE HUNDREDTH
ANNIVERSARY OF SHAKESPEARE'S DEATH

The Comedies: Plays of Fun and Fancy

SHAKESPEARE'S plays are full of fun and laughter, sometimes having the spirit of schoolboys playing jokes and hurrahing at nonsense; sometimes the happy spirit that characterizes people set free for a time from the cares of life, and sometimes a kind of sober fun that recognizes sadness, but smiles in spite of everything.

In certain comedies, like "The Comedy of Errors" and "The Taming of the Shrew," Shakespeare's humor is more boisterous than elsewhere, as tho he had resolved to write "Even to the world's pleasure, and the increase of laughter." Such plays are written without deep searching into character. They turn on unusual and surprizing events, and ring with the laughter of a hearty young man, not wholly thoughtless, but more ready to laugh than to moralize. They have the spirit of the rogue Autolycus in his song:

Jog on, jog on, the foot-path way,
And merrily hent the stile-a;
A merry heart goes all the day,
Your sad tires in a mile-a.

The spirit of joyous comedy makes the plays so delightful that we do not expect them to give us much of poetry or lofty thought. We read them for their buoyant fun.

In some comedies, like "Love's Labour's Lost" and "A Midsummer Night's Dream," Shakespeare gave his happy imagination full scope. In such plays he looked upon the world, not so much as a reality, as something interesting, whimsical, a subject for humor; and upon the serious side of life as something far-off and strange—a subject for poetry, perhaps, but not a stern fact. In such a comedy as "A Midsummer Night's Dream" he plays with life, while his

Imagination bodies forth
The forms of things unknown.

A small group of plays echoing
with loud laughter, and rough and

boy-like in humor, with some others that are redolent with idle imagination, fancy and dreams, is the product of Shakespeare's young manhood before he had felt the gripping hand of reality. In the period in which he produced these merry plays he wrote some other and darker plays as well, but in them, too, he looked upon life as a pageant rather than a mystery, writing, it is true, some cruel and gruesome plays, but regarding event rather than soul, and looking upon history as

The tide of pomp
That beats upon the high shore of this world.

It is only natural that Shakespeare, as a young man, should be far more interested in plot than in character, far more interested in what his characters do than in what they really are, far more ready to play upon words, and to revel in puns, conceits and tricks of style.

"In the very May-morn of his youth" when Shakespeare was between twenty-six and thirty-three years old, he wrote the hilarious "Comedy of Errors," the boisterous "Taming of the Shrew," the happy-

go-lucky "Henry IV," Part I and Part II, and its sequel, "The Merry Wives of Windsor," the lively "Love's Labour's Lost," the romantic "Two Gentlemen of Verona" and the fanciful "A Midsummer Night's Dream."

Anyone who would look into Shakespeare's plays for mere amusement and the delight of escaping from the too-stern world around him, should read any of the eight comedies written in Shakespeare's early manhood. It is altogether probable that they have created more laughter than any other plays ever written. They rest most largely upon the surprize of events, and deal very little with character analysis.

The "Comedy of Errors" is little more than a hit-or-miss, slap-stick farce from beginning to end, with just a relieving touch of the romantic and the serious. The more tragic element is introduced in the story of unfortunate, old Aegeon who, after years of fruitless search, at last finds his wife and two sons at a moment when he thinks he has been sentenced to death. In his story there is a hint of the greater power, rising from a rare combination of inner nature and action, that characterizes Shakespeare's more distinguished plays. The "Comedy of Errors" is practically all action. Twin brothers and their twin servants are so taken for one another that they hardly recognize themselves. The wives of the married claim the unmarried as their husbands; one twin receives money due the other, and the servants are beaten for each other's faults. Such material is not the material for character drawing. It is the subject of farce, but Shakespeare has touched even this broad canvas of laughter with a refining hand.

"The Taming of the Shrew" is somewhat the same sort of play, but it has a greater element of character and a finer spirit of romance. Like many of Shakespeare's plays, it is complex in structure, having three distinct stories. One is that of the drunken tinker, Christopher Sly, who, picked up by a rich lord and his

SHAKESPEARE?

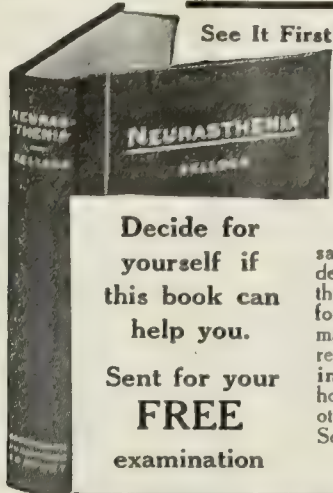

The Zoust or Soest portrait, painted by Gerard Soest, born twenty-one years after Shakespeare's death, is identified with the poet "only on fanciful grounds"

servants, is put into an elegant bed in a near-by castle and told that he is not himself but someone else! Another is the story of Baptista's daughter Bianca, who outwits her father and two unwelcome suitors by receiving her lover disguised as a teacher of languages. The third story is that of Baptista's other daughter, Katharina the Shrew, whose seemingly irrepressible temper had terrified everyone around her till Petruchio, a gay-hearted young man from Verona, marries her against her will. Such a play is of course an action-play, but it turns very pleasantly in the direction of character. It has many of the farcical elements of the "Comedy of Errors," but it also has a delightful whimsicality and many touches of gentle romance.

The two parts of "Henry IV" and "The Merry Wives of Windsor" likewise contain the element of rough, farcical humor, but they also give still stronger character portrayal. Henry IV is a combination of history-play and farce-comedy, presenting on the one side the tragic story of Henry IV struggling against rebellious subjects, and on the other the low-comedy story of Falstaff, an irresponsible tavern roisterer. The young Prince Hal appears in both stories and brings them into harmony, at first being little more than a careless, jesting, prank-playing companion of the too-good-hearted and over-bibulous Falstaff, but rising, when real responsibility comes, into a serious-minded king. In "Henry V" the story of Falstaff is brought to a close when we learn that he died "Like any christom child" and "babbled of green fields." The story of Prince Hal develops into heroic proportions in the epic-like account of Henry the Fifth's victories over the French. The entire story of Prince Hal, given in three plays, is not unlike Shakespeare's own life-story, a development from somewhat wild, mischief-making days into genuine greatness. Some have chosen to consider the story of Prince Hal as partly autobiographical.

In "Henry IV" the character interest is important. There is the pathetic Henry IV mourning his failure to attain happiness, and finding how "uneasy lies the head that wears a crown." There is the quick-tempered, over-zealous Hotspur, whose boy-like passion sweeps us with him, but who, in spite of his seeming greatness, lacks the broad manhood of Prince Hal, whom he despises. Most notable of all, there is Falstaff, the most laughable character Shakespeare ever conceived—a fat, jolly knight, too fond of drink, too fond of idle sport, but always the soul of good humor

Have You Nerves?

Dr. John Harvey Kellogg, tells you, in his book, "Neurasthenia," that nervousness is **not a disease** but a symptom of internal conditions which may be controlled and corrected by care and attention to habits of living. Drugs cannot permanently relieve nervousness. Only natural methods are effective. These Dr. Kellogg recommends—and so thoroughly explains that all who read may follow. Dr. Kellogg has successfully treated thousands of cases of nervousness during his forty years as Superintendent of the great Battle Creek Sanitarium. He deals with facts—not theory. No one is better able to furnish you with practical guidance for the relief of nervousness. The book contains over 300 pages, many illustrations, complete diet tables and full instructions for exercise, rest and sleep. We will send you this valuable book for **free examination** if you will just tear out and mail the coupon **now**. Learn how easy it is to permanently relieve sleeplessness, exhaustion and other forms of nervousness. This free examination offer is limited. Send the coupon **now**.

Lincoln and Lee agreed on one thing

Abraham Lincoln and Robert E. Lee differed radically on the one great question of their day. But on a single point they proved to be in complete agreement—the value of a policy in the Hartford Fire Insurance Company.

Both of these great leaders turned to the "Hartford" for insurance on their homes before the breaking of the storm of the Civil War. In 1859 General Lee took out a policy on "Arlington," his beautiful estate in Virginia, while President Lincoln insured his home in Springfield, Ill., just before he left for Washington to be inaugurated in 1861.

The documents relating to the policies of Lincoln and Lee are preserved in the vaults of the Hartford Fire Insurance Company, for there is a true historic significance in the records of the

INSURANCE SERVICE OF THE TWO HARTFORDS

The Hartford Fire Insurance Company has helped make American history. Through every war, disaster and conflagration, the Old Hartford has met every honest claim promptly and to the satisfaction of its policy holders.

The Hartford Accident & Indemnity Company carries into the field of casualty and bonding insurance the same high principles and integrity that have always marked the history of the parent organization.

The two companies, between them, write practically every form of insurance but life insurance.

"BUT FOR MY BONNY KATE, SHE MUST WITH ME"

Act iii, Sc. 2, of "The Taming of the Shrew." Petruchio, Katharina and Bianca just after Petruchio has married Kate. One of the plates from Boydell's "Shakespeare Prints" published in 1805 in two huge volumes after Alderman Boydell had commissioned many painters, including several academicians like Wheatley, who painted this, to illustrate Shakespeare and had established a Shakespeare gallery in London

and friendliness. Falstaff is the most audacious, the most laughable, and the most lovable of all Shakespeare's comic characters.

"Love's Labour's Lost" and "The Two Gentlemen of Verona" have less of the boisterous and more of unreality. In the first a king and three lords withdraw from the busy world, but when a French princess and her three ladies intrude, study gives way to love! In the same play is the story of the fantastic Don Armado and some ignorant country people who make ridiculous attempts to present a play. Just then the Princess' father dies, the happy company must separate, and all love's labor is lost. In the second, a loyal girl named Julia, disguised as a boy, follows her faithless lover to Milan and regains his love. Her lover's friend, treacherously thwarted from a romantic elopement, becomes leader of a band of outlaws—and there with him, in the good, free wood, all the characters are at last happily united. Such stories are the light romances of youth, the play of events under the light of love, with little of seriousness, and much of sparkling wit.

"Love's Labour's Lost," like "Henry IV," has interesting passages that

may refer to Shakespeare's personality. The dramatist had come down to London from a country village, and he had gained education by experience rather than by study. In this play he ridicules continuous study as something that blinds one to the world, and extols experience.

SHAKESPEARE PICTURES

Readers of these articles who live in or near New York will find it interesting to visit the Fifty-eighth Street Branch of the New York Public Library, 121 East Fifty-eighth street, where Miss Leipziger has gathered about 300 pictures of Shakespeare, Stratford, Shakespearean plays and actors.

An excellent reproduction on heavy cameo paper of Leopold Flameng's etching of the famous Chapdos portrait of Shakespeare will be sent by The Independent to any reader for six two-cent stamps.

Small have continual plodders ever won,
Save base authority from others' books.

In such a song as that which closes the play we find the heart of the country boy:

When icicles hang by the wall,
And Dick the shepherd blows his nail,
And Tom bears logs into the hall,
And milk comes frozen home in pail,
When blood is nipp'd and ways be foul,
Then nightly sings the staring owl,
Tu-whit; tu-who, a merry note.

"A Midsummer Night's Dream" combines the buffoonery, story-telling, and romance of the other plays with a poetic beauty of its own. The whole play is fantastic, dream-like, "Like far-off mountains turned into clouds." It is a play of love and laughter and fairyland and is fitly named.

At about the time when Shakespeare wrote these plays he also wrote other and sadder plays, but in them, as in these, he showed love for story, and delight in playing upon words. He had not yet risen to the greater heights of character, of poetry, and of philosophy. The early comedies, showing the quick, interested and care-free heart of the young Shakespeare, make a delightful introduction to the greater plays.

MOVIES INSTEAD OF SALOONS

BY CHARLES STELZLE

WHEN saloon-keepers organize to fight motion picture houses it is a sign that the picture shows are either very, very bad, or very, very good—that they are so much *worse* than the saloon that even a saloon-keeper cannot stand for them, or else that they are so much better than the saloon that they threaten to injure the saloon-keeper's business.

There is no doubt that the latter is the actual situation. Nothing in social and recreational life is doing more to furnish a saloon substitute than the motion picture house. And furnishing a saloon substitute isn't the comparatively easy task that most people think it to be.

There can be no real substitute for the saloon for those who now find their chief pleasure there. An institution which has in it so many serious objections, many of which constitute its main charm and attractiveness for those who patronize it, cannot very well be duplicated—*minus* all these features, and still be a success. The best that can be done is to try to discover what are the really good features of the saloon, and then to incorporate them in existing agencies or organize new ones.

Several outstanding peculiarities immediately strike one as the saloon is studied. In the first place, there is the perfectly natural way in which the saloon is conducted. There's nothing strained about it. Men aren't made *too welcome*. Few restrictions are imposed. Those who conduct the place make themselves as inconspicuous and as unobtrusive as they can. Those who patronize the saloon usually have nothing special *done* for them. They pay for what they get, and they do it cheerfully—often hilariously. There's a spirit of democracy about the saloon which is tremendously appealing. A five cent piece places the average man upon an equality with everybody else in the place; the music helps to produce a cheerful atmosphere.

The motion picture house possesses all of these virtues and many others besides. Here is

The motion picture show, once suspected of being the enemy of morality and as such subjected to unprecedented restrictions and censorship, is now generally recognized as a valuable educational agency and as a dreaded competitor of the saloon. Mr. Stelzle, machinist, sociologist and Presbyterian preacher, here explains the reason for its popularity among the working classes.—THE EDITOR.

found the free normal atmosphere to which the average man is accustomed. Attentions are not forced upon him. There's no one at the door to bid him an embarrassing welcome or speed him a confusing farewell. He doesn't have to talk about himself and his affairs, or about his family. The average workingman is about as shy a creature out of his natural element as one can find anywhere. In the motion picture house he may come and go in the dark. He isn't compelled to wear good clothes—he doesn't even have to change his shirt or put on a stiff linen collar. He can come just as he is. To the average workingman "dressing up" is an intolerable burden. When a man hugs the little red ticket that is flipped at him thru that cleverly contrived machine in the selling booth in front

of the picture house he takes it with a feeling of independence, and passes into the show with his head up.

Furthermore, he can take his wife and children. He cannot take them to the saloon. The workingman can afford to take his family to the picture show, because it usually costs him no more than if he spent the evening in a saloon. And he feels a lot better for it the morning after. This often induces him to try it again. A few such experiences and the entire family are regular customers at the motion picture house.

Whereas in the saloon the evening is usually spent in an inane or worse manner, the modern motion picture show has in it a distinct educational advantage, and the education comes in a form which is palatable and easily digested. The mind isn't taxed unduly. The workingman really hasn't much mind left at the end of an average day's work. Also even the comparatively popular educational films are interspersed with others of a dramatic or humorous character. Sometimes the dramatic picture has an element of moral or ethical teaching which is decidedly wholesome. The cheap, harmful film is rapidly disappearing even from the cheaper houses. The entire film business is on the up grade.

To what extent the church or the school may engage in the motion picture business depends upon the character of the neighborhood, the ability to finance properly such an enterprise, the opportunity for making a selection of the right kind of films, and some other questions which may be peculiar to the locality or the organization attempting it. But principally, it is a matter of conducting the enterprise in a business-like manner, for running a motion picture show is no job for amateurs—it requires specialization and experience, which, however, may be acquired by educational and religious institutions if brains and energy are put into the task. Chiefly, one must have studied the element of human nature.

LO AND BEHOLD

BY ELLIS O. JONES

See the War Expert!

Yes, what a solemn-looking, wrinkle-browed, Atlas-like individual he is. What is the War Expert doing?

The War Expert is making sapient and pregnant observations about the war.

Does the War Expert take himself seriously?

Oh, yes, very seriously indeed. He finds it absolutely impossible to admit of the slightest chance of his being wrong in any particular.

How did the War Expert become a War Expert?

By being willing to draw the most infinitely far-reaching conclusions from the most scant and unreliable data and to assert these conclusions in a positive and scholarly manner.

Is this the only War Expert there is?

Oh, no. The woods are full of them and the newspapers are full of them and the highways and byways are full of them.

How interesting. Do the War Experts agree with each other?

Oh, no. One of the essentials of a true and trustworthy War Expert is that he shall agree with no other War Expert as to the least detail whatsoever.

New York City

THE WORLD OVER

Bird Spies

The pigeon of war, first cousin once removed of the dove of peace, has become an important factor in modern warfare.

His special value is as a photographer, a messenger and a spy. Equipped with a camera peculiarly designed for his purpose, he can dodge shells and aeroplanes and penetrate the enemy's lines until their innermost secrets are recorded by his lens.

The tiny camera is fastened under the bird's body, where it will not impede flying. Its shutter works automatically.

The birds are trained as ordinary carrier pigeons—in fact they are still used to some extent to carry messages—but it is as scouts that they have become indispensable to practically every army in Europe. The French have made the most thorough tests of the war pigeons' efficiency and their conclusions have resulted in the addition of many automobile pigeon houses to the general army equipment.

Whether or not the birds accustomed to carrying cameras and dispatches can be induced to substitute the olive branch is an interesting subject for speculation.

Record Speed and Endurance

The repeating "Autophone" is the latest thing in talking machines. It is just what its name suggests, a talking machine equipped with a device upon which twelve cylindrical records may be placed at one time. After these records have been placed in position the patent reproducer is placed at the starting point; the case is closed and the powerful spring, which will run for a half hour with one winding, is tightened. Simply pulling out a pin starts the mechanism to working and it requires no further attention for half an hour or more. The machinery has been so arranged that just as soon as one record has been finished the arm holding the diamond point reproducer is automatically carried back to the starting point, and the wheel holding the records turned around one notch, whereupon everything is in readiness for the playing of another selection. At the given instant the point of the reproducer is dropped upon the record and selection No. 2 begins.

A sufficient number of records may be placed in this machine to provide a program sixty-five minutes long. After one record ends it takes the machine

Medem Photo Service

FRENCH ARMY PIGEONS

They travel by automobile and have a commissariat all their own.

just a minute and a half to get in position to begin the next. When one set of records has been played it takes but five minutes to change the entire set and to have the machine again in motion.

The Census Bureau

Probably few people visit Washington and look over the different departments of Government activity without a sense of wonder and a query as to

Albert Marple

AN HOUR'S CONTINUOUS CONCERT

whether after all it is worth while. Especially is this true in regard to some of the bureaus, such as the Census Bureau, which do not bulk as large in the public eye as do the departments of War, Navy, State, Agriculture, etc.

Yet when one looks into the detail more closely it becomes evident that there is no other bureau which touches the national life at so many and such vital points. Its reports decide the apportionment of members of Congress among the states, and without its testimony no new state can be admitted to the Union. Upon its figures are based our immigration laws.

Business men look to its reports on manufactures, agriculture, transportation, electrical industries for suggestions as to investment. The Cotton Exchange watches with feverish anxiety for its monthly reports and municipalities use its financial statistics of cities for testimony as to the best methods of accounting.

It registers the number of the insane, of criminals in prison, of paupers in almshouses, of inmates of benevolent institutions, of members of the different denominational bodies. It tells the number of persons in different occupations, business, agriculture, manufactures, mining, the professions; records the births and deaths wherever there are registration areas and reports on the prevalence of divorce.

Its volumes pour in an almost unending stream from the Government Printing Office and can be had, except in a few cases, by any American citizen for the asking.

The Shark in Commerce

Products obtained from the shark are both numerous and valuable. Shark fins furnish a jelly that makes a delicious soup, for which there is an excellent market wherever Chinese are to be found.

The shark's liver gives a clear oil excellently adapted for the lubrication of the parts of watches, clocks and fine guns. This oil is held in some quarters in as high esteem as is the oil obtained from porpoise and dogfish liver, long claimed to be the finest of animal oils.

Shark skin is of great value. It is of a beautiful burnished gray or bluish color, and at first glance looks like finely grained leather because of the tiny prickles plentifully set one way. There are so many of these prickles, quite invisible to the naked eye, that the effect

afforded the dried skin is one of rich beauty, a quality that renders it particularly valuable.

Even the bones of sharks are useful. The spine is in demand by the manufacturers of curious walking-sticks. They pass a thin malacca or steel rod thru the round, polished vertebrae, and the result is a cane that sells for a high price. The shark-spine stick is a great favorite in Germany.

How They Have Grown

The Woman's Club, it seems, is one of those institutions which we have always had. To be sure, the number of them has grown exceedingly since the early days. There are at present over 2000 women's clubs in America alone.

But in 600 B. C. there was only one in the world and that was in Greece, founded by a lady named Sappho, who instructed the club in versification and the appreciation of literature.

In the fifth century B. C., Aspasia, unofficial political adviser to Pericles, started another club for the intellectual improvement of Greek women.

There are records, too, of women's clubs in early Greece, which met to discuss municipal questions and which voted funds for the erection of statues and monuments in honor of distinguished men—in those unenlightened days the monuments were all to men.

Africa came next in the development of women's clubs—its most notable the one at Alexandria, where Hypatia, one of the foremost mathematicians and philosophers of her time, taught the studious women of Egypt. Contrary to modern custom, the men begged permission to join, and astronomers, philosophers, statesmen and scholars were admitted regardless of sex.

The first club organizer in America was Anne Hutchinson, who came to New England in 1634 and formed circles of women to discuss the sermons of the day and other matters of religion. The interest in these discussions brought the men of that colony to their sessions, too, and finally caused the banishment of Anne Hutchinson.

That put a stop to women's clubs for nearly a century. The next attempt was made in 1818, again in Boston, when an organization called The Gleaners came into existence. This was composed of unmarried women, who met to discuss questions of the proper attitude to be maintained toward gentlemen. With the marriage of all the members the club ceased to exist.

Women's clubs spread thruout the country after that. Illinois, Ohio, Indiana, and Michigan followed the lead of Massachusetts—one of the most flourishing of their ventures was the Minerva Club of New Harmony, started by Mrs. Constance Fauntleroy Runice.

But all of these were more or less "feelers," preliminary to the actual beginning of the woman's club movement in the United States. The New England Women's Club in Boston and the Sorosis Club in New York, both founded in 1868, laid the foundation for the organization of women's clubs today, in which they are still active leaders.

"My—but Sanatogen makes one enjoy living!"

AND you know it is a pleasure beyond the telling when, after weeks of overwork have weakened your system's forces, you begin to take Sanatogen and *feel* that old-time vigor come back with a new desire to accomplish and a new joy in living.

The best of it is that it's no *temporary* relief that Sanatogen gives—but a *real, lasting* improvement in bodily health—and especially in the health of the nervous system. For combining the properties both of a *food* and a *tonic*, Sanatogen nourishes the nerve-cells, rebuilds the wasted energies and tones up the whole system as it helps gather a new store of strength.

You can scarcely doubt that Sanatogen will *help you* when you remember that over 21,000 doctors have endorsed it in personal letters—and when you read what *Charles D. Sigsbee*, Rear Admiral, U. S. Navy, writes:

"After a thorough trial of Sanatogen, I am convinced of its merit as a food and tonic. Its beneficial effects are beyond doubt."

Or what *Colonel Watterson*, the famous editor, writes:

"I do not think I could have regained my vitality without Sanatogen acting equally upon the digestive organs and the nerve centers."

Sanatogen is sold by good druggists everywhere in three sizes, from \$1 up.

"THE SHEPHERD IN THE DISTANCE." A PANTOMIME WRITTEN, DESIGNED, ACTED, PRODUCED BY WASHINGTON SQUARE PLAYERS

TWO LITTLE THEATERS GROW UP

BY HANNAH WHITE

PRACTICALLY everyone, with the possible exception of theatrical managers, has a theory for the ideal theater—a place for something more than dramatized best sellers and vehicles drawn exclusively by stars. And in consequence amateur companies and "little theaters" have sprung up all over the country, most of them leaping into the experiment with complete abandonment of tradition and frequently finding, when they stop to look, that the sum total of their achievement is a difference without a distinction.

Two exceptions, both in New York City, have succeeded during the present theatrical season in establishing themselves as forces to be reckoned with in the future of the American stage. Both are democratic ventures, both are presenting plays that have no appeal to the commercial manager, both are giving their attention exclusively to the stage and forgetting the box office, both are interested in stimulating and developing new and artistic methods of acting and producing—and both are winning out.

It was just a year ago that the Washington Square Players, "that valorous band that came out of nowhere late last winter and settled down quietly to the business of taking the curse off the word amateur," presented their first program of four one-act plays to an audience of 299 people at the Bandbox Theater.

Their capital was exactly nothing, their stock in trade boundless enthusiasm, in-

defatigable energy and a wide variety of talents. And next morning the newspapers heralded their production as "the most novel theatrical opening ever seen in this city," "a stimulus and suggestion for all who are concerned with the drama."

Thruout the rest of the season they played three or four times a week to a house sold out in advance for every performance, giving in all fourteen new plays by American writers and

three by foreign authors. The entire staff, the press representative and all the actors contributed their services. All seats were sold at fifty cents.

Now the theater is leased for eight performances a week, a part of the seats are sold at \$1, and a living wage is paid to each of the actors and producers who form the nucleus of the company. Second only to their achievement of artistically worthwhile productions is the Washington Square Players' record of paying as they go and even putting aside a surplus for further experiments. The company even hopes this spring to be able to make a tour of New England and of the Middle West.

The secret of their success is in the personnel of the Washington Square Players—so-called because they live in Greenwich Village, "the Quartier Latin—minus the Latin—of New York." They are all young and they are all idealists. They have convictions and they have the courage to carry them out. Their convention is unconventionality and their motto Dare!

Moreover, they are willing to work hard—as actors, playwrights, producers, designers and, in a pinch, ticket-sellers or scene-shifters, all at once. For one person to write, for instance, the first play of a bill, to take the leading part in the next, and to design the costumes or direct the production of the third seems quite possible to them. Even the publicity manager may rush from lobby to stage to "supe" when the business calls for "a throng of passersby."

Photograph by Charles P. Cushing

THE NEIGHBORHOOD PLAYHOUSE

Where the heritage of the immigrant is furthering our artistic ideals

The selection of plays has been particularly happy. Aside from their individual merits they have been chosen to present interesting contrasts and to include a wide range of modern dramatists.

But it is in the creation of artistic stage settings, daringly impressionistic, that the Washington Square Players have made their most important contribution to dramatic progress. Colors have been used as never before to register ideas. The audience gasps when the curtain goes up, but it applauds, too; and before a word is spoken the atmosphere of the play is established and the imagination of each spectator is in good working order.

"Art for art's sake" has been quoted as the slogan of the Washington Square Players. Art for the people's sake sums up fairly well the purpose of the second successful dramatic experiment in New York, the Neighborhood Playhouse. It too was opened in February, 1915—the outcome of the work of the festival and dramatic groups of the famous Henry Street Settlement.

For nine years these groups have presented festivals and pantomimes in the gymnasium of the settlement, developing their possibilities until they were able to form a dramatic club—The Neighborhood Players—which did so well that they were given a little theater, offering every facility for artistic productions.

"Jephthah's Daughter," a Biblical festival, opened the playhouse with a performance beautiful in itself and significant both as a reminder of our indebtedness to Jewish literature and art and as a demonstration of the potential talent of the East Side. Seventy-eight young people were in the cast, and many more, as craftsmen, composers, painters, and musicians, seamstresses, and producers, had a share in the production.

During the year a half dozen plays, chosen for their educational value as well as for their dramatic possibilities, have been produced. The Thanksgiving Festival, an elaborate pageant, which brought out the musical as well as the dramatic ability of the company, was the most successful production of the year. To the East Side it was an interpretative festival, which they appreciated as participators. But the rest of New York found it a delightful entertainment.

The Thanksgiving Festival typifies the aim of the Neighborhood Playhouse, "to recapture and hold something of the poetry and idealism that belong to its people and open the door of opportunity for messages in drama, picture, story and song."

THE NEW BOOKS

RUPERT BROOKE IN AMERICA

There are two main streams in Rupert Brooke's poems: a keen and frequently ironical analysis of some phases of emotion, and a tingling freshness of sense-experience, expressed alike with the greatest pungency and beauty of phrase. In the *Letters from America*, which adds one to the small group of books by and about the vivid young Englishman, there is little of the searching analysis of men's hearts, but a great wealth of things and the appearances of things, pictured and discussed with that same piercingly suggestive diction.

Brooke left England in May, 1913, to visit the United States, Canada, and the South Seas, and was away until the beginning of June, 1914. Thirteen travel letters were written to the *Westminster Gazette*, and one other paper appeared in the *New Statesman*; and these have been collected, together with an additional essay, of which more later, by Brooke's close friend, Edward Marsh, who is also preparing a memoir and such posthumous matter as still awaits publication. Henry James supplies a preface.

It is fortunate that the poet's chief concern is not with the United States, but with Canada. He was so finely linked up with the English heritage, as Mr. James points out, that his reactions to the half-English Dominion would naturally be more interesting than his impressions of our own country, and his curiosity as to the surfaces of things quite dominates the brief attention he gives to New York and Boston, which alone are treated in these rapid and frankly casual sketches. Mr. James remarks:

We feel him not a little lost and lonely and stranded in the New York pandemonium—obliged to throw himself upon skyscrapers and the overspread blackness pricked out in a flickering fury of imaged advertisement for want of some more interesting view of character and manners. We long to take him by the hand and show him finer lights—eyes of but meaner range, after all, being adequate to the gape at the vertical business blocks and the lurid sky-clamour for more dollars. We feel in a manner his sensibility wasted and would fain turn it on to the capture of deeper meanings.

Most interesting among the American observations is Brooke's impression of a Harvard commencement. Here there is some balm—but not much—for the friendly contempt which he pours upon New York and the typical American.

Brooke saw Canada when the flush of the Great Speculation which made the Dominion a nation of real estate dealers had not yet died away, killed by the collapse of land values. So he speaks with amusement and some scorn of the booster and the land trader. "To boost," he says, "is to commend outrageously." And there is a delicious account of an encounter with two boosters.

I traveled from Edmonton to Calgary in the company of a citizen of Edmonton and a citizen of Calgary. Hour after hour they disputed. Land in Calgary had risen from five dollars to three hundred; but in Edmonton from three to five thousand. Edmonton had grown from thirty persons to forty thousand in twenty years; but Calgary from twenty to thirty thousand in twelve. . . . "Where"—as a respite—"did I come from?" I had to tell them, not without shame, that my own town of Grantchester, having numbered three hundred at the time of Julius Caesar's landing, had risen rapidly to nearly four by Doomsday Book, but was now declined to three-fifty. They seemed perplexed and angry.

The dry humor which flavors this is much in evidence throughout the book. The often repellent irony which one finds in the poems is softened, and, oddly enough, Brooke finds in all his travels here no such distressing grotesqueries as some of the poems exhibit. One piece of quaintly phrased characterization must be quoted:

His mind was even more childlike and transparent than is usual with business men. The observer could see thoughts slowly floating into it, like carp in a pond. When they got near the surface, by a purely automatic process they found utterance.

To suggest that humor is the predominant strain in the book would be an in-

justice to the poet in the man. There are places where the sheer beauty of the description and the delicacy of the comment would be hard to surpass in the whole range of English writing. Particularly in telling of the Northwest, where Brooke got to the frontier and the mountains, and of Samoa, does the poet break away from the journalist—tho either rôle sits well on him. A few papers come to their conclusion with a lovely falling cadence that recalls Ruskin.

The last chapter, somewhat unhappily called "An Unusual Young Man," ties the book to the war by presenting what purports to be a straightforward record of a young man's mental processes when he came home from an isolated vacation to sudden news of the Great War. It is, of course, autobiographical, and it adds interestingly to the distinctive literature of this war—the literature that attempts to study the impact of war upon the individual.

Of the preface by Mr. James one is inclined to say little, remembering the blow that has fallen upon him. There is a subtle study of the relation between Brooke and his heritage and environment, but that curious style which was once a matter of admirable, tho often tedious precision, has here lost itself in a sad welter of words.

Letters from America, by Rupert Brooke. New York: Scribner. \$1.25.

A DAUNTLESS LADY

In *Life and Gabriella*, by Ellen Glasgow, there is a duel between the two, and, at first, Life appears to have conquered the bright, spirited girl. But Gabriella has courage as well as spirit and the gift of doing one thing well, which is the best gift the fairies can bring to the cradle of any child. Miss Glasgow contrasts Richmond in the middle nineties and its spare and Spartan living, with New York in its growing extravagance. The effort of the less opulent people in both cities to keep up appearances is a sordid struggle to which she does full justice. Gabriella's escape into the business world, and her career as a successful woman of affairs, add the romance of trade to the story of social and domestic complications. The heroine who can throw aside her home worries by a plunge into practical finance, is happier than the lady of older fiction who could only sit by the fire and weep—and she is more interesting.

Doubleday, Page. \$1.35.

AMERICA EXPLAINED

The lectures delivered in 1914 by President Arthur Twining Hadley of Yale University at Oxford and at the University of Virginia have now been published in *Undercurrents in American Politics*. The analysis of the realities of American political life is more searching and complete than would be expected from the brief compass of the

Y E A R B O O K S

In *The Garden and Farm Almanac* Dayboll's has come again. Here one may find the agricultural activities and officials of each state, a list of farming publications, directions for the control of plant pests, besides much other information useful to every dweller in the country.

Doubleday, Page. 25 cents.

The American Whitaker Almanac and Encyclopedia aims to do for the United States what the English Whitaker does for Great Britain. It devotes itself mainly to data of the departments of the Government, the naval and military organizations, the consular and diplomatic service. There are articles on our relations with other powers and a long review of the Great War.

Macmillan. \$2.

For comprehensiveness and compression *The World Almanac* is unequalled. Besides a mass of miscellaneous information, one has here the answers to most questions concerning foreign governments and our own, with data on our schools, libraries, churches, railroads, economic and social conditions, national enterprises and the year's events.

New York World. 25 cents.

The Living Church Annual supplies information as to the Episcopal Church, its officers and clergy, missionaries, missions and societies, the Church of England and those on the continent.

Milwaukee: Young Churchman Co. Paper, 50 cents. Cloth, 75 cents.

The Handbook of All Denominations, prepared by Mr. Phelan, gives the origin, tenets, and numbers of the branches of the Christian Church and will be especially useful in regard to the smaller sects, of which it is difficult to get information.

Nashville, Tenn.: Smith & Lamar. 75 cents.

book. President Hadley says little of the formal changes of law and constitution and much of the purely extra-legal features of our political machinery; the party organization, the power of the boss, the spoils system and the reform movements. The influence of economic factors upon legislation and administration is stressed; the author even venturing the statement that "the whole American political and social system is based on industrial property right, far more completely than has ever been the case in any European country."

Undercurrents in American Politics, by Arthur Twining Hadley. Yale University Press. \$1.35.

SONGS OF WAR AND PEACE

Glorious indeed is the *Vision of War*, as Lincoln Colcord sees it. Here is an idealization, not so much of war, as the martial spirit. "The actual fighting is not of the least importance. . . . The willingness to be killed is the only vital issue." Which is greater, Mr. Colcord asks, the Belgium of peace and plenty and the Congo atrocities, or the devastated Belgium of today? Mr. Colcord's use of free verse is as forceful as Whitman's, and his vision is as wide.

Songs of Brittany make it clear why Theodore Botrel has been a favorite of the soldiers in the trenches. Elizabeth S. Dickerman has translated for us his first volume, published in 1897. His songs are the stuff of which folk-lore is made. They are simple; they are patriotic; they are religious; and, occasionally, as in *The Prude*, who boasts that she does not go walking with the village lads—because "I am not asked, you know"—whimsical.

A volume of unusual merit is *Prayer for Peace and Other Poems*, by William Samuel Johnson. The opening poem, *Prayer for Peace*, strikes a high note that is sustained thruout. The Poor Little Guy is a fine plea for those who suffer most from war. A *La Soiree Musicale* is a triolet of rare grace.

Songs to Save a Soul, by a new English poet, Irene Rutherford McLeod, went into its fourth edition in England in a few months. There is a freshness and charm about the volume that is the result not only of its splendid lines but of its varied themes. The opening poem, *Soft Places*, is typical of the mystical strain that runs thruout. *Lone Dog* is the cry of a rebel; the note struck is akin to that of Masefield, who, by the way, has helped greatly to render the author her due.

The *Collected Poems* of Condé Benoit Pallen is a volume of distinctive verse by a Catholic poet. The book has none of the harshness of our modern verse; it is the work of a scholar and a classicist. There is the flavor of Fitzgerald in *The New Rubaiyat*; something of Milton in *Maria Immaculata*; and *The Death of Sir Launcelot* shows Tennyson's influence.

Charles Erskine Scott Wood's chief claim to fame heretofore has been as a writer of the famous (or infamous, if you will) "Heavenly Dialogs" for *Masses*. In *The Poet in the Desert*, however, he has produced literature.

CONSTIPATION IN CHILDREN

Do you realize how often the foundations of ill health are laid in early childhood—by the neglect of parents who fail to guard their children from the dangers of the constipation habit?

Children should not be given cathartics and strong purges. They weaken the *natural* processes of evacuation and are dangerously habit-forming.

A far safer and saner means of securing normal bowel movements is the use of **Nujol**, which eminent physicians both in this country and abroad are now prescribing.

Nujol is not a laxative, but acts in effect as a mechanical lubricant, preventing the contents of the intestines from becoming hard, and so promoting healthy and regular bowel activity.

Most druggists carry **Nujol**, which is sold only in pint bottles packed in cartons bearing the **Nujol** trademark. If your druggist does not carry **Nujol**, accept no substitute. We will send a pint bottle prepaid to any point in the United States on receipt of 75c—money order or stamps.

Write for booklet, "The Rational Treatment of Constipation."

The Famous DURO Guaranteed Shirts

MONEY BACK

Try in six months' wear, or a year's wear, our famous Duro shirts with neat stripes of blue, black and white. Each collar of Duro shirt is cut style, cuffs are cut style, and the sleeves are cut style. Sleeves are cut style, and the collar is cut style. A Duro shirt is the most comfortable and durable shirt you can wear. It is made of the finest quality of cotton, and is guaranteed to last for a year's wear. If you are not satisfied, we will give you a full refund of your money. Write for more information to the Duro Shirt Company, Room 131, Goodell & Company, 153 E. 34th St., New York.

The largest mail order shirt house in the U.S.

Could You Fill His Shoes?

Suppose a good job were open where you work. Could you fill it? Could you jump right in and make good? Or would the boss have to pass you up because you lacked *training*?

Don't take chances on being promoted. If you want a job that pays good money, get ready for it.

Pick out the job you want in the work you like best. Then start *right now* to get, through the International Correspondence Schools, the training that will prepare you to hold it.

Thousands of men have advanced through I. C. S. training to the very jobs they wanted. What these men have done you can do. All the I. C. S. asks is the chance to help you. No matter where you live, the I. C. S. will come to you and train you in your spare time.

The job you want is within your reach. I. C. S. training will win it for you. The thing to do now is to make your start. Here's the coupon—mark and mail it now.

I. C. S., Box 4501, Scranton, Pa.

SHORT-STORY WRITING

A course of forty lessons in the history, form structure, and writing of the Short Story taught by Dr. J. Berg Esenwein, Editor Lippincott's Magazine. 250-page catalogue free. Please address THE HOME CORRESPONDENCE SCHOOL Dr. Esenwein Dept. 305, Springfield, Mass.

The most violent opponent of free verse will hesitate to say that this is not poetry. In a splendid tribute to the Desert, wherein the Poet talks with Truth, Mr. Wood makes a notable addition to our American verse.

Vision of War, by Lincoln Colcord. Macmillan. \$1.25. *Songs of Brittany*, by Theodore Botrel. Boston: Badger. \$1. *Prayer for Peace and Other Poems*, by William Samuel Johnson. Kennerley. \$1.25. *Songs to Save a Soul*, by Irene Rutherford McLeod. Huebsch. \$1. *Collected Poems*, by Condé Benoist Pallen. Kennedy. \$1.25. *The Poet in the Desert*, by Charles Erskine Scott Wood. Oregon: F. W. Baltes. \$1.

GIVING THE BABY A GOOD START

Sensible suggestions on the care of young children never come amiss to the inexperienced but loving, conscientious mother. *The Baby's First Two Years*, by Richard M. Smith, M.D., may be recommended as certain to be helpful.

Houghton, Mifflin. 75 cents.

NATIONAL QUESTIONS

The current issue of the *University Debate Annual* contains debates on the Increase of the Army and Navy, the Monroe Doctrine, the Minimum Wage, Government Ownership of Telephone and Telegraph, Socialistic Control of the Means of Production and Exchange, and Single Tax.

White Plains, N. Y.: Wilson. \$1.80.

POPULAR SCIENCE

An uncommonly attractive collection of miscellaneous information is that of the *Book of Progress*, which all boys and girls and many grown folk would enjoy and profit by. Compiled by A. A. Hopkins from the last five years of the *Scientific American*, the papers are trustworthy as well as interesting.

N. Y.: Cricks Publishing Corporation. 3 v. \$9.

ST. PAUL

The new volume on *Paul and His Epistles*, by Professor D. A. Hayes, is full of learning vigorously exprest, but lacks freshness of view and historical insight. The author stands in fear of the older commentators and has given us a strange mixture of scholasticism, traditionalism and modern learning.

Methodist Book Concern. \$2.

THE GANG AT SUNDAY SCHOOL

In *Fishers of Boys* William McCormick gives sound advice to religious workers and parents. He has found that boys can be reached best through the gang, and he presents his case in a breezy readable manner. Boys are influenced more by a great baseball player's opinion of religion than by the Old Testament Prophets and a Golden Text.

Doran. \$1.

OUR NEW HIGHWAY

Thirty-one beautiful plates, by a new process of color photography, make C. Lancaster's pamphlet on *The Columbia, America's Greatest Highway*, a notable little publication. Mr. Lancaster was chief engineer in laying out the road that runs thru the Cascade Mountains to the sea, and he knows well the wonderful region, its geology, its Indian legends, its tales of settlement days.

Portland, Ore.: S. C. Lancaster. \$2.50.

THE BEST OF THE MODERNS

The *Trail of the Torch*, by Paul Hervieu, perhaps today the greatest of French dramatists, has now been included in the Drama League Series. The capable translation is by John Alan Houghton. Hervieu's art is here at its best, and the austerity and intensity of the emotional appeal is brought home, whether or not we sympathize with the problem the author has presented after the French fashion.

Doubleday, Page. 75 cents.

HOPE

Professor George Trumbull Ladd has followed his inquiries into the possibilities of knowledge, moral values, and faith by a new volume, the last of the series, entitled *What May I Hope?* With delibera-

tion and sound reasoning he outlines the essence and ground of hope, its practical use and value, and its objects in the moral and social realms, and points out the basis upon which humanity rises to the assurance of immortal life.

Longmans, Green. \$1.50.

THE DIFFICULT ART OF GROWING UP

Exercise, air, rest, food and "the control of inner force" are Mr. Moore's essentials in *Keeping in Condition, a Handbook on Training for Older Boys*. Worry, colds, constipation, are among the dangers that check full growth and participation in race and national progress. The sex life is placed normally among other functions and conservatively treated.

Macmillan. 75 cents.

THE PURITAN LEGACY

In a series of readable historical sketches James Phinney Munroe shows the strength and possibilities of that often maligned quality, *The New England Conscience*. He also discusses democracy and woman suffrage; gives a most interesting description of the Middle West, the Heart of the United States from a New England standpoint; and endeavors, not very convincingly, to show the basic relation between the New England Conscience and the Eternal Feminine.

Boston: Badger. \$1.25.

SUGAR-COATED HISTORY

The twenty-third edition of Gertrude Atherton's biographical story of Alexander Hamilton, *The Conqueror*, proves the popularity of a book which combines authentic history with an intensely interesting novel. The personality of "the greatest of constructive American statesmen, on the wheels of whose work this country still travels" is portrayed with enthusiastic appreciation of the power of his intellect and the scope of his career.

Stokes. \$1.50.

FOR WOMEN AND BY WOMEN

The middle of the nineteenth century saw the beginning of many movements, few of them more important than the founding of the Young Women's Christian Association, in 1866. *Fifty Years of Association Work Among Young Women*, by Elizabeth Wilson, tells the story of its phenomenal growth and gives an adequate and accurate survey of its varied activities.

New York: National Board Y. W. C. A. \$1.35.

EDUCATIONAL PHILOSOPHY

The essays in *The Meaning of Education*, by Nicholas Murray Butler, an enlargement of the book of the same title published in 1898, illustrate happily the saying that everyone is a radical in his own specialty. A typically incisive remark, to be taken to heart in all normal schools, is as follows: "Some of the books and periodicals that purport to deal with education make me regret the invention of printing; . . . they cannot be read without subtracting from the sum of human knowledge."

Scribner. \$1.50.

WHAT IS THE MATTER WITH AMERICA?

When you have finished Van Wyck Brooks's *America's Coming of Age* you know that our country badly needs "something" in her life and literature. You have a general conception of that "something," but not the remotest idea how it is to be obtained. But you have come in contact with many ideas worth meeting. Some you receive with joy, others you repudiate, nearly all arrest your attention because of their felicitous phrasing.

Huebsch. \$1.

MOUNTAIN BLOSSOMS

This untechnical, yet carefully made, handbook, *Wild Flowers of the North American Mountains*, by Julia W. Hinshaw, will be extremely useful to every tourist to the national parks among the Rockies and the coast ranges, as well as to residents of those regions. The flowers are arranged in groups according to their most conspicuous color; and there are scores of the most helpful as well as pleasing illustrations from photographs, including twenty in colors.

McBride. \$2.50.

LAW

Offers YOU Success

in business as well as politics today. Law-trained men earn \$3,000 to \$10,000 yearly. Opportunities Open. Big firms now put lawyers on their regular payrolls at large salaries. You can learn at home by mail in spare time by our simplified method. Course written in plain language by university professors. BECOME AN LL. B. We guarantee to coach graduates free on all subjects required in bar examination until successful. Complete course in Public Speaking by Dr. Fred'k B. Robinson, Professor of Public Speaking, College of City of New York, and big fourteen volume law library furnished FREE if you enroll now. Write at once for remarkable offer and book on law. Everything sent free.

LaSalle Extension University, Dept. 250 F.A. Chicago, Ill.

EFFICIENCY QUESTION BOX

CONDUCTED BY

EDWARD EARLE PURINTON

DIRECTOR OF THE

INDEPENDENT EFFICIENCY SERVICE

210. Mr. R. W. D., Oregon. "I am a stenographer and executive in the Government service. I don't feel energetic and enthusiastically interested as I should be. When I do occasionally get enthusiastic and begin to hurry I make mistakes and lose my bearings. I want to learn to think and do things quickly, but accurately and thoroughly. Health good, no bad habits. Kindly make suggestions."

You should learn scientific management. Ask Efficiency Press Syndicate, Woolworth Building, New York, for list of books on the subject. The key to your problem lies in planning your day ahead, thinking out each move on a standardized time schedule, in advance of making it. To increase energy, take a good course in physical exercise—answer all such advertisements in a copy of *Physical Culture* magazine, Flatiron Building, New York; and of *Health Culture*, Passaic, New Jersey. A Government job tends to stagnation. Get a future where you are, and get it in mind—or get out.

211. Mrs. H. B. C., California. "(a) Does an active child of twelve need as much food as an adult doing sedentary work? (b) Have the Fletcher or Chittenden standards been tried out on children? (c) Is not the danger of underfeeding as great as that of overfeeding, with the growing organism? (d) Is it advisable to measure and limit a growing child who is healthy and on plain rations? (e) Can you refer me to authorities on the scientific feeding of children? The new standards and ideals seem to apply mostly to adults."

(a) Probably yes. (b) Not so far as we know—and we devoutly hope they never will be. Fletcher and Chittenden were meant to guide grown-ups, not children. (c) Yes. Read Crichton-Browne's "Parsimony in Nutrition." (d) Hardly ever. Teach the children to eat slowly, regularly, and only at meal time, then allow natural hunger to operate unmolested. (e) We do not consider anybody a final authority. But we suggest gladly a few names of leading investigators: Dr. J. H. Kellogg, Battle Creek, Mich.; Prof. L. B. Alyn, Westfield, Mass.; Dr. J. H. Tilden, Denver, Colorado; Dr. H. Lindlahr, Ashland Boulevard, Chicago; Eugene Christian, 213 West Seventy-ninth Street, New York; Editor of *National Food Magazine*, 45 West Thirty-fourth Street, New York; Bernarr Macfadden, Flatiron Building, New York; School Lunch Committee of Child Hygiene Bureau, New York City Board of Health.

212. Mr. J. S. F., Brooklyn. "I am ambitious to become a lecturer. I have given successfully a few informal talks on travel subjects. How would you advise me to perfect myself, and to secure a position as a lecturer on serious subjects?"

Without knowing you we cannot advise you how to perfect yourself in anything. But your first step, doubtless, will be to find what successful speakers are doing. Learn of their topics, methods, itineraries, and apply the lessons to yourself. Obtain descriptive literature of the lectures of Chautauqua Institution, Chautauqua, New York; Burton Holmes Travelogues, 156 Fifth Avenue, New York City; J. B. Pond Lyceum Bureau, 1 Madison Avenue, New York City; League for Political Education, 147 West Forty-eighth Street, New York City; West Side Y. M. C. A., 318 West Fifty-seventh Street; Bureau of Lectures, New York City Board of Education, 157 East Sixty-seventh Street.

Have you a real message to give? Don't try to be a lecturer without it. Become a

BIG BOOKS of the MOMENT

Theodore Roosevelt on the Larger Americanism FEAR GOD AND TAKE YOUR OWN PART

THE AGGRESSIVE POLICIES OF
WASHINGTON AND LINCOLN

Preparedness, Dual Citizenship, the Mexican Crisis—these are the big, vital problems of the day. The psychological moment has come for the appearance of a book which discusses them with outspoken fearlessness. Roosevelt asserts that we must follow the policies of Washington and Lincoln if we wish to keep America's name unsullied and her prestige unassailed. A nation that cannot take its own part he declares to be at times almost as fertile a source of mischief in the world at large as is a nation which does wrong to others, for its very existence puts a premium on wrongdoing. 414 pp. 8vo. Net \$1.50

DEMOCRACY AND THE NATIONS

Dr. James A. Macdonald

Canada's Lincoln points to the warm friendship existing between the United States and the Dominion as evidence of the growth of that international spirit, which, he says, will finally put an end to war. "A fine American patriotism—American used in the sense that includes Canada as well as the United States—pervades 'Democracy and the Nations,' by J. A. Macdonald, of Toronto. The people of the republic know the editor of the Toronto Globe almost as well as do the people of the Dominion."—Cleveland Plain Dealer.

8vo. Net \$1.35

THE WORLD'S HIGHWAY

Norman Angell

A book dealing most searchingly and suggestively with the problem America is now facing in her negotiations with the Teutonic powers over the sinking of passenger vessels. "Mr. Angell is an expert dynamiter. So, one after another he explodes this or that old theory and tradition in relation to one or another international fetich."—Washington Star.

8vo. Net \$1.50

KINGS, QUEENS AND PAWNS

Mary Roberts Rinehart

The American novelist who was the first correspondent to reach the Western front gives us a vivid and gripping account of what she saw there—and from a woman's viewpoint.

12mo. Net \$1.50

OVER THERE

Arnold Bennett

It is with confidence that the reader opens Arnold Bennett's book of war experiences. One may well hesitate in affirming that the literature of war as yet contains a more remarkable book. Drawings by Walter Hale.

12mo. Net \$1.25

I ACCUSE!

By a German

Germany permits the sale of French books and pamphlets in Belgium but draws the line on one volume, a book by a high German official, writing anonymously, who says that his countrymen were wrong in entering the war. This is the book—the sensation of the hour.

12mo. Net \$1.50

An Important Biography by Bishop Brent

A MASTER BUILDER

Being the Life and Letters of Henry Yates
Satterlee, First Bishop of Washington

By The Rt. Rev. CHARLES H. BRENT, D.D.

Bishop of the Philippine Islands

With 16 Illustrations, 8vo, pp. xvi + 477. \$4.00 net.

"... I hold a biography to be a word portrait. It is more akin to a painting than to a photograph. But a biography is in one sense even a higher kind of art than painting, in that it is a moving picture of the man. The steady flow of his life and character is presented. The duty of a biographer, as I have tried to discern my own in this, is not to suppress his own convictions based on personal touch, but to keep them in due relation to all the material gathered. He must do more than chronicle bald facts. He must give them color and atmosphere. . . . Moreover . . . he must dive into the deep sea of motives underlying principles. . . ."—From the Preface.

119 West 40th St.

New York

recognized authority in some special field—
and you will be asked to tell about your
work. Investigate the Kleiser Course in
Public Speaking, managed by Funk and
Wagnalls, 360 Fourth Avenue, New York
—and improve your delivery.

213. Mr. G. S. H., Michigan. "We were very
much interested in your Independent article for
October 25, on "Efficiency in the Factory." One
of the bits of advice given in this article was
to consult an expert. You mention organizations
such as The American Institute of Consulting
Engineers and The American Society of Me-
chanical Engineers. The writer would appre-
ciate it highly if you would mention the loca-
tion of these societies, so that we might write
to them for information."

Address the American Institute of Con-
sulting Engineers at 35 Nassau Street,
New York; The American Society of Me-
chanical Engineers at 25 West Thirty-
ninth Street, New York.

214. Mr. H. W. H., New York City. "Does not
efficiency minimize physical effort? Do not peo-
ple doing least physical work have smallest
families? Therefore would not efficiency on a
large scale tend toward race-suicide?"

Your logic is faulty. The really efficient
person *thinks*—first, last and all the time.
The parents who *think* save their children
from the terrible infant mortality, vice and
crime that destroy hundreds of thousands
of children every year. This saving should
more than offset the lower rate of birth re-
sulting from the hypothetical physical
apathy of a race of efficient people. It
may be that one man in 10,000 is truly
efficient, and one woman in 30,000. The
condition is not yet epidemic, and should
cause no alarm.

215. Prof. M. A., Alabama. "I am twenty-six
years old, a supervisor in the city schools; seem
to be highly respected, and to discharge my
duties satisfactorily. But I feel that I do not
know anything, and have never learned how to
think, to study, to concentrate, to analyze or
compare. I cannot make a systematic study of
myself, my talents or opportunities. Where can
I obtain knowledge of experimental psychology,
character analysis, vocational guidance, human
nature, self-discovery and self-improvement?
How can I secure a copy of your article "What
Is Efficiency," and what will be the cost?"

If you have been reading the Question
Box regularly, and continue to do so, you
will find many of your queries answered
in replies to others. What you want is a
new educational system applied to yourself
—twenty years after it should have been
started. The new system is woefully needed,
but we cannot produce it in a few lines
of a magazine column. The article "What
Is Efficiency," price 10 cents, may be had
from The Independent.

216. A Reader in the West. "I am forty years
old, married, no children. Was in office and bank-
ing; but thru failure of an irrigation project I
lost everything, and am \$4000 in debt. A year
ago I went into life insurance, am now state
manager, making a living, and reducing my in-
debtedness about \$500 a year. I don't want to go
into bankruptcy, but cannot pay off my debts in
many years at this rate, with no prospect of
saving money at all. My wife and I are both
studying Spanish. We would go anywhere, to re-
build our fortunes. Are there opportunities in
the new companies now being formed for the devel-
opment of South American trade? If so, where
can I learn of them?"

Write the Secretary of the American In-
ternational Corporation, 120 Broadway,
New York; The *Exporter's Review*, 80
Broad street; *Exporters' and Importers' Journal*, 17 State street; South American
Export and Import Company, 24 Stone
street; South American Publishing Com-
pany, 1 Broadway; South American Trade
and Finance Company, 149 Broadway.
Then apply to officials of the firms doing
business in South America, whose names
you will have secured. Tell these men what
you have done—a man who can rise to be
state manager of his business in a year of
service has a right to be heard!

Why wouldn't your own life insurance
company send you to South America, and
put you in charge of a good territory when
you had mastered local details? Ask your
company about this.

Evans Art Pianos and Players Factory to You

\$125

and up can be saved by my plan of
selling direct from my factory to you. I can
save you from \$125 to \$250 on an Evans Artist
Model Piano or Player.

Freight Paid The easiest kind of terms, week-
ly, monthly, quarterly or yearly

217. A Reader in Connecticut. "Can you advise me in regard to obtaining a position in the office of an architect or building superintendent? I have been a teacher and social worker, but my natural bent is toward architecture and building. Am a college graduate, and a hard worker; have been told that in regard to building problems I have an unusually practical mind. Am now taking a correspondence course, with the I. C. S. of Scranton, and would appreciate and give loyal service to an employer who would grant me the opportunity of working for him while finishing the course."

You are on the right track, with the right idea. Congratulations. We offer several suggestions. Ask the I. C. S. for a list of their old architectural graduates in your vicinity, who might have an opening in their office. Put an advertisement in a trade journal—send for copies of these, and look them over: *Architecture*, 527 Fifth avenue; *Architectural Record*, 119 West Fortieth street; *Architecture and Building*, 23 Warren street; *Building Age*, 239 West Thirty-ninth street; all of New York. Obtain particulars of their work—then use to advantage—from Architects' Bureau Technical Service, 105 West Fortieth street; Architects and Builders' Index, 340 Madison avenue; Architectural League of New York, 215 West Fifty-seventh street; Building Trades Employers' Association, 30 West Thirty-third street; all of New York. From this data compile list of possible employers; send to each a brief, strong letter, typewritten, presenting your ambitions and qualifications.

218. Mrs. L. C., District of Columbia. "(a) How would you plan a home so that all five bedrooms may have the morning sun? (b) Should a wife and mother leave her home for half the day, in order to do outside work, even if she has a good maid, when the result is a scattering of the family and few home evenings? I have been watching several cases where outside interests of women cause home inefficiency, and should like your opinion. Other women readers of The Independent join me in this request."

(a) Put the very young, old or weakly members of the family in rooms exposed to the morning sun, and the rest in sleeping chambers with a clear Western exposure. For an average healthy person the rays of the afternoon sun, if direct from noon to night, should be sufficient for home hygiene.

(b) Some modern club women err on the side of preferring the limelight to the heart-glow. When the price of publicity is domesticity, a woman will find it a bad bargain. What is the objection, however, to a useful public service or business for a woman if she is absent from home during office hours only, when husband and children are at work and at school? The typical woman publicist needs heading off, but every woman should have something of a career. See page 343 of my book "Efficient Living," for an extended answer.

219. Miss O. D. R., Ohio. "(a) Can you give me the address of a news clipping agency? I wish to have clippings from magazines on specified subjects, but am unable to find the address of any agency. (b) Will you kindly suggest a subject for a high school senior girl's oration to be given in a literary contest? My opponents will write upon the subjects, 'Pan-American Union' and 'The Value of the Chau-tauqua.' I shall greatly appreciate your favor."

(a) Among the leading press clipping bureaus are the following: The *Atlas*, 218 East Forty-second Street; Burrette's, 60 Warren Street; Luce's, 88 Park Place; Romeike's, 106 Seventh Avenue; National Press Intelligence Company, 119 West Fortieth; all of New York City.

(b) Do you want merely to win the contest—or to give an oration that shall be of most benefit to your hearers and yourself? Analyze your motive and aim. One of these topics would be good: "Finding Your Vocation"; "Woman's Work"; "National Preparedness and Individual Responsibility"; "Should a High School Graduate Go Thru College?" "Social Service and the New Age"; "The Science of Home Building"; "Great Lessons from the Great War." Take a subject that appeals to your heart—then fill your brain with facts—then write yourself into your production.

The Joy of Owning a Boat

MOTOR BOATING is the greatest sport in the world—it's healthful, it's enjoyable—it's invigorating. Again, for 1916, over 100 leading Boat Builders in various parts of the United States and Canada have joined with the Gray Motor Company in issuing a catalog of *specialized boats*, telling where you can buy the kind of boat you want at the price you want to pay—also giving you the name and address of the leading boat builder nearest your locality.

Boats a Girl Can Operate

The boats shown in this catalog are powered with Guaranteed Gray Motors, self-starting, clean and reliable—making motor boating a real pleasure for "Milady."

4-cyl. 20-24 H. P. 4-cycle Model "D"

With this catalog we will send you our new marine engine book showing a complete line of 2 and 4 cycle marine motors—2 to 50 H. P. 1 to 6 cylinders—including descriptions of the two new "D Jr." 4-cycle engines, 2-cylinder 5-6 H. P. and 4-cylinder 10-12 H. P. These motors embody all the latest developments in engineering practice—self-starting, high-power, oil-tight motors, backed by the service and guarantee of the Gray Motor Company, a responsible and long-established concern with agencies all over the world.

These books are sent free on request, write for them today.

Insurance

Conducted by

W. E. UNDERWOOD

HELPLESS OLD AGE

One of my correspondents, agreeing with a recent statement of mine to the effect that helpless old age is worse than death, wants to know what material benefit a small annuity resulting from a very limited amount of life insurance would be, adding that most men are poor and therefore financially unable to maintain any considerable sum of insurance during a period of thirty or forty years.

I will have to admit that something cannot be made from nothing. The fundamental defect lies in the fact that most men do not commence building a life insurance reserve for themselves early enough. Young people should be trained to regard that form of thrift as a necessity. Comparatively few young unmarried men carry life insurance. They squander in social pleasures enough money every year to carry from \$1000 to \$5000 insurance. Then they marry and, if conscientious, commence being drudges with, in most cases, just enough insurance protection to pay doctors' bills, funeral expenses and a few hundred dollars for their widows.

They should commence at the age of eighteen or twenty to accumulate life insurance equities, adding new policies as circumstances and means permit. I will not stickle at the kind of policies taken, altho I believe in endowments for the young. All old line legal reserve insurance is endowment insurance. The ordinary life policy is an endowment at age ninety-six; all the others, except term and special contracts, are endowments at earlier ages. Let them take any plan they prefer; but take it and keep it. Keep it even tho their families outlive the need for it. Keep it as a part of their own support in old age.

J. R. P., Princeton, Fla.—If you can get it, take your cash value; if not accept the paid-up insurance. Don't pay any more money into the concern.

C. O. H., Marengo, Ill.—The Ancient Order of Gleaners of Detroit is not a life insurance company; it is a fraternal assessment concern charging inadequate rates. The Union Central is a strong old line company paying good dividends to policyholders, the only criticism adverse to it being the capitalization of \$400,000 of its surplus in 1908. The Equitable of Iowa is a good average company with many superiors.

H. H. M., Columbia, Mo.—The latest figures available for both companies are those of December 31, 1914. Postal: Assets, \$9,613,849; surplus to policyholders consists of \$100,000 capital and \$129,882 net surplus; total, \$229,882. Kansas City Life: Assets, \$4,953,930; policyholders' surplus, \$346,557, including \$100,000 capital. Measured by service to policyholders neither of them compare favorably with the leading well established mutual companies.

BISSELL'S Carpet Sweeper

Proven Indispensable In 40 Years of Use

BISSELL'S Carpet Sweeper will always compose part of the cleaning equipment of modern homes, because no other device can ever equal its convenience for daily sweeping. The soft, flexible, pure bristle brush is far more efficient than the rough straw of a broom. Progressive women long ago abandoned brooms in favor of the BISSELL'S.

Use BISSELL'S Carpet Sweeper in combination with BISSELL'S Vacuum Sweeper, the hand-propelled suction machine that has more power than most electric cleaners, and you secure the most satisfactory, convenient, work-saving cleaning method that modern progress has evolved.

As to prices: Bissell's Carpet Sweepers are \$2.75 to \$5.75; the Vacuum Cleaner (without brush) \$7.50; the Vacuum Sweeper (with brush) \$9.00. Slightly higher in the West, South and Canada. Sold by dealers everywhere. Booklet on request.
